corrupt his integrity. With equal, nay with greater reason, a body of men are unfit to be both judges and parties at the same time; yet what are many of the most important acts of legislation, but so many judicial determinations, not indeed concerning the rights of single persons, but concerning the rights of large bodies of citizens? And what are the different classes of legislators but advocates and parties to the causes which they determine? Is a law proposed concerning private debts? It is a question to which the creditors are parties on one side and the debtors on the other. Justice ought to hold the balance between them. Yet the parties are, and must be, themselves the judges; and the most numerous party, or, in other words, the most powerful faction must be expected to prevail. Shall domestic manufactures be encouraged, and in what degree, by restrictions on foreign manufactures? are questions which would be differently decided by the landed and the manufacturing classes, and probably by neither with a sole regard to justice and the public good. The apportionment of taxes on the various descriptions of property is an act which seems to require the most exact impartiality; yet there is, perhaps, no legislative act in which greater opportunity and temptation are given to a predominant party to trample on the rules of justice. Every shilling with which they overburden the inferior number is a shilling saved to their own pockets.

It is in vain to say that enlightened statesmen will be able to adjust these clashing interests, and render them all subservient to the public good. Enlightened statesmen will not always be at the helm. Nor, in many cases, can such an adjustment be made at all without taking into view indirect and remote considerations, which will rarely prevail over the immediate interest which one party may find in disregarding the rights of another or the good of the whole.

The inference to which we are brought is, that the causes of faction cannot be removed, and that relief is only to be sought in the

means of controlling its effects.^[1]

If a faction consists of less than a majority, relief is supplied by the republican principle, which enables the majority to defeat its sinister views by regular vote. It may clog the administration, it may convulse the society; but it will be unable to execute and mask its violence under the forms of the Constitution. When a majority is included in a faction, the form of popular government, on the other hand, enables it to sacrifice to its ruling passion or interest both the public good and the rights of other citizens. To secure the public good and private rights against the danger of such a faction, and at the same time to preserve the spirit and the form of popular government, is then the great object to which our inquiries are directed. Let me add that it is the great desideratum by which alone this form of government can be rescued from the opprobrium under which it has so long labored, and be recommended to the esteem and adoption of mankind.

By what means is this object attainable? Evidently by one of two only. Either the existence of the same passion or interest in a majority at the same time must be prevented, or the majority, having such coexistent passion or interest, must be rendered, by their number and local situation, unable to concert and carry into effect schemes of oppression. If the impulse and the opportunity be suffered to coincide, we well know that neither moral nor religious motives can be relied on as an adequate control. They are not found to be such on the injustice and violence of individuals, and lose their efficacy in proportion to the number combined together, that is, in proportion as their efficacy becomes needful.

From this view of the subject it may be concluded that a pure democracy, by which I mean a society consisting of a small number of citizens, who assemble and administer the government in person, can admit of no cure for the mischiefs of faction. A common passion or

interest will, in almost every case, be felt by a majority of the whole; a communication and concert results from the form of government itself; and there is nothing to check the inducements to sacrifice the weaker party or an obnoxious individual. Hence it is that such democracies have ever been spectacles of turbulence and contention; have ever been found incompatible with personal security or the rights of property; and have in general been as short in their lives as they have been violent in their deaths. Theoretic politicians, who have patronized this species of government, have erroneously supposed that by reducing mankind to a perfect equality in their political rights, they would at the same time be perfectly equalized and assimilated in their possessions, their opinions, and their passions.

A republic, by which I mean a government in which the scheme of representation takes place, opens a different prospect and promises the cure for which we are seeking. Let us examine the points in which it varies from pure democracy, and we shall comprehend both the nature of the cure and the efficacy which it must derive from the Union.

The two great points of difference between a democracy and a republic are: first, the delegation of the government, in the latter, to a small number of citizens elected by the rest; secondly, the greater number of citizens and greater sphere of country over which the latter may be extended.^[2]

The effect of the first difference is, on the one hand, to refine and enlarge the public views by passing them through the medium of a chosen body of citizens, whose wisdom may best discern the true interest of their country and whose patriotism and love of justice will be least likely to sacrifice it to temporary or partial considerations. Under such a regulation it may well happen that the public voice, pronounced by the representatives of the people, will be more consonant to the public good than if pronounced by the people

themselves, convened for the purpose. On the other hand, the effect may be inverted. Men of factious tempers, of local prejudices, or of sinister designs, may, by intrigue, by corruption, or by other means, first obtain the suffrages, and then betray the interests of the people. The question resulting is, whether small or extensive republics are more favorable to the election of proper guardians of the public weal; and it is clearly decided in favor of the latter by two obvious considerations.

In the first place, it is to be remarked that however small the republic may be, the representatives must be raised to a certain number in order to guard against the cabals of a few; and that however large it may be, they must be limited to a certain number in order to guard against the confusion of a multitude. Hence, the number of representatives in the two cases not being in proportion to that of the constituents, and being proportionally greatest in the small republic, it follows that if the proportion of fit characters be not less in the large than in the small republic, the former will present a greater option, and consequently a greater probability of a fit choice.

In the next place, as each representative will be chosen by a greater number of citizens in the large than in the small republic, it will be more difficult for unworthy candidates to practise with success the vicious arts by which elections are too often carried; and the suffrages of the people being more free, will be more likely to centre on men who possess the most attractive merit and the most diffusive and established characters.

It must be confessed that in this, as in most other cases, there is a mean, on both sides of which inconveniences will be found to lie. By enlarging too much the number of electors, you render the representative too little acquainted with all their local circumstances and lesser interests; as by reducing it too much, you render him unduly attached to these, and too little fit to comprehend and pursue

great and national objects. The federal Constitution forms a happy combination in this respect; the great and aggregate interests being referred to the national, the local and particular to the State legislatures.

The other point of difference is the greater number of citizens and extent of territory which may be brought within the compass of republican than of democratic government; and it is this circumstance principally which renders factious combinations less to be dreaded in the former than in the latter. The smaller the society, the fewer probably will be the distinct parties and interests composing it; the fewer the distinct parties and interests, the more frequently will a majority be found of the same party; and the smaller the number of individuals composing a majority, and the smaller the compass within which they are placed, the more easily will they concert and execute their plans of oppression. Extend the sphere and you take in a greater variety of parties and interests; you make it less probable that a majority of the whole will have a common motive to invade the rights of other citizens; or if such a common motive exists, it will be more difficult for all who feel it to discover their own strength and to act in unison with each other. Besides other impediments, it may be remarked that, where there is a consciousness of unjust or dishonorable purposes, communication is always checked by distrust in proportion to the number whose concurrence is necessary.

Hence, it clearly appears that the same advantage which a republic has over a democracy in controlling the effects of faction is enjoyed by a large over a small republic—is enjoyed by the Union over the States composing it. Does the advantage consist in the substitution of representatives whose enlightened views and virtuous sentiments render them superior to local prejudices and to schemes of injustice? It will not be denied that the representation of the Union will be most likely to possess these requisite endowments. Does it

consist in the greater security afforded by a greater variety of parties, against the event of any one party being able to outnumber and oppress the rest? In an equal degree, does the increased variety of parties comprised within the Union increase this security? Does it, in fine, consist in the greater obstacles opposed to the concert and accomplishment of the secret wishes of an unjust and interested majority? Here again the extent of the Union gives it the most palpable advantage.

The influence of factious leaders may kindle a flame within their particular States but will be unable to spread a general conflagration through the other States. A religious sect may degenerate into a political faction in a part of the Confederacy; but the variety of sects dispersed over the entire face of it must secure the national councils against any danger from that source. A rage for paper money, for an abolition of debts, for an equal division of property, or for any other improper or wicked project, will be less apt to pervade the whole body of the Union than a particular member of it; in the same proportion as such a malady is more likely to taint a particular county or district, than an entire State.

In the extent and proper structure of the Union, therefore, we behold a republican remedy for the diseases most incident to republican government. And according to the degree of pleasure and pride we feel in being republicans ought to be our zeal in cherishing the spirit and supporting the character of Federalists.

[1] 我们的结论是，党争的原因无法消除，只能采用控制其后果的方法。

[2] 这段话指出了民主政体和共和政体的两个差别：一，后者的政府是由公民选举出来的少数公民来管理；二，后者所能管辖的公民人数比较多，国土范围比较大。

FEDERALIST No. 11 The Utility of the Union in Respect to Commercial Relations and a Navy

**For the Independent Journal.
Saturday, November 24, 1787
Hamilton**

To the People of the State of New York:

THE importance of the Union, in a commercial light, is one of those points about which there is least room to entertain a difference of opinion, and which has, in fact, commanded the most general assent of men who have any acquaintance with the subject. This applies as well to our intercourse with foreign countries as with each other.^[1]

There are appearances to authorize a supposition that the adventurous spirit, which distinguishes the commercial character of America, has already excited uneasy sensations in several of the maritime powers of Europe. They seem to be apprehensive of our too great interference in that carrying trade, which is the support of their navigation and the foundation of their naval strength. Those of them which have colonies in America look forward to what this country is capable of becoming with painful solicitude. They foresee the dangers that may threaten their American dominions from the neighborhood of States, which have all the dispositions and would possess all the means requisite to the creation of a powerful marine. Impressions of

this kind will naturally indicate the policy of fostering divisions among us and of depriving us, as far as possible, of an ACTIVE COMMERCE in our own bottoms. This would answer the threefold purpose of preventing our interference in their navigation, of monopolizing the profits of our trade, and of clipping the wings by which we might soar to a dangerous greatness. Did not prudence forbid the detail, it would not be difficult to trace, by facts, the workings of this policy to the cabinets of ministers.

If we continue united, we may counteract a policy so unfriendly to our prosperity in a variety of ways. By prohibitory regulations, extending at the same time throughout the States, we may oblige foreign countries to bid against each other for the privileges of our markets. This assertion will not appear chimerical to those who are able to appreciate the importance to any manufacturing nation of the markets of three millions of people—increasing in rapid progression, for the most part exclusively addicted to agriculture, and likely from local circumstances to remain in this disposition; and the immense difference there would be to the trade and navigation of such a nation, between a direct communication in its own ships and an indirect conveyance of its products and returns, to and from America, in the ships of another country. Suppose, for instance, we had a government in America capable of excluding Great Britain (with whom we have at present no treaty of commerce) from all our ports; what would be the probable operation of this step upon her politics? Would it not enable us to negotiate, with the fairest prospect of success, for commercial privileges of the most valuable and extensive kind in the dominions of that kingdom? When these questions have been asked upon other occasions, they have received a plausible, but not a solid or satisfactory answer. It has been said that prohibitions on our part would produce no change in the system of Britain, because she could prosecute her trade with us through the medium of the Dutch, who would be her immediate customers and paymasters for those articles

which were wanted for the supply of our markets. But would not her navigation be materially injured by the loss of the important advantage of being her own carrier in that trade? Would not the principal part of its profits be intercepted by the Dutch, as a compensation for their agency and risk? Would not the mere circumstance of freight occasion a considerable deduction? Would not so circuitous an intercourse facilitate the competitions of other nations, by enhancing the price of British commodities in our markets, and by transferring to other hands the management of this interesting branch of the British commerce?

A mature consideration of the objects suggested by these questions will justify a belief that the real disadvantages to Great Britain from such a state of things, conspiring with the pre-possessions of a great part of the nation in favor of the American trade, and with the importunities of the West India islands, would produce a relaxation in her present system, and would let us into the enjoyment of privileges in the markets of those islands and elsewhere, from which our trade would derive the most substantial benefits. Such a point gained from the British government, and which could not be expected without an equivalent in exemptions and immunities in our markets, would be likely to have a correspondent effect on the conduct of other nations, who would not be inclined to see themselves altogether supplanted in our trade.

A further resource for influencing the conduct of European nations towards us, in this respect, would arise from the establishment of a federal navy. There can be no doubt that the continuance of the Union under an efficient government would put it in our power, at a period not very distant, to create a navy which, if it could not vie with those of the great maritime powers, would at least be of respectable weight if thrown into the scale of either of two contending parties. This would be more peculiarly the case in relation to operations in the

West Indies. A few ships of the line, sent opportunely to the reinforcement of either side, would often be sufficient to decide the fate of a campaign, on the event of which interests of the greatest magnitude were suspended. Our position is in this respect a very commanding one. And if to this consideration we add that of the usefulness of supplies from this country, in the prosecution of military operations in the West Indies, it will readily be perceived that a situation so favorable would enable us to bargain with great advantage for commercial privileges. A price would be set not only upon our friendship, but upon our neutrality. By a steady adherence to the Union we may hope, ere long, to become the arbiter of Europe in America, and to be able to incline the balance of European competitions in this part of the world as our interest may dictate.

But in the reverse of this eligible situation, we shall discover that the rivalships of the parts would make them checks upon each other, and would frustrate all the tempting advantages which nature has kindly placed within our reach. In a state so insignificant our commerce would be a prey to the wanton intermeddlings of all nations at war with each other, who, having nothing to fear from us, would with little scruple or remorse, supply their wants by depredations on our property as often as it fell in their way. The rights of neutrality will only be respected when they are defended by an adequate power. A nation, despicable by its weakness, forfeits even the privilege of being neutral.

Under a vigorous national government, the natural strength and resources of the country, directed to a common interest, would baffle all the combinations of European jealousy to restrain our growth. This situation would even take away the motive to such combinations, by inducing an impracticability of success. An active commerce, an extensive navigation, and a flourishing marine would then be the inevitable offspring of moral and physical necessity. We might defy

the little arts of little politicians to control or vary the irresistible and unchangeable course of nature.

But in a state of disunion, these combinations might exist and might operate with success. It would be in the power of the maritime nations, availing themselves of our universal impotence, to prescribe the conditions of our political existence; and as they have a common interest in being our carriers, and still more in preventing our being theirs, they would in all probability combine to embarrass our navigation in such a manner as would in effect destroy it, and confine us to a PASSIVE COMMERCE. We should then be compelled to content ourselves with the first price of our commodities, and to see the profits of our trade snatched from us to enrich our enemies and persecutors. That unequalled spirit of enterprise, which signalizes the genius of the American merchants and navigators, and which is in itself an inexhaustible mine of national wealth, would be stifled and lost, and poverty and disgrace would overspread a country which, with wisdom, might make herself the admiration and envy of the world.

There are rights of great moment to the trade of America which are rights of the Union—I allude to the fisheries, to the navigation of the lakes, and to that of the Mississippi. The dissolution of the Confederacy would give room for delicate questions concerning the future existence of these rights; which the interest of more powerful partners would hardly fail to solve to our disadvantage. The disposition of Spain with regard to the Mississippi needs no comment. France and Britain are concerned with us in the fisheries, and view them as of the utmost moment to their navigation. They, of course, would hardly remain long indifferent to that decided mastery, of which experience has shown us to be possessed in this valuable branch of traffic, and by which we are able to undersell those nations in their own markets. What more natural than that they should be

disposed to exclude from the lists such dangerous competitors?

This branch of trade ought not to be considered as a partial benefit. All the navigating States may, in different degrees, advantageously participate in it, and under circumstances of a greater extension of mercantile capital, would not be unlikely to do it. As a nursery of seamen, it now is, or when time shall have more nearly assimilated the principles of navigation in the several States, will become, a universal resource. To the establishment of a navy, it must be indispensable.

To this great national object, a NAVY, union will contribute in various ways. Every institution will grow and flourish in proportion to the quantity and extent of the means concentrated towards its formation and support. A navy of the United States, as it would embrace the resources of all, is an object far less remote than a navy of any single State or partial confederacy, which would only embrace the resources of a part. It happens, indeed, that different portions of confederated America possess each some peculiar advantage for this essential establishment. The more southern States furnish in greater abundance certain kinds of naval stores—tar, pitch, and turpentine. Their wood for the construction of ships is also of a more solid and lasting texture. The difference in the duration of the ships of which the navy might be composed, if chiefly constructed of Southern wood, would be of signal importance, either in the view of naval strength or of national economy. Some of the Southern and of the Middle States yield a greater plenty of iron, and of better quality. Seamen must chiefly be drawn from the Northern hive. The necessity of naval protection to external or maritime commerce, and the conduciveness of that species of commerce to the prosperity of a navy, are points too manifest to require a particular elucidation. They, by a kind of reaction, mutually beneficial, promote each other.

An unrestrained intercourse between the States themselves will

advance the trade of each by an interchange of their respective productions, not only for the supply of reciprocal wants at home, but for exportation to foreign markets. The veins of commerce in every part will be replenished, and will acquire additional motion and vigor from a free circulation of the commodities of every part. Commercial enterprise will have much greater scope from the diversity in the productions of different States. When the staple of one fails from a bad harvest or unproductive crop, it can call to its aid the staple of another. The variety, not less than the value, of products for exportation contributes to the activity of foreign commerce. It can be conducted upon much better terms with a large number of materials of a given value than with a small number of materials of the same value; arising from the competitions of trade and from the fluctuations of markets. Particular articles may be in great demand at certain periods, and unsalable at others; but if there be a variety of articles, it can scarcely happen that they should all be at one time in the latter predicament, and on this account the operations of the merchant would be less liable to any considerable obstruction or stagnation. The speculative trader will at once perceive the force of these observations, and will acknowledge that the aggregate balance of the commerce of the United States would bid fair to be much more favorable than that of the thirteen States without union or with partial unions.

It may perhaps be replied to this that whether the States are united or disunited there would still be an intimate intercourse between them which would answer the same ends; but this intercourse would be fettered, interrupted, and narrowed by a multiplicity of causes, which in the course of these papers have been amply detailed. A unity of commercial, as well as political, interests, can only result from a unity of government. There are other points of view in which this subject might be placed, of a striking and animating kind. But they would lead us too far into the regions of

futurity, and would involve topics not proper for a newspaper discussion. I shall briefly observe, that our situation invites and our interests prompt us to aim at an ascendant in the system of American affairs. The world may politically, as well as geographically, be divided into four parts, each having a distinct set of interests. Unhappily for the other three, Europe, by her arms and by her negotiations, by force and by fraud, has, in different degrees, extended her dominion over them all. Africa, Asia, and America, have successively felt her domination. The superiority she has long maintained has tempted her to plume herself as the Mistress of the World, and to consider the rest of mankind as created for her benefit. Men admired as profound philosophers have in direct terms attributed to her inhabitants a physical superiority and have gravely asserted that all animals, and with them the human species, degenerate in America—that even dogs cease to bark after having breathed awhile in our atmosphere.^[2] Facts have too long supported these arrogant pretensions of the Europeans. It belongs to us to vindicate the honor of the human race, and to teach that assuming brother moderation. Union will enable us to do it. Disunion will add another victim to his triumphs. Let Americans disdain to be the instruments of European greatness! Let the thirteen States, bound together in a strict and indissoluble Union, concur in erecting one great American system, superior to the control of all transatlantic force or influence, and able to dictate the terms of the connection between the old and the new world!

FEDERALIST No. 12 The Utility of the Union in Respect to Revenue

**From the New York Packet.
Tuesday, November 27, 1787
Hamilton**

To the People of the State of New York:

THE effects of Union upon the commercial prosperity of the States have been sufficiently delineated. Its tendency to promote the interests of revenue will be the subject of our present inquiry.^[1]

The prosperity of commerce is now perceived and acknowledged by all enlightened statesmen to be the most useful as well as the most productive source of national wealth, and has accordingly become a primary object of their political cares. By multiplying the means of gratification, by promoting the introduction and circulation of the precious metals, those darling objects of human avarice and enterprise, it serves to vivify and invigorate all the channels of industry, and to make them flow with greater activity and copiousness. The assiduous merchant, the laborious husbandman, the active mechanic, and the industrious manufacturer—all orders of men look forward with eager expectation and growing alacrity to this pleasing reward of their toils. The often-agitated question between agriculture and commerce has, from indubitable experience, received a decision which has silenced the rivalry that once subsisted between them, and has proved, to the entire satisfaction of their

friends, that their interests are intimately blended and interwoven. It has been found in various countries that, in proportion as commerce has flourished, land has risen in value. And how could it have happened otherwise? Could that which procures a freer vent for the products of the earth, which furnishes new incitements to the cultivation of land, which is the most powerful instrument in increasing the quantity of money in a state—could that, in fine, which is the faithful handmaid of labor and industry in every shape fail to augment the value of that article, which is the prolific parent of far the greatest part of the objects upon which they are exerted? It is astonishing that so simple a truth should ever have had an adversary; and it is one, among a multitude of proofs, how apt a spirit of ill-informed jealousy, or of too great abstraction and refinement, is to lead men astray from the plainest paths of reason and conviction.

The ability of a country to pay taxes must always be proportioned in a great degree to the quantity of money in circulation and to the celerity with which it circulates. Commerce, contributing to both these objects, must of necessity render the payment of taxes easier, and facilitate the requisite supplies to the treasury. The hereditary dominions of the Emperor of Germany contain a great extent of fertile, cultivated, and populous territory, a large proportion of which is situated in mild and luxuriant climates. In some parts of this territory are to be found the best gold and silver mines in Europe. And yet, from the want of the fostering influence of commerce, that monarch can boast but slender revenues. He has several times been compelled to owe obligations to the pecuniary succors of other nations for the preservation of his essential interests, and is unable, upon the strength of his own resources, to sustain a long or continued war.

But it is not in this aspect of the subject alone that Union will be seen to conduce to the purpose of revenue. There are other points of view in which its influence will appear more immediate and decisive.

It is evident from the state of the country, from the habits of the people, from the experience we have had on the point itself, that it is impracticable to raise any very considerable sums by direct taxation. Tax laws have in vain been multiplied; new methods to enforce the collection have in vain been tried; the public expectation has been uniformly disappointed, and the treasuries of the States have remained empty. The popular system of administration inherent in the nature of popular government, coinciding with the real scarcity of money incident to a languid and mutilated state of trade, has hitherto defeated every experiment for extensive collections, and has at length taught the different legislatures the folly of attempting them.

No person acquainted with what happens in other countries will be surprised at this circumstance. In so opulent a nation as that of Britain, where direct taxes from superior wealth must be much more tolerable, and, from the vigor of the government, much more practicable, than in America, far the greatest part of the national revenue is derived from taxes of the indirect kind, from imposts, and from excises. Duties on imported articles form a large branch of this latter description.

In America, it is evident that we must a long time depend for the means of revenue chiefly on such duties. In most parts of it, excises must be confined within a narrow compass. The genius of the people will ill brook the inquisitive and peremptory spirit of excise laws. The pockets of the farmers, on the other hand, will reluctantly yield but scanty supplies, in the unwelcome shape of impositions on their houses and lands; and personal property is too precarious and invisible a fund to be laid hold of in any other way than by the inperceptible agency of taxes on consumption.

If these remarks have any foundation, that state of things which will best enable us to improve and extend so valuable a resource must be the best adapted to our political welfare. And it cannot admit of a

serious doubt that this state of things must rest on the basis of a general Union. As far as this would be conducive to the interests of commerce, so far it must tend to the extension of the revenue to be drawn from that source. As far as it would contribute to rendering regulations for the collection of the duties more simple and efficacious, so far it must serve to answer the purposes of making the same rate of duties more productive and of putting it into the power of the government to increase the rate without prejudice to trade.

The relative situation of these States; the number of rivers with which they are intersected and of bays that wash their shores; the facility of communication in every direction; the affinity of language and manners; the familiar habits of intercourse—all these are circumstances that would conspire to render an illicit trade between them a matter of little difficulty, and would insure frequent evasions of the commercial regulations of each other. The separate States or confederacies would be necessitated by mutual jealousy to avoid the temptations to that kind of trade by the lowness of their duties. The temper of our governments, for a long time to come, would not permit those rigorous precautions by which the European nations guard the avenues into their respective countries, as well by land as by water; and which, even there, are found insufficient obstacles to the adventurous stratagems of avarice.

In France, there is an army of patrols (as they are called) constantly employed to secure her fiscal regulations against the inroads of the dealers in contraband. Mr. Neckar computes the number of these patrols at upwards of twenty thousand. This proves the immense difficulty in preventing that species of traffic, where there is an inland communication and shows in a strong light the disadvantages with which the collection of duties in this country would be encumbered, if by disunion the States should be placed in a situation with respect to each other resembling that of France with

respect to her neighbors. The arbitrary and vexatious powers with which the patrols are necessarily armed, would be intolerable in a free country.

If, on the contrary, there be but one government pervading all the States, there will be, as to the principal part of our commerce, but ONE SIDE to guard—the ATLANTIC COAST. Vessels arriving directly from foreign countries, laden with valuable cargoes, would rarely choose to hazard themselves to the complicated and critical perils which would attend attempts to unlade prior to their coming into port. They would have to dread both the dangers of the coast, and of detection, as well after as before their arrival at the places of their final destination. An ordinary degree of vigilance would be competent to the prevention of any material infractions upon the rights of the revenue. A few armed vessels, judiciously stationed at the entrances of our ports, might at a small expense be made useful sentinels of the laws. And the government having the same interest to provide against violations everywhere, the co-operation of its measures in each State would have a powerful tendency to render them effectual. Here also we should preserve by Union, an advantage which nature holds out to us and which would be relinquished by separation. The United States lie at a great distance from Europe and at a considerable distance from all other places with which they would have extensive connections of foreign trade. The passage from them to us, in a few hours or in a single night, as between the coasts of France and Britain, and of other neighboring nations, would be impracticable. This is a prodigious security against a direct contraband with foreign countries; but a circuitous contraband to one State through the medium of another would be both easy and safe. The difference between a direct importation from abroad, and an indirect importation through the channel of a neighboring State, in small parcels according to time and opportunity, with the additional facilities of inland communication, must be palpable to every man of discernment.

It is therefore evident that one national government would be able at much less expense to extend the duties on imports beyond comparison, further than would be practicable to the States separately, or to any partial confederacies. Hitherto, I believe, it may safely be asserted, that these duties have not upon an average exceeded in any State three percent. In France they are estimated at about fifteen percent, and in Britain the proportion is still greater. There seems to be nothing to hinder their being increased in this country to at least treble their present amount. The single article of ardent spirits, under federal regulation, might be made to furnish a considerable revenue. Upon a ratio to the importation into this State, the whole quantity imported into the United States may at a low computation be estimated at four millions of gallons, which, at a shilling per gallon, would produce two hundred thousand pounds. That article would well bear this rate of duty; and if it should tend to diminish the consumption of it, such an effect would be equally favorable to the agriculture, to the economy, to the morals, and to the health of the society. There is, perhaps, nothing so much a subject of national extravagance as this very article.

What will be the consequence if we are not able to avail ourselves of the resource in question in its full extent? A nation cannot long exist without revenue. Destitute of this essential support, it must resign its independence, and sink into the degraded condition of a province. This is an extremity to which no government will of choice accede. Revenue, therefore, must be had at all events. In this country, if the principal part be not drawn from commerce, it must fall with oppressive weight upon land. It has been already intimated that excises in their true signification are too little in unison with the feelings of the people to admit of great use being made of that mode of taxation; nor, indeed, in the States where almost the sole employment is agriculture are the objects proper for excise sufficiently numerous to permit very ample collections in that way. Personal

estate (as has been before remarked), from the difficulty in tracing it, cannot be subjected to large contributions by any other means than by taxes on consumption. In populous cities it may be enough the subject of conjecture to occasion the oppression of individuals, without much aggregate benefit to the State; but beyond these circles it must, in a great measure, escape the eye and the hand of the tax-gatherer. As the necessities of the State, nevertheless, must be satisfied in some mode or other, the defect of other resources must throw the principal weight of the public burdens on the possessors of land. And as on the other hand the wants of the government can never obtain an adequate supply, unless all the sources of revenue are open to its demands, the finances of the community, under such embarrassments, cannot be put into a situation consistent with its respectability or its security. Thus we shall not even have the consolations of a full treasury to atone for the oppression of that valuable class of the citizens who are employed in the cultivation of the soil. But public and private distress will keep pace with each other in gloomy concert and unite in deploring the infatuation of those counsels which led to disunion.

FEDERALIST No. 13 Advantage of the Union in Respect to Economy in Government

**For the Independent Journal.
Wednesday, November 28, 1787
Hamilton**

To the People of the State of New York:

As CONNECTED with the subject of revenue, we may with propriety consider that of economy. The money saved from one object may be usefully applied to another, and there will be so much the less to be drawn from the pockets of the people. If the States are united under one government, there will be but one national civil list to support; if they are divided into several confederacies, there will be as many different national civil lists to be provided for—and each of them, as to the principal departments, coextensive with that which would be necessary for a government of the whole. The entire separation of the States into thirteen unconnected sovereignties is a project too extravagant and too replete with danger to have many advocates. The ideas of men who speculate upon the dismemberment of the empire seem generally turned toward three confederacies—one consisting of the four Northern, another of the four Middle, and a third of the five Southern States. There is little probability that there would be a greater number. According to this distribution, each confederacy would comprise an extent of territory larger than that of the kingdom of Great Britain. No well-informed man will suppose that the affairs of such a confederacy can be properly regulated by a

government less comprehensive in its organs or institutions than that which has been proposed by the convention. When the dimensions of a State attain to a certain magnitude, it requires the same energy of government and the same forms of administration which are requisite in one of much greater extent. This idea admits not of precise demonstration, because there is no rule by which we can measure the momentum of civil power necessary to the government of any given number of individuals; but when we consider that the island of Britain, nearly commensurate with each of the supposed confederacies, contains about eight millions of people, and when we reflect upon the degree of authority required to direct the passions of so large a society to the public good, we shall see no reason to doubt that the like portion of power would be sufficient to perform the same task in a society far more numerous. Civil power, properly organized and exerted, is capable of diffusing its force to a very great extent, and can in a manner reproduce itself in every part of a great empire by a judicious arrangement of subordinate institutions.

The supposition that each confederacy into which the States would be likely to be divided would require a government not less comprehensive than the one proposed will be strengthened by another supposition, more probable than that which presents us with three confederacies as the alternative to a general Union. If we attend carefully to geographical and commercial considerations, in conjunction with the habits and prejudices of the different States, we shall be led to conclude that in case of disunion they will most naturally league themselves under two governments. The four Eastern States, from all the causes that form the links of national sympathy and connection, may with certainty be expected to unite. New York, situated as she is, would never be unwise enough to oppose a feeble and unsupported flank to the weight of that confederacy. There are other obvious reasons that would facilitate her accession to it. New Jersey is too small a State to think of being a frontier in opposition to

this still more powerful combination; nor do there appear to be any obstacles to her admission into it. Even Pennsylvania would have strong inducements to join the Northern league. An active foreign commerce, on the basis of her own navigation, is her true policy, and coincides with the opinions and dispositions of her citizens. The more Southern States, from various circumstances, may not think themselves much interested in the encouragement of navigation. They may prefer a system which would give unlimited scope to all nations to be the carriers as well as the purchasers of their commodities. Pennsylvania may not choose to confound her interests in a connection so adverse to her policy. As she must at all events be a frontier, she may deem it most consistent with her safety to have her exposed side turned towards the weaker power of the Southern, rather than towards the stronger power of the Northern, Confederacy. This would give her the fairest chance to avoid being the Flanders of America. Whatever may be the determination of Pennsylvania, if the Northern Confederacy includes New Jersey, there is no likelihood of more than one confederacy to the south of that State.

Nothing can be more evident than that the thirteen States will be able to support a national government better than one half, or one third, or any number less than the whole. This reflection must have great weight in obviating that objection to the proposed plan, which is founded on the principle of expense; an objection, however, which, when we come to take a nearer view of it, will appear in every light to stand on mistaken ground.

If, in addition to the consideration of a plurality of civil lists, we take into view the number of persons who must necessarily be employed to guard the inland communication between the different confederacies against illicit trade, and who in time will infallibly spring up out of the necessities of revenue; and if we also take into view the military establishments which it has been shown would

unavoidably result from the jealousies and conflicts of the several nations into which the States would be divided, we shall clearly discover that a separation would be not less injurious to the economy than to the tranquillity, commerce, revenue, and liberty of every part.

PUBLIUS

FEDERALIST No. 14 Objections to the Proposed Constitution from Extent of Territory Answered

**From the New York Packet.
Friday, November 30, 1787
Madison**

To the People of the State of New York:

WE HAVE seen the necessity of the Union, as our bulwark against foreign danger, as the conservator of peace among ourselves, as the guardian of our commerce and other common interests, as the only substitute for those military establishments which have subverted the liberties of the Old World, and as the proper antidote for the diseases of faction, which have proved fatal to other popular governments, and of which alarming symptoms have been betrayed by our own. All that remains within this branch of our inquiries is to take notice of an objection that may be drawn from the great extent of country which the Union embraces. A few observations on this subject will be the more proper as it is perceived that the adversaries of the new Constitution are availing themselves of a prevailing prejudice with regard to the practicable sphere of republican administration, in order to supply by imaginary difficulties the want of those solid objections which they endeavor in vain to find.

The error which limits republican government to a narrow district has been unfolded and refuted in preceding papers. I remark here only

that it seems to owe its rise and prevalence chiefly to the confounding of a republic with a democracy, and applying to the former reasonings drawn from the nature of the latter. The true distinction between these forms was also adverted to on a former occasion. It is that in a democracy the people meet and exercise the government in person; in a republic they assemble and administer it by their representatives and agents. A democracy, consequently, must be confined to a small spot. A republic may be extended over a large region.

To this accidental source of the error may be added the artifice of some celebrated authors, whose writings have had a great share in forming the modern standard of political opinions. Being subjects either of an absolute or limited monarchy, they have endeavored to heighten the advantages, or palliate the evils of those forms, by placing in comparison with them the vices and defects of the republican and by citing as specimens of the latter the turbulent democracies of ancient Greece and modern Italy. Under the confusion of names, it has been an easy task to transfer to a republic observations applicable to a democracy only; and among others, the observation that it can never be established but among a small number of people, living within a small compass of territory.

Such a fallacy may have been the less perceived, as most of the popular governments of antiquity were of the democratic species; and even in modern Europe, to which we owe the great principle of representation, no example is seen of a government wholly popular and founded, at the same time, wholly on that principle. If Europe has the merit of discovering this great mechanical power in government, by the simple agency of which the will of the largest political body may be concentrated and its force directed to any object which the public good requires, America can claim the merit of making the discovery the basis of unmixed and extensive republics. It is only to be lamented that any of her citizens should wish to deprive her of the

additional merit of displaying its full efficacy in the establishment of the comprehensive system now under her consideration.

As the natural limit of a democracy is that distance from the central point which will just permit the most remote citizens to assemble as often as their public functions demand, and will include no greater number than can join in those functions, so the natural limit of a republic is that distance from the centre which will barely allow the representatives of the people to meet as often as may be necessary for the administration of public affairs. Can it be said that the limits of the United States exceed this distance? It will not be said by those who recollect that the Atlantic coast is the longest side of the Union, that during the term of thirteen years, the representatives of the States have been almost continually assembled, and that the members from the most distant States are not chargeable with greater intermissions of attendance than those from the States in the neighborhood of Congress.

That we may form a juster estimate with regard to this interesting subject, let us resort to the actual dimensions of the Union. The limits, as fixed by the treaty of peace, are: on the east the Atlantic, on the south the latitude of thirty-one degrees, on the west the Mississippi, and on the north an irregular line running in some instances beyond the forty-fifth degree, in others falling as low as the forty-second. The southern shore of Lake Erie lies below that latitude. Computing the distance between the thirty-first and forty-fifth degrees, it amounts to nine hundred and seventy-three common miles; computing it from thirty-one to forty-two degrees, to seven hundred, sixty-four miles and a half. Taking the mean for the distance, the amount will be eight hundred, sixty-eight miles and three fourths. The mean distance from the Atlantic to the Mississippi does not probably exceed seven hundred and fifty miles. On a comparison of this extent with that of several countries in Europe, the practicability of rendering our system

commensurate to it appears to be demonstrable. It is not a great deal larger than Germany, where a diet representing the whole empire is continually assembled; or than Poland before the late dismemberment, where another national diet was the depository of the supreme power. Passing by France and Spain, we find that in Great Britain, inferior as it may be in size, the representatives of the northern extremity of the island have as far to travel to the national council as will be required of those of the most remote parts of the Union.

Favorable as this view of the subject may be, some observations remain which will place it in a light still more satisfactory.

In the first place it is to be remembered that the general government is not to be charged with the whole power of making and administering laws. Its jurisdiction is limited to certain enumerated objects, which concern all the members of the republic, but which are not to be attained by the separate provisions of any. The subordinate governments, which can extend their care to all those other subjects which can be separately provided for, will retain their due authority and activity. Were it proposed by the plan of the convention to abolish the governments of the particular States, its adversaries would have some ground for their objection; though it would not be difficult to show that if they were abolished the general government would be compelled, by the principle of self-preservation to reinstate them in their proper jurisdiction.

A second observation to be made is that the immediate object of the federal Constitution is to secure the union of the thirteen primitive States, which we know to be practicable; and to add to them such other States as may arise in their own bosoms, or in their neighborhoods, which we cannot doubt to be equally practicable. The arrangements that may be necessary for those angles and fractions of our territory which lie on our northwestern frontier must be left to those whom further discoveries and experience will render more equal

to the task.

Let it be remarked, in the third place, that the intercourse throughout the Union will be facilitated by new improvements. Roads will everywhere be shortened and kept in better order; accommodations for travelers will be multiplied and meliorated; an interior navigation on our eastern side will be opened throughout, or nearly throughout, the whole extent of the thirteen States. The communication between the Western and Atlantic districts, and between different parts of each, will be rendered more and more easy by those numerous canals with which the beneficence of nature has intersected our country, and which art finds it so little difficult to connect and complete.

A fourth and still more important consideration is that as almost every State will on one side or other be a frontier, and will thus find, in regard to its safety, an inducement to make some sacrifices for the sake of the general protection; so the States which lie at the greatest distance from the heart of the Union, and which, of course, may partake least of the ordinary circulation of its benefits, will be at the same time immediately contiguous to foreign nations, and will consequently stand, on particular occasions, in greatest need of its strength and resources. It may be inconvenient for Georgia, or the States forming our western or northeastern borders, to send their representatives to the seat of government; but they would find it more so to struggle alone against an invading enemy, or even to support alone the whole expense of those precautions which may be dictated by the neighborhood of continual danger. If they should derive less benefit, therefore, from the Union in some respects than the less distant States, they will derive greater benefit from it in other respects, and thus the proper equilibrium will be maintained throughout.

I submit to you, my fellow-citizens, these considerations, in full

confidence that the good sense which has so often marked your decisions will allow them their due weight and effect; and that you will never suffer difficulties, however formidable in appearance or however fashionable the error on which they may be founded, to drive you into the gloomy and perilous scene into which the advocates for disunion would conduct you. Hearken not to the unnatural voice which tells you that the people of America, knit together as they are by so many cords of affection, can no longer live together as members of the same family; can no longer continue the mutual guardians of their mutual happiness; can no longer be fellow-citizens of one great, respectable, and flourishing empire. Hearken not to the voice which petulantly tells you that the form of government recommended for your adoption is a novelty in the political world; that it has never yet had a place in the theories of the wildest projectors; that it rashly attempts what it is impossible to accomplish. No, my countrymen, shut your ears against this unhallowed language. Shut your hearts against the poison which it conveys; the kindred blood which flows in the veins of American citizens, the mingled blood which they have shed in defense of their sacred rights, consecrate their Union and excite horror at the idea of their becoming aliens, rivals, enemies. And if novelties are to be shunned, believe me, the most alarming of all novelties, the most wild of all projects, the most rash of all attempts, is that of rendering us in pieces, in order to preserve our liberties and promote our happiness. But why is the experiment of an extended republic to be rejected, merely because it may comprise what is new? Is it not the glory of the people of America that, whilst they have paid a decent regard to the opinions of former times and other nations, they have not suffered a blind veneration for antiquity, for custom, or for names, to overrule the suggestions of their own good sense, the knowledge of their own situation, and the lessons of their own experience? To this manly spirit, posterity will be indebted for the possession, and the world for the example, of the numerous innovations displayed on the American theatre in favor of private

rights and public happiness. Had no important step been taken by the leaders of the Revolution for which a precedent could not be discovered, no government established of which an exact model did not present itself, the people of the United States might at this moment have been numbered among the melancholy victims of misguided councils, must at best have been laboring under the weight of some of those forms which have crushed the liberties of the rest of mankind. Happily for America, happily we trust for the whole human race, they pursued a new and more noble course. They accomplished a revolution which has no parallel in the annals of human society. They reared the fabrics of governments which have no model on the face of the globe. They formed the design of a great Confederacy, which it is incumbent on their successors to improve and perpetuate. If their works betray imperfections, we wonder at the fewness of them. If they erred most in the structure of the Union, this was the work most difficult to be executed; this is the work which has been new modelled by the act of your convention, and it is that act on which you are now to deliberate and to decide.

PUBLIUS

FEDERALIST No. 15 The Insufficiency of the Present Confederation to Preserve the Union

**For the Independent Journal.
Saturday, December 1, 1787
Hamilton**

To the People of the State of New York:

IN THE course of the preceding papers I have endeavored, my fellow-citizens, to place before you in a clear and convincing light the importance of Union to your political safety and happiness. I have unfolded to you a complication of dangers to which you would be exposed, should you permit that sacred knot which binds the people of America together to be severed or dissolved by ambition or by avarice, by jealousy or by misrepresentation. In the sequel of the inquiry through which I propose to accompany you, the truths intended to be inculcated will receive further confirmation from facts and arguments hitherto unnoticed. If the road over which you will still have to pass should in some places appear to you tedious or irksome, you will recollect that you are in quest of information on a subject the most momentous which can engage the attention of a free people, that the field through which you have to travel is in itself spacious, and that the difficulties of the journey have been unnecessarily increased by the mazes with which sophistry has beset the way. It will be my aim to remove the obstacles to your progress in as compendious a

manner as it can be done, without sacrificing utility to despatch.

In pursuance of the plan which I have laid down for the discussion of the subject, the point next in order to be examined is the “insufficiency of the present Confederation to the preservation of the Union.” It may perhaps be asked what need there is of reasoning or proof to illustrate a position which is not either controverted or doubted, to which the understandings and feelings of all classes of men assent, and which in substance is admitted by the opponents as well as by the friends of the new Constitution. It must in truth be acknowledged that, however these may differ in other respects, they in general appear to harmonize in this sentiment, at least, that there are material imperfections in our national system and that something is necessary to be done to rescue us from impending anarchy. The facts that support this opinion are no longer objects of speculation. They have forced themselves upon the sensibility of the people at large, and have at length extorted from those, whose mistaken policy has had the principal share in precipitating the extremity at which we are arrived, a reluctant confession of the reality of those defects in the scheme of our federal government which have been long pointed out and regretted by the intelligent friends of the Union.

We may indeed with propriety be said to have reached almost the last stage of national humiliation. There is scarcely anything that can wound the pride or degrade the character of an independent nation which we do not experience. Are there engagements to the performance of which we are held by every tie respectable among men? These are the subjects of constant and unblushing violation. Do we owe debts to foreigners and to our own citizens contracted in a time of imminent peril for the preservation of our political existence? These remain without any proper or satisfactory provision for their discharge. Have we valuable territories and important posts in the possession of a foreign power which, by express stipulations, ought

long since to have been surrendered? These are still retained to the prejudice of our interests, not less than of our rights. Are we in a condition to resent or to repel the aggression? We have neither troops, nor treasury, nor government.^[1] Are we even in a condition to remonstrate with dignity? The just imputations on our own faith in respect to the same treaty ought first to be removed. Are we entitled by nature and compact to a free participation in the navigation of the Mississippi? Spain excludes us from it. Is public credit an indispensable resource in time of public danger? We seem to have abandoned its cause as desperate and irretrievable. Is commerce of importance to national wealth? Ours is at the lowest point of declension. Is respectability in the eyes of foreign powers a safeguard against foreign encroachments? The imbecility of our government even forbids them to treat with us. Our ambassadors abroad are the mere pageants of mimic sovereignty. Is a violent and unnatural decrease in the value of land a symptom of national distress? The price of improved land in most parts of the country is much lower than can be accounted for by the quantity of waste land at market, and can only be fully explained by that want of private and public confidence, which are so alarmingly prevalent among all ranks and which have a direct tendency to depreciate property of every kind. Is private credit the friend and patron of industry? That most useful kind which relates to borrowing and lending is reduced within the narrowest limits, and this still more from an opinion of insecurity than from the scarcity of money. To shorten an enumeration of particulars which can afford neither pleasure nor instruction, it may in general be demanded, what indication is there of national disorder, poverty, and insignificance that could befall a community so peculiarly blessed with natural advantages as we are, which does not form a part of the dark catalogue of our public misfortunes?

This is the melancholy situation to which we have been brought by those very maxims and councils which would now deter us from

adopting the proposed Constitution; and which, not content with having conducted us to the brink of a precipice, seem resolved to plunge us into the abyss that awaits us below. Here, my countrymen, impelled by every motive that ought to influence an enlightened people, let us make a firm stand for our safety, our tranquillity, our dignity, our reputation. Let us at last break the fatal charm which has too long seduced us from the paths of felicity and prosperity.

It is true, as has been before observed, that facts too stubborn to be resisted have produced a species of general assent to the abstract proposition that there exist material defects in our national system; but the usefulness of the concession on the part of the old adversaries of federal measures is destroyed by a strenuous opposition to a remedy, upon the only principles that can give it a chance of success. While they admit that the government of the United States is destitute of energy, they contend against conferring upon it those powers which are requisite to supply that energy. They seem still to aim at things repugnant and irreconcilable; at an augmentation of federal authority without a diminution of State authority; at sovereignty in the Union and complete independence in the members. They still, in fine, seem to cherish with blind devotion the political monster of an imperium in imperio. This renders a full display of the principal defects of the Confederation necessary in order to show that the evils we experience do not proceed from minute or partial imperfections, but from fundamental errors in the structure of the building, which cannot be amended otherwise than by an alteration in the first principles and main pillars of the fabric.

The great and radical vice in the construction of the existing Confederation is in the principle of LEGISLATION for STATES or GOVERNMENTS, in their CORPORATE or COLLECTIVE CAPACITIES, and as contradistinguished from the INDIVIDUALS of whom they consist.^[2] Though this principle does not run through all the powers

delegated to the Union, yet it pervades and governs those on which the efficacy of the rest depends. Except as to the rule of appointment, the United States has an indefinite discretion to make requisitions for men and money; but they have no authority to raise either, by regulations extending to the individual citizens of America. The consequence of this is that though in theory their resolutions concerning those objects are laws constitutionally binding on the members of the Union, yet in practice they are mere recommendations which the States observe or disregard at their option.

It is a singular instance of the capriciousness of the human mind that after all the admonitions we have had from experience on this head, there should still be found men who object to the new Constitution for deviating from a principle which has been found the bane of the old and which is in itself evidently incompatible with the idea of GOVERNMENT; a principle, in short, which, if it is to be executed at all, must substitute the violent and sanguinary agency of the sword to the mild influence of the magistracy.

There is nothing absurd or impracticable in the idea of a league or alliance between independent nations for certain defined purposes precisely stated in a treaty regulating all the details of time, place, circumstance, and quantity, leaving nothing to future discretion; and depending for its execution on the good faith of the parties. Compacts of this kind exist among all civilized nations, subject to the usual vicissitudes of peace and war, of observance and nonobservance, as the interests or passions of the contracting powers dictate. In the early part of the present century there was an epidemical rage in Europe for this species of compacts, from which the politicians of the times fondly hoped for benefits which were never realized. With a view to establishing the equilibrium of power and the peace of that part of the world, all the resources of negotiation were exhausted, and triple and quadruple alliances were formed; but they were scarcely formed

before they were broken, giving an instructive but afflicting lesson to mankind how little dependence is to be placed on treaties which have no other sanction than the obligations of good faith, and which oppose general considerations of peace and justice to the impulse of any immediate interest or passion.

If the particular States in this country are disposed to stand in a similar relation to each other, and to drop the project of a general DISCRETIONARY SUPERINTENDENCE, the scheme would indeed be pernicious and would entail upon us all the mischiefs which have been enumerated under the first head; but it would have the merit of being, at least, consistent and practicable. Abandoning all views towards a confederate government, this would bring us to a simple alliance offensive and defensive; and would place us in a situation to be alternate friends and enemies of each other, as our mutual jealousies and rivalships, nourished by the intrigues of foreign nations, should prescribe to us.

But if we are unwilling to be placed in this perilous situation; if we still will adhere to the design of a national government, or, which is the same thing, of a superintending power under the direction of a common council, we must resolve to incorporate into our plan those ingredients which may be considered as forming the characteristic difference between a league and a government; we must extend the authority of the Union to the persons of the citizens—the only proper objects of government.

Government implies the power of making laws. It is essential to the idea of a law, that it be attended with a sanction; or, in other words, a penalty or punishment for disobedience. If there be no penalty annexed to disobedience, the resolutions or commands which pretend to be laws will, in fact, amount to nothing more than advice or recommendation. This penalty, whatever it may be, can only be inflicted in two ways: by the agency of the courts and ministers of

justice, or by military force; by the COERCION of the magistracy, or by the COERCION of arms. The first kind can evidently apply only to men; the last kind must of necessity be employed against bodies politic, or communities, or States. It is evident that there is no process of a court by which the observance of the laws can in the last resort be enforced. Sentences may be denounced against them for violations of their duty; but these sentences can only be carried into execution by the sword. In an association where the general authority is confined to the collective bodies of the communities that compose it, every breach of the laws must involve a state of war; and military execution must become the only instrument of civil obedience. Such a state of things can certainly not deserve the name of government, nor would any prudent man choose to commit his happiness to it.

There was a time when we were told that breaches by the States of the regulations of the federal authority were not to be expected; that a sense of common interest would preside over the conduct of the respective members, and would beget a full compliance with all the constitutional requisitions of the Union. This language, at the present day, would appear as wild as a great part of what we now hear from the same quarter will be thought, when we shall have received further lessons from that best oracle of wisdom, experience. It at all times betrayed an ignorance of the true springs by which human conduct is actuated, and belied the original inducements to the establishment of civil power. Why has government been instituted at all? Because the passions of men will not conform to the dictates of reason and justice without constraint. Has it been found that bodies of men act with more rectitude or greater disinterestedness than individuals? The contrary of this has been inferred by all accurate observers of the conduct of mankind; and the inference is founded upon obvious reasons. Regard to reputation has a less active influence when the infamy of a bad action is to be divided among a number than when it is to fall singly upon one. A spirit of faction, which is apt to mingle its

poison in the deliberations of all bodies of men, will often hurry the persons of whom they are composed into improprieties and excesses for which they would blush in a private capacity.

In addition to all this, there is in the nature of sovereign power an impatience of control that disposes those who are invested with the exercise of it to look with an evil eye upon all external attempts to restrain or direct its operations. From this spirit it happens that in every political association which is formed upon the principle of uniting in a common interest a number of lesser sovereignties, there will be found a kind of eccentric tendency in the subordinate or inferior orbs by the operation of which there will be a perpetual effort in each to fly off from the common centre. This tendency is not difficult to be accounted for. It has its origin in the love of power. Power controlled or abridged is almost always the rival and enemy of that power by which it is controlled or abridged. This simple proposition will teach us how little reason there is to expect that the persons intrusted with the administration of the affairs of the particular members of a confederacy will at all times be ready with perfect good-humor, and an unbiased regard to the public weal to execute the resolutions or decrees of the general authority. The reverse of this results from the constitution of man.

If, therefore, the measures of the Confederacy cannot be executed without the intervention of the particular administrations, there will be little prospect of their being executed at all. The rulers of the respective members, whether they have a constitutional right to do it or not, will undertake to judge of the propriety of the measures themselves. They will consider the conformity of the thing proposed or required to their immediate interests or aims; the momentary conveniences or inconveniences that would attend its adoption. All this will be done; and in a spirit of interested and suspicious scrutiny, without that knowledge of national circumstances and reasons of

state, which is essential to a right judgment, and with that strong predilection in favor of local objects, which can hardly fail to mislead the decision. The same process must be repeated in every member of which the body is constituted; and the execution of the plans, framed by the councils of the whole, will always fluctuate on the discretion of the ill-informed and prejudiced opinion of every part. Those who have been conversant in the proceedings of popular assemblies; who have seen how difficult it often is, where there is no exterior pressure of circumstances, to bring them to harmonious resolutions on important points, will readily conceive how impossible it must be to induce a number of such assemblies, deliberating at a distance from each other, at different times, and under different impressions, long to co-operate in the same views and pursuits.

In our case the concurrence of thirteen distinct sovereign wills is requisite under the Confederation to the complete execution of every important measure that proceeds from the Union.^[3] It has happened as was to have been foreseen. The measures of the Union have not been executed; and the delinquencies of the States have step by step matured themselves to an extreme, which has, at length, arrested all the wheels of the national government and brought them to an awful stand. Congress at this time scarcely possess the means of keeping up the forms of administration, till the States can have time to agree upon a more substantial substitute for the present shadow of a federal government. Things did not come to this desperate extremity at once. The causes which have been specified produced at first only unequal and disproportionate degrees of compliance with the requisitions of the Union. The greater deficiencies of some States furnished the pretext of example and the temptation of interest to the complying, or to the least delinquent States. Why should we do more in proportion than those who are embarked with us in the same political voyage? Why should we consent to bear more than our proper share of the common burden? These were suggestions which human selfishness

could not withstand, and which even speculative men, who looked forward to remote consequences, could not without hesitation combat. Each State yielding to the persuasive voice of immediate interest or convenience has successively withdrawn its support, till the frail and tottering edifice seems ready to fall upon our heads and to crush us beneath its ruins.

PUBLIUS

注释

[1] “I mean for the Union.”

[2] 这段话点出了第15篇至第20篇论证的核心观点，即现存邦联政府结构上的主要弊病在于立法原则是以各州或各州政府为对象，它的效力仅仅及于州集体，而不能达到组成州的个人。

[3] 执行邦联政府的每个举措，都要13个州的一致同意，这导致的后果是邦联的措施不能得到执行。一方面是由于任意的缺席，许多州都出席国会的情况并不常见，而根本原因在于各州利益不一致，都努力追求本州利益的最大化。历史上很少有这样的政府——也未曾有过这样的时期——如此轻视行政和司法的功能。事实上，在当时的美国，各州的宪法都规定了行政和法院系统，只有全国政府缺乏这些基本的结构。

FEDERALIST No. 16 The Same Subject Continued (The Insufficiency of the Present Confederation to Preserve the Union)

**From the New York Packet.
Tuesday, December 4, 1787
Hamilton**

To the People of the State of New York:

THE tendency of the principle of legislation for States, or communities, in their political capacities, as it has been exemplified by the experiment we have made of it, is equally attested by the events which have befallen all other governments of the confederate kind, of which we have any account in exact proportion to its prevalence in those systems. The confirmations of this fact will be worthy of a distinct and particular examination. I shall content myself with barely observing here that of all the confederacies of antiquity which history has handed down to us, the Lycian and Achaean leagues, as far as there remain vestiges of them, appear to have been most free from the fetters of that mistaken principle, and were accordingly those which have best deserved and have most liberally received the applauding suffrages of political writers.

This exceptionable principle may as truly as emphatically be styled the parent of anarchy: It has been seen that delinquencies in the

members of the Union are its natural and necessary offspring; and that whenever they happen, the only constitutional remedy is force, and the immediate effect of the use of it, civil war.

It remains to inquire how far so odious an engine of government in its application to us would even be capable of answering its end. If there should not be a large army constantly at the disposal of the national government it would either not be able to employ force at all, or, when this could be done, it would amount to a war between different parts of the Confederacy concerning the infractions of a league, in which the strongest combination would be most likely to prevail, whether it consisted of those who supported or of those who resisted the general authority. It would rarely happen that the delinquency to be redressed would be confined to a single member, and if there were more than one who had neglected their duty, similarity of situation would induce them to unite for common defense. Independent of this motive of sympathy, if a large and influential State should happen to be the aggressing member, it would commonly have weight enough with its neighbors to win over some of them as associates to its cause. Specious arguments of danger to the common liberty could easily be contrived; plausible excuses for the deficiencies of the party could without difficulty be invented to alarm the apprehensions, inflame the passions, and conciliate the good-will even of those States which were not chargeable with any violation or omission of duty. This would be the more likely to take place, as the delinquencies of the larger members might be expected sometimes to proceed from an ambitious premeditation in their rulers, with a view to getting rid of all external control upon their designs of personal aggrandizement; the better to effect which it is presumable they would tamper beforehand with leading individuals in the adjacent States. If associates could not be found at home, recourse would be had to the aid of foreign powers, who would seldom be disinclined to encouraging the dissensions of a Confederacy from the firm union of

which they had so much to fear. When the sword is once drawn, the passions of men observe no bounds of moderation. The suggestions of wounded pride, the instigations of irritated resentment, would be apt to carry the States against which the arms of the Union were exerted to any extremes necessary to avenge the affront or to avoid the disgrace of submission. The first war of this kind would probably terminate in a dissolution of the Union.

This may be considered as the violent death of the Confederacy. Its more natural death is what we now seem to be on the point of experiencing, if the federal system be not speedily renovated in a more substantial form. It is not probable, considering the genius of this country, that the complying States would often be inclined to support the authority of the Union by engaging in a war against the noncomplying States. They would always be more ready to pursue the milder course of putting themselves upon an equal footing with the delinquent members by an imitation of their example. And the guilt of all would thus become the security of all. Our past experience has exhibited the operation of this spirit in its full light. There would, in fact, be an insuperable difficulty in ascertaining when force could with propriety be employed. In the article of pecuniary contribution, which would be the most usual source of delinquency, it would often be impossible to decide whether it had proceeded from disinclination or inability. The pretense of the latter would always be at hand. And the case must be very flagrant in which its fallacy could be detected with sufficient certainty to justify the harsh expedient of compulsion. It is easy to see that this problem alone, as often as it should occur, would open a wide field to the majority that happened to prevail in the national council for the exercise of factious views, of partiality, and of oppression.

It seems to require no pains to prove that the States ought not to prefer a national Constitution which could only be kept in motion by

the instrumentality of a large army continually on foot to execute the ordinary requisitions or decrees of the government. And yet this is the plain alternative involved by those who wish to deny it the power of extending its operations to individuals. Such a scheme, if practicable at all, would instantly degenerate into a military despotism; but it will be found in every light impracticable. The resources of the Union would not be equal to the maintenance of an army considerable enough to confine the larger States within the limits of their duty; nor would the means ever be furnished of forming such an army in the first instance. Whoever considers the populousness and strength of several of these States singly at the present juncture, and looks forward to what they will become even at the distance of half a century, will at once dismiss as idle and visionary any scheme which aims at regulating their movements by laws to operate upon them in their collective capacities and to be executed by a coercion applicable to them in the same capacities. A project of this kind is little less romantic than the monster-taming spirit, attributed to the fabulous heroes and demigods of antiquity.

Even in those confederacies which have been composed of members smaller than many of our counties, the principle of legislation for sovereign States supported by military coercion has never been found effectual. It has rarely been attempted to be employed, but against the weaker members; and in most instances attempts to coerce the refractory and disobedient have been the signals of bloody wars in which one half of the confederacy has displayed its banners against the other half.

The result of these observations to an intelligent mind must be clearly this, that if it be possible at any rate to construct a federal government capable of regulating the common concerns and preserving the general tranquillity, it must be founded, as to the objects committed to its care, upon the reverse of the principle

contended for by the opponents of the proposed Constitution. It must carry the agency to the persons of the citizens. It must stand in need of no intermediate legislations, but must itself be empowered to employ the arm of the ordinary magistrate to execute its own resolutions. The majesty of the national authority must be manifested through the medium of the courts of justice. The government of the Union, like that of each State, must be able to address itself immediately to the hopes and fears of individuals; and to attract to its support those passions which have the strongest influence upon the human heart. It must, in short, possess all the means, and have a right to resort to all the methods, of executing the powers with which it is intrusted, that are possessed and exercised by the government of the particular States.

To this reasoning it may perhaps be objected that if any State should be disaffected to the authority of the Union, it could at any time obstruct the execution of its laws, and bring the matter to the same issue of force, with the necessity of which the opposite scheme is reproached.

The plausibility of this objection will vanish the moment we advert to the essential difference between a mere NONCOMPLIANCE and a DIRECT and ACTIVE RESISTANCE. If the interposition of the State legislatures be necessary to give effect to a measure of the Union, they have only NOT TO ACT, or TO ACT EVASIVELY, and the measure is defeated. This neglect of duty may be disguised under affected but unsubstantial provisions so as not to appear, and of course not to excite any alarm in the people for the safety of the Constitution. The State leaders may even make a merit of their surreptitious invasions of it on the ground of some temporary convenience, exemption, or advantage.

But if the execution of the laws of the national government should not require the intervention of the State legislatures, if they

were to pass into immediate operation upon the citizens themselves, the particular governments could not interrupt their progress without an open and violent exertion of an unconstitutional power. No omissions nor evasions would answer the end. They would be obliged to act, and in such a manner as would leave no doubt that they had encroached on the national rights. An experiment of this nature would always be hazardous in the face of a constitution in any degree competent to its own defense, and of a people enlightened enough to distinguish between a legal exercise and an illegal usurpation of authority. The success of it would require not merely a factious majority in the legislature, but the concurrence of the courts of justice and of the body of the people. If the judges were not embarked in a conspiracy with the legislature, they would pronounce the resolutions of such a majority to be contrary to the supreme law of the land, unconstitutional, and void. If the people were not tainted with the spirit of their State representatives, they, as the natural guardians of the Constitution, would throw their weight into the national scale and give it a decided preponderancy in the contest. Attempts of this kind would not often be made with levity or rashness, because they could seldom be made without danger to the authors, unless in cases of a tyrannical exercise of the federal authority.

If opposition to the national government should arise from the disorderly conduct of refractory or seditious individuals, it could be overcome by the same means which are daily employed against the same evil under the State governments. The magistracy, being equally the ministers of the law of the land from whatever source it might emanate, would doubtless be as ready to guard the national as the local regulations from the inroads of private licentiousness. As to those partial commotions and insurrections which sometimes disquiet society from the intrigues of an inconsiderable faction, or from sudden or occasional illhumors that do not infect the great body of the community, the general government could command more extensive

resources for the suppression of disturbances of that kind than would be in the power of any single member. And as to those mortal feuds which in certain conjunctures spread a conflagration through a whole nation, or through a very large proportion of it, proceeding either from weighty causes of discontent given by the government or from the contagion of some violent popular paroxysm, they do not fall within any ordinary rules of calculation. When they happen, they commonly amount to revolutions and dismemberments of empire. No form of government can always either avoid or control them. It is in vain to hope to guard against events too mighty for human foresight or precaution, and it would be idle to object to a government because it could not perform impossibilities.

PUBLIUS

FEDERALIST No. 17 The Same Subject Continued (The Insufficiency of the Present Confederation to Preserve the Union)

**For the Independent Journal.
Wednesday, December 5, 1787
Hamilton**

To the People of the State of New York:

AN OBJECTION of a nature different from that which has been stated and answered in my last address may perhaps be likewise urged against the principle of legislation for the individual citizens of America. It may be said that it would tend to render the government of the Union too powerful, and to enable it to absorb those residuary authorities, which it might be judged proper to leave with the States for local purposes. Allowing the utmost latitude to the love of power which any reasonable man can require, I confess I am at a loss to discover what temptation the persons intrusted with the administration of the general government could ever feel to divest the States of the authorities of that description. The regulation of the mere domestic police of a State appears to me to hold out slender allurements to ambition. Commerce, finance, negotiation, and war seem to comprehend all the objects which have charms for minds governed by that passion; and all the powers necessary to those objects ought in the first instance to be lodged in the national

depository. The administration of private justice between the citizens of the same State, the supervision of agriculture and of other concerns of a similar nature, all those things, in short, which are proper to be provided for by local legislation, can never be desirable cares of a general jurisdiction. It is therefore improbable that there should exist a disposition in the federal councils to usurp the powers with which they are connected; because the attempt to exercise those powers would be as troublesome as it would be nugatory; and the possession of them, for that reason, would contribute nothing to the dignity, to the importance, or to the splendor of the national government.

But let it be admitted, for argument's sake, that mere wantonness and lust of domination would be sufficient to beget that disposition; still it may be safely affirmed that the sense of the constituent body of the national representatives, or, in other words, the people of the several States, would control the indulgence of so extravagant an appetite. It will always be far more easy for the State governments to encroach upon the national authorities than for the national government to encroach upon the State authorities. The proof of this proposition turns upon the greater degree of influence which the State governments, if they administer their affairs with uprightness and prudence, will generally possess over the people; a circumstance which at the same time teaches us that there is an inherent and intrinsic weakness in all federal constitutions; and that too much pains cannot be taken in their organization, to give them all the force which is compatible with the principles of liberty.

The superiority of influence in favor of the particular governments would result partly from the diffusive construction of the national government, but chiefly from the nature of the objects to which the attention of the State administrations would be directed.

It is a known fact in human nature that its affections are commonly weak in proportion to the distance or diffusiveness of the

object. Upon the same principle that a man is more attached to his family than to his neighborhood, to his neighborhood than to the community at large, the people of each State would be apt to feel a stronger bias towards their local governments than towards the government of the Union; unless the force of that principle should be destroyed by a much better administration of the latter.

This strong propensity of the human heart would find powerful auxiliaries in the objects of State regulation.

The variety of more minute interests, which will necessarily fall under the superintendence of the local administrations and which will form so many rivulets of influence, running through every part of the society, cannot be particularized without involving a detail too tedious and uninteresting to compensate for the instruction it might afford.

There is one transcendent advantage belonging to the province of the State governments, which alone suffices to place the matter in a clear and satisfactory light—I mean the ordinary administration of criminal and civil justice. This, of all others, is the most powerful, most universal, and most attractive source of popular obedience and attachment. It is that which, being the immediate and visible guardian of life and property, having its benefits and its terrors in constant activity before the public eye, regulating all those personal interests and familiar concerns to which the sensibility of individuals is more immediately awake, contributes, more than any other circumstance, to impressing upon the minds of the people affection, esteem, and reverence towards the government. This great cement of society, which will diffuse itself almost wholly through the channels of the particular governments, independent of all other causes of influence, would insure them so decided an empire over their respective citizens as to render them at all times a complete counterpoise, and, not unfrequently, dangerous rivals to the power of the Union.

The operations of the national government, on the other hand, falling less immediately under the observation of the mass of the citizens, the benefits derived from it will chiefly be perceived and attended to by speculative men. Relating to more general interests, they will be less apt to come home to the feelings of the people; and, in proportion, less likely to inspire a habitual sense of obligation and an active sentiment of attachment.

The reasoning on this head has been abundantly exemplified by the experience of all federal constitutions with which we are acquainted, and of all others which have borne the least analogy to them.

Though the ancient feudal systems were not, strictly speaking, confederacies, yet they partook of the nature of that species of association. There was a common head, chieftain, or sovereign, whose authority extended over the whole nation; and a number of subordinate vassals, or feudatories, who had large portions of land allotted to them, and numerous trains of inferior vassals or retainers, who occupied and cultivated that land upon the tenure of fealty or obedience to the persons of whom they held it. Each principal vassal was a kind of sovereign within his particular demesnes. The consequences of this situation were a continual opposition to authority of the sovereign and frequent wars between the great barons or chief feudatories themselves. The power of the head of the nation was commonly too weak, either to preserve the public peace or to protect the people against the oppressions of their immediate lords. This period of European affairs is emphatically styled by historians the times of feudal anarchy.

When the sovereign happened to be a man of vigorous and warlike temper and of superior abilities, he would acquire a personal weight and influence, which answered, for the time the purpose of a more regular authority. But in general the power of the barons

triumphed over that of the prince; and in many instances his dominion was entirely thrown off, and the great fiefs were erected into independent principalities or States. In those instances in which the monarch finally prevailed over his vassals, his success was chiefly owing to the tyranny of those vassals over their dependents. The barons, or nobles, equally the enemies of the sovereign and the oppressors of the common people, were dreaded and detested by both; till mutual danger and mutual interest effected a union between them fatal to the power of the aristocracy. Had the nobles, by a conduct of clemency and justice, preserved the fidelity and devotion of their retainers and followers, the contests between them and the prince must almost always have ended in their favor, and in the abridgment or subversion of the royal authority.

This is not an assertion founded merely in speculation or conjecture. Among other illustrations of its truth which might be cited, Scotland will furnish a cogent example. The spirit of clanship which was at an early day introduced into that kingdom, uniting the nobles and their dependants by ties equivalent to those of kindred, rendered the aristocracy a constant overmatch for the power of the monarch, till the incorporation with England subdued its fierce and ungovernable spirit and reduced it within those rules of subordination which a more rational and more energetic system of civil polity had previously established in the latter kingdom.

The separate governments in a confederacy may aptly be compared with the feudal baronies; with this advantage in their favor: that from the reasons already explained they will generally possess the confidence and good will of the people, and with so important a support will be able effectually to oppose all encroachments of the national government. It will be well if they are not able to counteract its legitimate and necessary authority. The points of similitude consist in the rivalry of power applicable to both; and in the

CONCENTRATION of large portions of the strength of the community into particular DEPOSITORIES, in one case at the disposal of individuals, in the other case at the disposal of political bodies.

A concise review of the events that have attended confederate governments will further illustrate this important doctrine; an inattention to which has been the great source of our political mistakes and has given our jealousy a direction to the wrong side. This review shall form the subject of some ensuing papers.

PUBLIUS

FEDERALIST No. 18 The Same Subject Continued (The Insufficiency of the Present Confederation to Preserve the Union)

**From the New York Packet.
Friday, December 7, 1787
Madison with Hamilton**

To the People of the State of New York:

AMONG the confederacies of antiquity the most considerable was that of the Grecian republics, associated under the Amphictyonic council. From the best accounts transmitted of this celebrated institution it bore a very instructive analogy to the present Confederation of the American States.

The members retained the character of independent and sovereign states and had equal votes in the federal council. This council had a general authority to propose and resolve whatever it judged necessary for the common welfare of Greece; to declare and carry on war; to decide in the last resort all controversies between the members; to fine the aggressing party; to employ the whole force of the confederacy against the disobedient; to admit new members. The Amphictyons were the guardians of religion, and of the immense riches belonging to the temple of Delphos, where they had the right of jurisdiction in controversies between the inhabitants and those who

came to consult the oracle. As a further provision for the efficacy of the federal powers, they took an oath mutually to defend and protect the united cities, to punish the violators of this oath, and to inflict vengeance on sacrilegious despoilers of the temple.

In theory and upon paper, this apparatus of powers seems amply sufficient for all general purposes. In several material instances they exceed the powers enumerated in the Articles of Confederation. The Amphictyons had in their hands the superstition of the times, one of the principal engines by which government was then maintained; they had a declared authority to use coercion against refractory cities, and were bound by oath to exert this authority on the necessary occasions.

Very different, nevertheless, was the experiment from the theory. The powers, like those of the present Congress, were administered by deputies appointed wholly by the cities in their political capacities; and exercised over them in the same capacities. Hence the weakness, the disorders, and finally the destruction of the confederacy. The more powerful members, instead of being kept in awe and subordination, tyrannized successively over all the rest. Athens, as we learn from Demosthenes, was the arbiter of Greece seventy-three years. The Lacedaemonians next governed it twenty-nine years; at a subsequent period, after the battle of Leuctra, the Thebans had their turn of domination.

It happened but too often, according to Plutarch, that the deputies of the strongest cities awed and corrupted those of the weaker; and that judgment went in favor of the most powerful party.

Even in the midst of defensive and dangerous wars with Persia and Macedon, the members never acted in concert, and were, more or fewer of them, eternally the dupes or the hirelings of the common enemy. The intervals of foreign war were filled up by domestic vicissitudes, convulsions, and carnage.

After the conclusion of the war with Xerxes, it appears that the Lacedaemonians required that a number of the cities should be turned out of the confederacy for the unfaithful part they had acted. The Athenians, finding that the Lacedaemonians would lose fewer partisans by such a measure than themselves and would become masters of the public deliberations, vigorously opposed and defeated the attempt. This piece of history proves at once the inefficiency of the union, the ambition and jealousy of its most powerful members, and the dependent and degraded condition of the rest. The smaller members, though entitled by the theory of their system to revolve in equal pride and majesty around the common center, had become, in fact, satellites of the orbs of primary magnitude.

Had the Greeks, says the Abbe Milot, been as wise as they were courageous, they would have been admonished by experience of the necessity of closer union, and would have availed themselves of the peace which followed their success against the Persian arms to establish such a reformation. Instead of this obvious policy, Athens and Sparta, inflated with the victories and the glory they had acquired, became first rivals and then enemies; and did each other infinitely more mischief than they had suffered from Xerxes. Their mutual jealousies, fears, hatreds, and injuries ended in the celebrated Peloponnesian war; which itself ended in the ruin and slavery of the Athenians who had begun it.

As a weak government when not at war is ever agitated by internal dissensions, so these never fail to bring on fresh calamities from abroad. The Phocians having ploughed up some consecrated ground belonging to the temple of Apollo, the Amphictyonic council, according to the superstition of the age, imposed a fine on the sacrilegious offenders. The Phocians, being abetted by Athens and Sparta, refused to submit to the decree. The Thebans, with others of the cities, undertook to maintain the authority of the Amphictyons

and to avenge the violated god. The latter, being the weaker party, invited the assistance of Philip of Macedon, who had secretly fostered the contest. Philip gladly seized the opportunity of executing the designs he had long planned against the liberties of Greece. By his intrigues and bribes he won over to his interests the popular leaders of several cities; by their influence and votes, gained admission into the Amphictyonic council; and by his arts and his arms, made himself master of the confederacy.

Such were the consequences of the fallacious principle on which this interesting establishment was founded. Had Greece, says a judicious observer on her fate, been united by a stricter confederation and persevered in her union, she would never have worn the chains of Macedon; and might have proved a barrier to the vast projects of Rome.

The Achaean league, as it is called, was another society of Grecian republics which supplies us with valuable instruction.

The Union here was far more intimate, and its organization much wiser than in the preceding instance. It will accordingly appear that though not exempt from a similar catastrophe, it by no means equally deserved it.

The cities composing this league retained their municipal jurisdiction, appointed their own officers, and enjoyed a perfect equality. The senate, in which they were represented, had the sole and exclusive right of peace and war; of sending and receiving ambassadors; of entering into treaties and alliances; of appointing a chief magistrate or praetor, as he was called, who commanded their armies and who, with the advice and consent of ten of the senators, not only administered the government in the recess of the senate, but had a great share in its deliberations, when assembled. According to the primitive constitution, there were two praetors associated in the

administration; but on trial a single one was preferred.

It appears that the cities had all the same laws and customs, the same weights and measures, and the same money. But how far this effect proceeded from the authority of the federal council is left in uncertainty. It is said only that the cities were in a manner compelled to receive the same laws and usages. When Lacedaemon was brought into the league by Philopoemen, it was attended with an abolition of the institutions and laws of Lycurgus, and an adoption of those of the Achaeans. The Amphictyonic confederacies, of which she had been a member, left her in the full exercise of her government and her legislation. This circumstance alone proves a very material difference in the genius of the two systems.

It is much to be regretted that such imperfect monuments remain of this curious political fabric. Could its interior structure and regular operation be ascertained, it is probable that more light would be thrown by it on the science of federal government than by any of the like experiments with which we are acquainted.

One important fact seems to be witnessed by all the historians who take notice of Achaean affairs. It is that as well after the renovation of the league by Aratus as before its dissolution by the arts of Macedon, there was infinitely more of moderation and justice in the administration of its government, and less of violence and sedition in the people, than were to be found in any of the cities exercising singly all the prerogatives of sovereignty. The Abbé Mably, in his observations on Greece, says that the popular government, which was so tempestuous elsewhere, caused no disorders in the members of the Achaean republic, because it was there tempered by the general authority and laws of the confederacy.

We are not to conclude too hastily, however, that faction did not, in a certain degree, agitate the particular cities; much less than a due

subordination and harmony reigned in the general system. The contrary is sufficiently displayed in the vicissitudes and fate of the republic.

Whilst the Amphictyonic confederacy remained, that of the Achaeans, which comprehended the less important cities only, made little figure on the theatre of Greece. When the former became a victim to Macedon, the latter was spared by the policy of Philip and Alexander. Under the successors of these princes, however, a different policy prevailed. The arts of division were practiced among the Achaeans. Each city was seduced into a separate interest; the union was dissolved. Some of the cities fell under the tyranny of Macedonian garrisons; others under that of usurpers springing out of their own confusions. Shame and oppression ere long awakened their love of liberty. A few cities reunited. Their example was followed by others, as opportunities were found of cutting off their tyrants. The league soon embraced almost the whole Peloponnesus. Macedon saw its progress; but was hindered by internal dissensions from stopping it. All Greece caught the enthusiasm and seemed ready to unite in one confederacy, when the jealousy and envy in Sparta and Athens of the rising glory of the Achaeans threw a fatal damp on the enterprise. The dread of the Macedonian power induced the league to court the alliance of the Kings of Egypt and Syria, who, as successors of Alexander, were rivals of the king of Macedon. This policy was defeated by Cleomenes, king of Sparta, who was led by his ambition to make an unprovoked attack on his neighbors, the Achaeans, and who, as an enemy to Macedon, had interest enough with the Egyptian and Syrian princes to effect a breach of their engagements with the league. The Achaeans were now reduced to the dilemma of submitting to Cleomenes, or of supplicating the aid of Macedon, its former oppressor. The latter expedient was adopted. The contests of the Greeks always afforded a pleasing opportunity to that powerful neighbor of intermeddling in their affairs. A Macedonian army quickly

appeared. Cleomenes was vanquished. The Achaeans soon experienced, as often happens, that a victorious and powerful ally is but another name for a master. All that their most abject compliances could obtain from him was a toleration of the exercise of their laws. Philip, who was now on the throne of Macedon, soon provoked by his tyrannies fresh combinations among the Greeks. The Achaeans, though weakened by internal dissensions and by the revolt of Messene, one of its members, being joined by the Aetolians and Athenians, erected the standard of opposition. Finding themselves, though thus supported, unequal to the undertaking, they once more had recourse to the dangerous expedient of introducing the succor of foreign arms. The Romans, to whom the invitation was made, eagerly embraced it. Philip was conquered; Macedon subdued. A new crisis ensued to the league. Dissensions broke out among its members. These the Romans fostered. Callicrates and other popular leaders became mercenary instruments for inveigling their countrymen. The more effectually to nourish discord and disorder the Romans had, to the astonishment of those who confided in their sincerity, already proclaimed universal liberty^[1] throughout Greece. With the same insidious views, they now seduced the members from the league by representing to their pride the violation it committed on their sovereignty. By these arts this union, the last hope of Greece, the last hope of ancient liberty, was torn into pieces; and such imbecility and distraction introduced, that the arms of Rome found little difficulty in completing the ruin which their arts had commenced. The Achaeans were cut to pieces, and Achaia loaded with chains, under which it is groaning at this hour.

I have thought it not superfluous to give the outlines of this important portion of history, both because it teaches more than one lesson and because, as a supplement to the outlines of the Achaean constitution, it emphatically illustrates the tendency of federal bodies rather to anarchy among the members than to tyranny in the head.

注释

[1] This was but another name more specious for the independence of the members on the federal head.

FEDERALIST No. 19 The Same Subject Continued (The Insufficiency of the Present Confederation to Preserve the Union)

**For the Independent Journal.
Saturday, December 8, 1787
Madison with Hamilton**

To the People of the State of New York:

THE examples of ancient confederacies, cited in my last paper, have not exhausted the source of experimental instruction on this subject. There are existing institutions, founded on a similar principle which merit particular consideration. The first which presents itself is the Germanic body.

In the early ages of Christianity, Germany was occupied by seven distinct nations, who had no common chief. The Franks, one of the number, having conquered the Gauls, established the kingdom which has taken its name from them. In the ninth century Charlemagne, its warlike monarch, carried his victorious arms in every direction; and Germany became a part of his vast dominions. On the dismemberment which took place under his sons this part was erected into a separate and independent empire. Charlemagne and his immediate descendants possessed the reality, as well as the ensigns and dignity of imperial power. But the principal vassals, whose fiefs had become hereditary,

and who composed the national diets which Charlemagne had not abolished, gradually threw off the yoke and advanced to sovereign jurisdiction and independence. The force of imperial sovereignty was insufficient to restrain such powerful dependants, or to preserve the unity and tranquillity of the empire. The most furious private wars, accompanied with every species of calamity, were carried on between the different princes and states. The imperial authority, unable to maintain the public order, declined by degrees till it was almost extinct in the anarchy, which agitated the long interval between the death of the last emperor of the Suabian and the accession of the first emperor of the Austrian lines. In the eleventh century the emperors enjoyed full sovereignty; in the fifteenth they had little more than the symbols and decorations of power.

Out of this feudal system, which has itself many of the important features of a confederacy, has grown the federal system which constitutes the Germanic empire. Its powers are vested in a diet representing the component members of the confederacy; in the emperor, who is the executive magistrate, with a negative on the decrees of the diet; and in the imperial chamber and the aulic council, two judiciary tribunals having supreme jurisdiction in controversies which concern the empire, or which happen among its members.

The diet possesses the general power of legislating for the empire; of making war and peace; contracting alliances; assessing quotas of troops and money; constructing fortresses; regulating coin; admitting new members; and subjecting disobedient members to the ban of the empire, by which the party is degraded from his sovereign rights and his possessions forfeited. The members of the confederacy are expressly restricted from entering into compacts prejudicial to the empire; from imposing tolls and duties on their mutual intercourse, without the consent of the emperor and diet; from altering the value of money; from doing injustice to one another; or from affording

assistance or retreat to disturbers of the public peace. And the ban is denounced against such as shall violate any of these restrictions. The members of the diet, as such, are subject in all cases to be judged by the emperor and diet, and in their private capacities by the aulic council and imperial chamber.

The prerogatives of the emperor are numerous. The most important of them are: his exclusive right to make propositions to the diet; to negative its resolutions; to name ambassadors; to confer dignities and titles; to fill vacant electorates; to found universities; to grant privileges not injurious to the states of the empire; to receive and apply the public revenues; and generally to watch over the public safety. In certain cases, the electors form a council to him. In quality of emperor, he possesses no territory within the empire, nor receives any revenue for his support. But his revenue and dominions, in other qualities, constitute him one of the most powerful princes in Europe.

From such a parade of constitutional powers in the representatives and head of this confederacy, the natural supposition would be that it must form an exception to the general character which belongs to its kindred systems. Nothing would be further from the reality. The fundamental principle on which it rests, that the empire is a community of sovereigns, that the diet is a representation of sovereigns and that the laws are addressed to sovereigns, renders the empire a nerveless body, incapable of regulating its own members, insecure against external dangers, and agitated with unceasing fermentations in its own bowels.

The history of Germany is a history of wars between the emperor and the princes and states; of wars among the princes and states themselves; of the licentiousness of the strong and the oppression of the weak; of foreign intrusions and foreign intrigues; of requisitions of men and money disregarded, or partially complied with; of attempts to enforce them, altogether abortive, or attended with slaughter and

desolation, involving the innocent with the guilty; of general inbecility, confusion, and misery.

In the sixteenth century, the emperor, with one part of the empire on his side, was seen engaged against the other princes and states. In one of the conflicts, the emperor himself was put to flight, and very near being made prisoner by the elector of Saxony. The late king of Prussia was more than once pitted against his imperial sovereign, and commonly proved an overmatch for him. Controversies and wars among the members themselves have been so common that the German annals are crowded with the bloody pages which describe them. Previous to the peace of Westphalia, Germany was desolated by a war of thirty years, in which the emperor, with one half of the empire, was on one side, and Sweden, with the other half, on the opposite side. Peace was at length negotiated and dictated by foreign powers; and the articles of it, to which foreign powers are parties, made a fundamental part of the Germanic constitution.

If the nation happens, on any emergency, to be more united by the necessity of self-defense, its situation is still deplorable. Military preparations must be preceded by so many tedious discussions, arising from the jealousies, pride, separate views, and clashing pretensions of sovereign bodies, that before the diet can settle the arrangements, the enemy are in the field; and before the federal troops are ready to take it, are retiring into winter quarters.

The small body of national troops, which has been judged necessary in time of peace, is defectively kept up, badly paid, infected with local prejudices, and supported by irregular and disproportionate contributions to the treasury.

The impossibility of maintaining order and dispensing justice among these sovereign subjects produced the experiment of dividing the empire into nine or ten circles or districts; of giving them an

interior organization; and of charging them with the military execution of the laws against delinquent and contumacious members. This experiment has only served to demonstrate more fully the radical vice of the constitution. Each circle is the miniature picture of the deformities of this political monster. They either fail to execute their commissions, or they do it with all the devastation and carnage of civil war. Sometimes whole circles are defaulters; and then they increase the mischief which they were instituted to remedy.

We may form some judgment of this scheme of military coercion from a sample given by Thuanus. In Donawerth, a free and imperial city of the circle of Suabia, the Abbé de St. Croix enjoyed certain immunities which had been reserved to him. In the exercise of these, on some public occasions, outrages were committed on him by the people of the city. The consequence was that the city was put under the ban of the empire, and the Duke of Bavaria, though director of another circle, obtained an appointment to enforce it. He soon appeared before the city with a corps of ten thousand troops, and finding it a fit occasion, as he had secretly intended from the beginning, to revive an antiquated claim on the pretext that his ancestors had suffered the place to be dismembered from his territory, [1] he took possession of it in his own name, disarmed and punished the inhabitants, and reannexed the city to his domains.

It may be asked, perhaps, what has so long kept this disjointed machine from falling entirely to pieces? The answer is obvious: The weakness of most of the members, who are unwilling to expose themselves to the mercy of foreign powers; the weakness of most of the principal members, compared with the formidable powers all around them; the vast weight and influence which the emperor derives from his separate and hereditary dominions; and the interest he feels in preserving a system with which his family pride is connected, and which constitutes him the first prince in Europe. These

causes support a feeble and precarious Union, whilst the repellent quality incident to the nature of sovereignty, and which time continually strengthens, prevents any reform whatever founded on a proper consolidation. Nor is it to be imagined, if this obstacle could be surmounted, that the neighboring powers would suffer a revolution to take place which would give to the empire the force and pre-eminence to which it is entitled. Foreign nations have long considered themselves as interested in the changes made by events in this constitution, and have on various occasions betrayed their policy of perpetuating its anarchy and weakness.

If more direct examples were wanting, Poland, as a government over local sovereigns, might not improperly be taken notice of. Nor could any proof more striking be given of the calamities flowing from such institutions. Equally unfit for self-government and self-defense, it has long been at the mercy of its powerful neighbors, who have lately had the mercy to disburden it of one third of its people and territories.

The connection among the Swiss cantons scarcely amounts to a confederacy, though it is sometimes cited as an instance of the stability of such institutions.

They have no common treasury; no common troops even in war; no common coin; no common judicatory; nor any other common mark of sovereignty.

They are kept together by the peculiarity of their topographical position; by their individual weakness and insignificancy; by the fear of powerful neighbors, to one of which they were formerly subject; by the few sources of contention among a people of such simple and homogeneous manners; by their joint interest in their dependent possessions; by the mutual aid they stand in need of for suppressing insurrections and rebellions, an aid expressly stipulated and often required and afforded; and by the necessity of some regular and

permanent provision for accomodating disputes among the cantons. The provision is that the parties at variance shall each choose four judges out of the neutral cantons, who, in case of disagreement, choose an umpire. This tribunal, under an oath of impartiality, pronounces definitive sentence, which all the cantons are bound to enforce. The competency of this regulation may be estimated by a clause in their treaty of 1683, with Victor Amadeus of Savoy, in which he obliges himself to interpose as mediator in disputes between the cantons, and to employ force, if necessary, against the contumacious party.

So far as the peculiarity of their case will admit of comparison with that of the United States, it serves to confirm the principle intended to be established. Whatever efficacy the union may have had in ordinary cases, it appears that the moment a cause of difference sprang up capable of trying its strength, it failed. The controversies on the subject of religion, which in three instances have kindled violent and bloody contests, may be said, in fact, to have severed the league. The Protestant and Catholic cantons have since had their separate diets, where all the most important concerns are adjusted, and which have left the general diet little other business than to take care of the common bailages.

That separation had another consequence which merits attention. It produced opposite alliances with foreign powers: of Berne, at the head of the Protestant association, with the United Provinces; and of Luzerne, at the head of the Catholic association, with France.

expense of the expedition.

FEDERALIST No. 20 The Same Subject Continued (The Insufficiency of the Present Confederation to Preserve the Union)

**From the New York Packet.
Tuesday, December 11, 1787
Madison with Hamilton**

To the People of the State of New York:

THE United Netherlands are a confederacy of republics, or rather of aristocracies of a very remarkable texture, yet confirming all the lessons derived from those which we have already reviewed.

The union is composed of seven coequal and sovereign states, and each state or province is a composition of equal and independent cities. In all important cases, not only the provinces but the cities must be unanimous.

The sovereignty of the Union is represented by the States-General, consisting usually of about fifty deputies appointed by the provinces. They hold their seats, some for life, some for six, three, and one years; from two provinces they continue in appointment during pleasure.

The States-General have authority to enter into treaties and alliances; to make war and peace; to raise armies and equip fleets; to ascertain quotas and demand contributions. In all these cases,

however, unanimity and the sanction of their constituents are requisite. They have authority to appoint and receive ambassadors; to execute treaties and alliances already formed; to provide for the collection of duties on imports and exports; to regulate the mint, with a saving to the provincial rights; to govern as sovereigns the dependent territories. The provinces are restrained, unless with the general consent, from entering into foreign treaties; from establishing imposts injurious to others, or charging their neighbors with higher duties than their own subjects. A council of state, a chamber of accounts, with five colleges of admiralty, aid and fortify the federal administration.

The executive magistrate of the union is the stadtholder, who is now an hereditary prince. His principal weight and influence in the republic are derived from this independent title; from his great patrimonial estates; from his family connections with some of the chief potentates of Europe; and, more than all, perhaps, from his being stadtholder in the several provinces, as well as for the union; in which provincial quality he has the appointment of town magistrates under certain regulations, executes provincial decrees, presides when he pleases in the provincial tribunals, and has throughout the power of pardon.

As stadtholder of the union, he has, however, considerable prerogatives.

In his political capacity he has authority to settle disputes between the provinces, when other methods fail; to assist at the deliberations of the States-General and at their particular conferences; to give audiences to foreign ambassadors and to keep agents for his particular affairs at foreign courts.

In his military capacity he commands the federal troops, provides for garrisons, and in general regulates military affairs; disposes of all

appointments, from colonels to ensigns, and of the governments and posts of fortified towns.

In his marine capacity he is admiral-general and superintends and directs every thing relative to naval forces and other naval affairs; presides in the admiralties in person or by proxy; appoints lieutenant admirals and other officers; and establishes councils of war, whose sentences are not executed till he approves them.

His revenue, exclusive of his private income, amounts to 300,000 florins. The standing army which he commands consists of about 40,000 men.

Such is the nature of the celebrated Belgic confederacy, as delineated on parchment. What are the characters which practice has stamped upon it? Imbecility in the government; discord among the provinces; foreign influence and indignities; a precarious existence in peace, and peculiar calamities from war.

It was long ago remarked by Grotius, that nothing but the hatred of his countrymen to the house of Austria kept them from being ruined by the vices of their constitution.

The union of Utrecht, says another respectable writer, reposes an authority in the States-General seemingly sufficient to secure harmony, but the jealousy in each province renders the practice very different from the theory.

The same instrument, says another, obliges each province to levy certain contributions; but this article never could, and probably never will, be executed; because the inland provinces, who have little commerce, cannot pay an equal quota.

In matters of contribution, it is the practice to waive the articles of the constitution. The danger of delay obliges the consenting

provinces to furnish their quotas, without waiting for the others; and then to obtain reimbursement from the others by deputations, which are frequent, or otherwise, as they can. The great wealth and influence of the province of Holland enable her to effect both these purposes.

It has more than once happened that the deficiencies had to be ultimately collected at the point of the bayonet, a thing practicable, though dreadful, in a confederacy where one of the members exceeds in force all the rest, and where several of them are too small to meditate resistance; but utterly impracticable in one composed of members, several of which are equal to each other in strength and resources and equal singly to a vigorous and persevering defense.

Foreign ministers, says Sir William Temple, who was himself a foreign minister, elude matters taken ad referendum by tampering with the provinces and cities. In 1726 the treaty of Hanover was delayed by these means a whole year. Instances of a like nature are numerous and notorious.

In critical emergencies the States-General are often compelled to overleap their constitutional bounds. In 1688 they concluded a treaty of themselves at the risk of their heads. The treaty of Westphalia in 1648, by which their independence was formerly and finally recognized, was concluded without the consent of Zealand. Even as recently as the last treaty of peace with Great Britain, the constitutional principle of unanimity was departed from. A weak constitution must necessarily terminate in dissolution for want of proper powers, or the usurpation of powers requisite for the public safety. Whether the usurpation, when once begun, will stop at the salutary point, or go forward to the dangerous extreme, must depend on the contingencies of the moment. Tyranny has perhaps oftener grown out of the assumptions of power called for, on pressing exigencies, by a defective constitution, than out of the full exercise of the largest constitutional authorities.

Notwithstanding the calamities produced by the stadtholdership, it has been supposed that without his influence in the individual provinces, the causes of anarchy manifest in the confederacy would long ago have dissolved it. "Under such a government," says the Abbe Mably, "the Union could never have subsisted, if the provinces had not a spring within themselves capable of quickening their tardiness, and compelling them to the same way of thinking. This spring is the stadtholder." It is remarked by Sir William Temple "that in the intermissions of the stadtholdership, Holland, by her riches and her authority, which drew the others into a sort of dependence, supplied the place."

These are not the only circumstances which have controlled the tendency to anarchy and dissolution. The surrounding powers impose an absolute necessity of union to a certain degree, at the same time that they nourish by their intrigues the constitutional vices which keep the republic in some degree always at their mercy.

The true patriots have long bewailed the fatal tendency of these vices, and have made no less than four regular experiments by extraordinary assemblies, convened for the special purpose to apply a remedy. As many times has their laudable zeal found it impossible to unite the public councils in reforming the known, the acknowledged, the fatal evils of the existing constitution. Let us pause, my fellow-citizens, for one moment, over this melancholy and monitory lesson of history; and with the tear that drops for the calamities brought on mankind by their adverse opinions and selfish passions, let our gratitude mingle an ejaculation to Heaven, for the propitious concord which has distinguished the consultations for our political happiness.

A design was also conceived of establishing a general tax to be administered by the federal authority. This also had its adversaries and failed.

This unhappy people seem to be now suffering from popular convulsions, from dissensions among the states, and from the actual invasion of foreign arms, the crisis of their destiny. All nations have their eyes fixed on the awful spectacle. The first wish prompted by humanity is, that this severe trial may issue in such a revolution of their government as will establish their union and render it the parent of tranquillity, freedom and happiness. The next, that the asylum under which, we trust, the enjoyment of these blessings will speedily be secured in this country, may receive and console them for the catastrophe of their own.

I make no apology for having dwelt so long on the contemplation of these federal precedents. Experience is the oracle of truth; and where its responses are unequivocal, they ought to be conclusive and sacred. The important truth, which it unequivocally pronounces in the present case, is that a sovereignty over sovereigns, a government over governments, a legislation for communities, as contradistinguished from individuals, as it is a solecism in theory, so in practice it is subversive of the order and ends of civil polity, by substituting violence in place of law, or the destructive coercion of the sword in place of the mild and salutary coercion of the magistracy.

PUBLIUS

FEDERALIST No. 21 Other Defects of the Present Confederation

**For the Independent Journal.
Wednesday, December 12, 1787
Hamilton**

To the People of the State of New York:

HAVING in the three last numbers taken a summary review of the principal circumstances and events which depict the genius and fate of other confederate governments, I shall now proceed in the enumeration of the most important of those defects which have hitherto disappointed our hopes from the system established among ourselves. To form a safe and satisfactory judgment of the proper remedy, it is absolutely necessary that we should be well acquainted with the extent and malignity of the disease.

The next most palpable defect of the existing Confederation is the total want of a SANCTION to its laws. The United States as now composed have no powers to exact obedience, or punish disobedience to their resolutions, either by pecuniary mulcts, by a suspension or divestiture of privileges, or by any other constitutional mode. There is no express delegation of authority to them to use force against delinquent members; and if such a right should be ascribed to the federal head, as resulting from the nature of the social compact between the States, it must be by inference and construction in the face of that part of the second article by which it is declared“that each

State shall retain every power, jurisdiction, and right, not expressly delegated to the United States in Congress assembled.”The want of such a right involves, no doubt. a striking absurdity; but we are reduced to the dilemma either of supposing that deficiency, preposterous as it may seem, or of contravening or explaining away a provision, which has been of late a repeated theme of the eulogies of those who oppose the new Constitution; and the omission of which in that plan has been the subject of much plausible animadversion and severe criticism. If we are unwilling to impair the force of this applauded provision, we shall be obliged to conclude that the United States afford the extraordinary spectacle of a government destitute even of the shadow of constitutional power to enforce the execution of its own laws. It will appear from the specimens which have been cited that the American Confederacy, in this particular, stands discriminated from every other institution of a similar kind, and exhibits a new and unexampled phenomenon in the political world.

The want of a mutual guaranty of the State governments is another capital imperfection in the federal plan. There is nothing of this kind declared in the articles that compose it; and to imply a tacit guaranty from considerations of utility, would be a still more flagrant departure from the clause which has been mentioned, than to imply a tacit power of coercion from the like considerations. The want of a guaranty, though it might in its consequences endanger the Union, does not so immediately attack its existence as the want of a constitutional sanction to its laws.

Without a guaranty the assistance to be derived from the Union in repelling those domestic dangers which may sometimes threaten the existence of the State constitutions must be renounced. Usurpation may rear its crest in each State and trample upon the liberties of the people, while the national government could legally do nothing more than behold its encroachments with indignation and regret. A

successful faction may erect a tyranny on the ruins of order and law, while no succor could constitutionally be afforded by the Union to the friends and supporters of the government. The tempestuous situation from which Massachusetts has scarcely emerged evinces that dangers of this kind are not merely speculative. Who can determine what might have been the issue of her late convulsions if the malcontents had been headed by a Caesar or by a Cromwell? Who can predict what effect a despotism established in Massachusetts would have upon the liberties of New Hampshire or Rhode Island, of Connecticut or New York?

The inordinate pride of State importance has suggested to some minds an objection to the principle of a guaranty in the federal government, as involving an officious interference in the domestic concerns of the members. A scruple of this kind would deprive us of one of the principal advantages to be expected from union, and can only flow from a misapprehension of the nature of the provision itself. It could be no impediment to reforms of the State constitution by a majority of the people in a legal and peaceable mode. This right would remain undiminished. The guaranty could only operate against changes to be effected by violence. Towards the preventions of calamities of this kind, too many checks cannot be provided. The peace of society and the stability of government depend absolutely on the efficacy of the precautions adopted on this head. Where the whole power of the government is in the hands of the people, there is the less pretense for the use of violent remedies in partial or occasional distempers of the State. The natural cure for an ill-administration in a popular or representative constitution is a change of men. A guaranty by the national authority would be as much levelled against the usurpations of rulers as against the ferments and outrages of faction and sedition in the community.

The principle of regulating the contributions of the States to the

common treasury by QUOTAS is another fundamental error in the Confederation.^[1] Its repugnancy to an adequate supply of the national exigencies has been already pointed out, and has sufficiently appeared from the trial which has been made of it. I speak of it now solely with a view to equality among the States. Those who have been accustomed to contemplate the circumstances which produce and constitute national wealth must be satisfied that there is no common standard or barometer by which the degrees of it can be ascertained. Neither the value of lands, nor the numbers of the people, which have been successively proposed as the rule of State contributions, has any pretension to being a just representative. If we compare the wealth of the United Netherlands with that of Russia or Germany, or even of France, and if we at the same time compare the total value of the lands and the aggregate population of the contracted territory of that republic with the total value of the lands and the aggregate population of the immense regions of either of those kingdoms, we shall at once discover that there is no comparison between the proportion of either of these two objects and that of the relative wealth of those nations. If the like parallel were to be run between several of the American States, it would furnish a like result. Let Virginia be contrasted with North Carolina, Pennsylvania with Connecticut, or Maryland with New Jersey, and we shall be convinced that the respective abilities of those States in relation to revenue bear little or no analogy to their comparative stock in lands or to their comparative population. The position may be equally illustrated by a similar process between the counties of the same State. No man acquainted with the State of New York will doubt that the active wealth of Kings County bears a much greater proportion to that of Montgomery than it would appear to do if we should take either the total value of the lands or the total number of the people as a criterion!

The wealth of nations depends upon an infinite variety of causes. Situation, soil, climate, the nature of the productions, the nature of

the government, the genius of the citizens, the degree of information they possess, the state of commerce, of arts, of industry—these circumstances and many more, too complex, minute, or adventitious to admit of a particular specification, occasion differences hardly conceivable in the relative opulence and riches of different countries. The consequence clearly is that there can be no common measure of national wealth, and, of course, no general or stationary rule by which the ability of a state to pay taxes can be determined. The attempt, therefore, to regulate the contributions of the members of a confederacy by any such rule cannot fail to be productive of glaring inequality and extreme oppression.

This inequality would of itself be sufficient in America to work the eventual destruction of the Union, if any mode of enforcing a compliance with its requisitions could be devised. The suffering States would not long consent to remain associated upon a principle which distributed the public burdens with so unequal a hand, and which was calculated to impoverish and oppress the citizens of some States, while those of others would scarcely be conscious of the small proportion of the weight they were required to sustain. This, however, is an evil inseparable from the principle of quotas and requisitions.

There is no method of steering clear of this inconvenience, but by authorizing the national government to raise its own revenues in its own way. Imposts, excises, and, in general, all duties upon articles of consumption, may be compared to a fluid, which will in time find its level with the means of paying them. The amount to be contributed by each citizen will in a degree be at his own option, and can be regulated by an attention to his resources. The rich may be extravagant, the poor can be frugal; and private oppression may always be avoided by a judicious selection of objects proper for such impositions. If inequalities should arise in some States from duties on particular objects, these will in all probability be counterbalanced by

proportional inequalities in other States, from the duties on other objects. In the course of time and things, an equilibrium, as far as it is attainable in so complicated a subject, will be established everywhere. Or, if inequalities should still exist, they would neither be so great in their degree, so uniform in their operation, nor so odious in their appearance, as those which would necessarily spring from quotas upon any scale that can possibly be devised.

It is a signal advantage of taxes on articles of consumption that they contain in their own nature a security against excess. They prescribe their own limit, which cannot be exceeded without defeating the end proposed—that is, an extension of the revenue. When applied to this object, the saying is as just as it is witty, that, “in political arithmetic, two and two do not always make four.” If duties are too high, they lessen the consumption; the collection is eluded; and the product to the treasury is not so great as when they are confined within proper and moderate bounds. This forms a complete barrier against any material oppression of the citizens by taxes of this class, and is itself a natural limitation of the power of imposing them.

Impositions of this kind usually fall under the denomination of indirect taxes, and must for a long time constitute the chief part of the revenue raised in this country. Those of the direct kind, which principally relate to land and buildings, may admit of a rule of apportionment. Either the value of land, or the number of the people, may serve as a standard. The state of agriculture and the populousness of a country are considered as having a near relation with each other. And, as a rule, for the purpose intended, numbers, in the view of simplicity and certainty, are entitled to a preference. In every country it is a herculean task to obtain a valuation of the land; in a country imperfectly settled and progressive in improvement, the difficulties are increased almost to impracticability. The expense of an accurate valuation is, in all situations, a formidable objection. In a branch of

taxation where no limits to the discretion of the government are to be found in the nature of the thing, the establishment of a fixed rule, not incompatible with the end, may be attended with fewer inconveniences than to leave that discretion altogether at large.

[1] 邦联政府的另一个主要错误是用定额摊牌的方法规定各州对邦联国库的经费负担。国会在向各州征集资金的时候会遭遇很多情况，没有一个州遵从国会的征集经费要求，有的州默默地置之不理，有的州则明确地予以拒绝。1786年夏天，10个州尚未支付它们应缴邦联的费用。国会发出一封要求催缴的信件，并派议员去各州议会请求支付资金，但无人理会。南卡罗来纳有三年分文未付，新泽西和康涅狄格一贯地违背其认缴的义务，而佐治亚则从未付过一分钱。参见[美]戴维斯·图沃特著，顾元译：《1787年之夏缔造美国宪法的人们》，22页，北京，中国政法大学出版社，2011。

FEDERALIST No. 22 The Same Subject Continued (Other Defects of the Present Confederation)

**From the New York Packet.
Friday, December 14, 1787
Hamilton**

To the People of the State of New York:

IN ADDITION to the defects already enumerated in the existing federal system, there are others of not less importance which concur in rendering it altogether unfit for the administration of the affairs of the Union.

The want of a power to regulate commerce is by all parties allowed to be of the number. The utility of such a power has been anticipated under the first head of our inquiries; and for this reason, as well as from the universal conviction entertained upon the subject, little need be added in this place. It is indeed evident, on the most superficial view, that there is no object, either as it respects the interests of trade or finance, that more strongly demands a federal superintendence. The want of it has already operated as a bar to the formation of beneficial treaties with foreign powers, and has given occasions of dissatisfaction between the States. No nation acquainted with the nature of our political association would be unwise enough to enter into stipulations with the United States, conceding on their part privileges of importance, while they were apprised that the

engagements on the part of the Union might at any moment be violated by its members and while they found from experience that they might enjoy every advantage they desired in our markets without granting us any return but such as their momentary convenience might suggest. It is not, therefore, to be wondered at that Mr. Jenkinson, in ushering into the House of Commons a bill for regulating the temporary intercourse between the two countries, should preface its introduction by a declaration that similar provisions in former bills had been found to answer every purpose to the commerce of Great Britain, and that it would be prudent to persist in the plan until it should appear whether the American government was likely or not to acquire greater consistency.^[1]

Several States have endeavored by separate prohibitions, restrictions, and exclusions to influence the conduct of that kingdom in this particular, but the want of concert, arising from the want of a general authority and from clashing and dissimilar views in the State, has hitherto frustrated every experiment of the kind, and will continue to do so as long as the same obstacles to a uniformity of measures continue to exist.

The interfering and unneighborly regulations of some States, contrary to the true spirit of the Union, have, in different instances, given just cause of umbrage and complaint to others, and it is to be feared that examples of this nature, if not restrained by a national control, would be multiplied and extended till they became not less serious sources of animosity and discord than injurious impediments to the intercourse between the different parts of the Confederacy. “The commerce of the German empire^[2] is in continual trammels from the multiplicity of the duties which the several princes and states exact upon the merchandises passing through their territories, by means of which the fine streams and navigable rivers with which Germany is so happily watered are rendered almost useless.” Though the genius of

the people of this country might never permit this description to be strictly applicable to us, yet we may reasonably expect from the gradual conflicts of State regulations that the citizens of each would at length come to be considered and treated by the others in no better light than that of foreigners and aliens.

The power of raising armies by the most obvious construction of the articles of the Confederation is merely a power of making requisitions upon the States for quotas of men. This practice in the course of the late war was found replete with obstructions to a vigorous and to an economical system of defense. It gave birth to a competition between the States which created a kind of auction for men. In order to furnish the quotas required of them, they outbid each other till bounties grew to an enormous and insupportable size. The hope of a still further increase afforded an inducement to those who were disposed to serve to procrastinate their enlistment, and disinclined them from engaging for any considerable periods. Hence, slow and scanty levies of men, in the most critical emergencies of our affairs; short enlistments at an unparalleled expense; continual fluctuations in the troops, ruinous to their discipline and subjecting the public safety frequently to the perilous crisis of a disbanded army. Hence, also, those oppressive expedients for raising men which were upon several occasions practiced, and which nothing but the enthusiasm of liberty would have induced the people to endure.

This method of raising troops is not more unfriendly to economy and vigor than it is to an equal distribution of the burden. The States near the seat of war, influenced by motives of self-preservation, made efforts to furnish their quotas, which even exceeded their abilities; while those at a distance from danger were for the most part as remiss as the others were diligent in their exertions. The immediate pressure of this inequality was not in this case, as in that of the contributions of money, alleviated by the hope of a final liquidation. The States which

did not pay their proportions of money might at least be charged with their deficiencies; but no account could be formed of the deficiencies in the supplies of men. We shall not, however, see much reason to regret the want of this hope, when we consider how little prospect there is, that the most delinquent States will ever be able to make compensation for their pecuniary failures. The system of quotas and requisitions, whether it be applied to men or money, is in every view a system of imbecility in the Union, and of inequality and injustice among the members.

The right of equal suffrage among the States is another exceptionable part of the Confederation.^[3] Every idea of proportion and every rule of fair representation conspire to condemn a principle, which gives to Rhode Island an equal weight in the scale of power with Massachusetts, or Connecticut, or New York; and to Delaware an equal voice in the national deliberations with Pennsylvania, or Virginia, or North Carolina. Its operation contradicts that fundamental maxim of republican government, which requires that the sense of the majority should prevail. Sophistry may reply, that sovereigns are equal, and that a majority of the votes of the States will be a majority of confederated America. But this kind of logical legerdemain will never counteract the plain suggestions of justice and common sense. It may happen that this majority of States is a small minority of the people of America;^[4] and two thirds of the people of America could not long be persuaded upon the credit of artificial distinctions and syllogistic subtleties to submit their interests to the management and disposal of one third. The larger States would after a while revolt from the idea of receiving the law from the smaller. To acquiesce in such a privation of their due importance in the political scale would be not merely to be insensible to the love of power, but even to sacrifice the desire of equality. It is neither rational to expect the first, nor just to require the last. The smaller States, considering how peculiarly their safety and welfare depend on union, ought readily to renounce a

pretension which, if not relinquished, would prove fatal to its duration.

It may be objected to this that not seven but nine States, or two thirds of the whole number, must consent to the most important resolutions; and it may be thence inferred that nine States would always comprehend a majority of the Union. But this does not obviate the impropriety of an equal vote between States of the most unequal dimensions and populousness; nor is the inference accurate in point of fact; for we can enumerate nine States which contain less than a majority of the people;^[5] and it is constitutionally possible that these nine may give the vote. Besides, there are matters of considerable moment determinable by a bare majority; and there are others, concerning which doubts have been entertained, which, if interpreted in favor of the sufficiency of a vote of seven States, would extend its operation to interests of the first magnitude. In addition to this it is to be observed that there is a probability of an increase in the number of States, and no provision for a proportional augmentation of the ratio of votes.

But this is not all: what at first sight may seem a remedy, is in reality a poison. To give a minority a negative upon the majority (which is always the case where more than a majority is requisite to a decision) is, in its tendency, to subject the sense of the greater number to that of the lesser number. Congress, from the non-attendance of a few States, have been frequently in the situation of a Polish diet, where a single veto has been sufficient to put a stop to all their movements. A sixtieth part of the Union, which is about the proportion of Delaware and Rhode Island, has several times been able to oppose an entire bar to its operations. This is one of those refinements which, in practice, has an effect the reverse of what is expected from it in theory. The necessity of unanimity in public bodies, or of something approaching towards it, has been founded

upon a supposition that it would contribute to security. But its real operation is to embarrass the administration, to destroy the energy of the government, and to substitute the pleasure, caprice, or artifices of an insignificant, turbulent, or corrupt junto to the regular deliberations and decisions of a respectable majority. In those emergencies of a nation in which the goodness or badness, the weakness or strength, of its government is of the greatest importance, there is commonly a necessity for action. The public business must in some way or other go forward. If a pertinacious minority can control the opinion of a majority, respecting the best mode of conducting it, the majority in order that something may be done must conform to the views of the minority; and thus the sense of the smaller number will overrule that of the greater and give a tone to the national proceedings. Hence, tedious delays; continual negotiation and intrigue; contemptible compromises of the public good. And yet, in such a system it is even happy when such compromises can take place: for upon some occasions things will not admit of accommodation; and then the measures of government must be injuriously suspended, or fatally defeated. It is often by the impracticability of obtaining the concurrence of the necessary number of votes kept in a state of inaction. Its situation must always savor of weakness, sometimes border upon anarchy.

It is not difficult to discover that a principle of this kind gives greater scope to foreign corruption, as well as to domestic faction, than that which permits the sense of the majority to decide; though the contrary of this has been presumed. The mistake has proceeded from not attending with due care to the mischiefs that may be occasioned by obstructing the progress of government at certain critical seasons. When the concurrence of a large number is required by the Constitution to the doing of any national act, we are apt to rest satisfied that all is safe, because nothing improper will be likely to be done, but we forget how much good may be prevented, and how

much ill may be produced, by the power of hindering the doing what may be necessary, and of keeping affairs in the same unfavorable posture in which they may happen to stand at particular periods.

Suppose, for instance, we were engaged in a war in conjunction with one foreign nation against another. Suppose the necessity of our situation demanded peace, and the interest or ambition of our ally led him to seek the prosecution of the war, with views that might justify us in making separate terms. In such a state of things, this ally of ours would evidently find it much easier by his bribes and intrigues to tie up the hands of government from making peace, where two thirds of all the votes were requisite to that object, than where a simple majority would suffice. In the first case, he would have to corrupt a smaller number; in the last, a greater number. Upon the same principle, it would be much easier for a foreign power with which we were at war to perplex our councils and embarrass our exertions. And, in a commercial view, we may be subjected to similar inconveniences. A nation, with which we might have a treaty of commerce, could with much greater facility prevent our forming a connection with her competitor in trade, though such a connection should be ever so beneficial to ourselves.

Evils of this description ought not to be regarded as imaginary. One of the weak sides of republics, among their numerous advantages, is that they afford too easy an inlet to foreign corruption. An hereditary monarch, though often disposed to sacrifice his subjects to his ambition, has so great a personal interest in the government and in the external glory of the nation, that it is not easy for a foreign power to give him an equivalent for what he would sacrifice by treachery to the state. The world has accordingly been witness to few examples of this species of royal prostitution, though there have been abundant specimens of every other kind.

In republics, persons elevated from the mass of the community by

the suffrages of their fellow-citizens to stations of great pre-eminence and power may find compensations for betraying their trust, which, to any but minds actuated by superior virtue may appear to exceed the proportion of interest they have in the common stock, and to overbalance the obligations of duty. Hence it is that history furnishes us with so many mortifying examples of the prevalency of foreign corruption in republican governments. How much this contributed to the ruin of the ancient commonwealths has been already delineated. It is well known that the deputies of the United Provinces have, in various instances, been purchased by the emissaries of the neighboring kingdoms. The Earl of Chesterfield (if my memory serves me right), in a letter to his court, intimates that his success in an important negotiation must depend on his obtaining a major's commission for one of those deputies. And in Sweden, the parties were alternately bought by France and England in so barefaced and notorious a manner that it excited universal disgust in the nation, and was a principal cause that the most limited monarch in Europe, in a single day, without tumult, violence, or opposition, became one of the most absolute and uncontrolled.

A circumstance which crowns the defects of the Confederation remains yet to be mentioned—the want of a judiciary power. Laws are a dead letter without courts to expound and define their true meaning and operation. The treaties of the United States, to have any force at all, must be considered as part of the law of the land. Their true import, as far as respects individuals, must, like all other laws, be ascertained by judicial determinations. To produce uniformity in these determinations, they ought to be submitted, in the last resort, to one SUPREME TRIBUNAL. And this tribunal ought to be instituted under the same authority which forms the treaties themselves. These ingredients are both indispensable. If there is in each State a court of final jurisdiction, there may be as many different final determinations on the same point as there are courts. There are endless diversities in

the opinions of men. We often see not only different courts but the judges of the same court differing from each other. To avoid the confusion which would unavoidably result from the contradictory decisions of a number of independent judicatories, all nations have found it necessary to establish one court paramount to the rest, possessing a general superintendence and authorized to settle and declare in the last resort a uniform rule of civil justice.

This is the more necessary where the frame of the government is so compounded that the laws of the whole are in danger of being contravened by the laws of the parts. In this case, if the particular tribunals are invested with a right of ultimate jurisdiction, besides the contradictions to be expected from difference of opinion, there will be much to fear from the bias of local views and prejudices and from the interference of local regulations. As often as such an interference was to happen, there would be reason to apprehend that the provisions of the particular laws might be preferred to those of the general laws; from the deference with which men in office naturally look up to that authority to which they owe their official existence.

The treaties of the United States under the present Constitution are liable to the infractions of thirteen different legislatures, and as many different courts of final jurisdiction, acting under the authority of those legislatures. The faith, the reputation, the peace of the whole Union are thus continually at the mercy of the prejudices, the passions, and the interests of every member of which it is composed. Is it possible that foreign nations can either respect or confide in such a government? Is it possible that the people of America will longer consent to trust their honor, their happiness, their safety, on so precarious a foundation?

In this review of the Confederation, I have confined myself to the exhibition of its most material defects; passing over those imperfections in its details by which even a considerable part of the

power intended to be conferred upon it has been in a great measure rendered abortive. It must be by this time evident to all men of reflection, who are either free from erroneous prepossessions, or can divest themselves of them, that it is a system so radically vicious and unsound as to admit not of amendment but by an entire change in its leading features and characters.

The organization of Congress is itself utterly improper for the exercise of those powers which are necessary to be deposited in the Union. A single assembly may be a proper receptacle of those slender, or rather fettered, authorities, which have been heretofore delegated to the federal head; but it would be inconsistent with all the principles of good government to intrust it with those additional powers which even the moderate and more rational adversaries of the proposed Constitution admit ought to reside in the United States. If that plan should not be adopted, and if the necessity of the Union should be able to withstand the ambitious aims of those men who may indulge magnificent schemes of personal aggrandizement from its dissolution, the probability would be that we should run into the project of conferring supplementary powers upon Congress as they are now constituted; and either the machine, from the intrinsic feebleness of its structure, will moulder into pieces, in spite of our ill-judged efforts to prop it; or, by successive augmentations of its force and energy, as necessity might prompt, we shall finally accumulate in a single body all the most important prerogatives of sovereignty, and thus entail upon our posterity one of the most execrable forms of government that human infatuation ever contrived. Thus we should create in reality that very tyranny which the adversaries of the new Constitution either are, or affect to be, solicitous to avert.

It has not a little contributed to the infirmities of the existing federal system that it never had a ratification by the PEOPLE. Resting on no better foundation than the consent of the several legislatures, it

has been exposed to frequent and intricate questions concerning the validity of its powers, and has, in some instances, given birth to the enormous doctrine of a right of legislative repeal. Owing its ratification to the law of a State, it has been contended that the same authority might repeal the law by which it was ratified. However gross a heresy it may be to maintain that a party to a compact has a right to revoke that compact, the doctrine itself has had respectable advocates. The possibility of a question of this nature proves the necessity of laying the foundations of our national government deeper than in the mere sanction of delegated authority. The fabric of American empire ought to rest on the solid basis of THE CONSENT OF THE PEOPLE. The streams of national power ought to flow immediately from that pure, original fountain of all legitimate authority.

[1] This, as nearly as I can recollect, was the sense of his speech in introducing the last bill.

[2] Encyclopedia article“Empire.”

[3] 邦联政府不能采取有效行动的原因之一就在于各州的平等投票权，在很多情况下，小州的否决票就导致了某项决策的失败。因此，在美国制宪会议期间，大州坚决要求按照人口数来计票。而小州害怕自己的利益遭到大州的绑架，坚持一州一票制度，最后双方达成了妥协：众议院按照各州人口数进行选举，而参议院由各州议会选派代表，每位参议员都有一票表决权。

[4] New Hampshire, Rhode Island, New Jersey, Delaware, Georgia, South Carolina, and Maryland are a majority of the whole number of the States, but they do not contain one third of the people.

[5] Add New York and Connecticut to the foregoing seven, and they will be less than a majority.

FEDERALIST No. 23 The Necessity of a Government as Energetic as the One Proposed to the Preservation of the Union

**From the New York Packet.
Tuesday, December 18, 1787
Hamilton**

To the People of the State of New York:

THE necessity of a Constitution, at least equally energetic with the one proposed, to the preservation of the Union, is the point at the examination of which we are now arrived.

This inquiry will naturally divide itself into three branches—the objects to be provided for by a federal government, the quantity of power necessary to the accomplishment of those objects, the persons upon whom that power ought to operate. Its distribution and organization will more properly claim our attention under the succeeding head.

The principal purposes to be answered by union are these—the common defense of the members; the preservation of the public peace as well against internal convulsions as external attacks; the regulation of commerce with other nations and between the States; the superintendence of our intercourse, political and commercial, with foreign countries.

The authorities essential to the common defense are these: to raise armies; to build and equip fleets; to prescribe rules for the government of both; to direct their operations; to provide for their support. These powers ought to exist without limitation, because it is impossible to foresee or to define the extent and variety of national exigencies, and the correspondent extent and variety of the means which may be necessary to satisfy them. The circumstances that endanger the safety of nations are infinite, and for this reason no constitutional shackles can wisely be imposed on the power to which the care of it is committed. This power ought to be coextensive with all the possible combinations of such circumstances; and ought to be under the direction of the same councils which are appointed to preside over the common defense.

This is one of those truths which to a correct and unprejudiced mind carries its own evidence along with it, and may be obscured, but cannot be made plainer by argument or reasoning. It rests upon axioms as simple as they are universal; the means ought to be proportioned to the end; the persons from whose agency the attainment of any end is expected ought to possess the means by which it is to be attained.

Whether there ought to be a federal government intrusted with the care of the common defense is a question in the first instance open for discussion; but the moment it is decided in the affirmative, it will follow that that government ought to be clothed with all the powers requisite to complete execution of its trust. And unless it can be shown that the circumstances which may affect the public safety are reducible within certain determinate limits; unless the contrary of this position can be fairly and rationally disputed, it must be admitted as a necessary consequence that there can be no limitation of that authority which is to provide for the defense and protection of the community in any matter essential to its efficacy—that is, in any

matter essential to the formation, direction, or support of the NATIONAL FORCES.

Defective as the present Confederation has been proved to be, this principle appears to have been fully recognized by the framers of it; though they have not made proper or adequate provision for its exercise. Congress have an unlimited discretion to make requisitions of men and money; to govern the army and navy; to direct their operations. As their requisitions are made constitutionally binding upon the States, who are in fact under the most solemn obligations to furnish the supplies required of them, the intention evidently was that the United States should command whatever resources were by them judged requisite to the "common defense and general welfare." It was presumed that a sense of their true interests, and a regard to the dictates of good faith, would be found sufficient pledges for the punctual performance of the duty of the members to the federal head.

The experiment has, however, demonstrated that this expectation was ill-founded and illusory; and the observations made under the last head will, I imagine, have sufficed to convince the impartial and discerning that there is an absolute necessity for an entire change in the first principles of the system; that if we are in earnest about giving the Union energy and duration, we must abandon the vain project of legislating upon the States in their collective capacities; we must extend the laws of the federal government to the individual citizens of America; we must discard the fallacious scheme of quotas and requisitions as equally impracticable and unjust. The result from all this is that the Union ought to be invested with full power to levy troops; to build and equip fleets; and to raise the revenues which will be required for the formation and support of an army and navy in the customary and ordinary modes practiced in other governments.

If the circumstances of our country are such as to demand a compound instead of a simple, a confederate instead of a sole,

government, the essential point which will remain to be adjusted will be to discriminate the OBJECTS, as far as it can be done, which shall appertain to the different provinces or departments of power; allowing to each the most ample authority for fulfilling the objects committed to its charge. Shall the Union be constituted the guardian of the common safety? Are fleets and armies and revenues necessary to this purpose? The government of the Union must be empowered to pass all laws, and to make all regulations which have relation to them. The same must be the case in respect to commerce, and to every other matter to which its jurisdiction is permitted to extend. Is the administration of justice between the citizens of the same State the proper department of the local governments? These must possess all the authorities which are connected with this object, and with every other that may be allotted to their particular cognizance and direction. Not to confer in each case a degree of power commensurate to the end would be to violate the most obvious rules of prudence and propriety, and improvidently to trust the great interests of the nation to hands which are disabled from managing them with vigor and success.

Who is likely to make suitable provisions for the public defense, as that body to which the guardianship of the public safety is confided; which, as the centre of information, will best understand the extent and urgency of the dangers that threaten; as the representative of the WHOLE, will feel itself most deeply interested in the preservation of every part; which, from the responsibility implied in the duty assigned to it, will be most sensibly impressed with the necessity of proper exertions; and which, by the extension of its authority throughout the States, can alone establish uniformity and concert in the plans and measures by which the common safety is to be secured? Is there not a manifest inconsistency in devolving upon the federal government the care of the general defense and leaving in the State governments the effective powers by which it is to be provided for? Is not a want of co-operation the infallible consequence

of such a system? And will not weakness, disorder, an undue distribution of the burdens and calamities of war, an unnecessary and intolerable increase of expense, be its natural and inevitable concomitants? Have we not had unequivocal experience of its effects in the course of the revolution which we have just achieved?

Every view we may take of the subject, as candid inquirers after truth, will serve to convince us that it is both unwise and dangerous to deny the federal government an unconfined authority in respect to all those objects which are intrusted to its management. It will indeed deserve the most vigilant and careful attention of the people to see that it be modeled in such a manner as to admit of its being safely vested with the requisite powers. If any plan which has been, or may be, offered to our consideration should not, upon a dispassionate inspection, be found to answer this description, it ought to be rejected. A government, the constitution of which renders it unfit to be trusted with all the powers which a free people ought to delegate to any government, would be an unsafe and improper depository of the NATIONAL INTERESTS. Wherever THESE can with propriety be confided, the coincident powers may safely accompany them. This is the true result of all just reasoning upon the subject. And the adversaries of the plan promulgated by the convention would have given a better impression of their candor if they had confined themselves to showing that the internal structure of the proposed government was such as to render it unworthy of the confidence of the people. They ought not to have wandered into inflammatory declamations and unmeaning cavils about the extent of the powers. The POWERS are not too extensive for the OBJECTS of federal administration, or, in other words, for the management of our NATIONAL INTERESTS; nor can any satisfactory argument be framed to show that they are chargeable with such an excess. If it be true, as has been insinuated by some of the writers on the other side, that the difficulty arises from the nature of the thing, and that the extent of the

country will not permit us to form a government in which such ample powers can safely be reposed, it would prove that we ought to contract our views, and resort to the expedient of separate confederacies, which will move within more practicable spheres. For the absurdity must continually stare us in the face of confiding to a government the direction of the most essential national interests, without daring to trust it to the authorities which are indispensable to their proper and efficient management. Let us not attempt to reconcile contradictions, but firmly embrace a rational alternative.

I trust, however, that the impracticability of one general system cannot be shown. I am greatly mistaken, if anything of weight has yet been advanced of this tendency; and I flatter myself, that the observations which have been made in the course of these papers have served to place the reverse of that position in as clear a light as any matter still in the womb of time and experience is susceptible of. This, at all events, must be evident, that the very difficulty itself, drawn from the extent of the country, is the strongest argument in favor of an energetic government; for any other can certainly never preserve the Union of so large an empire. If we embrace the tenets of those who oppose the adoption of the proposed Constitution as the standard of our political creed, we cannot fail to verify the gloomy doctrines which predict the impracticability of a national system pervading the entire limits of the present Confederacy.

FEDERALIST No. 24 The Powers Necessary to the Common Defense Further Considered

**For the Independent Journal.
Wednesday, December 19, 1787
Hamilton**

To the People of the State of New York:

TO THE powers proposed to be conferred upon the federal government, in respect to the creation and direction of the national forces, I have met with but one specific objection, which, if I understand it right, is this—that proper provision has not been made against the existence of standing armies in time of peace; an objection which I shall now endeavor to show rests on weak and unsubstantial foundations.

It has indeed been brought forward in the most vague and general form, supported only by bold assertions without the appearance of argument; without even the sanction of theoretical opinions; in contradiction to the practice of other free nations, and to the general sense of America, as expressed in most of the existing constitutions. The propriety of this remark will appear the moment it is recollected that the objection under consideration turns upon a supposed necessity of restraining the LEGISLATIVE authority of the nation in the article of military establishments; a principle unheard of, except in one or two of our State constitutions, and rejected in all the

rest.

A stranger to our politics, who was to read our newspapers at the present juncture without having previously inspected the plan reported by the convention, would be naturally led to one of two conclusions: either that it contained a positive injunction and standing armies should be kept up in time of peace; or that it vested in the EXECUTIVE the whole power of levying troops without subjecting his discretion, in any shape, to the control of the legislature.

If he came afterwards to peruse the plan itself, he would be surprised to discover that neither the one nor the other was the case; that the whole power of raising armies was lodged in the legislature, not in the executive; that this legislature was to be a popular body, consisting of the representatives of the people periodically elected; and that instead of the provision he had supposed in favor of standing armies, there was to be found in respect to this object an important qualification even of the legislative discretion in that clause which forbids the appropriation of money for the support of an army for any longer period than two years—a precaution which upon a nearer view of it will appear to be a great and real security against military establishments without evident necessity.

Disappointed in his first surmise, the person I have supposed would be apt to pursue his conjectures a little further. He would naturally say to himself, it is impossible that all this vehement and pathetic declamation can be without some colorable pretext. It must needs be that this people, so jealous of their liberties, have, in all the preceding models of the constitutions which they have established, inserted the most precise and rigid precautions on this point, the omission of which in the new plan has given birth to all this apprehension and clamor.

If under this impression he proceeded to pass in review the

several State constitutions, how great would be his disappointment to find that two only of them^[1] contained an interdiction of standing armies in time of peace; that the other eleven had either observed a profound silence on the subject, or had in express terms admitted the right of the legislature to authorize their existence.

Still, however, he would be persuaded that there must be some plausible foundation for the cry raised on this head. He would never be able to imagine, while any source of information remained unexplored, that it was nothing more than an experiment upon the public credulity, dictated either by a deliberate intention to deceive, or by the overflowings of a zeal too intemperate to be ingenuous. It would probably occur to him that he would be likely to find the precautions he was in search of in the primitive compact between the States. Here, at length, he would expect to meet with a solution of the enigma. No doubt he would observe to himself the existing Confederation must contain the most explicit provisions against military establishments in time of peace; and a departure from this model in a favorite point has occasioned the discontent which appears to influence these political champions.

If he should now apply himself to a careful and critical survey of the Articles of Confederation, his astonishment would not only be increased, but would acquire a mixture of indignation, at the unexpected discovery, that these articles, instead of containing the prohibition he looked for, and though they had with a jealous circumspection restricted the authority of the State legislatures in this particular, had not imposed a single restraint on that of the United States. If he happened to be a man of quick sensibility, or ardent temper, he could now no longer refrain from pronouncing these clamors to be the dishonest artifices of a sinister and unprincipled opposition to a plan which ought at least to receive a fair and candid examination from all sincere lovers of their country! How else, he

would say, could the authors of them have been tempted to vent such loud censures upon that plan about a point in which it seems to have conformed itself to the general sense of America as declared in its different forms of government, and in which it has even superadded a new and powerful guard unknown to any of them? If, on the contrary, he happened to be a man of calm and dispassionate feelings, he would indulge a sigh for the frailty of human nature, and would lament, that in a matter so interesting to the happiness of millions the true merits of the question should be perplexed and obscured by expedients so unfriendly to an impartial and right determination. Even such a man could hardly forbear remarking that a conduct of this kind has too much the appearance of an intention to mislead the people by alarming their passions, rather than to convince them by arguments addressed to their understandings.

But however little this objection may be countenanced, even by precedents among ourselves, it may be satisfactory to take a nearer view of its intrinsic merits. From a close examination it will appear that restraints upon the discretion of the legislature in respect to military establishments would be improper to be imposed, and if imposed, from the necessities of society, would be unlikely to be observed.

Though a wide ocean separates the United States from Europe, yet there are various considerations that warn us against an excess of confidence or security. On one side of us, and stretching far into our rear, are growing settlements subject to the dominion of Britain. On the other side, and extending to meet the British settlements, are colonies and establishments subject to the dominion of Spain. This situation and the vicinity of the West India Islands, belonging to these two powers, create between them, in respect to their American possessions and in relation to us, a common interest. The savage tribes on our Western frontier ought to be regarded as our natural enemies,

their natural allies, because they have most to fear from us, and most to hope from them. The improvements in the art of navigation have, as to the facility of communication, rendered distant nations, in a great measure, neighbors. Britain and Spain are among the principal maritime powers of Europe. A future concert of views between these nations ought not to be regarded as improbable. The increasing remoteness of consanguinity is every day diminishing the force of the family compact between France and Spain. And politicians have ever with great reason considered the ties of blood as feeble and precarious links of political connection. These circumstances combined admonish us not to be too sanguine in considering ourselves as entirely out of the reach of danger.

Previous to the Revolution, and ever since the peace, there has been a constant necessity for keeping small garrisons on our Western frontier. No person can doubt that these will continue to be indispensable, if it should only be against the ravages and depredations of the Indians. These garrisons must either be furnished by occasional detachments from the militia, or by permanent corps in the pay of the government. The first is impracticable; and if practicable, would be pernicious. The militia would not long, if at all, submit to be dragged from their occupations and families to perform that most disagreeable duty in times of profound peace. And if they could be prevailed upon or compelled to do it, the increased expense of a frequent rotation of service, and the loss of labor and disconcertion of the industrious pursuits of individuals, would form conclusive objections to the scheme. It would be as burdensome and injurious to the public as ruinous to private citizens. The latter resource of permanent corps in the pay of the government amounts to a standing army in time of peace; a small one, indeed, but not the less real for being small. Here is a simple view of the subject that shows us at once the impropriety of a constitutional interdiction of such establishments, and the necessity of leaving the matter to the

discretion and prudence of the legislature.

In proportion to our increase in strength, it is probable, nay, it may be said certain, that Britain and Spain would augment their military establishments in our neighborhood. If we should not be willing to be exposed, in a naked and defenseless condition, to their insults and encroachments, we should find it expedient to increase our frontier garrisons in some ratio to the force by which our Western settlements might be annoyed. There are, and will be, particular posts, the possession of which will include the command of large districts of territory, and facilitate future invasions of the remainder. It may be added that some of those posts will be keys to the trade with the Indian nations. Can any man think it would be wise to leave such posts in a situation to be at any instant seized by one or the other of two neighboring and formidable powers? To act this part would be to desert all the usual maxims of prudence and policy.

If we mean to be a commercial people, or even to be secure on our Atlantic side, we must endeavor, as soon as possible, to have a navy. To this purpose there must be dockyards and arsenals; and for the defense of these, fortifications, and probably garrisons. When a nation has become so powerful by sea that it can protect its dockyards by its fleets, this supersedes the necessity of garrisons for that purpose; but where naval establishments are in their infancy, moderate garrisons will, in all likelihood, be found an indispensable security against descents for the destruction of the arsenals and dock-yards, and sometimes of the fleet itself.

PUBLIUS

注释

[1] This statement of the matter is taken from the printed collections of State constitutions. Pennsylvania and North Carolina are

the two which contain the interdiction in these words:“As standing armies in time of peace are dangerous to liberty, THEY OUGHT NOT to be kept up.”This is, in truth, rather a CAUTION than a PROHIBITION. New Hampshire, Massachusetts, Delaware, and Maryland have, in each of their bills of rights, a clause to this effect:“Standing armies are dangerous to liberty, and ought not to be raised or kept up WITHOUT THE CONSENT OF THE LEGISLATURE”; which is a formal admission of the authority of the legislature. New York has no bill of her rights, and her constitution says not a word about the matter. No bills of rights appear annexed to the constitutions of the other States, except the foregoing, and their constitutions are equally silent. I am told, however, that one or two States have bills of rights which do not appear in this collection; but that those also recognize the right of the legislative authority in this respect.

FEDERALIST No. 25 The Same Subject Continued (The Powers Necessary to the Common Defense Further Considered)

**From the New York Packet.
Friday, December 21, 1787
Hamilton**

To the People of the State of New York:

IT MAY perhaps be urged that the objects enumerated in the preceding number ought to be provided for by the State governments, under the direction of the Union. But this would be in reality an inversion of the primary principle of our political association, as it would in practice transfer the care of the common defense from the federal head to the individual members: a project oppressive to some States, dangerous to all, and baneful to the Confederacy.

The territories of Britain, Spain, and of the Indian nations in our neighborhood do not border on particular States, but encircle the Union from Maine to Georgia. The danger, though in different degrees, is therefore common. And the means of guarding against it ought, in like manner, to be the objects of common councils, and of a common treasury. It happens that some States, from local situation, are more directly exposed. New York is of this class. Upon the plan of separate provisions, New York would have to sustain the whole weight of the establishments requisite to her immediate safety, and to the mediate or ultimate protection of her neighbors. This would

neither be equitable as it respected New York, nor safe as it respected the other States. Various inconveniences attend such a system. The States, to whose lot it might fall to support the necessary establishments, would be as little able as willing for a considerable time to come to bear the burden of competent provisions. The security of all would thus be subjected to the parsimony, improvidence, or inability of a part. If the resources of such part becoming more abundant and extensive, its provisions should be proportionally enlarged, the other States would quickly take the alarm at seeing the whole military force of the Union in the hands of two or three of its members, and those probably amongst the most powerful. They would each choose to have some counterpoise, and pretenses could easily be contrived. In this situation, military establishments, nourished by mutual jealousy, would be apt to swell beyond their natural or proper size; and being at the separate disposal of the members, they would be engines for the abridgment or demolition of the national authority.

Reasons have been already given to induce a supposition that the State governments will too naturally be prone to a rivalry with that of the Union, the foundation of which will be the love of power; and that in any contest between the federal head and one of its members the people will be most apt to unite with their local government. If, in addition to this immense advantage, the ambition of the members should be stimulated by the separate and independent possession of military forces, it would afford too strong a temptation and too great a facility to them to make enterprises upon, and finally to subvert, the constitutional authority of the Union. On the other hand, the liberty of the people would be less safe in this state of things than in that which left the national forces in the hands of the national government. As far as an army may be considered as a dangerous weapon of power, it had better be in those hands of which the people are most likely to be jealous than in those of which they are least likely to be jealous. For it is a truth, which the experience of all ages has attested, that the

people are commonly most in danger when the means of injuring their rights are in the possession of those of whom they entertain the least suspicion.

The framers of the existing Confederation, fully aware of the danger to the Union from the separate possession of military forces by the States, have in express terms prohibited them from having either ships or troops, unless with the consent of Congress. The truth is, that the existence of a federal government and military establishments under State authority are not less at variance with each other than a due supply of the federal treasury and the system of quotas and requisitions.

There are other lights besides those already presented in which the impropriety of restraints on the discretion of the national legislature will be equally manifest. The design of the objection which has been mentioned is to preclude standing armies in time of peace, though we have never been informed how far it is desired the prohibition should extend: whether to raising armies as well as to keeping them up in a season of tranquillity or not. If it be confined to the latter it will have no precise signification, and it will be ineffectual for the purpose intended. When armies are once raised what shall be denominated “keeping them up,” contrary to the sense of the Constitution? What time shall be requisite to ascertain the violation? Shall it be a week, a month, or a year? Or shall we say they may be continued as long as the danger which occasioned their being raised continues? This would be to admit that they might be kept up in time of peace, against threatening or impending danger, which would be at once to deviate from the literal meaning of the prohibition and to introduce an extensive latitude of construction. Who shall judge of the continuance of the danger? This must undoubtedly be submitted to the national government, and the matter would then be brought to this issue, that the national government to provide against

apprehended danger might in the first instance raise troops, and might afterwards keep them on foot as long as they supposed the peace or safety of the community was in any degree of jeopardy. It is easy to perceive that a discretion so latitudinary as this would afford ample room for eluding the force of the provision.

The supposed utility of a provision of this kind must be founded upon a supposed probability, or at least possibility, of a combination between the executive and legislative in some scheme of usurpation. Should this at any time happen, how easy would it be to fabricate pretenses of approaching danger? Indian hostilities, instigated by Spain or Britain, would always be at hand. Provocations to produce the desired appearances might even be given to some foreign power, and appeased again by timely concessions. If we can reasonably presume such a combination to have been formed, and that the enterprise is warranted by a sufficient prospect of success, the army, when once raised, from whatever cause, or on whatever pretext, may be applied to the execution of the project.

If, to obviate this consequence, it should be resolved to extend the prohibition to the raising of armies in time of peace, the United States would then exhibit the most extraordinary spectacle which the world has yet seen—that of a nation incapacitated by its Constitution to prepare for defense before it was actually invaded. As the ceremony of a formal denunciation of war has of late fallen into disuse, the presence of an enemy within our territories must be waited for as the legal warrant to the government to begin its levies of men for the protection of the State. We must receive the blow before we could even prepare to return it. All that kind of policy by which nations anticipate distant danger and meet the gathering storm must be abstained from, as contrary to the genuine maxims of a free government. We must expose our property and liberty to the mercy of foreign invaders and invite them by our weakness to seize the naked

and defenseless prey, because we are afraid that rulers, created by our choice, dependent on our will, might endanger that liberty by an abuse of the means necessary to its preservation.

Here I expect we shall be told that the militia of the country is its natural bulwark, and would be at all times equal to the national defense. This doctrine, in substance, had like to have lost us our independence. It cost millions to the United States that might have been saved. The facts which from our own experience forbid a reliance of this kind are too recent to permit us to be the dupes of such a suggestion. The steady operations of war against a regular and disciplined army can only be successfully conducted by a force of the same kind. Considerations of economy, not less than of stability and vigor, confirm this position. The American militia, in the course of the late war, have, by their valor on numerous occasions, erected eternal monuments to their fame; but the bravest of them feel and know that the liberty of their country could not have been established by their efforts alone, however great and valuable they were. War, like most other things, is a science to be acquired and perfected by diligence, by perseverance, by time, and by practice.

All violent policy, contrary to the natural and experienced course of human affairs, defeats itself. Pennsylvania at this instant affords an example of the truth of this remark. The Bill of Rights of that State declares that standing armies are dangerous to liberty, and ought not to be kept up in time of peace. Pennsylvania, nevertheless, in a time of profound peace from the existence of partial disorders in one or two of her counties, has resolved to raise a body of troops; and in all probability will keep them up as long as there is any appearance of danger to the public peace. The conduct of Massachusetts affords a lesson on the same subject, though on different ground. That State (without waiting for the sanction of Congress, as the articles of the Confederation require) was compelled to raise troops to quell a

domestic insurrection, and still keeps a corps in pay to prevent a revival of the spirit of revolt. The particular constitution of Massachusetts opposed no obstacle to the measure; but the instance is still of use to instruct us that cases are likely to occur under our government, as well as under those of other nations, which will sometimes render a military force in time of peace essential to the security of the society, and that it is therefore improper in this respect to control the legislative discretion. It also teaches us, in its application to the United States, how little the rights of a feeble government are likely to be respected, even by its own constituents. And it teaches us, in addition to the rest, how unequal parchment provisions are to a struggle with public necessity.

It was a fundamental maxim of the Lacedaemonian commonwealth that the post of admiral should not be conferred twice on the same person. The Peloponnesian confederates, having suffered a severe defeat at sea from the Athenians, demanded Lysander, who had before served with success in that capacity, to command the combined fleets. The Lacedaemonians, to gratify their allies, and yet preserve the semblance of an adherence to their ancient institutions, had recourse to the flimsy subterfuge of investing Lysander with the real power of admiral under the nominal title of vice-admiral. This instance is selected from among a multitude that might be cited to confirm the truth already advanced and illustrated by domestic examples; which is, that nations pay little regard to rules and maxims calculated in their very nature to run counter to the necessities of society. Wise politicians will be cautious about fettering the government with restrictions that cannot be observed, because they know that every breach of the fundamental laws, though dictated by necessity, impairs that sacred reverence which ought to be maintained in the breast of rulers towards the constitution of a country, and forms a precedent for other breaches where the same plea of necessity does not exist at all, or is less urgent and palpable.

FEDERALIST No. 26 The Idea of Restraining the Legislative Authority in Regard to the Common Defense Considered For the Independent Journal. Saturday, December 22, 1787 Hamilton

To the People of the State of New York:

IT WAS a thing hardly to be expected that in a popular revolution the minds of men should stop at that happy mean which marks the salutary boundary between POWER and PRIVILEGE, and combines the energy of government with the security of private rights. A failure in this delicate and important point is the great source of the inconveniences we experience, and if we are not cautious to avoid a repetition of the error in our future attempts to rectify and ameliorate our system we may travel from one chimerical project to another; we may try change after change; but we shall never be likely to make any material change for the better.

The idea of restraining the legislative authority in the means of providing for the national defense is one of those refinements which owe their origin to a zeal for liberty more ardent than enlightened. We have seen, however, that it has not had thus far an extensive prevalence; that even in this country, where it made its first appearance, Pennsylvania and North Carolina are the only two States by which it has been in any degree patronized; and that all the others

have refused to give it the least countenance; wisely judging that confidence must be placed somewhere; that the necessity of doing it is implied in the very act of delegating power; and that it is better to hazard the abuse of that confidence than to embarrass the government and endanger the public safety by impolitic restrictions on the legislative authority. The opponents of the proposed Constitution combat, in this respect, the general decision of America; and instead of being taught by experience the propriety of correcting any extremes into which we may have heretofore run, they appear disposed to conduct us into others still more dangerous and more extravagant. As if the tone of government had been found too high, or too rigid, the doctrines they teach are calculated to induce us to depress or to relax it by expedients which, upon other occasions, have been condemned or forborne. It may be affirmed without the imputation of invective that if the principles they inculcate on various points could so far obtain as to become the popular creed, they would utterly unfit the people of this country for any species of government whatever. But a danger of this kind is not to be apprehended. The citizens of America have too much discernment to be argued into anarchy. And I am much mistaken if experience has not wrought a deep and solemn conviction in the public mind that greater energy of government is essential to the welfare and prosperity of the community.

It may not be amiss in this place concisely to remark the origin and progress of the idea, which aims at the exclusion of military establishments in time of peace. Though in speculative minds it may arise from a contemplation of the nature and tendency of such institutions, fortified by the events that have happened in other ages and countries, yet as a national sentiment it must be traced to those habits of thinking which we derive from the nation from whom the inhabitants of these States have in general sprung.

In England, for a long time after the Norman Conquest, the

authority of the monarch was almost unlimited. Inroads were gradually made upon the prerogative in favor of liberty, first by the barons and afterwards by the people, till the greatest part of its most formidable pretensions became extinct. But it was not till the revolution in 1688, which elevated the Prince of Orange to the throne of Great Britain, that English liberty was completely triumphant. As incident to the undefined power of making war an acknowledged prerogative of the crown, Charles II had by his own authority, kept on foot in time of peace a body of 5,000 regular troops. And this number James II increased to 30,000, which were paid out of his civil list. At the revolution, to abolish the exercise of so dangerous an authority, it became an article of the Bill of Rights then framed that “the raising or keeping a standing army within the kingdom in time of peace, unless with the consent of parliament, was against law.”

In that kingdom, when the pulse of liberty was at its highest pitch, no security against the danger of standing armies was thought requisite, beyond a prohibition of their being raised or kept up by the mere authority of the executive magistrate. The patriots who effected that memorable revolution were too temperate, too wellinformed, to think of any restraint on the legislative discretion. They were aware that a certain number of troops for guards and garrisons were indispensable; that no precise bounds could be set to the national exigencies; that a power equal to every possible contingency must exist somewhere in the government; and that when they referred the exercise of that power to the judgment of the legislature, they had arrived at the ultimate point of precaution which was reconcilable with the safety of the community.

From the same source, the people of America may be said to have derived an hereditary impression of danger to liberty, from standing armies in time of peace. The circumstances of a revolution quickened the public sensibility on every point connected with the security of

popular rights, and in some instances raise the warmth of our zeal beyond the degree which consisted with the due temperature of the body politic. The attempts of two of the States to restrict the authority of the legislature in the article of military establishments are of the number of these instances. The principles which had taught us to be jealous of the power of an hereditary monarch were by an injudicious excess extended to the representatives of the people in their popular assemblies. Even in some of the States, where this error was not adopted, we find unnecessary declarations that standing armies ought not to be kept up in time of peace WITHOUT THE CONSENT OF THE LEGISLATURE. I call them unnecessary, because the reason which had introduced a similar provision into the English Bill of Rights is not applicable to any of the State constitutions. The power of raising armies at all under those constitutions can by no construction be deemed to reside anywhere else than in the legislatures themselves; and it was superfluous, if not absurd, to declare that a matter should not be done without the consent of a body, which alone had the power of doing it. Accordingly, in some of these constitutions, and among others, in that of this State of New York, which has been justly celebrated both in Europe and America as one of the best of the forms of government established in this country, there is a total silence upon the subject.

It is remarkable that even in the two States which seem to have meditated an interdiction of military establishments in time of peace, the mode of expression made use of is rather monitory than prohibitory. It is not said that standing armies shall not be kept up, but that they ought not to be kept up, in time of peace. This ambiguity of terms appears to have been the result of a conflict between jealousy and conviction; between the desire of excluding such establishments at all events and the persuasion that an absolute exclusion would be unwise and unsafe.

Can it be doubted that such a provision, whenever the situation of public affairs was understood to require a departure from it, would be interpreted by the legislature into a mere admonition, and would be made to yield to the necessities or supposed necessities of the State? Let the fact already mentioned with respect to Pennsylvania decide. What then (it may be asked) is the use of such a provision, if it cease to operate the moment there is an inclination to disregard it?

查理二世（1630—1685），查理一世与亨利叶塔·玛利亚王后的长子。早年因其父王在英国内战中失败，颠沛流离。1649年，查理一世被克伦威尔处死后，他被苏格兰议会立为苏格兰国王，以对抗清教徒的英吉利共和国。1650年他抵达爱丁堡；1651年元旦加冕，称查理二世

Let us examine whether there be any comparison in point of efficacy between the provision alluded to and that which is contained in the new Constitution for restraining the appropriations of money for military purposes to the period of two years. The former, by aiming at too much, is calculated to effect nothing; the latter, by steering clear of an imprudent extreme, and by being perfectly compatible with a proper provision for the exigencies of the nation, will have a salutary and powerful operation.

The legislature of the United States will be obliged by this provision, once at least in every two years, to deliberate upon the propriety of keeping a military force on foot; to come to a new resolution on the point; and to declare their sense of the matter by a formal vote in the face of their constituents. They are not at liberty to vest in the executive department permanent funds for the support of an army, if they were even incautious enough to be willing to repose in it so improper a confidence. As the spirit of party in different degrees must be expected to infect all political bodies, there will be, no doubt, persons in the national legislature willing enough to arraign the measures and criminate the views of the majority. The provision for the support of a military force will always be a favorable topic for declamation. As often as the question comes forward, the public attention will be roused and attracted to the subject by the party in opposition; and if the majority should be really disposed to exceed the proper limits, the community will be warned of the danger, and will have an opportunity of taking measures to guard against it. Independent of parties in the national legislature itself, as often as the period of discussion arrived, the State legislatures, who will always be not only vigilant but suspicious and jealous guardians of the rights of

the citizens against encroachments from the federal government, will constantly have their attention awake to the conduct of the national rulers, and will be ready enough, if anything improper appears, to sound the alarm to the people, and not only to be the VOICE, but, if necessary, the ARM of their discontent.

Schemes to subvert the liberties of a great community require time to mature them for execution. An army, so large as seriously to menace those liberties, could only be formed by progressive augmentations; which would suppose not merely a temporary combination between the legislature and executive, but a continued conspiracy for a series of time. Is it probable that such a combination would exist at all? Is it probable that it would be persevered in, and transmitted along through all the successive variations in a representative body, which biennial elections would naturally produce in both houses? Is it presumable that every man the instant he took his seat in the national Senate or House of Representatives would commence a traitor to his constituents and to his country? Can it be supposed that there would not be found one man discerning enough to detect so atrocious a conspiracy, or bold or honest enough to apprise his constituents of their danger? If such presumptions can fairly be made, there ought to be at once an end of all delegated authority. The people should resolve to recall all the powers they have heretofore parted with out of their own hands, and to divide themselves into as many States as there are counties in order that they may be able to manage their own concerns in person.

If such suppositions could even be reasonably made, still the concealment of the design for any duration would be impracticable. It would be announced by the very circumstance of augmenting the army to so great an extent in time of profound peace. What colorable reason could be assigned in a country so situated for such vast augmentations of the military force? It is impossible that the people

could be long deceived; and the destruction of the project and of the projectors would quickly follow the discovery.

It has been said that the provision which limits the appropriation of money for the support of an army to the period of two years would be unavailing, because the executive, when once possessed of a force large enough to awe the people into submission, would find resources in that very force sufficient to enable him to dispense with supplies from the acts of the legislature. But the question again recurs, upon what pretense could he be put in possession of a force of that magnitude in time of peace? If we suppose it to have been created in consequence of some domestic insurrection or foreign war, then it becomes a case not within the principles of the objection; for this is levelled against the power of keeping up troops in time of peace. Few persons will be so visionary as seriously to contend that military forces ought not to be raised to quell a rebellion or resist an invasion; and if the defense of the community under such circumstances should make it necessary to have an army so numerous as to hazard its liberty, this is one of those calamities for which there is neither preventative nor cure. It cannot be provided against by any possible form of government; it might even result from a simple league offensive and defensive, if it should ever be necessary for the confederates or allies to form an army for common defense.

But it is an evil infinitely less likely to attend us in a united than in a disunited state; nay, it may be safely asserted that it is an evil altogether unlikely to attend us in the latter situation. It is not easy to conceive a possibility that dangers so formidable can assail the whole Union as to demand a force considerable enough to place our liberties in the least jeopardy, especially if we take into our view the aid to be derived from the militia, which ought always to be counted upon as a valuable and powerful auxiliary. But in a state of disunion (as has been fully shown in another place), the contrary of this supposition

would become not only probable, but almost unavoidable.

PUBLIUS

FEDERALIST No. 27 The Same Subject Continued (The Idea of Restraining the Legislative Authority in Regard to the Common Defense Considered)

**From the New York Packet.
Tuesday, December 25, 1787
Hamilton**

To the People of the State of New York:

IT HAS been urged in different shapes that a Constitution of the kind proposed by the convention cannot operate without the aid of a military force to execute its laws. This, however, like most other things that have been alleged on that side, rests on mere general assertion, unsupported by any precise or intelligible designation of the reasons upon which it is founded. As far as I have been able to divine the latent meaning of the objectors, it seems to originate in a presupposition that the people will be disinclined to the exercise of federal authority in any matter of an internal nature. Waiving any exception that might be taken to the inaccuracy or inexplicitness of the distinction between internal and external, let us inquire what ground there is to presuppose that disinclination in the people. Unless we presume at the same time that the powers of the general government will be worse administered than those of the State government, there seems to be no room for the presumption of ill-will, disaffection, or opposition in the people. I believe it may be laid down

as a general rule that their confidence in and obedience to a government will commonly be proportioned to the goodness or badness of its administration. It must be admitted that there are exceptions to this rule; but these exceptions depend so entirely on accidental causes that they cannot be considered as having any relation to the intrinsic merits or demerits of a constitution. These can only be judged of by general principles and maxims.

Various reasons have been suggested in the course of these papers to induce a probability that the general government will be better administered than the particular governments; the principal of which are that the extension of the spheres of election will present a greater option, or latitude of choice, to the people; that through the medium of the State legislatures—who are select bodies of men and who are to appoint the members of the national Senate—there is reason to expect that this branch will generally be composed with peculiar care and judgment; that these circumstances promise greater knowledge and more comprehensive information in the national councils. And that on account of the extent of the country from which those, to whose direction they will be committed, will be drawn, they will be less apt to be tainted by the spirit of faction, and more out of the reach of those occasional ill humors, or temporary prejudices and propensities, which in smaller societies frequently contaminate the public deliberations, beget injustice and oppression of a part of the community, and engender schemes which, though they gratify a momentary inclination or desire, terminate in general distress, dissatisfaction, and disgust. Several additional reasons of considerable force to fortify that probability will occur when we come to survey with a more critical eye the interior structure of the edifice which we are invited to erect. It will be sufficient here to remark that until satisfactory reasons can be assigned to justify an opinion that the federal government is likely to be administered in such a manner as to render it odious or contemptible to the people, there can be no

reasonable foundation for the supposition that the laws of the Union will meet with any greater obstruction from them, or will stand in need of any other methods to enforce their execution, than the laws of the particular members.

The hope of impunity is a strong incitement to sedition; the dread of punishment, a proportionably strong discouragement to it. Will not the government of the Union, which, if possessed of a due degree of power, can call to its aid the collective resources of the whole Confederacy, be more likely to repress the former sentiment and to inspire the latter, than that of a single State, which can only command the resources within itself? A turbulent faction in a State may easily suppose itself able to contend with the friends to the government in that State; but it can hardly be so infatuated as to imagine itself a match for the combined efforts of the Union. If this reflection be just, there is less danger of resistance from irregular combinations of individuals to the authority of the Confederacy than to that of a single member.

I will, in this place, hazard an observation which will not be the less just because to some it may appear new; which is, that the more the operations of the national authority are intermingled in the ordinary exercise of government, the more the citizens are accustomed to meet with it in the common occurrences of their political life, the more it is familiarized to their sight and to their feelings, the further it enters into those objects which touch the most sensible chords and put in motion the most active springs of the human heart, the greater will be the probability that it will conciliate the respect and attachment of the community. Man is very much a creature of habit. A thing that rarely strikes his senses will generally have but a transient influence upon his mind. A government continually at a distance and out of sight can hardly be expected to interest the sensations of the people. The inference is that the authority of the Union and the affections of

the citizens towards it will be strengthened, rather than weakened, by its extension to what are called matters of internal concern; and that it will have less occasion to recur to force, in proportion to the familiarity and comprehensiveness of its agency. The more it circulates through those channels and currents in which the passions of mankind naturally flow, the less will it require the aid of the violent and perilous expedients of compulsion.

One thing at all events must be evident, that a government like that proposed would bid much fairer to avoid the necessity of using force than the species of league contended for by most of its opponents; the authority of which should only operate upon the States in their political or collective capacities. It has been shown that in such a Confederacy there can be no sanction for the laws but force; that frequent delinquencies in the members are the natural offspring of the very frame of the government; and that as often as these happen, they can only be redressed, if at all, by war and violence.

The plan reported by the convention, by extending the authority of the federal head to the individual citizens of the several States, will enable the government to employ the ordinary magistracy of each in the execution of its laws. It is easy to perceive that this will tend to destroy, in the common apprehension, all distinction between the sources from which they might proceed; and will give the federal government the same advantage for securing a due obedience to its authority which is enjoyed by the government of each State, in addition to the influence on public opinion which will result from the important consideration of its having power to call to its assistance and support the resources of the whole Union. It merits particular attention in this place, that the laws of the Confederacy as to the enumerated and legitimate objects of its jurisdiction will become the SUPREME LAW of the land; to the observance of which all officers, legislative, executive, and judicial in each State will be bound by the

sanctity of an oath. Thus the legislatures, courts, and magistrates, of the respective members, will be incorporated into the operations of the national government as far as its just and constitutional authority extends; and will be rendered auxiliary to the enforcement of its laws.

[1] Any man who will pursue by his own reflections the consequences of this situation will perceive that there is good ground to calculate upon a regular and peaceable execution of the laws of the Union, if its powers are administered with a common share of prudence. If we will arbitrarily suppose the contrary, we may deduce any inferences we please from the supposition; for it is certainly possible; by an injudicious exercise of the authorities of the best government that ever was, or ever can be instituted, to provoke and precipitate the people into the wildest excesses. But though the adversaries of the proposed Constitution should presume that the national rulers would be insensible to the motives of public good, or to the obligations of duty, I would still ask them how the interests of ambition, or the views of encroachment, can be promoted by such a conduct?

注释

[1] The sophistry which has been employed to show that this will tend to the destruction of the State governments will, in its proper place, be fully detected.

FEDERALIST No. 28 The Same Subject Continued (The Idea of Restraining the Legislative Authority in Regard to the Common Defense Considered)

**For the Independent Journal.
Wednesday, December 26, 1787
Hamilton**

To the People of the State of New York:

THAT there may happen cases in which the national government may be necessitated to resort to force cannot be denied. Our own experience has corroborated the lessons taught by the examples of other nations; that emergencies of this sort will sometimes exist in all societies, however constituted; that seditions and insurrections are, unhappily, maladies as inseparable from the body politic as tumors and eruptions from the natural body; that the idea of governing at all times by the simple force of law (which we have been told is the only admissible principle of republican government) has no place but in the reveries of those political doctors whose sagacity disdains the admonitions of experimental instruction.

Should such emergencies at any time happen under the national government, there could be no remedy but force. The means to be employed must be proportioned to the extent of the mischief. If it should be a slight commotion in a small part of a State, the militia of

the residue would be adequate to its suppression; and the national presumption is that they would be ready to do their duty. An insurrection, whatever may be its immediate cause, eventually endangers all government. Regard to the public peace, if not to the rights of the Union, would engage the citizens to whom the contagion had not communicated itself to oppose the insurgents; and if the general government should be found in practice conducive to the prosperity and felicity of the people, it were irrational to believe that they would be disinclined to its support.

If, on the contrary, the insurrection should pervade a whole State, or a principal part of it, the employment of a different kind of force might become unavoidable. It appears that Massachusetts found it necessary to raise troops for repressing the disorders within that State; that Pennsylvania, from the mere apprehension of commotions among a part of her citizens, has thought proper to have recourse to the same measure. Suppose the State of New York had been inclined to re-establish her lost jurisdiction over the inhabitants of Vermont, could she have hoped for success in such an enterprise from the efforts of the militia alone? Would she not have been compelled to raise and to maintain a more regular force for the execution of her design? If it must then be admitted that the necessity of recurring to a force different from the militia, in cases of this extraordinary nature, is applicable to the State governments themselves, why should the possibility that the national government might be under a like necessity, in similar extremities, be made an objection to its existence? Is it not surprising that men who declare an attachment to the Union in the abstract should urge as an objection to the proposed Constitution what applies with tenfold weight to the plan for which they contend; and what, as far as it has any foundation in truth, is an inevitable consequence of civil society upon an enlarged scale? Who would not prefer that possibility to the unceasing agitations and frequent revolutions which are the continual scourges of petty

republics?

Let us pursue this examination in another light. Suppose, in lieu of one general system, two, or three, or even four Confederacies were to be formed, would not the same difficulty oppose itself to the operations of either of these Confederacies? Would not each of them be exposed to the same casualties; and when these happened, be obliged to have recourse to the same expedients for upholding its authority which are objected to in a government for all the States? Would the militia in this supposition be more ready or more able to support the federal authority than in the case of a general union? All candid and intelligent men must, upon due consideration, acknowledge that the principle of the objection is equally applicable to either of the two cases; and that whether we have one government for all the States, or different governments for different parcels of them, or as many unconnected governments as there are States, there might sometimes be a necessity to make use of a force constituted differently from the militia, to preserve the peace of the community and to maintain the just authority of the laws against those violent invasions of them which amount to insurrections and rebellions.

Independent of all other reasonings upon the subject, it is a full answer to those who require a more peremptory provision against military establishments in time of peace to say that the whole power of the proposed government is to be in the hands of the representatives of the people. This is the essential, and, after all, only efficacious security for the rights and privileges of the people which is attainable in civil society.^[1]

If the representatives of the people betray their constituents, there is then no resource left but in the exertion of that original right of self-defense which is paramount to all positive forms of government, and which against the usurpations of the national rulers may be exerted with infinitely better prospect of success than against those of the

rulers of an individual state. In a single state, if the persons intrusted with supreme power become usurpers, the different parcels, subdivisions, or districts of which it consists, having no distinct government in each, can take no regular measures for defense. The citizens must rush tumultuously to arms, without concert, without system, without resource; except in their courage and despair. The usurpers, clothed with the forms of legal authority, can too often crush the opposition in embryo. The smaller the extent of the territory, the more difficult will it be for the people to form a regular or systematic plan of opposition, and the more easy will it be to defeat their early efforts. Intelligence can be more speedily obtained of their preparations and movements, and the military force in the possession of the usurpers can be more rapidly directed against the part where the opposition has begun. In this situation there must be a peculiar coincidence of circumstances to insure success to the popular resistance.

The obstacles to usurpation and the facilities of resistance increase with the increased extent of the state, provided the citizens understand their rights and are disposed to defend them. The natural strength of the people in a large community, in proportion to the artificial strength of the government, is greater than in a small, and of course more competent to a struggle with the attempts of the government to establish a tyranny. But in a confederacy the people, without exaggeration, may be said to be entirely the masters of their own fate. Power being almost always the rival of power, the general government will at all times stand ready to check the usurpations of the state governments, and these will have the same disposition towards the general government. The people, by throwing themselves into either scale, will infallibly make it preponderate. If their rights are invaded by either, they can make use of the other as the instrument of redress. How wise will it be in them by cherishing the union to preserve to themselves an advantage which can never be too

highly prized!

It may safely be received as an axiom in our political system, that the State governments will, in all possible contingencies, afford complete security against invasions of the public liberty by the national authority. Projects of usurpation cannot be masked under pretenses so likely to escape the penetration of select bodies of men, as of the people at large. The legislatures will have better means of information. They can discover the danger at a distance; and possessing all the organs of civil power and the confidence of the people, they can at once adopt a regular plan of opposition, in which they can combine all the resources of the community. They can readily communicate with each other in the different States, and unite their common forces for the protection of their common liberty.

The great extent of the country is a further security. We have already experienced its utility against the attacks of a foreign power. And it would have precisely the same effect against the enterprises of ambitious rulers in the national councils. If the federal army should be able to quell the resistance of one State, the distant States would be able to make head with fresh forces. The advantages obtained in one place must be abandoned to subdue the opposition in others; and the moment the part which had been reduced to submission was left to itself, its efforts would be renewed, and its resistance revive.

We should recollect that the extent of the military force must, at all events, be regulated by the resources of the country. For a long time to come it will not be possible to maintain a large army; and as the means of doing this increase, the population and natural strength of the community will proportionably increase. When will the time arrive that the federal government can raise and maintain an army capable of erecting a despotism over the great body of the people of an immense empire, who are in a situation, through the medium of their State governments, to take measures for their own defense, with

all the celerity, regularity, and system of independent nations? The apprehension may be considered as a disease, for which there can be found no cure in the resources of argument and reasoning.

FEDERALIST No. 29

Concerning the Militia

**From the New York Packet.
Wednesday, January 9, 1788
Hamilton**

To the People of the State of New York:

THE power of regulating the militia and of commanding its services in times of insurrection and invasion are natural incidents to the duties of superintending the common defense, and of watching over the internal peace of the Confederacy.

It requires no skill in the science of war to discern that uniformity in the organization and discipline of the militia would be attended with the most beneficial effects, whenever they were called into service for the public defense. It would enable them to discharge the duties of the camp and of the field with mutual intelligence and concert—an advantage of peculiar moment in the operations of an army; and it would fit them much sooner to acquire the degree of proficiency in military functions which would be essential to their usefulness. This desirable uniformity can only be accomplished by confiding the regulation of the militia to the direction of the national authority. It is, therefore, with the most evident propriety that the plan of the convention proposes to empower the Union “to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively the appointment of the

officers, and the authority of training the militia according to the discipline prescribed by Congress.”

Of the different grounds which have been taken in opposition to this plan there is none that was so little to have been expected, or is so untenable in itself, as the one from which this particular provision has been attacked. If a well-regulated militia be the most natural defense of a free country, it ought certainly to be under the regulation and at the disposal of that body which is constituted the guardian of the national security. If standing armies are dangerous to liberty, an efficacious power over the militia in the same body ought, as far as possible, to take away the inducement and the pretext to such unfriendly institutions. If the federal government can command the aid of the militia in those emergencies which call for the military arm in support of the civil magistrate, it can the better dispense with the employment of a different kind of force. If it cannot avail itself of the former, it will be obliged to recur to the latter. To render an army unnecessary will be a more certain method of preventing its existence than a thousand prohibitions upon paper.

In order to cast an odium upon the power of calling forth the militia to execute the laws of the Union, it has been remarked that there is nowhere any provision in the proposed Constitution for requiring the aid of the POSSE COMITATUS to assist the magistrate in the execution of his duty, whence it has been inferred that military force was intended to be his only auxiliary. There is a striking incoherence in the objections which have appeared, and sometimes even from the same quarter, not much calculated to inspire a very favorable opinion of the sincerity or fair dealing of their authors. The same persons who tell us in one breath that the powers of the federal government will be despotic and unlimited inform us in the next that it has not authority sufficient even to call out the POSSE COMITATUS. The latter, fortunately, is as much short of the truth as the former

exceeds it. It would be as absurd to doubt that a right to pass all laws necessary and proper to execute its declared powers would include that of requiring the assistance of the citizens to the officers who may be intrusted with the execution of those laws as it would be to believe that a right to enact laws necessary and proper for the imposition and collection of taxes would involve that of varying the rules of descent and of the alienation of landed property, or of abolishing the trial by jury in cases relating to it. It being therefore evident that the supposition of a want of power to require the aid of the POSSE COMITATUS is entirely destitute of color, it will follow that the conclusion which has been drawn from it, in its application to the authority of the federal government over the militia, is as uncandid as it is illogical. What reason could there be to infer that force was intended to be the sole instrument of authority, merely because there is a power to make use of it when necessary? What shall we think of the motives which could induce men of sense to reason in this extraordinary manner? How shall we prevent a conflict between charity and conviction?

By a curious refinement upon the spirit of republican jealousy, we are even taught to apprehend danger from the militia itself in the hands of the federal government. It is observed that select corps may be formed, composed of the young and the ardent, who may be rendered subservient to the views of arbitrary power. What plan for the regulation of the militia may be pursued by the national government is impossible to be foreseen. But so far from viewing the matter in the same light with those who object to select corps as dangerous, were the Constitution ratified and were I to deliver my sentiments to a member of the federal legislature on the subject of a militia establishment, I should hold to him, in the substance, the following discourse:

“The project of disciplining all the militia of the United States is

as futile as it would be injurious if it were capable of being carried into execution. A tolerable expertness in military movements is a business that requires time and practice. It is not a day, nor a week nor even a month, that will suffice for the attainment of it. To oblige the great body of the yeomanry and of the other classes of the citizens to be under arms for the purpose of going through military exercises and evolutions, as often as might be necessary to acquire the degree of perfection which would entitle them to the character of a well-regulated militia, would be a real grievance to the people and a serious public inconvenience and loss. It would form an annual deduction from the productive labor of the country to an amount which, calculating upon the present numbers of the people, would not fall far short of a million pounds. To attempt a thing which would abridge the mass of labor and industry to so considerable an extent would be unwise: and the experiment, if made, could not succeed, because it would not long be endured. Little more can reasonably be aimed at with respect to the people at large than to have them properly armed and equipped; and in order to see that this be not neglected, it will be necessary to assemble them once or twice in the course of a year.

“But though the scheme of disciplining the whole nation must be abandoned as mischievous or impracticable; yet it is a matter of the utmost importance that a well-digested plan should, as soon as possible, be adopted for the proper establishment of the militia. The attention of the government ought particularly to be directed to the formation of a select corps of moderate size, upon such principles as will really fit it for service in case of need. By thus circumscribing the plan, it will be possible to have an excellent body of well-trained militia ready to take the field whenever the defense of the State shall require it. This will not only lessen the call for military establishments, but if circumstances should at any time oblige the government to form an army of any magnitude that army can never be

formidable to the liberties of the people while there is a large body of citizens, little, if at all, inferior to them in discipline and the use of arms, who stand ready to defend their own rights and those of their fellow-citizens. This appears to me the only substitute that can be devised for a standing army, and the best possible security against it, if it should exist.”

Thus differently from the adversaries of the proposed Constitution should I reason on the same subject, deducing arguments of safety from the very sources which they represent as fraught with danger and perdition. But how the national legislature may reason on the point is a thing which neither they nor I can foresee.

There is something so far-fetched and so extravagant in the idea of danger to liberty from the militia that one is at a loss whether to treat it with gravity or with raillery; whether to consider it as a mere trial of skill, like the paradoxes of rhetoricians; as a disingenuous artifice to instil prejudices at any price; or as the serious offspring of political fanaticism. Where in the name of common sense are our fears to end if we may not trust our sons, our brothers, our neighbors, our fellow-citizens? What shadow of danger can there be from men who are daily mingling with the rest of their countrymen and who participate with them in the same feelings, sentiments, habits and interests? What reasonable cause of apprehension can be inferred from a power in the Union to prescribe regulations for the militia and to command its services when necessary, while the particular States are to have the sole and exclusive appointment of the officers? If it were possible seriously to indulge a jealousy of the militia upon any conceivable establishment under the federal government, the circumstance of the officers being in the appointment of the States ought at once to extinguish it. There can be no doubt that this circumstance will always secure to them a preponderating influence over the militia.

In reading many of the publications against the Constitution, a man is apt to imagine that he is perusing some ill-written tale or romance, which instead of natural and agreeable images, exhibits to the mind nothing but frightful and distorted shapes—

“Gorgons, hydras, and chimeras dire”;

discoloring and disfiguring whatever it represents, and transforming everything it touches into a monster.

A sample of this is to be observed in the exaggerated and improbable suggestions which have taken place respecting the power of calling for the services of the militia. That of New Hampshire is to be marched to Georgia, of Georgia to New Hampshire, of New York to Kentucky, and of Kentucky to Lake Champlain. Nay, the debts due to the French and Dutch are to be paid in militiamen instead of louis d'ors and ducats. At one moment there is to be a large army to lay prostrate the liberties of the people; at another moment the militia of Virginia are to be dragged from their homes five or six hundred miles to tame the republican contumacy of Massachusetts; and that of Massachusetts is to be transported an equal distance to subdue the refractory haughtiness of the aristocratic Virginians. Do the persons who rave at this rate imagine that their art or their eloquence can impose any conceits or absurdities upon the people of America for infallible truths?

If there should be an army to be made use of as the engine of despotism, what need of the militia? If there should be no army, whither would the militia, irritated by being required to undertake a distant and distressing expedition for the purpose of riveting the chains of slavery upon a part of their countrymen, direct their course, but to the seat of the tyrants, who had meditated so foolish as well as so wicked a project to crush them in their imagined intrenchments of power, and to make them an example of the just vengeance of an

abused and incensed people? Is this the way in which usurpers stride to dominion over a numerous and enlightened nation? Do they begin by exciting the detestation of the very instruments of their intended usurpations? Do they usually commence their career by wanton and disgusting acts of power, calculated to answer no end, but to draw upon themselves universal hatred and execration? Are suppositions of this sort the sober admonitions of discerning patriots to a discerning people? Or are they the inflammatory ravings of chagrined incendiaries or distempered enthusiasts? If we were even to suppose the national rulers actuated by the most ungovernable ambition, it is impossible to believe that they would employ such preposterous means to accomplish their designs.

In times of insurrection, or invasion, it would be natural and proper that the militia of a neighboring State should be marched into another, to resist a common enemy, or to guard the republic against the violence of faction or sedition. This was frequently the case, in respect to the first object in the course of the late war; and this mutual succor is, indeed, a principal end of our political association. If the power of affording it be placed under the direction of the Union, there will be no danger of a supine and listless inattention to the dangers of a neighbor till its near approach had superadded the incitements of self-preservation to the too feeble impulses of duty and sympathy.

PUBLIUS

FEDERALIST No. 30

Concerning the General Power of Taxation

**From the New York Packet.
Friday, December 28, 1787
Hamilton**

To the People of the State of New York:

IT HAS been already observed that the federal government ought to possess the power of providing for the support of the national forces; in which proposition was intended to be included the expense of raising troops, of building and equipping fleets, and all other expenses in any wise connected with military arrangements and operations. But these are not the only objects to which the jurisdiction of the Union in respect to revenue must necessarily be empowered to extend. It must embrace a provision for the support of the national civil list; for the payment of the national debts contracted, or that may be contracted; and, in general, for all those matters which will call for disbursements out of the national treasury. The conclusion is that there must be interwoven in the frame of the government a general power of taxation, in one shape or another.

Money is, with propriety, considered as the vital principle of the body politic; as that which sustains its life and motion and enables it to perform its most essential functions. A complete power, therefore, to procure a regular and adequate supply of revenue, as far as the resources of the community will permit, may be regarded as an

indispensable ingredient in every constitution. From a deficiency in this particular, one of two evils must ensue; either the people must be subjected to continual plunder, as a substitute for a more eligible mode of supplying the public wants, or the government must sink into a fatal atrophy, and, in a short course of time, perish.

In the Ottoman or Turkish empire the sovereign, though in other respects absolute master of the lives and fortunes of his subjects, has no right to impose a new tax. The consequence is that he permits the bashaws or governors of provinces to pillage the people at discretion, and, in turn, squeezes out of them the sums of which he stands in need to satisfy his own exigencies and those of the state. In America, from a like cause, the government of the Union has gradually dwindled into a state of decay, approaching nearly to annihilation. Who can doubt that the happiness of the people in both countries would be promoted by competent authorities in the proper hands to provide the revenues which the necessities of the public might require?

The present Confederation, feeble as it is, intended to repose in the United States an unlimited power of providing for the pecuniary wants of the Union. But proceeding upon an erroneous principle, it has been done in such a manner as entirely to have frustrated the intention. Congress, by the articles which compose that compact (as has already been stated), are authorized to ascertain and call for any sums of money necessary in their judgment to the service of the United States; and their requisitions, if conformable to the rule of apportionment, are in every constitutional sense obligatory upon the States. These have no right to question the propriety of the demand; no discretion beyond that of devising the ways and means of furnishing the sums demanded. But though this be strictly and truly the case; though the assumption of such a right would be an infringement of the articles of Union; though it may seldom or never

have been avowedly claimed, yet in practice it has been constantly exercised and would continue to be so, as long as the revenues of the Confederacy should remain dependent on the intermediate agency of its members. What the consequences of this system have been is within the knowledge of every man the least conversant in our public affairs, and has been abundantly unfolded in different parts of these inquiries. It is this which affords ample cause of mortification to ourselves, and of triumph to our enemies.

What remedy can there be for this situation, but in a change of the system which has produced it—in a change of the fallacious and delusive system of quotas and requisitions? What substitute can there be imagined for this *ignis fatuus* in finance, but that of permitting the national government to raise its own revenues by the ordinary methods of taxation authorized in every well-ordered constitution of civil government? Ingenious men may declaim with plausibility on any subject; but no human ingenuity can point out any other expedient to rescue us from the inconveniences and embarrassments naturally resulting from defective supplies of the public treasury.

The more intelligent adversaries of the new Constitution admit the force of this reasoning; but they qualify their admission by a distinction between what they call internal and external taxation. The former they would reserve to the State governments; the latter, which they explain into commercial imposts, or rather duties on imported articles, they declare themselves willing to concede to the federal head. This distinction, however, would violate that fundamental maxim of good sense and sound policy, which dictates that every POWER ought to be proportionate to its OBJECT; and would still leave the general government in a kind of tutelage to the State governments, inconsistent with every idea of vigor or efficiency. Who can pretend that commercial imposts are, or would be, alone equal to the present and future exigencies of the Union? Taking into the account the

existing debt, foreign and domestic, upon any plan of extinguishment which a man moderately impressed with the importance of public justice and public credit could approve, in addition to the establishments which all parties will acknowledge to be necessary, we could not reasonably flatter ourselves that this resource alone, upon the most improved scale, would even suffice for its present necessities. Its future necessities admit not of calculation or limitation; and upon the principle more than once adverted to the power of making provision for them as they arise ought to be equally unconfined. I believe it may be regarded as a position warranted by the history of mankind that, in the usual progress of things, the necessities of a nation, in every stage of its existence, will be found at least equal to its resources.

To say that deficiencies may be provided for by requisitions upon the States is on the one hand to acknowledge that this system cannot be depended upon, and on the other hand to depend upon it for every thing beyond a certain limit. Those who have carefully attended to its vices and deformities as they have been exhibited by experience or delineated in the course of these papers must feel an invincible repugnancy to trusting the national interests in any degree to its operation. Its inevitable tendency, whenever it is brought into activity, must be to enfeeble the Union, and sow the seeds of discord and contention between the federal head and its members, and between the members themselves. Can it be expected that the deficiencies would be better supplied in this mode than the total wants of the Union have heretofore been supplied in the same mode? It ought to be recollected that if less will be required from the States, they will have proportionably less means to answer the demand. If the opinions of those who contend for the distinction which has been mentioned were to be received as evidence of truth, one would be led to conclude that there was some known point in the economy of national affairs at which it would be safe to stop and to say: Thus far the ends of public

happiness will be promoted by supplying the wants of government, and all beyond this is unworthy of our care or anxiety. How is it possible that a government half supplied and always necessitous can fulfill the purposes of its institution, can provide for the security, advance the prosperity, or support the reputation of the commonwealth? How can it ever possess either energy or stability, dignity or credit, confidence at home or respectability abroad? How can its administration be any- thing else than a succession of expedients temporizing, impotent, disgraceful? How will it be able to avoid a frequent sacrifice of its engagements to immediate necessity? How can it undertake or execute any liberal or enlarged plans of public good?

Let us attend to what would be the effects of this situation in the very first war in which we should happen to be engaged. We will presume, for argument's sake, that the revenue arising from the impost duties answers the purposes of a provision for the public debt and of a peace establishment for the Union. Thus circumstanced, a war breaks out. What would be the probable conduct of the government in such an emergency? Taught by experience that proper dependence could not be placed on the success of requisitions, unable by its own authority to lay hold of fresh resources, and urged by considerations of national danger, would it not be driven to the expedient of diverting the funds already appropriated from their proper objects to the defense of the State? It is not easy to see how a step of this kind could be avoided; and if it should be taken, it is evident that it would prove the destruction of public credit at the very moment that it was becoming essential to the public safety. To imagine that at such a crisis credit might be dispensed with would be the extreme of infatuation. In the modern system of war, nations the most wealthy are obliged to have recourse to large loans. A country so little opulent as ours must feel this necessity in a much stronger degree. But who would lend to a government that prefaced its overtures for borrowing

by an act which demonstrated that no reliance could be placed on the steadiness of its measures for paying? The loans it might be able to procure would be as limited in their extent as burdensome in their conditions. They would be made upon the same principles that usurers commonly lend to bankrupt and fraudulent debtors—with a sparing hand and at enormous premiums.

It may perhaps be imagined that from the scantiness of the resources of the country the necessity of diverting the established funds in the case supposed would exist, though the national government should possess an unrestrained power of taxation. But two considerations will serve to quiet all apprehension on this head: one is, that we are sure the resources of the community, in their full extent, will be brought into activity for the benefit of the Union; the other is that whatever deficiencies there may be can without difficulty be supplied by loans.

The power of creating new funds upon new objects of taxation by its own authority would enable the national government to borrow as far as its necessities might require. Foreigners, as well as the citizens of America, could then reasonably repose confidence in its engagements; but to depend upon a government that must itself depend upon thirteen other governments for the means of fulfilling its contracts, when once its situation is clearly understood, would require a degree of credulity not often to be met with in the pecuniary transactions of mankind, and little reconcilable with the usual sharp-sightedness of avarice.

Reflections of this kind may have trifling weight with men who hope to see realized in America the halcyon scenes of the poetic or fabulous age; but to those who believe we are likely to experience a common portion of the vicissitudes and calamities which have fallen to the lot of other nations, they must appear entitled to serious attention. Such men must behold the actual situation of their country

with painful solicitude, and deprecate the evils which ambition or revenge might, with too much facility, inflict upon it.

PUBLIUS

FEDERALIST No. 31 The Same Subject Continued (Concerning the General Power of Taxation)

From the New York Packet.
Tuesday, January 1, 1788
Hamilton

To the People of the State of New York:

IN DISQUISITIONS of every kind there are certain primary truths, or first principles, upon which all subsequent reasonings must depend. These contain an internal evidence which, antecedent to all reflection or combination, commands the assent of the mind. Where it produces not this effect, it must proceed either from some defect or disorder in the organs of perception, or from the influence of some strong interest, or passion, or prejudice. Of this nature are the maxims in geometry that the whole is greater than its part; that things equal to the same are equal to one another; that two straight lines cannot enclose a space; and that all right angles are equal to each other. Of the same nature are these other maxims in ethics and politics, that there cannot be an effect without a cause; that the means ought to be proportioned to the end; that every power ought to be commensurate with its object; that there ought to be no limitation of a power destined to effect a purpose which is itself incapable of limitation. And there are other truths in the two latter sciences which, if they cannot pretend to rank in the class of axioms, are yet such direct inferences from them, and so obvious in themselves, and so agreeable to the natural and unsophisticated dictates of common sense that they

challenge the assent of a sound and unbiased mind with a degree of force and conviction almost equally irresistible.

The objects of geometrical inquiry are so entirely abstracted from those pursuits which stir up and put in motion the unruly passions of the human heart that mankind, without difficulty, adopt not only the more simple theorems of the science, but even those abstruse paradoxes which, however they may appear susceptible of demonstration, are at variance with the natural conceptions which the mind, without the aid of philosophy, would be led to entertain upon the subject. The INFINITE DIVISIBILITY of matter, or, in other words, the INFINITE divisibility of a FINITE thing, extending even to the minutest atom, is a point agreed among geometers, though not less incomprehensible to common sense than any of those mysteries in religion, against which the batteries of infidelity have been so industriously leveled. But in the sciences of morals and politics, men are found far less tractable. To a certain degree it is right and useful that this should be the case. Caution and investigation are a necessary armor against error and imposition. But this untractableness may be carried too far, and may degenerate into obstinacy, perverseness, or disingenuity. Though it cannot be pretended that the principles of moral and political knowledge have, in general, the same degree of certainty with those of the mathematics, yet they have much better claims in this respect than to judge from the conduct of men in particular situations we should be disposed to allow them. The obscurity is much oftener in the passions and prejudices of the reasoner than in the subject. Men, upon too many occasions, do not give their own understandings fair play; but, yielding to some untoward bias, they entangle themselves in words and confound themselves in subtleties.

How else could it happen (if we admit the objectors to be sincere in their opposition) that positions so clear as those which manifest the

necessity of a general power of taxation in the government of the Union should have to encounter any adversaries among men of discernment? Though these positions have been elsewhere fully stated, they will perhaps not be improperly recapitulated in this place as introductory to an examination of what may have been offered by way of objection to them. They are in substance as follows:

A government ought to contain in itself every power requisite to the full accomplishment of the objects committed to its care, and to the complete execution of the trusts for which it is responsible, free from every other control but a regard to the public good and to the sense of the people.

As the duties of superintending the national defense and of securing the public peace against foreign or domestic violence involve a provision for casualties and dangers to which no possible limits can be assigned, the power of making that provision ought to know no other bounds than the exigencies of the nation and the resources of the community.

As revenue is the essential engine by which the means of answering the national exigencies must be procured, the power of procuring that article in its full extent must necessarily be comprehended in that of providing for those exigencies.

As theory and practice conspire to prove that the power of procuring revenue is unavailing when exercised over the States in their collective capacities, the federal government must of necessity be invested with an unqualified power of taxation in the ordinary modes.

Did not experience evince the contrary, it would be natural to conclude that the propriety of a general power of taxation in the national government might safely be permitted to rest on the evidence of these propositions, unassisted by any additional arguments or illustrations. But we find, in fact, that the antagonists of the proposed

Constitution, so far from acquiescing in their justness or truth, seem to make their principal and most zealous effort against this part of the plan. It may therefore be satisfactory to analyze the arguments with which they combat it.

Those of them which have been most labored with that view, seem in substance to amount to this: "It is not true, because the exigencies of the Union may not be susceptible of limitation, that its power of laying taxes ought to be unconfined. Revenue is as requisite to the purposes of the local administrations as to those of the Union; and the former are at least of equal importance with the latter to the happiness of the people. It is, therefore, as necessary that the State governments should be able to command the means of supplying their wants, as that the national government should possess the like faculty in respect to the wants of the Union. But an indefinite power of taxation in the latter might, and probably would in time, deprive the former of the means of providing for their own necessities; and would subject them entirely to the mercy of the national legislature. As the laws of the Union are to become the supreme law of the land, as it is to have power to pass all laws that may be NECESSARY for carrying into execution the authorities with which it is proposed to vest it, the national government might at any time abolish the taxes imposed for State objects upon the pretense of an interference with its own. It might allege a necessity of doing this in order to give efficacy to the national revenues. And thus all the resources of taxation might by degrees become the subjects of federal monopoly to the entire exclusion and destruction of the State governments."

This mode of reasoning appears sometimes to turn upon the supposition of usurpation in the national government; at other times it seems to be designed only as a deduction from the constitutional operation of its intended powers. It is only in the latter light that it can be admitted to have any pretensions to fairness. The moment we

launch into conjectures about the usurpations of the federal government, we get into an unfathomable abyss, and fairly put ourselves out of the reach of all reasoning. Imagination may range at pleasure till it gets bewildered amidst the labyrinths of an enchanted castle, and knows not on which side to turn to escape from the apparitions which itself has raised. Whatever may be the limits or modifications of the powers of the Union, it is easy to imagine an endless train of possible dangers; and by indulging an excess of jealousy and timidity, we may bring ourselves to a state of absolute scepticism and irresolution. I repeat here what I have observed in substance in another place, that all observations founded upon the danger of usurpation ought to be referred to the composition and structure of the government, not to the nature or extent of its powers. The State governments by their original constitutions are invested with complete sovereignty. In what does our security consist against usurpation from that quarter? Doubtless in the manner of their formation, and in a due dependence of those who are to administer them upon the people. If the proposed construction of the federal government be found, upon an impartial examination of it, to be such as to afford to a proper extent the same species of security, all apprehensions on the score of usurpation ought to be discarded.

It should not be forgotten that a disposition in the State governments to encroach upon the rights of the Union is quite as probable as a disposition in the Union to encroach upon the rights of the State governments. What side would be likely to prevail in such a conflict must depend on the means which the contending parties could employ toward insuring success. As in republics strength is always on the side of the people, and as there are weighty reasons to induce a belief that the State governments will commonly possess most influence over them, the natural conclusion is that such contests will be most apt to end to the disadvantage of the Union; and that there is greater probability of encroachments by the members upon the federal

head than by the federal head upon the members. But it is evident that all conjectures of this kind must be extremely vague and fallible: and that it is by far the safest course to lay them altogether aside and to confine our attention wholly to the nature and extent of the powers as they are delineated in the Constitution. Everything beyond this must be left to the prudence and firmness of the people; who, as they will hold the scales in their own hands, it is to be hoped will always take care to preserve the constitutional equilibrium between the general and the State governments. Upon this ground, which is evidently the true one, it will not be difficult to obviate the objections which have been made to an indefinite power of taxation in the United States.

PUBLIUS

FEDERALIST No. 32 The Same Subject Continued (Concerning the General Power of Taxation)

**For the Independent Journal.
Wednesday, January 2, 1788
Hamilton**

To the People of the State of New York:

ALTHOUGH I am of opinion that there would be no real danger of the consequences which seem to be apprehended to the State governments from a power in the Union to control them in the levies of money, because I am persuaded that the sense of the people, the extreme hazard of provoking the resentments of the State governments, and a conviction of the utility and necessity of local administrations for local purposes, would be a complete barrier against the oppressive use of such a power; yet I am willing here to allow, in its full extent, the justness of the reasoning which requires that the individual States should possess an independent and uncontrollable authority to raise their own revenues for the supply of their own wants. And making this concession, I affirm that (with the sole exception of duties on imports and exports) they would, under the plan of the convention, retain that authority in the most absolute and unqualified sense; and that an attempt on the part of the national government to abridge them in the exercise of it would be a violent assumption of power, unwarranted by any article or clause of its Constitution.

An entire consolidation of the States into one complete national sovereignty would imply an entire subordination of the parts; and whatever powers might remain in them would be altogether dependent on the general will. But as the plan of the convention aims only at a partial union or consolidation, the State governments would clearly retain all the rights of sovereignty which they before had, and which were not, by that act, exclusively delegated to the United States. This exclusive delegation, or rather this alienation, of State sovereignty would only exist in three cases: where the Constitution in express terms granted an exclusive authority to the Union; where it granted in one instance an authority to the Union, and in another prohibited the States from exercising the like authority; and where it granted an authority to the Union to which a similar authority in the States would be absolutely and totally contradictory and repugnant. I use these terms to distinguish this last case from another which might appear to resemble it, but which would, in fact, be essentially different; I mean where the exercise of a concurrent jurisdiction might be productive of occasional interferences in the policy of any branch of administration, but would not imply any direct contradiction or repugnancy in point of constitutional authority. These three cases of exclusive jurisdiction in the federal government may be exemplified by the following instances: The last clause but one in the eighth section of the first article provides expressly that Congress shall exercise“exclusive legislation”over the district to be appropriated as the seat of government. This answers to the first case. The first clause of the same section empowers Congress“to lay and collect taxes, duties, imposts, and excises”; and the second clause of the tenth section of the same article declares that“no State shall without the consent of Congress lay any imposts or duties on imports or exports, except for the purpose of executing its inspection laws.”Hence would result an exclusive power in the Union to lay duties on imports and exports, with the particular exception mentioned; but this power is abridged by another clause, which declares that no tax or duty shall

be laid on articles exported from any State; in consequence of which qualification it now only extends to the duties on imports. This answers to the second case. The third will be found in that clause which declares that Congress shall have power “to establish an UNIFORM RULE of naturalization throughout the United States.” This must necessarily be exclusive; because if each State had power to prescribe a DISTINCT RULE, there could not be a UNIFORM RULE.

A case which may perhaps be thought to resemble the latter, but which is in fact widely different, affects the question immediately under consideration. I mean the power of imposing taxes on all articles other than exports and imports. This, I contend, is manifestly a concurrent and coequal authority in the United States and in the individual States. There is plainly no expression in the granting clause which makes that power exclusive in the Union. There is no independent clause or sentence which prohibits the States from exercising it. So far is this from being the case that a plain and conclusive argument to the contrary is to be deduced from the restraint laid upon the States in relation to duties on imports and exports. This restriction implies an admission that if it were not inserted, the States would possess the power it excludes; and it implies a further admission that as to all other taxes, the authority of the States remains undiminished. In any other view it would be both unnecessary and dangerous; it would be unnecessary, because if the grant to the Union of the power of laying such duties implied the exclusion of the States, or even their subordination in this particular, there could be no need of such a restriction; it would be dangerous, because the introduction of it leads directly to the conclusion which has been mentioned, and which, if the reasoning of the objectors be just, could not have been intended; I mean that the States, in all cases to which the restriction did not apply, would have a concurrent power of taxation with the Union. The restriction in question amounts to what lawyers call a NEGATIVE PREGNANT—that is, a negation of one

thing, and an affirmance of another; a negation of the authority of the States to impose taxes on imports and exports, and an affirmance of their authority to impose them on all other articles. It would be mere sophistry to argue that it was meant to exclude them absolutely from the imposition of taxes of the former kind, and to leave them at liberty to lay others subject to the control of the national legislature. The restraining or prohibitory clause only says, that they shall not, without the consent of Congress, lay such duties; and if we are to understand this in the sense last mentioned, the Constitution would then be made to introduce a formal provision for the sake of a very absurd conclusion; which is, that the States, with the consent of the national legislature, might tax imports and exports; and that they might tax every other article, unless controlled by the same body. If this was the intention, why was it not left in the first instance, to what is alleged to be the natural operation of the original clause, conferring a general power of taxation upon the Union? It is evident that this could not have been the intention, and that it will not bear a construction of the kind.

As to a supposition of repugnancy between the power of taxation in the States and in the Union, it cannot be supported in that sense which would be requisite to work an exclusion of the States. It is, indeed, possible that a tax might be laid on a particular article by a State which might render it inexpedient that a further tax should be laid on the same article by the Union; but it would not imply a constitutional inability to impose a further tax. The quantity of the imposition, the expediency or inexpediency of an increase on either side, would be mutually questions of prudence; but there would be involved no direct contradiction of power. The particular policy of the national and of the State systems of finance might now and then not exactly coincide, and might require reciprocal forbearances. It is not, however a mere possibility of inconvenience in the exercise of powers, but an immediate constitutional repugnancy that can by implication

alienate and extinguish a pre-existing right of sovereignty.

《美国宪法》。美国的根本大法，奠定了美国政治制度的法律基础。该宪法于1787年9月17日在费城召开的美国制宪会议上获得代表的批准，并在此后不久被当时美国拥有的13个州的特别会议所批准。

The necessity of a concurrent jurisdiction in certain cases results from the division of the sovereign power; and the rule that all authorities, of which the States are not explicitly divested in favor of the Union, remain with them in full vigor is not only a theoretical consequence of that division, but is clearly admitted by the whole tenor of the instrument which contains the articles of the proposed Constitution. We there find that, notwithstanding the affirmative grants of general authorities, there has been the most pointed care in those cases where it was deemed improper that the like authorities should reside in the States to insert negative clauses prohibiting the exercise of them by the States. The tenth section of the first article consists altogether of such provisions. This circumstance is a clear indication of the sense of the convention, and furnishes a rule of interpretation out of the body of the act, which justifies the position I have advanced and refutes every hypothesis to the contrary.

PUBLIUS

FEDERALIST No. 33 The Same Subject Continued (Concerning the General Power of Taxation)

**For the Independent Journal.
Wednesday, January 2, 1788
Hamilton**

To the People of the State of New York:

THE residue of the argument against the provisions of the Constitution in respect to taxation is ingrafted upon the following clause. The last clause of the eighth section of the first article authorizes the national legislature “to make all laws which shall be necessary and proper for carrying into execution the powers by that Constitution vested in the government of the United States, or in any department or officer thereof”; and the second clause of the sixth article declares that “the Constitution and the laws of the United States made in pursuance thereof and the treaties made by their authority shall be the supreme law of the land, anything in the constitution or laws of any State to the contrary notwithstanding.”

These two clauses have been the source of much virulent invective and petulant declamation against the proposed Constitution. They have been held up to the people in all the exaggerated colors of misrepresentation as the pernicious engines by which their local governments were to be destroyed and their liberties exterminated; as the hideous monster whose devouring jaws would spare neither sex nor age, nor high nor low, nor sacred nor profane; and yet, strange as

it may appear, after all this clamor, to those who may not have happened to contemplate them in the same light, it may be affirmed with perfect confidence that the constitutional operation of the intended government would be precisely the same, if these clauses were entirely obliterated as if they were repeated in every article. They are only declaratory of a truth which would have resulted by necessary and unavoidable implication from the very act of constituting a federal government and vesting it with certain specified powers. This is so clear a proposition that moderation itself can scarcely listen to the railings which have been so copiously vented against this part of the plan without emotions that disturb its equanimity.

What is a power but the ability or faculty of doing a thing? What is the ability to do a thing, but the power of employing the means necessary to its execution? What is a LEGISLATIVE power but a power of making LAWS? What are the means to execute a LEGISLATIVE power but LAWS? What is the power of laying and collecting taxes, but a legislative power, or a power of making laws to lay and collect taxes? What are the proper means of executing such a power but necessary and proper laws?

This simple train of inquiry furnishes us at once with a test of the true nature of the clause complained of. It conducts us to this palpable truth that a power to lay and collect taxes must be a power to pass all laws necessary and proper for the execution of that power; and what does the unfortunate and calumniated provision in question do more than declare the same truth, to wit, that the national legislature to whom the power of laying and collecting taxes had been previously given might, in the execution of that power, pass all laws necessary and proper to carry it into effect? I have applied these observations thus particularly to the power of taxation, because it is the immediate subject under consideration and because it is the most important of

the authorities proposed to be conferred upon the Union. But the same process will lead to the same result in relation to all other powers declared in the Constitution. And it is expressly to execute these powers that the sweeping clause, as it has been affectedly called, authorizes the national legislature to pass all necessary and proper laws. If there is anything exceptionable, it must be sought for in the specific powers upon which this general declaration is predicated. The declaration itself, though it may be chargeable with tautology or redundancy, is at least perfectly harmless.

But SUSPICION may ask, Why then was it introduced? The answer is that it could only have been done for greater caution, and to guard against all cavilling refinements in those who might hereafter feel a disposition to curtail and evade the legitimate authorities of the Union. The Convention probably foresaw what it has been a principal aim of these papers to inculcate, that the danger which most threatens our political welfare is that the State governments will finally sap the foundations of the Union; and might therefore think it necessary, in so cardinal a point, to leave nothing to construction. Whatever may have been the inducement to it, the wisdom of the precaution is evident from the cry which has been raised against it; as that very cry betrays a disposition to question the great and essential truth which it is manifestly the object of that provision to declare.

But it may be again asked, Who is to judge of the necessity and propriety of the laws to be passed for executing the powers of the Union? I answer first that this question arises as well and as fully upon the simple grant of those powers as upon the declaratory clause; and I answer in the second place that the national government, like every other, must judge, in the first instance, of the proper exercise of its powers, and its constituents in the last. If the federal government should overpass the just bounds of its authority and make a tyrannical use of its powers, the people, whose creature it is, must appeal to the

standard they have formed, and take such measures to redress the injury done to the Constitution as the exigency may suggest and prudence justify. The propriety of a law, in a constitutional light, must always be determined by the nature of the powers upon which it is founded. Suppose, by some forced constructions of its authority (which, indeed, cannot easily be imagined), the federal legislature should attempt to vary the law of descent in any State, would it not be evident that in making such an attempt it had exceeded its jurisdiction and infringed upon that of the State? Suppose, again, that upon the pretense of an interference with its revenues, it should undertake to abrogate a land tax imposed by the authority of a State, would it not be equally evident that this was an invasion of that concurrent jurisdiction in respect to this species of tax, which its Constitution plainly supposes to exist in the State governments? If there ever should be a doubt on this head, the credit of it will be entirely due to those reasoners who, in the imprudent zeal of their animosity to the plan of the convention, have labored to envelop it in a cloud calculated to obscure the plainest and simplest truths.

But it is said that the laws of the Union are to be the supreme law of the land. What inference can be drawn from this, or what would they amount to, if they were not to be supreme? It is evident they would amount to nothing. A LAW, by the very meaning of the term, includes supremacy. It is a rule which those to whom it is prescribed are bound to observe. This results from every political association. If individuals enter into a state of society, the laws of that society must be the supreme regulator of their conduct. If a number of political societies enter into a larger political society, the laws which the latter may enact, pursuant to the powers intrusted to it by its constitution, must necessarily be supreme over those societies and the individuals of whom they are composed. It would otherwise be a mere treaty, dependent on the good faith of the parties, and not a government, which is only another word for POLITICAL POWER AND

SUPREMACY. But it will not follow from this doctrine that acts of the large society which are not pursuant to its constitutional powers, but which are invasions of the residuary authorities of the smaller societies, will become the supreme law of the land. These will be merely acts of usurpation, and will deserve to be treated as such. Hence we perceive that the clause which declares the supremacy of the laws of the Union, like the one we have just before considered, only declares a truth which flows immediately and necessarily from the institution of a federal government. It will not, I presume, have escaped observation that it expressly confines this supremacy to laws made pursuant to the Constitution; which I mention merely as an instance of caution in the convention; since that limitation would have been to be understood, though it had not been expressed.

Though a law, therefore, for laying a tax for the use of the United States would be supreme in its nature and could not legally be opposed or controlled, yet a law for abrogating or preventing the collection of a tax laid by the authority of a State (unless upon imports and exports) would not be the supreme law of the land, but a usurpation of power not granted by the Constitution. As far as an improper accumulation of taxes on the same object might tend to render the collection difficult or precarious, this would be a mutual inconvenience, not arising from a superiority or defect of power on either side, but from an injudicious exercise of power by one or the other in a manner equally disadvantageous to both. It is to be hoped and presumed, however, that mutual interest would dictate a concert in this respect which would avoid any material inconvenience. The inference from the whole is that the individual States would, under the proposed Constitution, retain an independent and uncontrollable authority to raise revenue to any extent of which they may stand in need, by every kind of taxation, except duties on imports and exports. It will be shown in the next paper that this concurrent jurisdiction in the article of taxation was the only admissible substitute for an entire

subordination, in respect to this branch of power, of the State authority to that of the Union.

PUBLIUS

FEDERALIST No. 34 The Same Subject Continued (Concerning the General Power of Taxation)

For the Independent Journal.
Saturday, January 5, 1788
Hamilton

To the People of the State of New York:

I FLATTER myself it has been clearly shown in my last number that the particular States, under the proposed Constitution, would have COEQUAL authority with the Union in the article of revenue, except as to duties on imports. As this leaves open to the States far the greatest part of the resources of the community, there can be no color for the assertion that they would not possess means as abundant as could be desired for the supply of their own wants, independent of all external control. That the field is sufficiently wide will more fully appear when we come to develop the inconsiderable share of the public expenses for which it will fall to the lot of the State governments to provide.

To argue upon abstract principles that this co-ordinate authority cannot exist would be to set up theory and supposition against fact and reality. However proper such reasonings might be to show that a thing ought not to exist, they are wholly to be rejected when they are made use of to prove that it does not exist contrary to the evidence of the fact itself. It is well known that in the Roman republic the legislative authority in the last resort resided for ages in two different

political bodies—not as branches of the same legislature, but as distinct and independent legislatures, in each of which an opposite interest prevailed: in one the patrician; in the other, the plebian. Many arguments might have been adduced to prove the unfitness of two such seemingly contradictory authorities, each having power to annul or repeal the acts of the other. But a man would have been regarded as frantic who should have attempted at Rome to disprove their existence. It will readily be understood that I allude to the COMITIA CENTURIATA and COMITIA TRIBUTA. The former, in which the people voted by centuries, was so arranged as to give a superiority to the patrician interest; in the latter, in which numbers prevailed, the plebian interest had an entire predominancy. And yet these two legislatures coexisted for ages, and the Roman republic attained to the pinnacle of human greatness.

In the case particularly under consideration, there is no such contradiction as appears in the example cited; there is no power on either side to annul the acts of the other. And in practice there is little reason to apprehend any inconvenience; because in a short course of time the wants of the States will naturally reduce themselves within a very narrow compass; and in the interim, the United States will in all probability find it convenient to abstain wholly from those objects to which the particular States would be inclined to resort.

To form a more precise judgment of the true merits of this question, it will be well to advert to the proportion between the objects that will require a federal provision in respect to revenue, and those which will require a State provision. We shall discover that the former are altogether unlimited and that the latter are circumscribed within very moderate bounds. In pursuing this inquiry, we must bear in mind that we are not to confine our view to the present period, but to look forward to remote futurity. Constitutions of civil government are not to be framed upon a calculation of existing exigencies, but

upon a combination of these with the probable exigencies of ages, according to the natural and tried course of human affairs. Nothing, therefore, can be more fallacious than to infer the extent of any power proper to be lodged in the national government from an estimate of its immediate necessities. There ought to be a CAPACITY to provide for future contingencies as they may happen; and as these are illimitable in their nature, so it is impossible safely to limit that capacity. It is true, perhaps, that a computation might be made with sufficient accuracy to answer the purpose of the quantity of revenue requisite to discharge the subsisting engagements of the Union, and to maintain those establishments which, for some time to come, would suffice in time of peace. But would it be wise, or would it not rather be the extreme of folly to stop at this point, and to leave the government intrusted with the care of the national defense in a state of absolute incapacity to provide for the protection of the community against future invasions of the public peace by foreign war or domestic convulsions? If we must be obliged to exceed this point, where can we stop, short of an indefinite power of providing for emergencies as they may arise? Though it be easy to assert in general terms the possibility of forming a rational judgment of a due provision against probable dangers, yet we may safely challenge those who make the assertion to bring forward their data, and may affirm that they would be found as vague and uncertain as any that could be produced to establish the probable duration of the world. Observations confined to the mere prospects of internal attacks can deserve no weight, though even these will admit of no satisfactory calculation: but if we mean to be a commercial people, it must form a part of our policy to be able one day to defend that commerce. The support of a navy and of naval wars would involve contingencies that must baffle all the efforts of political arithmetic.

Admitting that we ought to try the novel and absurd experiment in politics of tying up the hands of government from offensive war

founded upon reasons of state, yet certainly we ought not to disable it from guarding the community against the ambition or enmity of other nations. A cloud has been for some time hanging over the European world. If it should break forth into a storm, who can insure us that in its progress a part of its fury would not be spent upon us? No reasonable man would hastily pronounce that we are entirely out of its reach. Or if the combustible materials that now seem to be collecting should be dissipated without coming to maturity, or if a flame should be kindled without extending to us, what security can we have that our tranquillity will long remain undisturbed from some other cause or from some other quarter? Let us recollect that peace or war will not always be left to our option; that however moderate or unambitious we may be, we cannot count upon the moderation, or hope to extinguish the ambition of others. Who could have imagined at the conclusion of the last war that France and Britain, wearied and exhausted as they both were, would so soon have looked with so hostile an aspect upon each other? To judge from the history of mankind, we shall be compelled to conclude that the fiery and destructive passions of war reign in the human breast with much more powerful sway than the mild and beneficent sentiments of peace; and that to model our political systems upon speculations of lasting tranquillity would be to calculate on the weaker springs of the human character.

What are the chief sources of expense in every government? What has occasioned that enormous accumulation of debts with which several of the European nations are oppressed? The answer plainly is, wars and rebellions; the support of those institutions which are necessary to guard the body politic against these two most mortal diseases of society. The expenses arising from those institutions which are relative to the mere domestic police of a state, to the support of its legislative, executive, and judicial departments, with their different appendages, and to the encouragement of agriculture and

manufactures (which will comprehend almost all the objects of state expenditure) are insignificant in comparison with those which relate to the national defense.

In the kingdom of Great Britain, where all the ostentatious apparatus of monarchy is to be provided for, not above a fifteenth part of the annual income of the nation is appropriated to the class of expenses last mentioned; the other fourteen fifteenths are absorbed in the payment of the interest of debts contracted for carrying on the wars in which that country has been engaged, and in the maintenance of fleets and armies. If, on the one hand, it should be observed that the expenses incurred in the prosecution of the ambitious enterprises and vainglorious pursuits of a monarchy are not a proper standard by which to judge of those which might be necessary in a republic, it ought, on the other hand, to be remarked that there should be as great a disproportion between the profusion and extravagance of a wealthy kingdom in its domestic administration, and the frugality and economy which in that particular become the modest simplicity of republican government. If we balance a proper deduction from one side against that which it is supposed ought to be made from the other, the proportion may still be considered as holding good.

But let us take a view of the large debt which we have ourselves contracted in a single war, and let us only calculate on a common share of the events which disturb the peace of nations, and we shall instantly perceive, without the aid of any elaborate illustration, that there must always be an immense disproportion between the objects of federal and state expenditures. It is true that several of the States, separately, are encumbered with considerable debts, which are an excrescence of the late war. But this cannot happen again, if the proposed system be adopted; and when these debts are discharged, the only call for revenue of any consequence which the State governments will continue to experience will be for the mere support of their

respective civil list; to which, if we add all contingencies, the total amount in every State ought not to exceed two hundred thousand pounds.

If it cannot be denied to be a just principle that in framing a constitution of government for a nation we ought, in those provisions which are designed to be permanent, to calculate, not on temporary, but on permanent causes of expense; our attention would be directed to a provision in favor of the State governments for an annual sum of about 200,000 pounds; while the exigencies of the Union could be susceptible of no limits, even in imagination. In this view of the subject, by what logic can it be maintained that the local governments ought to command, in perpetuity, an exclusive source of revenue for any sum beyond the extent of 200,000 pounds? To extend its power further, in exclusion of the authority of the Union, would be to take the resources of the community out of those hands which stood in need of them for the public welfare, in order to put them into other hands which could have no just or proper occasion for them.

Suppose, then, the convention had been inclined to proceed upon the principle of a repartition of the objects of revenue, between the Union and its members, in proportion to their comparative necessities; what particular fund could have been selected for the use of the States that would not either have been too much or too little—too little for their present, too much for their future wants? As to the line of separation between external and internal taxes, this would leave to the States, at a rough computation, the command of two thirds of the resources of the community to defray from a tenth to a twentieth part of its expenses; and to the Union, one third of the resources of the community to defray from nine tenths to nineteen twentieths of its expenses. If we desert this boundary and content ourselves with leaving to the States an exclusive power of taxing houses and lands, there would still be a great disproportion between the means and the

end; the possession of one third of the resources of the community to supply, at most, one tenth of its wants. If any fund could have been selected and appropriated, equal to and not greater than the object, it would have been inadequate to the discharge of the existing debts of the particular States, and would have left them dependent on the Union for a provision for this purpose.

The preceding train of observation will justify the position which has been elsewhere laid down that “A CONCURRENT JURISDICTION in the article of taxation was the only admissible substitute for an entire subordination, in respect to this branch of power, of State authority to that of the Union.” Any separation of the objects of revenue that could have been fallen upon would have amounted to a sacrifice of the great INTERESTS of the Union to the POWER of the individual States. The convention thought the concurrent jurisdiction preferable to that subordination; and it is evident that it has at least the merit of reconciling an indefinite constitutional power of taxation in the federal government with an adequate and independent power in the States to provide for their own necessities. There remain a few other lights in which this important subject of taxation will claim a further consideration.

PUBLIUS

FEDERALIST No. 35 The Same Subject Continued (Concerning the General Power of Taxation)

**For the Independent Journal.
Saturday, January 5, 1788
Hamilton**

To the People of the State of New York:

BEFORE we proceed to examine any other objections to an indefinite power of taxation in the Union, I shall make one general remark; which is that if the jurisdiction of the national government in the article of revenue should be restricted to particular objects, it would naturally occasion an undue proportion of the public burdens to fall upon those objects. Two evils would spring from this source: the oppression of particular branches of industry; and an unequal distribution of the taxes, as well among the several States as among the citizens of the same State.

Suppose, as has been contended for, the federal power of taxation were to be confined to duties on imports, it is evident that the government, for want of being able to command other resources, would frequently be tempted to extend these duties to an injurious excess. There are persons who imagine that it can never be the case; since the higher they are, the more it is alleged they will tend to discourage an extravagant consumption to produce a favorable balance of trade and to promote domestic manufactures. But all extremes are pernicious in various ways. Exorbitant duties on

imported articles would serve to beget a general spirit of smuggling; which is always prejudicial to the fair trader, and eventually to the revenue itself: they tend to render other classes of the community tributary in an improper degree to the manufacturing classes, to whom they give a premature monopoly of the markets; they sometimes force industry out of its more natural channels into others in which it flows with less advantage; and in the last place, they oppress the merchant, who is often obliged to pay them himself without any retribution from the consumer. When the demand is equal to the quantity of goods at market, the consumer generally pays the duty; but when the markets happen to be overstocked, a great proportion falls upon the merchant, and sometimes not only exhausts his profits, but breaks in upon his capital. I am apt to think that a division of the duty, between the seller and the buyer, more often happens than is commonly imagined. It is not always possible to raise the price of a commodity in exact proportion to every additional imposition laid upon it. The merchant, especially in a country of small commercial capital, is often under a necessity of keeping prices down in order to make a more expeditious sale.

The maxim that the consumer is the payer is so much oftener true than the reverse of the proposition, that it is far more equitable that the duties on imports should go into a common stock than that they should redound to the exclusive benefit of the importing States. But it is not so generally true as to render it equitable that those duties should form the only national fund. When they are paid by the merchant they operate as an additional tax upon the importing State, whose citizens pay their proportion of them in the character of consumers. In this view they are productive of inequality among the States; which inequality would be increased with the increased extent of the duties. The confinement of the national revenues to this species of imposts would be attended with inequality, from a different cause, between the manufacturing and the non-manufacturing States. The

States which can go farthest towards the supply of their own wants by their own manufactures, will not, according to their numbers or wealth, consume so great a proportion of imported articles as those States which are not in the same favorable situation. They would not, therefore, in this mode alone contribute to the public treasury in a ratio to their abilities. To make them do this it is necessary that recourse be had to excises, the proper objects of which are particular kinds of manufactures. New York is more deeply interested in these considerations than such of her citizens as contend for limiting the power of the Union to external taxation may be aware of. New York is an importing State, and from a greater disproportion between her population and territory is less likely, than some other States, speedily to become in any considerable degree a manufacturing State. She would, of course, suffer in a double light from restraining the jurisdiction of the Union to commercial imposts.

So far as these observations tend to inculcate a danger of the import duties being extended to an injurious extreme it may be observed, conformably to a remark made in another part of these papers, that the interest of the revenue itself would be a sufficient guard against such an extreme. I readily admit that this would be the case as long as other resources were open; but if the avenues to them were closed, HOPE, stimulated by necessity, might beget experiments, fortified by rigorous precautions and additional penalties, which, for a time, would have the intended effect, till there had been leisure to contrive expedients to elude these new precautions. The first success would be apt to inspire false opinions, which it might require a long course of subsequent experience to correct. Necessity, especially in politics, often occasions false hopes, false reasonings, and a system of measures correspondingly erroneous. But even if this supposed excess should not be a consequence of the limitation of the federal power of taxation, the inequalities spoken of would still ensue, though not in the same degree, from the other causes that have been noticed. Let us

now return to the examination of objections.

One which, if we may judge from the frequency of its repetition, seems most to be relied on, is, that the House of Representatives is not sufficiently numerous for the reception of all the different classes of citizens in order to combine the interests and feelings of every part of the community, and to produce a due sympathy between the representative body and its constituents. This argument presents itself under a very specious and seducing form; and is well calculated to lay hold of the prejudices of those to whom it is addressed. But when we come to dissect it with attention, it will appear to be made up of nothing but fair-sounding words. The object it seems to aim at is, in the first place, impracticable, and in the sense in which it is contended for, is unnecessary. I reserve for another place the discussion of the question which relates to the sufficiency of the representative body in respect to numbers, and shall content myself with examining here the particular use which has been made of a contrary supposition in reference to the immediate subject of our inquiries.

The idea of an actual representation of all classes of the people by persons of each class is altogether visionary. Unless it were expressly provided in the Constitution that each different occupation should send one or more members, the thing would never take place in practice. Mechanics and manufacturers will always be inclined, with few exceptions, to give their votes to merchants in preference to persons of their own professions or trades. Those discerning citizens are well aware that the mechanic and manufacturing arts furnish the materials of mercantile enterprise and industry. Many of them, indeed, are immediately connected with the operations of commerce. They know that the merchant is their natural patron and friend; and they are aware that however great the confidence they may justly feel in their own good sense, their interests can be more effectually promoted by the merchant than by themselves. They are sensible that their

habits in life have not been such as to give them those acquired endowments, without which in a deliberative assembly the greatest natural abilities are for the most part useless; and that the influence and weight and superior acquirements of the merchants render them more equal to a contest with any spirit which might happen to infuse itself into the public councils, unfriendly to the manufacturing and trading interests. These considerations and many others that might be mentioned prove, and experience confirms it, that artisans and manufacturers will commonly be disposed to bestow their votes upon merchants and those whom they recommend. We must therefore consider merchants as the natural representatives of all these classes of the community.

With regard to the learned professions, little need be observed; they truly form no distinct interest in society, and according to their situation and talents, will be indiscriminately the objects of the confidence and choice of each other and of other parts of the community.

Nothing remains but the landed interest; and this in a political view, and particularly in relation to taxes, I take to be perfectly united from the wealthiest landlord to the poorest tenant. No tax can be laid on land which will not affect the proprietor of millions of acres as well as the proprietor of a single acre. Every landholder will therefore have a common interest to keep the taxes on land as low as possible; and common interest may always be reckoned upon as the surest bond of sympathy. But if we even could suppose a distinction of interest between the opulent landholder and the middling farmer, what reason is there to conclude that the first would stand a better chance of being deputed to the national legislature than the last? If we take fact as our guide, and look into our own senate and assembly, we shall find that moderate proprietors of land prevail in both; nor is this less the case in the senate, which consists of a smaller number than in the

assembly, which is composed of a greater number. Where the qualifications of the electors are the same, whether they have to choose a small or a large number, their votes will fall upon those in whom they have most confidence; whether these happen to be men of large fortunes, or of moderate property, or of no property at all.

It is said to be necessary that all classes of citizens should have some of their own number in the representative body in order that their feelings and interests may be the better understood and attended to. But we have seen that this will never happen under any arrangement that leaves the votes of the people free. Where this is the case, the representative body, with too few exceptions to have any influence on the spirit of the government, will be composed of landholders, merchants, and men of the learned professions. But where is the danger that the interests and feelings of the different classes of citizens will not be understood or attended to by these three descriptions of men? Will not the landholder know and feel whatever will promote or insure the interest of landed property? And will he not, from his own interest in that species of property, be sufficiently prone to resist every attempt to prejudice or encumber it? Will not the merchant understand and be disposed to cultivate, as far as may be proper, the interests of the mechanic and manufacturing arts to which his commerce is so nearly allied? Will not the man of the learned profession, who will feel a neutrality to the rivalships between the different branches of industry, be likely to prove an impartial arbiter between them, ready to promote either, so far as it shall appear to him conducive to the general interests of the society?

If we take into the account the momentary humors or dispositions which may happen to prevail in particular parts of the society, and to which a wise administration will never be inattentive, is the man whose situation leads to extensive inquiry and information less likely to be a competent judge of their nature, extent, and foundation than

one whose observation does not travel beyond the circle of his neighbors and acquaintances? Is it not natural that a man who is a candidate for the favor of the people, and who is dependent on the suffrages of his fellow-citizens for the continuance of his public honors, should take care to inform himself of their dispositions and inclinations and should be willing to allow them their proper degree of influence upon his conduct? This dependence, and the necessity of being bound himself and his posterity, by the laws to which he gives his assent are the true and they are the strong chords of sympathy between the representative and the constituent.

There is no part of the administration of government that requires extensive information and a thorough knowledge of the principles of political economy so much as the business of taxation. The man who understands those principles best will be least likely to resort to oppressive expedients, or to sacrifice any particular class of citizens to the procurement of revenue. It might be demonstrated that the most productive system of finance will always be the least burdensome. There can be no doubt that in order to a judicious exercise of the power of taxation, it is necessary that the person in whose hands it should be acquainted with the general genius, habits, and modes of thinking of the people at large, and with the resources of the country. And this is all that can be reasonably meant by a knowledge of the interests and feelings of the people. In any other sense the proposition has either no meaning, or an absurd one. And in that sense let every considerate citizen judge for himself where the requisite qualification is most likely to be found.

PUBLIUS

FEDERALIST No. 36 The Same Subject Continued (Concerning the General Power of Taxation)

**From the New York Packet.
Tuesday, January 8, 1788
Hamilton**

To the People of the State of New York:

WE HAVE seen that the result of the observations to which the foregoing number has been principally devoted is that from the natural operation of the different interests and views of the various classes of the community, whether the representation of the people be more or less numerous, it will consist almost entirely of proprietors of land, of merchants, and of members of the learned professions, who will truly represent all those different interests and views. If it should be objected that we have seen other descriptions of men in the local legislatures, I answer that it is admitted there are exceptions to the rule, but not in sufficient number to influence the general complexion or character of the government. There are strong minds in every walk of life that will rise superior to the disadvantages of situation and will command the tribute due to their merit, not only from the classes to which they particularly belong, but from the society in general. The door ought to be equally open to all; and I trust, for the credit of human nature, that we shall see examples of such vigorous plants flourishing in the soil of federal as well as of State legislation; but occasional instances of this sort will not render the reasoning founded upon the general course of things, less conclusive.

The subject might be placed in several other lights that would all lead to the same result; and in particular it might be asked, What greater affinity or relation of interest can be conceived between the carpenter and blacksmith, and the linen manufacturer or stocking weaver, than between the merchant and either of them? It is notorious that there are often as great rivalships between different branches of the mechanic or manufacturing arts as there are between any of the departments of labor and industry; so that unless the representative body were to be far more numerous than would be consistent with any idea of regularity or wisdom in its deliberations, it is impossible that what seems to be the spirit of the objection we have been considering should ever be realized in practice. But I forbear to dwell longer on a matter which has hitherto worn too loose a garb to admit even of an accurate inspection of its real shape or tendency.

There is another objection of a somewhat more precise nature which claims our attention. It has been asserted that a power of internal taxation in the national legislature could never be exercised with advantage, as well from the want of a sufficient knowledge of local circumstances as from an interference between the revenue laws of the Union and of the particular States. The supposition of a want of proper knowledge seems to be entirely destitute of foundation. If any question is depending in a State legislature respecting one of the counties, which demands a knowledge of local details, how is it acquired? No doubt from the information of the members of the county. Cannot the like knowledge be obtained in the national legislature from the representatives of each State? And is it not to be presumed that the men who will generally be sent there will be possessed of the necessary degree of intelligence to be able to communicate that information? Is the knowledge of local circumstances, as applied to taxation, a minute topographical acquaintance with all the mountains, rivers, streams, highways, and bypaths in each State; or is it a general acquaintance with its situation

and resources, with the state of its agriculture, commerce, manufactures, with the nature of its products and consumptions, with the different degrees and kinds of its wealth, property, and industry?

Nations in general, even under governments of the more popular kind, usually commit the administration of their finances to single men or to boards composed of a few individuals, who digest and prepare, in the first instance, the plans of taxation, which are afterwards passed into laws by the authority of the sovereign or legislature.

Inquisitive and enlightened statesmen are everywhere deemed best qualified to make a judicious selection of the objects proper for revenue; which is a clear indication, as far as the sense of mankind can have weight in the question, of the species of knowledge of local circumstances requisite to the purposes of taxation.

The taxes intended to be comprised under the general denomination of internal taxes may be subdivided into those of the direct and those of the indirect kind. Though the objection be made to both, yet the reasoning upon it seems to be confined to the former branch. And indeed, as to the latter, by which must be understood duties and excises on articles of consumption, one is at a loss to conceive what can be the nature of the difficulties apprehended. The knowledge relating to them must evidently be of a kind that will either be suggested by the nature of the article itself, or can easily be procured from any well-informed man, especially of the mercantile class. The circumstances that may distinguish its situation in one State from its situation in another must be few, simple, and easy to be comprehended. The principal thing to be attended to would be to avoid those articles which had been previously appropriated to the use of a particular State; and there could be no difficulty in ascertaining the revenue system of each. This could always be known from the respective codes of laws, as well as from the information of the

members of the several States.

The objection, when applied to real property or to houses and lands, appears to have, at first sight, more foundation, but even in this view it will not bear a close examination. Land taxes are commonly laid in one of two modes, either by actual valuations, permanent or periodical, or by occasional assessments, at the discretion, or according to the best judgment, of certain officers whose duty it is to make them. In either case, the EXECUTION of the business, which alone requires the knowledge of local details, must be devolved upon discreet persons in the character of commissioners or assessors, elected by the people or appointed by the government for the purpose. All that the law can do must be to name the persons or to prescribe the manner of their election or appointment, to fix their numbers and qualifications, and to draw the general outlines of their powers and duties. And what is there in all this that cannot as well be performed by the national legislature as by a State legislature? The attention of either can only reach to general principles; local details, as already observed, must be referred to those who are to execute the plan.

But there is a simple point of view in which this matter may be placed that must be altogether satisfactory. The national legislature can make use of the system of each state within that state. The method of laying and collecting this species of taxes in each State can, in all its parts, be adopted and employed by the federal government.

Let it be recollected that the proportion of these taxes is not to be left to the discretion of the national legislature, but is to be determined by the numbers of each State, as described in the second section of the first article. An actual census or enumeration of the people must furnish the rule, a circumstance which effectually shuts the door to partiality or oppression. The abuse of this power of taxation seems to have been provided against with guarded circumspection. In addition to the precaution just mentioned, there is

a provision that “all duties, imposts, and excises shall be UNIFORM throughout the United States.”

It has been very properly observed by different speakers and writers on the side of the Constitution that if the exercise of the power of internal taxation by the Union should be judged beforehand upon mature consideration, or should be discovered on experiment to be really inconvenient, the federal government may forbear the use of it, and have recourse to requisitions in its stead. By way of answer to this, it has been triumphantly asked, Why not in the first instance omit that ambiguous power and rely upon the latter resource? Two solid answers may be given. The first is that the actual exercise of that power may be found both convenient and necessary; for it is impossible to prove in theory, or otherwise than by the experiment, that it cannot be advantageously exercised. The contrary, indeed, appears most probable. The second answer is that the existence of such a power in the Constitution will have a strong influence in giving efficacy to requisitions. When the States know that the Union can apply itself without their agency, it will be a powerful motive for exertion on their part.

As to the interference of the revenue laws of the Union and of its members, we have already seen that there can be no clashing or repugnancy of authority. The laws cannot, therefore, in a legal sense, interfere with each other; and it is far from impossible to avoid an interference even in the policy of their different systems. An effectual expedient for this purpose will be mutually to abstain from those objects which either side may have first had recourse to. As neither can control the other, each will have an obvious and sensible interest in this reciprocal forbearance. And where there is an immediate common interest, we may safely count upon its operation. When the particular debts of the States are done away and their expenses come to be limited within their natural compass, the possibility almost of

interference will vanish. A small land tax will answer the purposes of the States, and will be their most simple and most fit resource.

Many spectres have been raised out of this power of internal taxation to excite the apprehensions of the people: double sets of revenue officers, a duplication of their burdens by double taxations, and the frightful forms of odious and oppressive poll taxes have been played off with all the ingenious dexterity of political legerdemain.

As to the first point, there are two cases in which there can be no room for double sets of officers: one, where the right of imposing the tax is exclusively vested in the Union, which applies to the duties on imports; the other, where the object has not fallen under any State regulation or provision, which may be applicable to a variety of objects. In other cases, the probability is that the United States will either wholly abstain from the objects preoccupied for local purposes, or will make use of the State officers and State regulations for collecting the additional imposition. This will best answer the views of revenue, because it will save expense in the collection, and will best avoid any occasion of disgust to the State governments and to the people. At all events, here is a practicable expedient for avoiding such an inconvenience; and nothing more can be required than to show that evils predicted to not necessarily result from the plan.

As to any argument derived from a supposed system of influence, it is a sufficient answer to say that it ought not to be presumed; but the supposition is susceptible of a more precise answer. If such a spirit should infest the councils of the Union, the most certain road to the accomplishment of its aim would be to employ the State officers as much as possible, and to attach them to the Union by an accumulation of their emoluments. This would serve to turn the tide of State influence into the channels of the national government, instead of making federal influence flow in an opposite and adverse current. But all suppositions of this kind are invidious, and ought to be banished

from the consideration of the great question before the people. They can answer no other end than to cast a mist over the truth.

As to the suggestion of double taxation, the answer is plain. The wants of the Union are to be supplied in one way or another; if to be done by the authority of the federal government, it will not be to be done by that of the State government. The quantity of taxes to be paid by the community must be the same in either case; with this advantage—if the provision is to be made by the Union—that the capital resource of commercial imposts, which is the most convenient branch of revenue, can be prudently improved to a much greater extent under federal than under State regulation, and of course will render it less necessary to recur to more inconvenient methods; and with this further advantage, that as far as there may be any real difficulty in the exercise of the power of internal taxation, it will impose a disposition to greater care in the choice and arrangement of the means; and must naturally tend to make it a fixed point of policy in the national administration to go as far as may be practicable in making the luxury of the rich tributary to the public treasury in order to diminish the necessity of those impositions which might create dissatisfaction in the poorer and most numerous classes of the society. Happy it is when the interest which the government has in the preservation of its own power coincides with a proper distribution of the public burdens and tends to guard the least wealthy part of the community from oppression!

As to poll taxes, I, without scruple, confess my disapprobation of them; and though they have prevailed from an early period in those States^[1] which have uniformly been the most tenacious of their rights, I should lament to see them introduced into practice under the national government. But does it follow because there is a power to lay them that they will actually be laid? Every State in the Union has power to impose taxes of this kind; and yet in several of them they are

unknown in practice. Are the State governments to be stigmatized as tyrannies because they possess this power? If they are not, with what propriety can the like power justify such a charge against the national government, or even be urged as an obstacle to its adoption? As little friendly as I am to the species of imposition, I still feel a thorough conviction that the power of having recourse to it ought to exist in the federal government. There are certain emergencies of nations in which expedients that in the ordinary state of things ought to be forborne become essential to the public weal. And the government, from the possibility of such emergencies, ought ever to have the option of making use of them. The real scarcity of objects in this country, which may be considered as productive sources of revenue, is a reason peculiar to itself for not abridging the discretion of the national councils in this respect. There may exist certain critical and tempestuous conjunctures of the State, in which a poll tax may become an inestimable resource. And as I know nothing to exempt this portion of the globe from the common calamities that have befallen other parts of it, I acknowledge my aversion to every project that is calculated to disarm the government of a single weapon, which in any possible contingency might be usefully employed for the general defense and security.

I have now gone through the examination of those powers proposed to be conferred upon the federal government which relate more peculiarly to its energy, and to its efficiency for answering the great and primary objects of union. There are others which, though omitted here, will, in order to render the view of the subject more complete, be taken notice of under the next head of our inquiries. I flatter myself the progress already made will have sufficed to satisfy the candid and judicious part of the community that some of the objections which have been most strenuously urged against the Constitution, and which were most formidable in their first appearance, are not only destitute of substance, but if they had

operated in the formation of the plan, would have rendered it incompetent to the great ends of public happiness and national prosperity. I equally flatter myself that a further and more critical investigation of the system will serve to recommend it still more to every sincere and disinterested advocate for good government and will leave no doubt with men of this character of the propriety and expediency of adopting it. Happy will it be for ourselves, and most honorable for human nature, if we have wisdom and virtue enough to set so glorious an example to mankind!

FEDERALIST No. 37

Concerning the Difficulties of the Convention in Devising a Proper Form of Government

**From the Daily Advertiser.
Friday, January 11, 1788
Madison**

To the People of the State of New York:

IN REVIEWING the defects of the existing Confederation, and showing that they cannot be supplied by a government of less energy than that before the public, several of the most important principles of the latter fell of course under consideration. But as the ultimate object of these papers is to determine clearly and fully the merits of this Constitution, and the expediency of adopting it, our plan cannot be completed without taking a more critical and thorough survey of the work of the convention, without examining it on all its sides, comparing it in all its parts, and calculating its probable effects. That this remaining task may be executed under impressions conducive to a just and fair result, some reflections must in this place be indulged, which candor previously suggests.

It is a misfortune, inseparable from human affairs, that public measures are rarely investigated with that spirit of moderation which is essential to a just estimate of their real tendency to advance or obstruct the public good; and that this spirit is more apt to be diminished than promoted by those occasions which require an

unusual exercise of it. To those who have been led by experience to attend to this consideration, it could not appear surprising that the act of the convention, which recommends so many important changes and innovations, which may be viewed in so many lights and relations, and which touches the springs of so many passions and interests, should find or excite dispositions unfriendly, both on one side and on the other, to a fair discussion and accurate judgment of its merits. In some, it has been too evident from their own publications that they have scanned the proposed Constitution, not only with a predisposition to censure, but with a predetermination to condemn; as the language held by others betrays an opposite predetermination or bias, which must render their opinions also of little moment in the question. In placing, however, these different characters on a level with respect to the weight of their opinions I wish not to insinuate that there may not be a material difference in the purity of their intentions. It is but just to remark in favor of the latter description that as our situation is universally admitted to be peculiarly critical, and to require indispensably that something should be done for our relief, the predetermined patron of what has been actually done may have taken his bias from the weight of these considerations, as well as from considerations of a sinister nature. The predetermined adversary, on the other hand, can have been governed by no venial motive whatever. The intentions of the first may be upright, as they may on the contrary be culpable. The views of the last cannot be upright, and must be culpable. But the truth is, that these papers are not addressed to persons falling under either of these characters. They solicit the attention of those only who add to a sincere zeal for the happiness of their country, a temper favorable to a just estimate of the means of promoting it.

Persons of this character will proceed to an examination of the plan submitted by the convention, not only without a disposition to find or to magnify faults; but will see the propriety of reflecting, that a

faultless plan was not to be expected. Nor will they barely make allowances for the errors which may be chargeable on the fallibility to which the convention, as a body of men, were liable; but will keep in mind that they themselves also are but men, and ought not to assume an infallibility in rejudging the fallible opinions of others.

With equal readiness will it be perceived that besides these inducements to candor, many allowances ought to be made for the difficulties inherent in the very nature of the undertaking referred to the convention.

The novelty of the undertaking immediately strikes us. It has been shown in the course of these papers that the existing Confederation is founded on principles which are fallacious; that we must consequently change this first foundation, and with it the superstructure resting upon it. It has been shown that the other confederacies which could be consulted as precedents have been vitiated by the same erroneous principles, and can therefore furnish no other light than that of beacons, which give warning of the course to be shunned, without pointing out that which ought to be pursued. The most that the convention could do in such a situation was to avoid the errors suggested by the past experience of other countries, as well as of our own; and to provide a convenient mode of rectifying their own errors, as future experiences may unfold them.

Among the difficulties encountered by the convention, a very important one must have lain in combining the requisite stability and energy in government with the inviolable attention due to liberty and to the republican form. Without substantially accomplishing this part of their undertaking, they would have very imperfectly fulfilled the object of their appointment, or the expectation of the public; yet that it could not be easily accomplished will be denied by no one who is unwilling to betray his ignorance of the subject. Energy in government is essential to that security against external and internal danger, and

to that prompt and salutary execution of the laws which enter into the very definition of good government. Stability in government is essential to national character and to the advantages annexed to it, as well as to that repose and confidence in the minds of the people, which are among the chief blessings of civil society. An irregular and mutable legislation is not more an evil in itself than it is odious to the people; and it may be pronounced with assurance that the people of this country, enlightened as they are with regard to the nature, and interested, as the great body of them are, in the effects of good government, will never be satisfied till some remedy be applied to the vicissitudes and uncertainties which characterize the State administrations. On comparing, however, these valuable ingredients with the vital principles of liberty, we must perceive at once the difficulty of mingling them together in their due proportions. The genius of republican liberty seems to demand on one side not only that all power should be derived from the people, but that those intrusted with it should be kept in independence on the people, by a short duration of their appointments; and that even during this short period the trust should be placed not in a few, but a number of hands. Stability, on the contrary, requires that the hands in which power is lodged should continue for a length of time the same. A frequent change of men will result from a frequent return of elections; and a frequent change of measures from a frequent change of men: whilst energy in government requires not only a certain duration of power, but the execution of it by a single hand.

How far the convention may have succeeded in this part of their work will better appear on a more accurate view of it. From the cursory view here taken, it must clearly appear to have been an arduous part.

Not less arduous must have been the task of marking the proper line of partition between the authority of the general and that of the

State governments. Every man will be sensible of this difficulty in proportion as he has been accustomed to contemplate and discriminate objects extensive and complicated in their nature. The faculties of the mind itself have never yet been distinguished and defined with satisfactory precision by all the efforts of the most acute and metaphysical philosophers. Sense, perception, judgment, desire, volition, memory, imagination are found to be separated by such delicate shades and minute gradations that their boundaries have eluded the most subtle investigations, and remain a pregnant source of ingenious disquisition and controversy. The boundaries between the great kingdom of nature, and, still more, between the various provinces and lesser portions into which they are subdivided afford another illustration of the same important truth. The most sagacious and laborious naturalists have never yet succeeded in tracing with certainty the line which separates the district of vegetable life from the neighboring region of unorganized matter, or which marks the termination of the former and the commencement of the animal empire. A still greater obscurity lies in the distinctive characters by which the objects in each of these great departments of nature have been arranged and assorted.

When we pass from the works of nature, in which all the delineations are perfectly accurate and appear to be otherwise only from the imperfection of the eye which surveys them, to the institutions of man, in which the obscurity arises as well from the object itself as from the organ by which it is contemplated, we must perceive the necessity of moderating still further our expectations and hopes from the efforts of human sagacity. Experience has instructed us that no skill in the science of government has yet been able to discriminate and define, with sufficient certainty, its three great provinces—the legislative, executive, and judiciary; or even the privileges and powers of the different legislative branches. Questions daily occur in the course of practice which prove the obscurity which

reins in these subjects, and which puzzle the greatest adepts in political science.

The experience of ages, with the continued and combined labors of the most enlightened legislators and jurists, has been equally unsuccessful in delineating the several objects and limits of different codes of laws and different tribunals of justice. The precise extent of the common law, and the statute law, the maritime law, the ecclesiastical law, the law of corporations, and other local laws and customs, remains still to be clearly and finally established in Great Britain, where accuracy in such subjects has been more industriously pursued than in any other part of the world. The jurisdiction of her several courts, general and local, of law, of equity, of admiralty, etc., is not less a source of frequent and intricate discussions, sufficiently denoting the indeterminate limits by which they are respectively circumscribed. All new laws, though penned with the greatest technical skill and passed on the fullest and most mature deliberation, are considered as more or less obscure and equivocal, until their meaning be liquidated and ascertained by a series of particular discussions and adjudications. Besides the obscurity arising from the complexity of objects and the imperfection of the human faculties, the medium through which the conceptions of men are conveyed to each other adds a fresh embarrassment. The use of words is to express ideas. Perspicuity, therefore, requires not only that the ideas should be distinctly formed, but that they should be expressed by words distinctly and exclusively appropriate to them. But no language is so copious as to supply words and phrases for every complex idea, or so correct as not to include many equivocally denoting different ideas. Hence it must happen that however accurately objects may be discriminated in themselves, and however accurately the discrimination may be considered, the definition of them may be rendered inaccurate by the inaccuracy of the terms in which it is delivered. And this unavoidable inaccuracy must be greater or less,

according to the complexity and novelty of the objects defined. When the Almighty himself condescends to address mankind in their own language, his meaning, luminous as it must be, is rendered dim and doubtful by the cloudy medium through which it is communicated.

Here, then, are three sources of vague and incorrect definitions: indistinctness of the object, imperfection of the organ of conception, inadequateness of the vehicle of ideas. Any one of these must produce a certain degree of obscurity. The convention, in delineating the boundary between the federal and State jurisdictions, must have experienced the full effect of them all.

To the difficulties already mentioned may be added the interfering pretensions of the larger and smaller States. We cannot err in supposing that the former would contend for a participation in the government, fully proportioned to their superior wealth and importance; and that the latter would not be less tenacious of the equality at present enjoyed by them. We may well suppose that neither side would entirely yield to the other, and consequently that the struggle could be terminated only by compromise. It is extremely probable, also, that after the ratio of representation had been adjusted, this very compromise must have produced a fresh struggle between the same parties to give such a turn to the organization of the government and to the distribution of its powers, as would increase the importance of the branches, in forming which they had respectively obtained the greatest share of influence. There are features in the Constitution which warrant each of these suppositions; and as far as either of them is well founded, it shows that the convention must have been compelled to sacrifice theoretical propriety to the force of extraneous considerations.

Nor could it have been the large and small States only which would marshal themselves in opposition to each other on various points. Other combinations, resulting from a difference of local

position and policy, must have created additional difficulties. As every State may be divided into different districts, and its citizens into different classes, which give birth to contending interests and local jealousies, so the different parts of the United States are distinguished from each other by a variety of circumstances, which produce a like effect on a larger scale. And although this variety of interests, for reasons sufficiently explained in a former paper, may have a salutary influence on the administration of the government when formed, yet every one must be sensible of the contrary influence which must have been experienced in the task of forming it.

Would it be wonderful if, under the pressure of all these difficulties, the convention should have been forced into some deviations from that artificial structure and regular symmetry which an abstract view of the subject might lead an ingenious theorist to bestow on a Constitution planned in his closet or in his imagination? The real wonder is that so many difficulties should have been surmounted, and surmounted with a unanimity almost as unprecedented as it must have been unexpected. It is impossible for any man of candor to reflect on this circumstance without partaking of the astonishment. It is impossible for the man of pious reflection not to perceive in it a finger of that Almighty hand which has been so frequently and signally extended to our relief in the critical stages of the revolution.

We had occasion in a former paper to take notice of the repeated trials which have been unsuccessfully made in the United Netherlands for reforming the baneful and notorious vices of their constitution. The history of almost all the great councils and consultations held among mankind for reconciling their discordant opinions, assuaging their mutual jealousies, and adjusting their respective interests, is a history of factions, contentions, and disappointments, and may be classed among the most dark and degraded pictures which display the

infirmities and depravities of the human character. If in a few scattered instances a brighter aspect is presented, they serve only as exceptions to admonish us of the general truth; and by their lustre to darken the gloom of the adverse prospect to which they are contrasted. In revolving the causes from which these exceptions result, and applying them to the particular instances before us, we are necessarily led to two important conclusions. The first is that the convention must have enjoyed, in a very singular degree, an exemption from the pestilential influence of party animosities—the disease most incident to deliberative bodies and most apt to contaminate their proceedings. The second conclusion is that all the deputations composing the convention were either satisfactorily accommodated by the final act, or were induced to accede to it by a deep conviction of the necessity of sacrificing private opinions and partial interests to the public good, and by a despair of seeing this necessity diminished by delays or by new experiments.

PUBLIUS

FEDERALIST No. 38 The Same Subject Continued, and the Incoherence of the Objections to the New Plan Exposed

**For the Independent Journal.
Saturday, January 12, 1788
Madison**

To the People of the State of New York:

IT IS not a little remarkable that in every case reported by ancient history in which government has been established with deliberation and consent, the task of framing it has not been committed to an assembly of men, but has been performed by some individual citizen of preeminent wisdom and approved integrity.

Minos, we learn, was the primitive founder of the government of Crete, as Zaleucus was of that of the Locrians. Theseus first, and after him Draco and Solon, instituted the government of Athens. Lycurgus was the lawgiver of Sparta. The foundation of the original government of Rome was laid by Romulus, and the work completed by two of his elective successors, Numa and Tullius Hostilius. On the abolition of royalty the consular administration was substituted by Brutus, who stepped forward with a project for such a reform, which, he alleged, had been prepared by Servius Tullius, and to which his address obtained the assent and ratification of the senate and people. This remark is applicable to confederate governments also. Amphictyon, we are told, was the author of that which bore his name. The Achaean

league received its first birth from Achaeus, and its second from Aratus.

《神曲》中的米诺斯。在希腊神话中，米诺斯是克里特之王，宙斯和欧罗巴的儿子。据说米诺斯、拉达曼迪斯和艾亚哥斯三兄弟同时爱上了一个非常漂亮的名叫米勒都斯的男孩，并为此争吵了起来。后来米勒都斯选择了艾亚哥斯。米诺斯怀恨在心，一个人独占了整个克里特岛。

What degree of agency these reputed lawgivers might have in their respective establishments, or how far they might be clothed with the legitimate authority of the people, cannot in every instance be ascertained. In some, however, the proceeding was strictly regular. Draco appears to have been intrusted by the people of Athens with indefinite powers to reform its government and laws. And Solon, according to Plutarch, was in a manner compelled by the universal suffrage of his fellow-citizens to take upon him the sole and absolute power of new-modeling the constitution. The proceedings under Lycurgus were less regular; but as far as the advocates for a regular reform could prevail, they all turned their eyes towards the single efforts of that celebrated patriot and sage, instead of seeking to bring about a revolution by the intervention of a deliberative body of citizens.

Whence could it have proceeded that a people, jealous as the Greeks were of their liberty, should so far abandon the rules of caution as to place their destiny in the hands of a single citizen? Whence could it have proceeded that the Athenians, a people who would not suffer an army to be commanded by fewer than ten generals, and who required no other proof of danger to their liberties than the illustrious merit of a fellow-citizen, should consider one illustrious citizen as a more eligible depository of the fortunes of themselves and their posterity than a select body of citizens, from whose common deliberations more wisdom, as well as more safety, might have been expected? These questions cannot be fully answered without supposing that the fears of discord and disunion among a number of counsellors exceeded the apprehension of treachery or incapacity in a single individual. History informs us, likewise, of the difficulties with which these celebrated reformers had to contend, as well as of the expedients which they were obliged to employ in order to carry their reforms into effect. Solon, who seems to have indulged a more temporizing policy, confessed that he had not given to his countrymen the government best suited to their happiness, but most tolerable to their prejudices. And Lycurgus, more true to his object, was under the necessity of mixing a portion of violence with the authority of superstition, and of securing his final success by a voluntary renunciation, first of his country and then of his life. If these lessons teach us, on one hand, to admire the improvement made by America on the ancient mode of preparing and establishing regular plans of government, they serve not less, on the other, to admonish us of the hazards and difficulties incident to such experiments, and of the great imprudence of unnecessarily multiplying them.

Is it an unreasonable conjecture that the errors which may be contained in the plan of the convention are such as have resulted rather from the defect of antecedent experience on this complicated and difficult subject, than from a want of accuracy or care in the

investigation of it; and, consequently such as will not be ascertained until an actual trial shall have pointed them out? This conjecture is rendered probable, not only by many considerations of a general nature, but by the particular case of the Articles of Confederation. It is observable that among the numerous objections and amendments suggested by the several States, when these articles were submitted for their ratification, not one is found which alludes to the great and radical error which on actual trial has discovered itself. And if we except the observations which New Jersey was led to make, rather by her local situation than by her peculiar foresight, it may be questioned whether a single suggestion was of sufficient moment to justify a revision of the system. There is abundant reason, nevertheless, to suppose that immaterial as these objections were, they would have been adhered to with a very dangerous inflexibility in some States, had not a zeal for their opinions and supposed interests been stifled by the more powerful sentiment of selfpreservation. One State, we may remember, persisted for several years in refusing her concurrence, although the enemy remained the whole period at our gates, or rather in the very bowels of our country. Nor was her pliancy in the end effected by a lesser motive than the fear of being chargeable with protracting the public calamities and endangering the event of the contest. Every candid reader will make the proper reflections on these important facts.

梭伦（约公元前638—前559），生于雅典，出身于没落的贵族，是古代雅典的政治家、立法者、诗人，古希腊七贤之一。

A patient who finds his disorder daily growing worse, and that an efficacious remedy can no longer be delayed without extreme danger, after coolly revolving his situation and the characters of different physicians, selects and calls in such of them as he judges most capable of administering relief, and best entitled to his confidence. The

physicians attend; the case of the patient is carefully examined; a consultation is held; they are unanimously agreed that the symptoms are critical, but that the case, with proper and timely relief, is so far from being desperate that it may be made to issue in an improvement of his constitution. They are equally unanimous in prescribing the remedy by which this happy effect is to be produced. The prescription is no sooner made known, however, than a number of persons interpose, and, without denying the reality or danger of the disorder, assure the patient that the prescription will be poison to his constitution, and forbid him, under pain of certain death, to make use of it. Might not the patient reasonably demand, before he ventured to follow this advice, that the authors of it should at least agree among themselves on some other remedy to be substituted? And if he found them differing as much from one another as from his first counsellors, would he not act prudently in trying the experiment unanimously recommended by the latter, rather than be hearkening to those who could neither deny the necessity of a speedy remedy, nor agree in proposing one?

Such a patient and in such a situation is America at this moment. She has been sensible of her malady. She has obtained a regular and unanimous advice from men of her own deliberate choice. And she is warned by others against following this advice under pain of the most fatal consequences. Do the monitors deny the reality of her danger? No. Do they deny the necessity of some speedy and powerful remedy? No. Are they agreed, are any two of them agreed, in their objections to the remedy proposed, or in the proper one to be substituted? Let them speak for themselves. This one tells us that the proposed Constitution ought to be rejected, because it is not a confederation of the States, but a government over individuals. Another admits that it ought to be a government over individuals to a certain extent, but by no means to the extent proposed. A third does not object to the government over individuals, or to the extent proposed, but to the

want of a bill of rights. A fourth concurs in the absolute necessity of a bill of rights, but contends that it ought to be declaratory, not of the personal rights of individuals, but of the rights reserved to the States in their political capacity. A fifth is of opinion that a bill of rights of any sort would be superfluous and misplaced, and that the plan would be unexceptionable but for the fatal power of regulating the times and places of election. An objector in a large State exclaims loudly against the unreasonable equality of representation in the Senate. An objector in a small State is equally loud against the dangerous inequality in the House of Representatives. From this quarter we are alarmed with the amazing expense from the number of persons who are to administer the new government. From another quarter, and sometimes from the same quarter, on another occasion, the cry is that the Congress will be but a shadow of a representation, and that the government would be far less objectionable if the number and the expense were doubled. A patriot in a State that does not import or export discerns insuperable objections against the power of direct taxation. The patriotic adversary in a State of great exports and imports is not less dissatisfied that the whole burden of taxes may be thrown on consumption. This politician discovers in the Constitution a direct and irresistible tendency to monarchy; that is equally sure it will end in aristocracy. Another is puzzled to say which of these shapes it will ultimately assume, but sees clearly it must be one or other of them; whilst a fourth is not wanting, who with no less confidence affirms that the Constitution is so far from having a bias towards either of these dangers, that the weight on that side will not be sufficient to keep it upright and firm against its opposite propensities. With another class of adversaries to the Constitution the language is that the legislative, executive, and judiciary departments are intermixed in such a manner as to contradict all the ideas of regular government and all the requisite precautions in favor of liberty. Whilst this objection circulates in vague and general expressions, there are but a few who lend their sanction to it. Let each one come forward with his

particular explanation, and scarce any two are exactly agreed upon the subject. In the eyes of one the junction of the Senate with the President in the responsible function of appointing to offices, instead of vesting this executive power in the Executive alone, is the vicious part of the organization. To another, the exclusion of the House of Representatives, whose numbers alone could be a due security against corruption and partiality in the exercise of such a power, is equally obnoxious. With another the admission of the President into any share of a power which must ever be a dangerous engine in the hands of the executive magistrate is an unpardonable violation of the maxims of republican jealousy. No part of the arrangement, according to some, is more inadmissible than the trial of impeachments by the Senate, which is alternately a member both of the legislative and executive departments, when this power so evidently belonged to the judiciary department. "We concur fully," reply others, "in the objection to this part of the plan, but we can never agree that a reference of impeachments to the judiciary authority would be an amendment of the error. Our principal dislike to the organization arises from the extensive powers already lodged in that department." Even among the zealous patrons of a council of state the most irreconcilable variance is discovered concerning the mode in which it ought to be constituted. The demand of one gentleman is that the council should consist of a small number to be appointed by the most numerous branch of the legislature. Another would prefer a larger number, and considers it as a fundamental condition that the appointment should be made by the President himself.

As it can give no umbrage to the writers against the plan of the federal Constitution, let us suppose that as they are the most zealous, so they are also the most sagacious, of those who think the late convention were unequal to the task assigned them, and that a wiser and better plan might and ought to be substituted. Let us further suppose that their country should concur, both in this favorable

opinion of their merits, and in their unfavorable opinion of the convention; and should accordingly proceed to form them into a second convention, with full powers, and for the express purpose of revising and remoulding the work of the first. Were the experiment to be seriously made, though it requires some effort to view it seriously even in fiction, I leave it to be decided by the sample of opinions just exhibited whether, with all their enmity to their predecessors, they would, in any one point, depart so widely from their example as in the discord and ferment that would mark their own deliberations; and whether the Constitution now before the public would not stand as fair a chance for immortality as Lycurgus gave to that of Sparta by making its change to depend on his own return from exile and death, if it were to be immediately adopted and were to continue in force, not until a BETTER, but until ANOTHER, should be agreed upon by this new assembly of lawgivers.

It is a matter both of wonder and regret that those who raise so many objections against the new Constitution should never call to mind the defects of that which is to be exchanged for it. It is not necessary that the former should be perfect; it is sufficient that the latter is more imperfect. No man would refuse to give brass for silver or gold, because the latter had some alloy in it. No man would refuse to quit a shattered and tottering habitation for a firm and commodious building, because the latter had not a porch to it, or because some of the rooms might be a little larger or smaller, or the ceiling a little higher or lower than his fancy would have planned them. But waiving illustrations of this sort, is it not manifest that most of the capital objections urged against the new system lie with tenfold weight against the existing Confederation? Is an indefinite power to raise money dangerous in the hands of the federal government? The present Congress can make requisitions to any amount they please, and the States are constitutionally bound to furnish them; they can emit bills of credit as long as they will pay for the paper; they can borrow, both

abroad and at home, as long as a shilling will be lent. Is an indefinite power to raise troops dangerous? The Confederation gives to Congress that power also; and they have already begun to make use of it. Is it improper and unsafe to intermix the different powers of government in the same body of men? Congress, a single body of men, are the sole depositary of all the federal powers. Is it particularly dangerous to give the keys of the treasury, and the command of the army, into the same hands? The Confederation places them both in the hands of Congress. Is a bill of rights essential to liberty? The Confederation has no bill of rights. Is it an objection against the new Constitution that it empowers the Senate, with the concurrence of the Executive, to make treaties which are to be the laws of the land? The existing Congress, without any such control, can make treaties which they themselves have declared and most of the States have recognized, to be the supreme law of the land. Is the importation of slaves permitted by the new Constitution for twenty years? By the old it is permitted forever.

I shall be told that however dangerous this mixture of powers may be in theory, it is rendered harmless by the dependence of Congress on the State for the means of carrying them into practice; that however large the mass of powers may be, it is in fact a lifeless mass. Then, say I, in the first place, that the Confederation is chargeable with the still greater folly of declaring certain powers in the federal government to be absolutely necessary, and at the same time rendering them absolutely nugatory; and, in the next place, that if the Union is to continue, and no better government be substituted, effective powers must either be granted to, or assumed by, the existing Congress; in either of which events, the contrast just stated will hold good. But this is not all. Out of this lifeless mass has already grown an excrescent power, which tends to realize all the dangers that can be apprehended from a defective construction of the supreme government of the Union. It is now no longer a point of speculation and hope, that the Western territory is a mine of vast wealth to the

United States; and although it is not of such a nature as to extricate them from their present distresses, or for some time to come, to yield any regular supplies for the public expenses, yet must it hereafter be able, under proper management, both to effect a gradual discharge of the domestic debt, and to furnish, for a certain period, liberal tributes to the federal treasury. A very large proportion of this fund has been already surrendered by individual States; and it may with reason be expected that the remaining States will not persist in withholding similar proofs of their equity and generosity. We may calculate, therefore, that a rich and fertile country of an area equal to the inhabited extent of the United States will soon become a national stock. Congress have assumed the administration of this stock. They have begun to render it productive. Congress have undertaken to do more: they have proceeded to form new States, to erect temporary governments, to appoint officers for them, and to prescribe the conditions on which such States shall be admitted into the Confederacy. All this has been done; and done without the least color of constitutional authority. Yet no blame has been whispered; no alarm has been sounded. A GREAT and INDEPENDENT fund of revenue is passing into the hands of a SINGLE BODY of men, who can RAISE TROOPS to an INDEFINITE NUMBER, and appropriate money to their support for an INDEFINITE PERIOD OF TIME. And yet there are men, who have not only been silent spectators of this prospect, but who are advocates for the system which exhibits it; and at the same time urge against the new system the objections which we have heard. Would they not act with more consistency in urging the establishment of the latter as no less necessary to guard the Union against the future powers and resources of a body constructed like the existing Congress, than to save it from the dangers threatened by the present impotency of that Assembly?

I mean not by any thing here said to throw censure on the measures which have been pursued by Congress. I am sensible they

could not have done otherwise. The public interest, the necessity of the case, imposed upon them the task of overleaping their constitutional limits. But is not the fact an alarming proof of the danger resulting from a government which does not possess regular powers commensurate to its objects? A dissolution or usurpation is the dreadful dilemma to which it is continually exposed.

FEDERALIST No. 39 The Conformity of the Plan to Republican Principles

**For the Independent Journal.
Wednesday, January 16, 1788
Madison**

To the People of the State of New York:

THE last paper having concluded the observations which were meant to introduce a candid survey of the plan of government reported by the convention, we now proceed to the execution of that part of our undertaking.

The first question that offers itself is whether the general form and aspect of the government be strictly republican. It is evident that no other form would be reconcilable with the genius of the people of America; with the fundamental principles of the Revolution; or with that honorable determination which animates every votary of freedom, to rest all our political experiments on the capacity of mankind for self-government. If the plan of the convention, therefore, be found to depart from the republican character, its advocates must abandon it as no longer defensible.

What, then, are the distinctive characters of the republican form? Were an answer to this question to be sought, not by recurring to principles but in the application of the term by political writers to the constitution of different States, no satisfactory one would ever be

found. Holland, in which no particle of the supreme authority is derived from the people, has passed almost universally under the denomination of a republic. The same title has been bestowed on Venice, where absolute power over the great body of the people is exercised in the most absolute manner by a small body of hereditary nobles. Poland, which is a mixture of aristocracy and of monarchy in their worst forms, has been dignified with the same appellation. The government of England, which has one republican branch only, combined with an hereditary aristocracy and monarchy, has with equal impropriety been frequently placed on the list of republics. These examples, which are nearly as dissimilar to each other as to a genuine republic, show the extreme inaccuracy with which the term has been used in political disquisitions.

If we resort for a criterion to the different principles on which different forms of government are established, we may define a republic to be, or at least may bestow that name on, a government which derives all its powers directly or indirectly from the great body of the people, and is administered by persons holding their offices during pleasure for a limited period, or during good behavior. It is essential to such a government that it be derived from the great body of the society, not from an inconsiderable proportion, or a favored class of it; otherwise a handful of tyrannical nobles, exercising their oppressions by a delegation of their powers, might aspire to the rank of republicans and claim for their government the honorable title of republic. It is sufficient for such a government that the persons administering it be appointed, either directly or indirectly, by the people; and that they hold their appointments by either of the tenures just specified; otherwise every government in the United States, as well as every other popular government that has been or can be well organized or well executed, would be degraded from the republican character. According to the constitution of every State in the Union, some or other of the officers of government are appointed indirectly

only by the people. According to most of them, the chief magistrate himself is so appointed. And according to one, this mode of appointment is extended to one of the co-ordinate branches of the legislature. According to all the constitutions, also, the tenure of the highest offices is extended to a definite period, and in many instances, both within the legislative and executive departments, to a period of years. According to the provisions of most of the constitutions, again, as well as according to the most respectable and received opinions on the subject, the members of the judiciary department are to retain their offices by the firm tenure of good behavior.

On comparing the Constitution planned by the convention with the standard here fixed, we perceive at once that it is, in the most rigid sense, conformable to it. The House of Representatives, like that of one branch at least of all the State legislatures, is elected immediately by the great body of the people. The Senate, like the present Congress and the Senate of Maryland, derives its appointment indirectly from the people. The President is indirectly derived from the choice of the people, according to the example in most of the States. Even the judges, with all other officers of the Union, will, as in the several States, be the choice, though a remote choice, of the people themselves, the duration of the appointments is equally conformable to the republican standard and to the model of State constitutions. The House of Representatives is periodically elective, as in all the States; and for the period of two years, as in the State of South Carolina. The Senate is elective for the period of six years, which is but one year more than the period of the Senate of Maryland, and but two more than that of the Senates of New York and Virginia. The President is to continue in office for the period of four years; as in New York and Delaware the chief magistrate is elected for three years, and in South Carolina for two years. In the other States the election is annual. In several of the States, however, no explicit provision is made for the impeachment of the chief magistrate. And in Delaware and

Virginia he is not impeachable till out of office. The President of the United States is impeachable at any time during his continuance in office. The tenure by which the judges are to hold their places is, as it unquestionably ought to be, that of good behavior. The tenure of the ministerial offices generally, will be a subject of legal regulation, conformably to the reason of the case and the example of the State constitutions.

Could any further proof be required of the republican complexion of this system, the most decisive one might be found in its absolute prohibition of titles of nobility, both under the federal and the State governments; and in its express guaranty of the republican form to each of the latter.

“But it was not sufficient,” say the adversaries of the proposed Constitution, “for the convention to adhere to the republican form. They ought with equal care to have preserved the federal form, which regards the Union as a confederacy of sovereign states; instead of which, they have framed a national government, which regards the Union as a consolidation of the States.” And it is asked by what authority this bold and radical innovation was undertaken? The handle which has been made of this objection requires that it should be examined with some precision.

Without inquiring into the accuracy of the distinction on which the objection is founded, it will be necessary to a just estimate of its force, first, to ascertain the real character of the government in question; secondly, to inquire how far the convention were authorized to propose such a government; and thirdly, how far the duty they owed to their country could supply any defect of regular authority.

First.—In order to ascertain the real character of the government, it may be considered in relation to the foundation on which it is to be established; to the sources from which its ordinary powers are to be

drawn; to the operation of those powers; to the extent of them; and to the authority by which future changes in the government are to be introduced.

On examining the first relation, it appears, on one hand, that the Constitution is to be founded on the assent and ratification of the people of America, given by deputies elected for the special purpose; but, on the other, that this assent and ratification is to be given by the people, not as individuals composing one entire nation, but as composing the distinct and independent States to which they respectively belong. It is to be the assent and ratification of the several States, derived from the supreme authority in each State—the authority of the people themselves. The act, therefore, establishing the Constitution will not be a national, but a federal act.

That it will be a federal and not a national act, as these terms are understood by the objectors—the act of the people, as forming so many independent States, not as forming one aggregate nation—is obvious from this single consideration: that it is to result neither from the decision of a majority of the people of the Union, nor from that of a majority of the States. It must result from the unanimous assent of the several States that are parties to it, differing no otherwise from their ordinary assent than in its being expressed, not by the legislative authority, but by that of the people themselves. Were the people regarded in this transaction as forming one nation, the will of the majority of the whole people of the United States would bind the minority, in the same manner as the majority in each State must bind the minority; and the will of the majority must be determined either by a comparison of the individual votes, or by considering the will of the majority of the States as evidence of the will of a majority of the people of the United States. Neither of these rules have been adopted. Each State, in ratifying the Constitution, is considered as a sovereign body independent of all others, and only to be bound by its own

voluntary act. In this relation, then, the new Constitution will, if established, be a federal and not a national constitution.

The next relation is to the sources from which the ordinary powers of government are to be derived. The House of Representatives will derive its powers from the people of America; and the people will be represented in the same proportion and on the same principle as they are in the legislature of a particular State. So far the government is national, not federal. The Senate, on the other hand, will derive its powers from the States as political and coequal societies; and these will be represented on the principle of equality in the Senate, as they now are in the existing Congress. So far the government is federal, not national. The executive power will be derived from a very compound source. The immediate election of the President is to be made by the States in their political characters. The votes allotted to them are in a compound ratio, which considers them partly as distinct and coequal societies, partly as unequal members of the same society. The eventual election, again, is to be made by that branch of the legislature which consists of the national representatives; but in this particular act they are to be thrown into the form of individual delegations from so many distinct and coequal bodies politic. From this aspect of the government it appears to be of a mixed character, presenting at least as many federal as national features.

The difference between a federal and national government, as it relates to the operation of the government, is by the adversaries of the plan of the convention supposed to consist in this, that in the former the powers operate on the political bodies composing the Confederacy in their political capacities; in the latter, on the individual citizens composing the nation in their individual capacities. On trying the Constitution by this criterion, it falls under the national not the federal character; though perhaps not so completely as has been understood. In several cases, and particularly in the trial of controversies to which

States may be parties, they must be viewed and proceeded against in their collective and political capacities only. But the operation of the government on the people in their individual capacities, in its ordinary and most essential proceedings, will, in the sense of its opponents, on the whole, designate it, in this relation, a national government.

But if the government be national with regard to the operation of its powers, it changes its aspect again when we contemplate it in relation to the extent of its powers. The idea of a national government involves in it not only an authority over the individual citizens, but an indefinite supremacy over all persons and things, so far as they are objects of lawful government. Among a people consolidated into one nation, this supremacy is completely vested in the national legislature. Among communities united for particular purposes, it is vested partly in the general and partly in the municipal legislatures. In the former case, all local authorities are subordinate to the supreme; and may be controlled, directed, or abolished by it at pleasure. In the latter, the local or municipal authorities form distinct and independent portions of the supremacy, no more subject, within their respective spheres, to the general authority than the general authority is subject to them, within its own sphere. In this relation, then, the proposed government cannot be deemed a national one; since its jurisdiction extends to certain enumerated objects only, and leaves to the several States a residuary and inviolable sovereignty over all other objects. It is true that in controversies relating to the boundary between the two jurisdictions, the tribunal which is ultimately to decide is to be established under the general government. But this does not change the principle of the case. The decision is to be impartially made, according to the rules of the Constitution; and all the usual and most effectual precautions are taken to secure this impartiality. Some such tribunal is clearly essential to prevent an appeal to the sword and a dissolution of the compact; and that it ought to be established under

the general rather than under the local governments, or, to speak more properly, that it could be safely established under the first alone, is a position not likely to be combated.

If we try the Constitution by its last relation to the authority by which amendments are to be made, we find it neither wholly national nor wholly federal. Were it wholly national, the supreme and ultimate authority would reside in the majority of the people of the Union; and this authority would be competent at all times, like that of a majority of every national society to alter or abolish its established government. Were it wholly federal, on the other hand, the concurrence of each State in the Union would be essential to every alteration that would be binding on all. The mode provided by the plan of the convention is not founded on either of these principles. In requiring more than a majority, and principles. In requiring more than a majority, and particularly in computing the proportion by States, not by citizens, it departs from the national and advances towards the federal character; in rendering the concurrence of less than the whole number of States sufficient, it loses again the federal and partakes of the national character.

The proposed Constitution, therefore, even when tested by the rules laid down by its antagonists, is, in strictness, neither a national nor a federal Constitution, but a composition of both. In its foundation it is federal, not national; in the sources from which the ordinary powers of the government are drawn, it is partly federal and partly national; in the operation of these powers, it is national, not federal; in the extent of them, again, it is federal, not national; and, finally in the authoritative mode of introducing amendments, it is neither wholly federal nor wholly national.^[1]

[1] 这段话是对宪法的国家性和联邦性的总结。到底是国家制还是联邦制，说到底是“要松散的‘联合国’，还是要美国”的问题。新宪法是一部混合的宪法，既是国家性的，又是联邦性的。

FEDERALIST No. 40 On the Powers of the Convention to Form a Mixed Government Examined and Sustained

**From the New York Packet.
Friday, January 18, 1788
Madison**

To the People of the State of New York:

THE SECOND point to be examined is whether the convention were authorized to frame and propose this mixed Constitution.

The powers of the convention ought, in strictness, to be determined by an inspection of the commissions given to the members by their respective constituents. As all of these, however, had reference either to the recommendation from the meeting at Annapolis, in September, 1786, or to that from Congress, in February, 1787, it will be sufficient to recur to these particular acts.

The act from Annapolis recommends the“appointment of commissioners to take into consideration the situation of the United States; to devise such further provisions as shall appear to them necessary to render the Constitution of the federal government adequate to the exigencies of the union; and to report such an act for that purpose to the United States in Congress assembled, as when agreed to by them, and afterwards confirmed by the legislature of every State, will effectually provide for the same.”

The recommendatory act of a Congress is in the words following:“Whereas there is provision in the Articles of Confederation and perpetual Union for making alterations therein, by the assent of a Congress of the United States and of the legislatures of the several States; and whereas experience hath evinced that there are defects in the present Confederation; as a mean to remedy which, several of the States, and particularly the State of New York, by express instructions to their delegates in Congress, have suggested a convention for the purposes expressed in the following resolution; and such convention appearing to be the most probable mean of establishing in these States a firm national government:

“Resolved—That in the opinion of Congress it is expedient, that on the second Monday in May next a convention of delegates, who shall have been appointed by the several States, be held at Philadelphia for the sole and express purpose of revising the Articles of Confederation and reporting to Congress and the several legislatures such alterations and provisions therein as shall, when agreed to in Congress and confirmed by the States, render the federal Constitution adequate to the exigencies of government and the preservation of the union.”

From these two acts, it appears, 1st, that the object of the convention was to establish in these States a firm national government; 2nd, that this government was to be such as would be adequate to the exigencies of government and the preservation of the Union; 3rd, that these purposes were to be effected by alterations and provisions in the Articles of Confederation, as it is expressed in the act of Congress, or by such further provisions as should appear necessary, as it stands in the recommendatory act from Annapolis; 4th, that the alterations and provisions were to be reported to Congress and to the States in order to be agreed to by the former and confirmed by the latter.

From a comparison and fair construction of these several modes of expression is to be deduced the authority under which the convention acted. They were to frame a national government, adequate to the exigencies of government and of the union; and to reduce the Articles of Confederation into such form as to accomplish these purposes.

There are two rules of construction, dictated by plain reason as well as founded on legal axioms. The one is that every part of the expression ought, if possible, to be allowed some meaning, and be made to conspire to some common end. The other is that where the several parts cannot be made to coincide, the less important should give way to the more important part; the means should be sacrificed to the end, rather than the end to the means.

Suppose, then, that the expressions defining the authority of the convention were irreconcilably at variance with each other; that a national and adequate government could not possibly, in the judgment of the convention, be affected by alterations and provisions in the Articles of Confederation; which part of the definition ought to have been embraced and which rejected? Which was the more important, which the less important part? Which the end; which the means? Let the most scrupulous expositors of delegated powers; let the most inveterate objectors against those exercised by the convention answer these questions. Let them declare whether it was of most importance to the happiness of the people of America that the Articles of Confederation should be disregarded, and an adequate government be provided, and the Union preserved; or that an adequate government should be omitted, and the Articles of Confederation preserved. Let them declare whether the preservation of these articles was the end for securing which a reform of the government was to be introduced as the means; or whether the establishment of a government adequate to the national happiness was the end at which these articles

themselves originally aimed, and to which they ought, as insufficient means, to have been sacrificed.

But is it necessary to suppose that these expressions are absolutely irreconcilable to each other; that no alterations or provisions in the Articles of the Confederation could possibly mold them into a national and adequate government; into such a government as has been proposed by the convention?

No stress, it is presumed, will, in this case, be laid on the title; a change of that could never be deemed an exercise of ungranted power. Alterations in the body of the instrument are expressly authorized. New provisions therein are also expressly authorized. Here then is a power to change the title; to insert new articles; to alter old ones. Must it of necessity be admitted that this power is infringed, so long as a part of the old articles remain? Those who maintain the affirmative ought at least to mark the boundary between authorized and usurped innovations; between that degree of change which lies within the compass of alterations and further provisions and that which amounts to a transmutation of the government. Will it be said that the alterations ought not to have touched the substance of the Confederation? The States would never have appointed a convention with so much solemnity, nor described its objects with so much latitude, if some substantial reform had not been in contemplation. Will it be said that the fundamental principles of the Confederation were not within the purview of the convention, and ought not to have been varied? I ask, What are these principles? Do they require that in the establishment of the Constitution the States should be regarded as distinct and independent sovereigns? They are so regarded by the Constitution proposed. Do they require that the members of the government should derive their appointment from the legislatures, not from the people of the States? One branch of the new government is to be appointed by these legislatures; and under the Confederation the

delegates to Congress may all be appointed immediately by the people, and in two States^[1] are actually so appointed. Do they require that the powers of the government should act on the States and not immediately on individuals? In some instances, as has been shown, the powers of the new government will act on the States in their collective characters. In some instances, also, those of the existing government act immediately on individuals. In cases of capture; of piracy; of the post office; of coins, weights, and measures; of trade with the Indians; of claims under grants of land by different States; and, above all, in the case of trials by courts-marshal in the army and navy, by which death may be inflicted without the intervention of a jury, or even of a civil magistrate—in all these cases the powers of the Confederation operate immediately on the persons and interests of individual citizens. Do these fundamental principles require, particularly, that no tax should be levied without the intermediate agency of the States? The Confederation itself authorizes a direct tax, to a certain extent, on the post office. The power of coinage has been so construed by Congress as to levy a tribute immediately from that source also. But pretermittting these instances, was it not an acknowledged object of the convention and the universal expectation of the people that the regulation of trade should be submitted to the general government in such a form as would render it an immediate source of general revenue? Had not Congress repeatedly recommended this measure as not inconsistent with the fundamental principles of the Confederation? Had not every State but one; had not New York herself, so far complied with the plan of Congress as to recognize the principle of the innovation? Do these principles, in fine, require that the powers of the general government should be limited, and that, beyond this limit, the States should be left in possession of their sovereignty and independence? We have seen that in the new government, as in the old, the general powers are limited; and that the States, in all unenumerated cases, are left in the enjoyment of their sovereign and independent jurisdiction.

The truth is that the great principles of the Constitution proposed by the convention may be considered less as absolutely new than as the expansion of principles which are found in the Articles of Confederation. The misfortune under the latter system has been that these principles are so feeble and confined as to justify all the charges of inefficiency which have been urged against it, and to require a degree of enlargement which gives to the new system the aspect of an entire transformation of the old.

In one particular it is admitted that the convention have departed from the tenor of their commission. Instead of reporting a plan requiring the confirmation of all the States, they have reported a plan which is to be confirmed and may be carried into effect by nine States only. It is worthy of remark that this objection, though the most plausible, has been the least urged in the publications which have swarmed against the convention. The forbearance can only have proceeded from an irresistible conviction of the absurdity of subjecting the fate of twelve States to the perverseness or corruption of a thirteenth; from the example of inflexible opposition given by a majority of one sixtieth of the people of America to a measure approved and called for by the voice of twelve States, comprising fifty-nine sixtieths of the people—an example still fresh in the memory and indignation of every citizen who has felt for the wounded honor and prosperity of his country. As this objection, therefore, has been in a manner waived by those who have criticised the powers of the convention, I dismiss it without further observation.

The third point to be inquired into is how far considerations of duty arising out of the case itself could have supplied any defect of regular authority.

In the preceding inquiries the powers of the convention have been analyzed and tried with the same rigor, and by the same rules, as if they had been real and final powers for the establishment of a

Constitution for the United States. We have seen in what manner they have borne the trial even on that supposition. It is time now to recollect that the powers were merely advisory and recommendatory; that they were so meant by the States and so understood by the convention; and that the latter have accordingly planned and proposed a Constitution which is to be of no more consequence than the paper on which it is written, unless it be stamped with the approbation of those to whom it is addressed. This reflection places the subject in a point of view altogether different, and will enable us to judge with propriety of the course taken by the convention.

Let us view the ground on which the convention stood. It may be collected from their proceedings that they were deeply and unanimously impressed with the crisis, which had led their country almost with one voice to make so singular and solemn an experiment for correcting the errors of a system by which this crisis had been produced; that they were no less deeply and unanimously convinced that such a reform as they have proposed was absolutely necessary to effect the purposes of their appointment. It could not be unknown to them that the hopes and expectations of the great body of citizens, throughout this great empire, were turned with the keenest anxiety to the event of their deliberations. They had every reason to believe that the contrary sentiments agitated the minds and bosoms of every external and internal foe to the liberty and prosperity of the United States. They had seen in the origin and progress of the experiment the alacrity with which the proposition, made by a single State (Virginia) towards a partial amendment of the Confederation, had been attended to and promoted. They had seen the liberty assumed by a very few deputies from a very few States, convened at Annapolis, of recommending a great and critical object, wholly foreign to their commission, not only justified by the public opinion, but actually carried into effect by twelve out of the thirteen States. They had seen, in a variety of instances, assumptions by Congress, not only of

recommendatory, but of operative, powers, warranted, in the public estimation, by occasions and objects infinitely less urgent than those by which their conduct was to be governed. They must have reflected that in all great changes of established governments forms ought to give way to substance; that a rigid adherence in such cases to the former would render nominal and nugatory the transcendent and precious right of the people to “abolish or alter their governments as to them shall seem most likely to effect their safety and happiness,”^[2] since it is impossible for the people spontaneously and universally to move in concert towards their object; and it is therefore essential that such changes be instituted by some informal and unauthorized propositions, made by some patriotic and respectable citizen or number of citizens. They must have recollected that it was by this irregular and assumed privilege of proposing to the people plans for their safety and happiness that the States were first united against the danger with which they were threatened by their ancient government; that committees and congresses were formed for concentrating their efforts and defending their rights; and that conventions were elected in the several states for establishing the constitutions under which they are now governed; nor could it have been forgotten that no little ill-timed scruples, no zeal for adhering to ordinary forms, were anywhere seen, except in those who wished to indulge, under these masks, their secret enmity to the substance contended for. They must have borne in mind that as the plan to be framed and proposed was to be submitted to the people themselves, the disapprobation of this supreme authority would destroy it forever; its approbation blot out antecedent errors and irregularities. It might even have occurred to them that where a disposition to cavil prevailed, their neglect to execute the degree of power vested in them, and still more their recommendation of any measure whatever not warranted by their commission, would not less excite animadversion than a recommendation at once of a measure fully commensurate to the national exigencies.

Had the convention, under all these impressions and in the midst of all these considerations, instead of exercising a manly confidence in their country, by whose confidence they had been so peculiarly distinguished, and of pointing out a system capable, in their judgment, of securing its happiness, taken the cold and sullen resolution of disappointing its ardent hopes, of sacrificing substance to forms, of committing the dearest interests of their country to the uncertainties of delay and the hazard of events, let me ask the man who can raise his mind to one elevated conception, who can awaken in his bosom one patriotic emotion, what judgment ought to have been pronounced by the impartial world, by the friends of mankind, by every virtuous citizen, on the conduct and character of this assembly? Or if there be a man whose propensity to condemn is susceptible of no control, let me then ask what sentence he has in reserve for the twelve States who usurped the power of sending deputies to the convention, a body, utterly unknown to their constitutions; for Congress, who recommended the appointment of this body, equally unknown to the Confederation; and for the State of New York, in particular, which first urged and then complied with this unauthorized interposition?

But that the objectors may be disarmed of every pretext it shall be granted for a moment that the convention were neither authorized by their commission, nor justified by circumstances in proposing a Constitution for their country: does it follow that the Constitution ought, for that reason alone, to be rejected? If, according to the noble precept, it be lawful to accept good advice even from an enemy, shall we set the ignoble example of refusing such advice even when it is offered by our friends? The prudent inquiry, in all cases, ought surely to be not so much from whom the advice comes, as whether the advice be good.

The sum of what has been here advanced and proved is that the charge against the convention of exceeding their powers, except in

one instance little urged by the objectors, has no foundation to support it; that if they had exceeded their powers, they were not only warranted, but required, as the confidential servants of their country, by the circumstances in which they were placed to exercise the liberty which they assume; and that finally, if they had violated both their powers and their obligations in proposing a Constitution, this ought nevertheless to be embraced, if it be calculated to accomplish the views and happiness of the people of America. How far this character is due to the Constitution is the subject under investigation.

FEDERALIST No. 41 General View of the Powers Conferred by the Constitution

**For the Independent Journal.
Saturday, January 19, 1788
Madison**

To the People of the State of New York:

THE Constitution proposed by the convention may be considered under two general points of view. The FIRST relates to the sum or quantity of power which it vests in the government, including the restraints imposed on the States. The SECOND, to the particular structure of the government and the distribution of this power among its several branches.

Under the first view of the subject, two important questions arise: 1. Whether any part of the powers transferred to the general government be unnecessary or improper? 2. Whether the entire mass of them be dangerous to the portion of jurisdiction left in the several States?

Is the aggregate power of the general government greater than ought to have been vested in it? This is the first question.

It cannot have escaped those who have attended with candor to the arguments employed against the extensive powers of the government that the authors of them have very little considered how far these powers were necessary means of attaining a necessary end.

They have chosen rather to dwell on the inconveniences which must be unavoidably blended with all political advantages; and on the possible abuses which must be incident to every power or trust, of which a beneficial use can be made. This method of handling the subject cannot impose on the good sense of the people of America. It may display the subtlety of the writer; it may open a boundless field for rhetoric and declamation; it may inflame the passions of the unthinking and may confirm the prejudices of the misthinking; but cool and candid people will at once reflect that the purest of human blessings must have a portion of alloy in them; that the choice must always be made, if not of the lesser evil, at least of the GREATER, not the PERFECT, good; and that in every political institution, a power to advance the public happiness involves a discretion which may be misapplied and abused. They will see, therefore, that in all cases where power is to be conferred, the point first to be decided is whether such a power be necessary to the public good; as the next will be, in case of an affirmative decision, to guard as effectually as possible against a perversion of the power to the public detriment.

That we may form a correct judgment on this subject, it will be proper to review the several powers conferred on the government of the Union; and that this may be the more conveniently done they may be reduced into different classes as they relate to the following different objects: 1. Security against foreign danger; 2. Regulation of the intercourse with foreign nations; 3. Maintenance of harmony and proper intercourse among the States; 4. Certain miscellaneous objects of general utility; 5. Restraint of the States from certain injurious acts; 6. Provisions for giving due efficacy to all these powers.

The powers falling within the first class are those of declaring war and granting letters of marque; of providing armies and fleets; of regulating and calling forth the militia; of levying and borrowing money.

Security against foreign danger is one of the primitive objects of civil society. It is an avowed and essential object of the American Union. The powers requisite for attaining it must be effectually confided to the federal councils.

Is the power of declaring war necessary? No man will answer this question in the negative. It would be superfluous, therefore, to enter into a proof of the affirmative. The existing Confederation establishes this power in the most ample form.

Is the power of raising armies and equipping fleets necessary? This is involved in the foregoing power. It is involved in the power of self-defense.

But was it necessary to give an INDEFINITE POWER of raising TROOPS, as well as providing fleets; and of maintaining both in PEACE as well as in WAR?

The answer to these questions has been too far anticipated in another place to admit an extensive discussion of them in this place. The answer indeed seems to be so obvious and conclusive as scarcely to justify such a discussion in any place. With what color of propriety could the force necessary for defense be limited by those who cannot limit the force of offense? If a federal Constitution could chain the ambition or set bounds to the exertions of all other nations, then indeed might it prudently chain the discretion of its own government and set bounds to the exertions for its own safety.

How could a readiness for war in time of peace be safely prohibited, unless we could prohibit in like manner the preparations and establishments of every hostile nation? The means of security can only be regulated by the means and the danger of attack. They will, in fact, be ever determined by these rules and by no others. It is in vain to oppose constitutional barriers to the impulse of self-preservation. It is worse than in vain; because it plants in the Constitution itself

necessary usurpations of power, every precedent of which is a germ of unnecessary and multiplied repetitions. If one nation maintains constantly a disciplined army, ready for the service of ambition or revenge, it obliges the most pacific nations who may be within the reach of its enterprises to take corresponding precautions. The fifteenth century was the unhappy epoch of military establishments in time of peace. They were introduced by Charles VII of France. All Europe has followed, or been forced into, the example. Had the example not been followed by other nations, all Europe must long ago have worn the chains of a universal monarch. Were every nation except France now to disband its peace establishments, the same event might follow. The veteran legions of Rome were an over-match for the undisciplined valor of all other nations and rendered her mistress of the world.

Not the less true is it that the liberties of Rome proved the final victim to her military triumphs; and that the liberties of Europe, as far as they ever existed, have, with few exceptions, been the price of her military establishments. A standing force, therefore, is a dangerous, at the same time that it may be a necessary, provision. On the smallest scale it has its inconveniences. On an extensive scale its consequences may be fatal. On any scale it is an object of laudable circumspection and precaution. A wise nation will combine all these considerations; and, whilst it does not rashly preclude itself from any resource which may become essential to its safety, will exert all its prudence in diminishing both the necessity and the danger of resorting to one which may be inauspicious to its liberties.

The clearest marks of this prudence are stamped on the proposed Constitution. The Union itself, which it cements and secures, destroys every pretext for a military establishment which could be dangerous. America united, with a handful of troops, or without a single soldier, exhibits a more forbidding posture to foreign ambition than America

disunited, with a hundred thousand veterans ready for combat. It was remarked on a former occasion that the want of this pretext had saved the liberties of one nation in Europe. Being rendered by her insular situation and her maritime resources impregnable to the armies of her neighbors, the rulers of Great Britain have never been able, by real or artificial dangers, to cheat the public into an extensive peace establishment. The distance of the United States from the powerful nations of the world gives them the same happy security. A dangerous establishment can never be necessary or plausible, so long as they continue a united people. But let it never for a moment be forgotten that they are indebted for this advantage to their Union alone. The moment of its dissolution will be the date of a new order of things. The fears of the weaker, or the ambition of the stronger States, or Confederacies, will set the same example in the New as Charles VII did in the Old World. The example will be followed here from the same motives which produced universal imitation there. Instead of deriving from our situation the precious advantage which Great Britain has derived from hers, the face of America will be but a copy of that of the continent of Europe. It will present liberty everywhere crushed between standing armies and perpetual taxes. The fortunes of disunited America will be even more disastrous than those of Europe. The sources of evil in the latter are confined to her own limits. No superior powers of another quarter of the globe intrigue among her rival nations, inflame their mutual animosities, and render them the instruments of foreign ambition, jealousy, and revenge. In America the miseries springing from her internal jealousies, contentions, and wars would form a part only of her lot. A plentiful addition of evils would have their source in that relation in which Europe stands to this quarter of the earth, and which no other quarter of the earth bears to Europe.

This picture of the consequences of disunion cannot be too highly colored, or too often exhibited. Every man who loves peace, every

man who loves his country, every man who loves liberty ought to have it ever before his eyes that he may cherish in his heart a due attachment to the Union of America and be able to set a due value on the means of preserving it.

Next to the effectual establishment of the Union, the best possible precaution against danger from standing armies is a limitation of the term for which revenue may be appropriated to their support. This precaution the Constitution has prudently added. I will not repeat here the observations which I flatter myself have placed this subject in a just and satisfactory light. But it may not be improper to take notice of an argument against this part of the Constitution, which has been drawn from the policy and practice of Great Britain. It is said that the continuance of an army in that kingdom requires an annual vote of the legislature; whereas the American Constitution has lengthened this critical period to two years. This is the form in which the comparison is usually stated to the public: but is it a just form? Is it a fair comparison? Does the British Constitution restrain the parliamentary discretion to one year? Does the American impose on the Congress appropriations for two years? On the contrary, it cannot be unknown to the authors of the fallacy themselves that the British Constitution fixes no limit whatever to the discretion of the legislature, and that the American ties down the legislature to two years as the longest admissible term.

Had the argument from the British example been truly stated, it would have stood thus: The term for which supplies may be appropriated to the army establishment, though unlimited by the British Constitution, has nevertheless, in practice, been limited by parliamentary discretion to a single year. Now, if in Great Britain, where the House of Commons is elected for seven years; where so great a proportion of the members are elected by so small a proportion of the people; where the electors are so corrupted by the

representatives, and the representatives so corrupted by the Crown, the representative body can possess a power to make appropriations to the army for an indefinite term, without desiring, or without daring, to extend the term beyond a single year, ought not suspicion herself to blush, in pretending that the representatives of the United States, elected FREELY by the WHOLE BODY of the people every SECOND YEAR, cannot be safely intrusted with the discretion over such appropriations, expressly limited to the short period of TWO YEARS?

A bad cause seldom fails to betray itself. Of this truth the management of the opposition to the federal government is an unvaried exemplification. But among all the blunders which have been committed, none is more striking than the attempt to enlist on that side the prudent jealousy entertained by the people of standing armies. The attempt has awakened fully the public attention to that important subject; and has led to investigations which must terminate in a thorough and universal conviction, not only that the constitution has provided the most effectual guards against danger from that quarter, but that nothing short of a Constitution fully adequate to the national defense and the preservation of the Union can save America from as many standing armies as it may be split into States or Confederacies, and from such a progressive augmentation of these establishments in each as will render them as burdensome to the properties and ominous to the liberties of the people as any establishment that can become necessary under a united and efficient government must be tolerable to the former and safe to the latter.

The palpable necessity of the power to provide and maintain a navy has protected that part of the Constitution against a spirit of censure which has spared few other parts. It must, indeed, be numbered among the greatest blessings of America that as her Union will be the only source of her maritime strength, so this will be a principal source of her security against danger from abroad. In this

respect our situation bears another likeness to the insular advantage of Great Britain. The batteries most capable of repelling foreign enterprises on our safety are happily such as can never be turned by a perfidious government against our liberties.

The inhabitants of the Atlantic frontier are all of them deeply interested in this provision for naval protection, and if they have hitherto been suffered to sleep quietly in their beds; if their property has remained safe against the predatory spirit of licentious adventurers; if their maritime towns have not yet been compelled to ransom themselves from the terrors of a conflagration by yielding to the exactions of daring and sudden invaders, these instances of good fortune are not to be ascribed to the capacity of the existing government for the protection of those from whom it claims allegiance, but to causes that are fugitive and fallacious. If we except perhaps Virginia and Maryland, which are peculiarly vulnerable on their eastern frontiers, no part of the Union ought to feel more anxiety on this subject than New York. Her seacoast is extensive. A very important district of the State is an island. The State itself is penetrated by a large navigable river for more than fifty leagues. The great emporium of its commerce, the great reservoir of its wealth, lies every moment at the mercy of events, and may also be regarded as a hostage for ignominious compliances with the dictates of a foreign enemy, or even with the rapacious demands of pirates and barbarians. Should a war be the result of the precarious situation of European affairs, and all the unruly passions attending it be let loose on the ocean, our escape from insults and depredations, not only on that element, but every part of the other bordering on it, will be truly miraculous. In the present condition of America, the States more immediately exposed to these calamities have nothing to hope from the phantom of a general government which now exists; and if their single resources were equal to the task of fortifying themselves against the danger, the object to be protected would be almost consumed by

the means of protecting them.

The power of regulating and calling forth the militia has been already sufficiently vindicated and explained.

The power of levying and borrowing money, being the sinew of that which is to be exerted in the national defense, is properly thrown into the same class with it. This power, also, has been examined already with such attention, and has, I trust, been clearly shown to be necessary, both in the extent and form given to it by the Constitution. I will address one additional reflection only to those who contend that the power ought to have been restrained to external taxation—by which they mean taxes on articles imported from other countries. It cannot be doubted that this will always be a valuable source of revenue; that for a considerable time it must be a principal source; that at this moment it is an essential one. But we may form very mistaken ideas on this subject, if we do not call to mind in our calculations that the extent of revenue drawn from foreign commerce must vary with the variations, both in the extent and the kind of imports; and that these variations do not correspond with the progress of population, which must be the general measure of the public wants. As long as agriculture continues the sole field of labor, the importation of manufactures must increase as the consumers multiply. As soon as domestic manufactures are begun by the hands not called for by agriculture, the imported manufactures will decrease as the numbers of people increase. In a more remote stage, the imports may consist in a considerable part of raw materials, which will be wrought into articles for exportation, and will, therefore, require rather the encouragement of bounties than to be loaded with discouraging duties. A system of government meant for duration ought to contemplate these revolutions and be able to accommodate itself to them.

Some who have not denied the necessity of the power of taxation

have grounded a very fierce attack against the Constitution, on the language in which it is defined. It has been urged and echoed that the power “to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States,” amounts to an unlimited commission to exercise every power which may be alleged to be necessary for the common defense or general welfare. No stronger proof could be given of the distress under which these writers labor for objections, than their stooping to such a misconstruction.

Had no other enumeration or definition of the powers of the Congress been found in the Constitution than the general expressions just cited, the authors of the objection might have had some color for it; though it would have been difficult to find a reason for so awkward a form of describing an authority to legislate in all possible cases. A power to destroy the freedom of the press, the trial by jury, or even to regulate the course of descents, or the forms of conveyances, must be very singularly expressed by the terms “to raise money for the general welfare.”

But what color can the objection have, when a specification of the objects alluded to by these general terms immediately follows and is not even separated by a longer pause than a semicolon? If the different parts of the same instrument ought to be so expounded as to give meaning to every part which will bear it, shall one part of the same sentence be excluded altogether from a share in the meaning; and shall the more doubtful and indefinite terms be retained in their full extent, and the clear and precise expressions be denied any signification whatsoever? For what purpose could the enumeration of particular powers be inserted, if these and all others were meant to be included in the preceding general power? Nothing is more natural nor common than first to use a general phrase, and then to explain and qualify it by a recital of particulars. But the idea of an enumeration of

particulars which neither explain nor qualify the general meaning, and can have no other effect than to confound and mislead, is an absurdity, which, as we are reduced to the dilemma of charging either on the authors of the objection or on the authors of the Constitution, we must take the liberty of supposing had not its origin with the latter.

The objection here is the more extraordinary, as it appears that the language used by the convention is a copy from the Articles of Confederation. The objects of the Union among the States, as described in article third, are “their common defense, security of their liberties, and mutual and general welfare.” The terms of article eighth are still more identical: “All charges of war and all other expenses that shall be incurred for the common defense or general welfare and allowed by the United States in Congress shall be defrayed out of a common treasury,” etc. A similar language again occurs in article ninth. Construe either of these articles by the rules which would justify the construction put on the new Constitution, and they vest in the existing Congress a power to legislate in all cases whatsoever. But what would have been thought of that assembly, if, attaching themselves to these general expressions and disregarding the specifications which ascertain and limit their import, they had exercised an unlimited power of providing for the common defense and general welfare? I appeal to the objectors themselves, whether they would in that case have employed the same reasoning in justification of Congress as they now make use of against the convention. How difficult it is for error to escape its own condemnation!

PUBLIUS

FEDERALIST No. 42 The Powers Conferred by the Constitution Further Considered

**From the New York Packet.
Tuesday, January 22, 1788
Madison**

To the People of the State of New York:

THE second class of powers lodged in the general government consists of those which regulate the intercourse with foreign nations, to wit: to make treaties; to send and receive ambassadors, other public ministers, and consuls; to define and punish piracies and felonies committed on the high seas, and offenses against the law of nations; to regulate foreign commerce, including a power to prohibit, after the year 1808, the importation of slaves, and to lay an intermediate duty of ten dollars per head, as a discouragement to such importations.

This class of powers forms an obvious and essential branch of the federal administration. If we are to be one nation in any respect, it clearly ought to be in respect to other nations.

The powers to make treaties and to send and receive ambassadors speak their own propriety. Both of them are comprised in the Articles of Confederation, with this difference only, that the former is disembarassed by the plan of the convention, of an exception under which treaties might be substantially frustrated by regulations of the States; and that a power of appointing and receiving“other public

ministers and consuls”is expressly and very properly added to the former provision concerning ambassadors. The term ambassador, if taken strictly, as seems to be required by the second of the Articles of Confederation, comprehends the highest grade only of public ministers, and excludes the grades which the United States will be most likely to prefer, where foreign embassies may be necessary. And under no latitude of construction will the term comprehend consuls. Yet it has been found expedient, and has been the practice of Congress, to employ the inferior grades of public ministers and to send and receive consuls.

It is true that where treaties of commerce stipulate for the mutual appointment of consuls, whose functions are connected with commerce, the admission of foreign consuls may fall within the power of making commercial treaties; and that where no such treaties exist, the mission of American consuls into foreign countries may perhaps be covered under the authority, given by the ninth article of the Confederation, to appoint all such civil officers as may be necessary for managing the general affairs of the United States. But the admission of consuls into the United States, where no previous treaty has stipulated it, seems to have been nowhere provided for. A supply of the omission is one of the lesser instances in which the convention have improved on the model before them. But the most minute provisions become important when they tend to obviate the necessity or the pretext for gradual and unobserved usurpations of power. A list of the cases in which Congress have been betrayed, or forced by the defects of the Confederation, into violations of their chartered authorities would not a little surprise those who have paid no attention to the subject; and would be no inconsiderable argument in favor of the new Constitution, which seems to have provided no less studiously for the lesser than the more obvious and striking defects of the old.

The power to define and punish piracies and felonies committed on the high seas and offenses against the law of nations belongs with equal propriety to the general government, and is a still greater improvement on the Articles of Confederation. These articles contain no provision for the case of offenses against the law of nations; and consequently leave it in the power of any indiscreet member to embroil the Confederacy with foreign nations. The provision of the federal articles on the subject of piracies and felonies extends no further than to the establishment of courts for the trial of these offenses. The definition of piracies might, perhaps, without inconveniency, be left to the law of nations; though a legislative definition of them is found in most municipal codes. A definition of felonies on the high seas is evidently requisite. Felony is a term of loose signification even in the common law of England; and of various import in the statute law of that kingdom. But neither the common nor the statute law of that, or of any other nation, ought to be a standard for the proceedings of this, unless previously made its own by legislative adoption. The meaning of the term, as defined in the codes of the several States, would be as impracticable as the former would be a dishonorable and illegitimate guide. It is not precisely the same in any two of the States; and varies in each with every revision of its criminal laws. For the sake of certainty and uniformity, therefore, the power of defining felonies in this case was in every respect necessary and proper.

The regulation of foreign commerce, having fallen within several views which have been taken of this subject, has been too fully discussed to need additional proofs here of its being properly submitted to the federal administration.

It were doubtless to be wished that the power of prohibiting the importation of slaves had not been postponed until the year 1808, or rather that it had been suffered to have immediate operation. But it is

not difficult to account either for this restriction on the general government, or for the manner in which the whole clause is expressed. It ought to be considered as a great point gained in favor of humanity that a period of twenty years may terminate forever, within these States, a traffic which has so long and so loudly upbraided the barbarism of modern policy; that within that period it will receive a considerable discouragement from the federal government, and may be totally abolished, by a concurrence of the few States which continue the unnatural traffic in the prohibitory example which has been given by so great a majority of the Union. Happy would it be for the unfortunate Africans if an equal prospect lay before them of being redeemed from the oppressions of their European brethren!

Attempts have been made to pervert this clause into an objection against the Constitution by representing it on one side as a criminal toleration of an illicit practice, and on another as calculated to prevent voluntary and beneficial emigrations from Europe to America. I mention these misconstructions not with a view to give them an answer, for they deserve none, but as specimens of the manner and spirit in which some have thought fit to conduct their opposition to the proposed government. The powers included in the third class are those which provide for the harmony and proper intercourse among the States.

Under this head might be included the particular restraints imposed on the authority of the States and certain powers of the judicial department; but the former are reserved for a distinct class and the latter will be particularly examined when we arrive at the structure and organization of the government. I shall confine myself to a cursory review of the remaining powers comprehended under this third description, to wit: to regulate commerce among the several States and the Indian tribes; to coin money, regulate the value thereof and of foreign coin; to provide for the punishment of counterfeiting

the current coin and securities of the United States; to fix the standard of weights and measures; to establish a uniform rule of naturalization, and uniform laws of bankruptcy; to prescribe the manner in which the public acts, records, and judicial proceedings of each State shall be proved, and the effect they shall have in other States; and to establish post offices and post roads.

The defect of power in the existing Confederacy to regulate the commerce between its several members is in the number of those which have been clearly pointed out by experience. To the proofs and remarks which former papers have brought into view on this subject, it may be added that without this supplemental provision, the great and essential power of regulating foreign commerce would have been incomplete and ineffectual. A very material object of this power was the relief of the States which import and export through other States from the improper contributions levied on them by the latter. Were these at liberty to regulate the trade between State and State, it must be foreseen that ways would be found out to load the articles of import and export, during the passage through their jurisdiction, with duties which would fall on the makers of the latter and the consumers of the former. We may be assured by past experience that such a practice would be introduced by future contrivances; and both by that and a common knowledge of human affairs that it would nourish unceasing animosities, and not improbably terminate in serious interruptions of the public tranquillity. To those who do not view the question through the medium of passion or of interest, the desire of the commercial States to collect, in any form, an indirect revenue from their uncommercial neighbors must appear not less impolitic than it is unfair; since it would stimulate the injured party by resentment as well as interest to resort to less convenient channels for their foreign trade. But the mild voice of reason, pleading the cause of an enlarged and permanent interest, is but too often drowned, before public bodies as well as individuals, by the clamors of an impatient

avidity for immediate and immoderate gain.

The necessity of a superintending authority over the reciprocal trade of confederated States has been illustrated by other examples as well as our own. In Switzerland, where the Union is so very slight, each canton is obliged to allow to merchandises a passage through its jurisdiction into other cantons, without an augmentation of the tolls. In Germany it is a law of the empire that the princes and states shall not lay tolls or customs on bridges, rivers, or passages, without the consent of the emperor and the diet; though it appears from a quotation in an antecedent paper that the practice in this, as in many other instances in that confederacy, has not followed the law, and has produced there the mischiefs which have been foreseen here. Among the restraints imposed by the Union of the Netherlands on its members, one is that they shall not establish imposts disadvantageous to their neighbors without the general permission. The regulation of commerce with the Indian tribes is very properly unfettered from two limitations in the Articles of Confederation, which render the provision obscure and contradictory. The power is there restrained to Indians, not members of any of the States, and is not to violate or infringe the legislative right of any State within its own limits. What description of Indians are to be deemed members of a State is not yet settled, and has been a question of frequent perplexity and contention in the federal councils. And how the trade with Indians, though not members of a State, yet residing within its legislative jurisdiction can be regulated by an external authority, without so far intruding on the internal rights of legislation, is absolutely incomprehensible. This is not the only case in which the Articles of Confederation have inconsiderately endeavored to accomplish impossibilities; to reconcile a partial sovereignty in the Union, with complete sovereignty in the States; to subvert a mathematical axiom by taking away a part and letting the whole remain.

All that need be remarked on the power to coin money, regulate the value thereof, and of foreign coin, is that by providing for this last case, the Constitution has supplied a material omission in the Articles of Confederation. The authority of the existing Congress is restrained to the regulation of coin struck by their own authority, or that of the respective States. It must be seen at once that the proposed uniformity in the value of the current coin might be destroyed by subjecting that of foreign coin to the different regulations of the different States.

The punishment of counterfeiting the public securities, as well as the current coin, is submitted of course to that authority which is to secure the value of both.

The regulation of weights and measures is transferred from the Articles of Confederation, and is founded on like considerations with the preceding power of regulating coin.

The dissimilarity in the rules of naturalization has long been remarked as a fault in our system, and as laying a foundation for intricate and delicate questions. In the fourth article of the Confederation, it is declared “that the free inhabitants of each of these States, paupers, vagabonds, and fugitives from justice excepted, shall be entitled to all privileges and immunities of free citizens in the several States; and the people of each State shall, in every other, enjoy all the privileges of trade and commerce,” etc. There is a confusion of language here which is remarkable. Why the terms free inhabitants are used in one part of the article, free citizens in another, and people in another; or what was meant by superadding to “all privileges and immunities of free citizens,” “all the privileges of trade and commerce,” cannot easily be determined. It seems to be a construction scarcely avoidable, however, that those who come under the denomination of free inhabitants of a State, although not citizens of such State, are entitled, in every other State, to all the privileges of free citizens of the latter; that is, to greater privileges than they may

be entitled to in their own State: so that it may be in the power of a particular State, or rather every State is laid under a necessity not only to confer the rights of citizenship in other States upon any whom it may admit to such rights within itself, but upon any whom it may allow to become inhabitants within its jurisdiction. But were an exposition of the term "inhabitants" to be admitted which would confine the stipulated privileges to citizens alone, the difficulty is diminished only, not removed. The very improper power would still be retained by each State of naturalizing aliens in every other State. In one State, residence for a short term confirms all the rights of citizenship; in another, qualifications of greater importance are required. An alien, therefore, legally incapacitated for certain rights in the latter, may, by previous residence only in the former, elude his incapacity; and thus the law of one State be preposterously rendered paramount to the law of another, within the jurisdiction of the other. We owe it to mere casualty, that very serious embarrassments on this subject have been hitherto escaped. By the laws of several States, certain descriptions of aliens, who had rendered themselves obnoxious, were laid under interdicts inconsistent not only with the rights of citizenship but with the privilege of residence. What would have been the consequence if such persons, by residence or otherwise, had acquired the character of citizens under the laws of another State, and then asserted their rights as such, both to residence and citizenship, within the State proscribing them? Whatever the legal consequences might have been, other consequences would probably have resulted of too serious a nature not to be provided against. The new Constitution has accordingly, with great propriety, made provision against them, and all others proceeding from the defect of the Confederation on this head, by authorizing the general government to establish a uniform rule of naturalization throughout the United States.

The power of establishing uniform laws of bankruptcy is so

intimately connected with the regulation of commerce, and will prevent so many frauds where the parties or their property may lie or be removed into different States, that the expediency of it seems not likely to be drawn into question.

The power of prescribing by general laws the manner in which the public acts, records and judicial proceedings of each State shall be proved, and the effect they shall have in other States, is an evident and valuable improvement on the clause relating to this subject in the Articles of Confederation. The meaning of the latter is extremely indeterminate, and can be of little importance under any interpretation which it will bear. The power here established may be rendered a very convenient instrument of justice, and be particularly beneficial on the borders of contiguous States, where the effects liable to justice may be suddenly and secretly translated in any stage of the process within a foreign jurisdiction.

The power of establishing post roads must, in every view, be a harmless power and may, perhaps, by judicious management, become productive of great public conveniency. Nothing which tends to facilitate the intercourse between the States can be deemed unworthy of the public care.

FEDERALIST No. 43 The Same Subject Continued (The Powers Conferred by the Constitution Further Considered)

**For the Independent Journal.
Wednesday, January 23, 1788
Madison**

To the People of the State of New York:

THE FOURTH class comprises the following miscellaneous powers:

1. A power “to promote the progress of science and useful arts by securing, for a limited time, to authors and inventors the exclusive right to their respective writings and discoveries.”

The utility of this power will scarcely be questioned. The copyright of authors has been solemnly adjudged in Great Britain to be a right of common law. The right to useful inventions seems with equal reason to belong to the inventors. The public good fully coincides in both cases with the claims of individuals. The States cannot separately make effectual provisions for either of the cases, and most of them have anticipated the decision of this point by laws passed at the instance of Congress.

2. “To exercise exclusive legislation, in all cases whatsoever, over such district (not exceeding ten miles square) as may, by cession of

particular States and the acceptance of Congress, become the seat of the government of the United States; and to exercise like authority over all places purchased by the consent of the legislatures of the States in which the same shall be, for the erection of forts, magazines, arsenals, dockyards, and other needful buildings.”

The indispensable necessity of complete authority at the seat of government carries its own evidence with it. It is a power exercised by every legislature of the Union, I might say of the world, by virtue of its general supremacy. Without it not only the public authority might be insulted and its proceedings interrupted with impunity, but a dependence of the members of the general government on the State comprehending the seat of the government for protection in the exercise of their duty might bring on the national councils an imputation of awe or influence equally dishonorable to the government and dissatisfactory to the other members of the Confederacy. This consideration has the more weight as the gradual accumulation of public improvements at the stationary residence of the government would be both too great a public pledge to be left in the hands of a single State, and would create so many obstacles to a removal of the government, as still further to abridge its necessary independence. The extent of this federal district is sufficiently circumscribed to satisfy every jealousy of an opposite nature. And as it is to be appropriated to this use with the consent of the State ceding it; as the State will no doubt provide in the compact for the rights and the consent of the citizens inhabiting it; as the inhabitants will find sufficient inducements of interest to become willing parties to the cession; as they will have had their voice in the election of the government which is to exercise authority over them; as a municipal legislature for local purposes, derived from their own suffrages, will of course be allowed them; and as the authority of the legislature of the State, and of the inhabitants of the ceded part of it, to concur in the cession will be derived from the whole people of the State in their

adoption of the Constitution, every imaginable objection seems to be obviated.

The necessity of a like authority over forts, magazines, etc., established by the general government, is not less evident. The public money expended on such places, and the public property deposited in them, requires that they should be exempt from the authority of the particular State. Nor would it be proper for the places on which the security of the entire Union may depend to be in any degree dependent on a particular member of it. All objections and scruples are here also obviated by requiring the concurrence of the States concerned in every such establishment.

3. "To declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attained."

As treason may be committed against the United States, the authority of the United States ought to be enabled to punish it. But as new-fangled and artificial treasons have been the great engines by which violent factions, the natural offspring of free government, have usually wreaked their alternate malignity on each other, the convention have, with great judgment, opposed a barrier to this peculiar danger, by inserting a constitutional definition of the crime, fixing the proof necessary for conviction of it, and restraining the Congress, even in punishing it, from extending the consequences of guilt beyond the person of its author.

4. "To admit new States into the Union; but no new State shall be formed or erected within the jurisdiction of any other State; nor any State be formed by the junction of two or more States, or parts of States, without the consent of the legislatures of the States concerned, as well as of the Congress."

In the articles of Confederation, no provision is found on this

important subject. Canada was to be admitted of right, on her joining in the measures of the United States; and the other colonies, by which were evidently meant the other British colonies, at the discretion of nine States. The eventual establishment of new states seems to have been overlooked by the compilers of that instrument. We have seen the inconvenience of this omission, and the assumption of power into which Congress have been led by it. With great propriety, therefore, has the new system supplied the defect. The general precaution that no new States shall be formed without the concurrence of the federal authority, and that of the States concerned is consonant to the principles which ought to govern such transactions. The particular precaution against the erection of new States, by the partition of a State without its consent, quiets the jealousy of the larger States; as that of the smaller is quieted by a like precaution against a junction of States without their consent.

5. "To dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States, with a proviso that nothing in the Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State."

This is a power of very great importance, and required by considerations similar to those which show the propriety of the former. The proviso annexed is proper in itself, and was probably rendered absolutely necessary by jealousies and questions concerning the Western territory sufficiently known to the public.

6. "To guarantee to every State in the Union a republican form of government; to protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature cannot be convened), against domestic violence."

In a confederacy founded on republican principles, and composed

of republican members, the superintending government ought clearly to possess authority to defend the system against aristocratic or monarchical innovations. The more intimate the nature of such a union may be, the greater interest have the members in the political institutions of each other; and the greater right to insist that the forms of government under which the compact was entered into should be substantially maintained. But a right implies a remedy; and where else could the remedy be deposited than where it is deposited by the Constitution? Governments of dissimilar principles and forms have been found less adapted to a federal coalition of any sort than those of a kindred nature. "As the confederate republic of Germany," says Montesquieu, "consists of free cities and petty states, subject to different princes, experience shows us that it is more imperfect than that of Holland and Switzerland." "Greece was undone," he adds, "as soon as the king of Macedon obtained a seat among the Amphictyons." In the latter case, no doubt, the disproportionate force, as well as the monarchical form of the new confederate, had its share of influence on the events. It may possibly be asked what need there could be of such a precaution, and whether it may not become a pretext for alterations in the State governments, without the concurrence of the States themselves. These questions admit of ready answers. If the interposition of the general government should not be needed, the provision for such an event will be a harmless superfluity only in the Constitution. But who can say what experiments may be produced by the caprice of particular States, by the ambition of enterprising leaders, or by the intrigues and influence of foreign powers? To the second question it may be answered that if the general government should interpose by virtue of this constitutional authority, it will be, of course, bound to pursue the authority. But the authority extends no further than to a guaranty of a republican form of government, which supposes a pre-existing government of the form which is to be guaranteed. As long, therefore, as the existing republican forms are continued by the States, they are guaranteed by

the federal Constitution. Whenever the States may choose to substitute other republican forms, they have a right to do so and to claim the federal guaranty for the latter. The only restriction imposed on them is that they shall not exchange republican for antirepublican Constitutions; a restriction which, it is presumed, will hardly be considered as a grievance.

A protection against invasion is due from every society to the parts composing it. The latitude of the expression here used seems to secure each State not only against foreign hostility, but against ambitious or vindictive enterprises of its more powerful neighbors. The history both of ancient and modern confederacies proves that the weaker members of the union ought not to be insensible to the policy of this article.

孟德斯鸠（1689—1755），法国启蒙时期思想家、社会学家，是西方国家学说和法学理论的奠基人。

Protection against domestic violence is added with equal propriety. It has been remarked that even among the Swiss cantons, which, properly speaking, are not under one government, provision is made for this object; and the history of that league informs us that mutual aid is frequently claimed and afforded; and as well by the most democratic as the other cantons. A recent and well-known event among ourselves has warned us to be prepared for emergencies of a like nature.

At first view, it might seem not to square with the republican theory to suppose either that a majority have not the right, or that a minority will have the force, to subvert a government; and consequently that the federal interposition can never be required but when it would be improper. But theoretic reasoning, in this as in most other cases, must be qualified by the lessons of practice. Why may not illicit combinations, for purposes of violence, be formed as well by a majority of a State, especially a small State as by a majority of a county, or a district of the same State; and if the authority of the State ought, in the latter case, to protect the local magistracy, ought not the federal authority, in the former, to support the State authority? Besides, there are certain parts of the State constitutions which are so interwoven with the federal Constitution that a violent blow cannot be given to the one without communicating the wound to the other. Insurrections in a State will rarely induce a federal interposition, unless the number concerned in them bear some proportion to the friends of government. It will be much better that the violence in such cases should be repressed by the superintending power, than that the majority should be left to maintain their cause by a bloody and obstinate contest. The existence of a right to interpose will generally prevent the necessity of exerting it.

Is it true that force and right are necessarily on the same side in republican governments? May not the minor party possess such a superiority of pecuniary resources, of military talents and experience, or of secret succors from foreign powers, as will render it superior also in an appeal to the sword? May not a more compact and advantageous position turn the scale on the same side against a superior number so situated as to be less capable of a prompt and collected exertion of its strength? Nothing can be more chimerical than to imagine that in a trial of actual force victory may be calculated by the rules which prevail in a census of the inhabitants, or which determine the event of an election! May it not happen, in fine, that the minority of citizens

may become a majority of persons, by the accession of alien residents, of a casual concourse of adventurers, or of those whom the constitution of the State has not admitted to the rights of suffrage? I take no notice of an unhappy species of population abounding in some of the States, who, during the calm of regular government, are sunk below the level of men; but who, in the tempestuous scenes of civil violence, may emerge into the human character and give a superiority of strength to any party with which they may associate themselves.

In cases where it may be doubtful on which side justice lies, what better umpires could be desired by two violent factions, flying to arms and tearing a State to pieces, than the representatives of confederate States, not heated by the local flame? To the impartiality of judges, they would unite the affection of friends. Happy would it be if such a remedy for its infirmities could be enjoyed by all free governments; if a project equally effectual could be established for the universal peace of mankind!

Should it be asked what is to be the redress for an insurrection pervading all the States, and comprising a superiority of the entire force, though not a constitutional right? the answer must be that such a case, as it would be without the compass of human remedies, so it is fortunately not within the compass of human probability; and that it is a sufficient recommendation of the federal Constitution, that it diminishes the risk of a calamity for which no possible constitution can provide a cure.

Among the advantages of a confederate republic enumerated by Montesquieu, an important one is, “that should a popular insurrection happen in one of the States, the others are able to quell it. Should abuses creep into one part, they are reformed by those that remain sound.”

7. “To consider all debts contracted and engagements entered into

before the adoption of this Constitution as being no less valid against the United States under this Constitution than under the Confederation.”

This can only be considered as a declaratory proposition; and may have been inserted, among other reasons, for the satisfaction of the foreign creditors of the United States, who cannot be strangers to the pretended doctrine that a change in the political form of civil society has the magical effect of dissolving its moral obligations.

Among the lesser criticisms which have been exercised on the Constitution, it has been remarked that the validity of engagements ought to have been asserted in favor of the United States, as well as against them; and in the spirit which usually characterizes little critics, the omission has been transformed and magnified into a plot against the national rights. The authors of this discovery may be told what few others need to be informed of, that as engagements are in their nature reciprocal, an assertion of their validity on one side necessarily involves a validity on the other side; and that as the article is merely declaratory, the establishment of the principle in one case is sufficient for every case. They may be further told that every constitution must limit its precautions to dangers that are not altogether imaginary; and that no real danger can exist that the government would dare, with or even without this constitutional declaration before it, to remit the debts justly due to the public on the pretext here condemned.

8. “To provide for amendments to be ratified by three fourths of the States under two exceptions only.”

That useful alterations will be suggested by experience could not but be foreseen. It was requisite, therefore, that a mode for introducing them should be provided. The mode preferred by the convention seems to be stamped with every mark of propriety. It

guards equally against that extreme facility, which would render the Constitution too mutable; and that extreme difficulty, which might perpetuate its discovered faults. It, moreover, equally enables the general and the State governments to originate the amendment of errors, as they may be pointed out by the experience on one side, or on the other. The exception in favor of the equality of suffrage in the Senate was probably meant as a palladium to the residuary sovereignty of the States, implied and secured by that principle of representation in one branch of the legislature; and was probably insisted on by the States particularly attached to that equality. The other exception must have been admitted on the same considerations which produced the privilege defended by it.

9. "The ratification of the conventions of nine States shall be sufficient for the establishment of this Constitution between the States, ratifying the same."

This article speaks for itself. The express authority of the people alone could give due validity to the Constitution. To have required the unanimous ratification of the thirteen States would have subjected the essential interests of the whole to the caprice or corruption of a single member. It would have marked a want of foresight in the convention, which our own experience would have rendered inexcusable.

Two questions of a very delicate nature present themselves on this occasion: 1. On what principle the Confederation, which stands in the solemn form of a compact among the States, can be superseded without the unanimous consent of the parties to it? 2. What relation is to subsist between the nine or more States ratifying the Constitution, and the remaining few who do not become parties to it?

The first question is answered at once by recurring to the absolute necessity of the case; to the great principle of self-preservation; to the transcendent law of nature and of nature's God, which declares that

the safety and happiness of society are the objects at which all political institutions aim and to which all such institutions must be sacrificed. Perhaps, also, an answer may be found without searching beyond the principles of the compact itself. It has been heretofore noted among the defects of the Confederation that in many of the States it had received no higher sanction than a mere legislative ratification. The principle of reciprocity seems to require that its obligation on the other States should be reduced to the same standard. A compact between independent sovereigns, founded on ordinary acts of legislative authority, can pretend to no higher validity than a league or treaty between the parties. It is an established doctrine on the subject of treaties that all the articles are mutually conditions of each other; that a breach of any one article is a breach of the whole treaty; and that a breach, committed by either of the parties, absolves the others, and authorizes them, if they please, to pronounce the compact violated and void. Should it unhappily be necessary to appeal to these delicate truths for a justification for dispensing with the consent of particular States to a dissolution of the federal pact, will not the complaining parties find it a difficult task to answer the multiplied and important infractions with which they may be confronted? The time has been when it was incumbent on us all to veil the ideas which this paragraph exhibits. The scene is now changed, and with it the part which the same motives dictate.

The second question is not less delicate; and the flattering prospect of its being merely hypothetical forbids an over-curious discussion of it. It is one of those cases which must be left to provide for itself. In general, it may be observed that although no political relation can subsist between the assenting and dissenting States, yet the moral relations will remain uncanceled. The claims of justice, both on one side and on the other, will be in force, and must be fulfilled; the rights of humanity must in all cases be duly and mutually respected; whilst considerations of a common interest, and, above all,

the remembrance of the endearing scenes which are past, and the anticipation of a speedy triumph over the obstacles to reunion, will, it is hoped, not urge in vain moderation on one side, and prudence on the other.

FEDERALIST No. 44

Restrictions on the Authority of the Several States

**From the New York Packet.
Friday, January 25, 1788
Madison**

To the People of the State of New York:

A fifth class of provisions in favor of the federal authority consists of the following restrictions on the authority of the several States:

1. “No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make any thing but gold and silver a legal tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts; or grant any title of nobility.”

The prohibition against treaties, alliances, and confederations makes a part of the existing articles of Union; and for reasons which need no explanation, is copied into the new Constitution. The prohibition of letters of marque is another part of the old system, but is somewhat extended in the new. According to the former, letters of marque could be granted by the States after a declaration of war; according to the latter, these licenses must be obtained, as well during war as previous to its declaration, from the government of the United States. This alteration is fully justified by the advantage of uniformity in all points which relate to foreign powers; and of immediate

responsibility to the nation in all those for whose conduct the nation itself is to be responsible.

The right of coining money, which is here taken from the States, was left in their hands by the Confederation as a concurrent right with that of Congress, under an exception in favor of the exclusive right of Congress to regulate the alloy and value. In this instance, also, the new provision is an improvement on the old. Whilst the alloy and value depended on the general authority, a right of coinage in the particular States could have no other effect than to multiply expensive mints and diversify the forms and weights of the circulating pieces. The latter inconveniency defeats one purpose for which the power was originally submitted to the federal head; and as far as the former might prevent an inconvenient remittance of gold and silver to the central mint for recoinage, the end can be as well attained by local mints established under the general authority.

The extension of the prohibition to bills of credit must give pleasure to every citizen in proportion to his love of justice and his knowledge of the true springs of public prosperity. The loss which America has sustained since the peace, from the pestilent effects of paper money on the necessary confidence between man and man, on the necessary confidence in the public councils, on the industry and morals of the people, and on the character of republican government, constitutes an enormous debt against the States chargeable with this unadvised measure, which must long remain unsatisfied; or rather an accumulation of guilt which can be expiated no otherwise than by a voluntary sacrifice on the altar of justice of the power which has been the instrument of it. In addition to these persuasive considerations, it may be observed that the same reasons which show the necessity of denying to the States the power of regulating coin prove with equal force that they ought not to be at liberty to substitute a paper medium in the place of coin. Had every State a right to regulate the value of its

coin, there might be as many different currencies as States, and thus the intercourse among them would be impeded; retrospective alterations in its value might be made, and thus the citizens of other States be injured, and animosities be kindled among the States themselves. The subjects of foreign powers might suffer from the same cause, and hence the Union be discredited and embroiled by the indiscretion of a single member. No one of these mischiefs is less incident to a power in the States to emit paper money than to coin gold or silver. The power to make anything but gold and silver a tender in payment of debts is withdrawn from the States on the same principle with that of issuing a paper currency.

Bills of attainder, ex post facto laws, and laws impairing the obligation of contracts are contrary to the first principles of the social compact and to every principle of sound legislation. The two former are expressly prohibited by the declarations prefixed to some of the State constitutions, and all of them are prohibited by the spirit and scope of these fundamental charters. Our own experience has taught us, nevertheless, that additional fences against these dangers ought not to be omitted. Very properly, therefore, have the convention added this constitutional bulwark in favor of personal security and private rights; and I am much deceived if they have not, in so doing, as faithfully consulted the genuine sentiments as the undoubted interests of their constituents. The sober people of America are weary of the fluctuating policy which has directed the public councils. They have seen with regret and indignation that sudden changes and legislative interferences, in cases affecting personal rights, become jobs in the hands of enterprising and influential speculators, and snares to the more industrious and less informed part of the community. They have seen, too, that one legislative interference is but the first link of a long chain of repetitions, every subsequent interference being naturally produced by the effects of the preceding. They very rightly infer, therefore, that some thorough reform is

wanting, which will banish speculations on public measures, inspire a general prudence and industry, and give a regular course to the business of society. The prohibition with respect to titles of nobility is copied from the Articles of Confederation and needs no comment.

2. “No State shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws, and the net produce of all duties and imposts laid by any State on imports or exports shall be for the use of the treasury of the United States; and all such laws shall be subject to the revision and control of the Congress. No State shall, without the consent of Congress, lay any duty on tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another State, or with a foreign power, or engage in war unless actually invaded, or in such imminent danger as will not admit of delay.”

The restraint on the power of the States over imports and exports is enforced by all the arguments which prove the necessity of submitting the regulation of trade to the federal councils. It is needless, therefore, to remark further on this head, than that the manner in which the restraint is qualified seems well calculated at once to secure to the States a reasonable discretion in providing for the conveniency of their imports and exports, and to the United States a reasonable check against the abuse of this discretion. The remaining particulars of this clause fall within reasonings which are either so obvious, or have been so fully developed, that they may be passed over without remark.

The sixth and last class consists of the several powers and provisions by which efficacy is given to all the rest.

1. Of these the first is the “power to make all laws which shall be necessary and proper for carrying into execution the foregoing

powers, and all other powers vested by this Constitution in the government of the United States, or in any department or officer thereof.”

Few parts of the Constitution have been assailed with more intemperance than this; yet on a fair investigation of it, as has been elsewhere shown, no part can appear more completely invulnerable. Without the substance of this power, the whole Constitution would be a dead letter. Those who object to the article, therefore, as a part of the Constitution, can only mean that the form of the provision is improper. But have they considered whether a better form could have been substituted?

There are four other possible methods which the Constitution might have taken on this subject. They might have copied the second article of the existing Confederation, which would have prohibited the exercise of any power not expressly delegated; they might have attempted a positive enumeration of the powers comprehended under the general terms “necessary and proper”; they might have attempted a negative enumeration of them by specifying the powers excepted from the general definition; they might have been altogether silent on the subject, leaving these necessary and proper powers to construction and inference.

Had the convention taken the first method of adopting the second article of Confederation, it is evident that the new Congress would be continually exposed, as their predecessors have been, to the alternative of construing the term “expressly” with so much rigor as to disarm the government of all real authority whatever, or with so much latitude as to destroy altogether the force of the restriction. It would be easy to show, if it were necessary, that no important power delegated by the Articles of Confederation has been or can be executed by Congress, without recurring more or less to the doctrine of construction or implication. As the powers delegated under the new

system are more extensive, the government which is to administer it would find itself still more distressed with the alternative of betraying the public interests by doing nothing, or of violating the Constitution by exercising powers indispensably necessary and proper, but, at the same time, not expressly granted.

Had the convention attempted a positive enumeration of the powers necessary and proper for carrying their other powers into effect, the attempt would have involved a complete digest of laws on every subject to which the Constitution relates; accommodated too not only to the existing state of things, but to all the possible changes which futurity may produce; for in every new application of a general power, the particular powers, which are the means of attaining the object of the general power, must always necessarily vary with that object, and be often properly varied whilst the object remains the same.

Had they attempted to enumerate the particular powers or means not necessary or proper for carrying the general powers into execution, the task would have been no less chimerical; and would have been liable to this further objection, that every defect in the enumeration would have been equivalent to a positive grant of authority. If, to avoid this consequence, they had attempted a partial enumeration of the exceptions, and described the residue by the general terms not necessary or proper, it must have happened that the enumeration would comprehend a few of the excepted powers only; that these would be such as would be least likely to be assumed or tolerated, because the enumeration would of course select such as would be least necessary or proper; and that the unnecessary and improper powers included in the residuum would be less forcibly excepted than if no partial enumeration had been made.

Had the Constitution been silent on this head, there can be no doubt that all the particular powers requisite as means of executing

the general powers would have resulted to the government by unavoidable implication. No axiom is more clearly established in law, or in reason, than that wherever the end is required, the means are authorized; wherever a general power to do a thing is given, every particular power necessary for doing it is included. Had this last method, therefore, been pursued by the convention, every objection now urged against their plan would remain in all its plausibility; and the real inconveniency would be incurred of not removing a pretext which may be seized on critical occasions for drawing into question the essential powers of the Union.

If it be asked what is to be the consequence, in case the Congress shall misconstrue this part of the Constitution and exercise powers not warranted by its true meaning, I answer the same as if they should misconstrue or enlarge any other power vested in them; as if the general power had been reduced to particulars, and any one of these were to be violated; the same, in short, as if the State legislatures should violate their irrelative constitutional authorities. In the first instance, the success of the usurpation will depend on the executive and judiciary departments, which are to expound and give effect to the legislative acts; and in the last resort a remedy must be obtained from the people who can, by the election of more faithful representatives, annul the acts of the usurpers. The truth is that this ultimate redress may be more confided in against unconstitutional acts of the federal than of the State legislatures, for this plain reason that as every such act of the former will be an invasion of the rights of the latter, these will be ever ready to mark the innovation, to sound the alarm to the people, and to exert their local influence in effecting a change of federal representatives. There being no such intermediate body between the State legislatures and the people interested in watching the conduct of the former, violations of the State constitutions are more likely to remain unnoticed and unredressed.

2. "This Constitution and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding."

The indiscreet zeal of the adversaries to the Constitution has betrayed them into an attack on this part of it also, without which it would have been evidently and radically defective. To be fully sensible of this, we need only suppose for a moment that the supremacy of the State constitutions had been left complete by a saving clause in their favor.

In the first place, as these constitutions invest the State legislatures with absolute sovereignty in all cases not excepted by the existing articles of Confederation, all the authorities contained in the proposed Constitution, so far as they exceed those enumerated in the Confederation, would have been annulled, and the new Congress would have been reduced to the same impotent condition with their predecessors.

In the next place, as the constitutions of some of the States do not even expressly and fully recognize the existing powers of the Confederacy, an express saving of the supremacy of the former would, in such States, have brought into question every power contained in the proposed Constitution.

In the third place, as the constitutions of the States differ much from each other, it might happen that a treaty or national law of great and equal importance to the States would interfere with some and not with other constitutions, and would consequently be valid in some of the States at the same time that it would have no effect in others.

In fine, the world would have seen, for the first time, a system of

government founded on an inversion of the fundamental principles of all government; it would have seen the authority of the whole society everywhere subordinate to the authority of the parts; it would have seen a monster, in which the head was under the direction of the members.

3. "The Senators and Representatives, and the members of the several State legislatures, and all executive and judicial officers, both of the United States and the several States, shall be bound by oath or affirmation to support this Constitution."

It has been asked why it was thought necessary that the State magistracy should be bound to support the federal Constitution, and unnecessary that a like oath should be imposed on the officers of the United States in favor of the State constitutions.

Several reasons might be assigned for the distinction. I content myself with one, which is obvious and conclusive. The members of the federal government will have no agency in carrying the State constitutions into effect. The members and officers of the State governments, on the contrary, will have an essential agency in giving effect to the federal Constitution. The election of the President and Senate will depend, in all cases, on the legislatures of the several States. And the election of the House of Representatives will equally depend on the same authority in the first instance; and will, probably, forever be conducted by the officers and according to the laws of the States.

4. Among the provisions for giving efficacy to the federal powers might be added those which belong to the executive and judiciary departments: but as these are reserved for particular examination in another place, I pass them over in this.

We have now reviewed, in detail, all the articles composing the sum or quantity of power delegated by the proposed Constitution to

the federal government, and are brought to this undeniable conclusion that no part of the power is unnecessary or improper for accomplishing the necessary objects of the Union. The question, therefore, whether this amount of power shall be granted or not resolves itself into another question, whether or not a government commensurate to the exigencies of the Union shall be established; or, in other words, whether the Union itself shall be preserved.

PUBLIUS

FEDERALIST No. 45 The Alleged Danger from the Powers of the Union to the State Governments Considered

**For the Independent Journal.
Saturday, January 26, 1788
Madison**

To the People of the State of New York:

HAVING shown that no one of the powers transferred to the federal government is unnecessary or improper, the next question to be considered is whether the whole mass of them will be dangerous to the portion of authority left in the several States.

The adversaries to the plan of the convention, instead of considering in the first place what degree of power was absolutely necessary for the purposes of the federal government, have exhausted themselves in a secondary inquiry into the possible consequences of the proposed degree of power to the governments of the particular States. But if the Union, as has been shown, be essential to the security of the people of America against foreign danger; if it be essential to their security against contentions and wars among the different States; if it be essential to guard them against those violent and oppressive factions which embitter the blessings of liberty and against those military establishments which must gradually poison its very fountain; if, in a word, the Union be essential to the happiness of the people of America, is it not preposterous to urge as an objection to

a government, without which the objects of the Union cannot be attained, that such a government may derogate from the importance of the governments of the individual States? Was, then, the American Revolution effected, was the American Confederacy formed, was the precious blood of thousands spilt, and the hard-earned substance of millions lavished, not that the people of America should enjoy peace, liberty, and safety, but that the government of the individual States, that particular municipal establishments, might enjoy a certain extent of power and be arrayed with certain dignities and attributes of sovereignty? We have heard of the impious doctrine in the Old World, that the people were made for kings, not kings for the people. Is the same doctrine to be revived in the new, in another shape—that the solid happiness of the people is to be sacrificed to the views of political institutions of a different form? It is too early for politicians to presume on our forgetting that the public good, the real welfare of the great body of the people, is the supreme object to be pursued; and that no form of government whatever has any other value than as it may be fitted for the attainment of this object. Were the plan of the convention adverse to the public happiness, my voice would be, Reject the plan. Were the Union itself inconsistent with the public happiness, it would be, Abolish the Union. In like manner, as far as the sovereignty of the States cannot be reconciled to the happiness of the people, the voice of every good citizen must be, Let the former be sacrificed to the latter. How far the sacrifice is necessary has been shown. How far the unsacrificed residue will be endangered is the question before us. Several important considerations have been touched in the course of these papers, which discountenance the supposition that the operation of the federal government will by degrees prove fatal to the State governments. The more I revolve the subject, the more fully I am persuaded that the balance is much more likely to be disturbed by the preponderancy of the last than of the first scale.

We have seen, in all the examples of ancient and modern confederacies, the strongest tendency continually betraying itself in the members to despoil the general government of its authorities, with a very ineffectual capacity in the latter to defend itself against the encroachments. Although, in most of these examples, the system has been so dissimilar from that under consideration as greatly to weaken any inference concerning the latter from the fate of the former, yet, as the States will retain under the proposed Constitution a very extensive portion of active sovereignty, the inference ought not to be wholly disregarded. In the Achaean league it is probable that the federal head had a degree and species of power which gave it a considerable likeness to the government framed by the convention. The Lycian Confederacy, as far as its principles and form are transmitted, must have borne a still greater analogy to it. Yet history does not inform us that either of them ever degenerated, or tended to degenerate, into one consolidated government. On the contrary, we know that the ruin of one of them proceeded from the incapacity of the federal authority to prevent the dissensions, and finally the disunion, of the subordinate authorities. These cases are the more worthy of our attention as the external causes by which the component parts were pressed together were much more numerous and powerful than in our case; and consequently less powerful ligaments within would be sufficient to bind the members to the head and to each other.

In the feudal system, we have seen a similar propensity exemplified. Notwithstanding the want of proper sympathy in every instance between the local sovereigns and the people, and the sympathy in some instances between the general sovereign and the latter, it usually happened that the local sovereigns prevailed in the rivalry for encroachments. Had no external dangers enforced internal harmony and subordination, and particularly, had the local sovereigns possessed the affections of the people, the great kingdoms in Europe would at this time consist of as many independent princes

as there were formerly feudatory barons.

The State governments will have the advantage of the Federal government, whether we compare them in respect to the immediate dependence of the one on the other; to the weight of personal influence which each side will possess; to the powers respectively vested in them; to the predilection and probable support of the people; to the disposition and faculty of resisting and frustrating the measures of each other.

The State governments may be regarded as constituent and essential parts of the federal government; whilst the latter is nowise essential to the operation or organization of the former. Without the intervention of the State legislatures, the President of the United States cannot be elected at all. They must in all cases have a great share in his appointment, and will, perhaps, in most cases, of themselves determine it. The Senate will be elected absolutely and exclusively by the State legislatures. Even the House of Representatives, though drawn immediately from the people, will be chosen very much under the influence of that class of men whose influence over the people obtains for themselves an election into the State legislatures. Thus, each of the principal branches of the federal government will owe its existence more or less to the favor of the State governments, and must consequently feel a dependence, which is much more likely to beget a disposition too obsequious than too overbearing towards them. On the other side, the component parts of the State governments will in no instance be indebted for their appointment to the direct agency of the federal government, and very little, if at all, to the local influence of its members.

The number of individuals employed under the Constitution of the United States will be much smaller than the number employed under the particular States. There will consequently be less of personal influence on the side of the former than of the latter. The members of

the legislative, executive, and judiciary departments of thirteen and more States, the justices of peace, officers of militia, ministerial officers of justice, with all the county, corporation, and town officers, for three millions and more of people, intermixed and having particular acquaintance with every class and circle of people must exceed, beyond all proportion, both in number and influence, those of every description who will be employed in the administration of the federal system. Compare the members of the three great departments of the thirteen States, excluding from the judiciary department the justices of peace, with the members of the corresponding departments of the single government of the Union; compare the militia officers of three millions of people with the military and marine officers of any establishment which is within the compass of probability, or, I may add, of possibility, and in this view alone, we may pronounce the advantage of the States to be decisive. If the federal government is to have collectors of revenue, the State governments will have theirs also. And as those of the former will be principally on the seacoast, and not very numerous, whilst those of the latter will be spread over the face of the country, and will be very numerous, the advantage in this view also lies on the same side. It is true that the Confederacy is to possess, and may exercise, the power of collecting internal as well as external taxes throughout the States; but it is probable that this power will not be resorted to, except for supplemental purposes of revenue; that an option will then be given to the States to supply their quotas by previous collections of their own; and that the eventual collection, under the immediate authority of the Union, will generally be made by the officers, and according to the rules, appointed by the several States. Indeed it is extremely probable that in other instances, particularly in the organization of the judicial power, the officers of the States will be clothed with the correspondent authority of the Union. Should it happen, however, that separate collectors of internal revenue should be appointed under the federal government, the influence of the whole number would not bear a comparison with that

of the multitude of State officers in the opposite scale. Within every district to which a federal collector would be allotted, there would not be less than thirty or forty, or even more, officers of different descriptions, and many of them persons of character and weight, whose influence would lie on the side of the State.

The powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the State governments are numerous and indefinite. The former will be exercised principally on external objects, as war, peace, negotiation, and foreign commerce; with which last the power of taxation will, for the most part, be connected. The powers reserved to the several States will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the State.

The operations of the federal government will be most extensive and important in times of war and danger; those of the State governments in times of peace and security. As the former periods will probably bear a small proportion to the latter, the State governments will here enjoy another advantage over the federal government. The more adequate, indeed, the federal powers may be rendered to the national defense, the less frequent will be those scenes of danger which might favor their ascendancy over the governments of the particular States.

If the new Constitution be examined with accuracy and candor, it will be found that the change which it proposes consists much less in the addition of NEW POWERS to the Union than in the invigoration of its ORIGINAL POWERS. The regulation of commerce, it is true, is a new power; but that seems to be an addition which few oppose and from which no apprehensions are entertained. The powers relating to war and peace, armies and fleets, treaties and finance, with the other more considerable powers, are all vested in the existing Congress by

the Articles of Confederation. The proposed change does not enlarge these powers; it only substitutes a more effectual mode of administering them. The change relating to taxation may be regarded as the most important; and yet the present Congress have as complete authority to REQUIRE of the States indefinite supplies of money for the common defense and general welfare as the future Congress will have to require them of individual citizens; and the latter will be no more bound than the States themselves have been to pay the quotas respectively taxed on them. Had the States complied punctually with the Articles of Confederation, or could their compliance have been enforced by as peaceable means as may be used with success towards single persons, our past experience is very far from countenancing an opinion that the State governments would have lost their constitutional powers, and have gradually undergone an entire consolidation. To maintain that such an event would have ensued would be to say at once that the existence of the State governments is incompatible with any system whatever that accomplishes the essential purposes of the Union.

PUBLIUS

FEDERALIST No. 46 The Influence of the State and Federal Governments Compared

**From the New York Packet.
Tuesday, January 29, 1788
Madison**

To the People of the State of New York:

RESUMING the subject of the last paper, I proceed to inquire whether the federal government or the State governments will have the advantage with regard to the predilection and support of the people. Notwithstanding the different modes in which they are appointed, we must consider both of them as substantially dependent on the great body of the citizens of the United States. I assume this position here as it respects the first, reserving the proofs for another place. The federal and State governments are in fact but different agents and trustees of the people, constituted with different powers and designed for different purposes. The adversaries of the Constitution seem to have lost sight of the people altogether in their reasonings on this subject; and to have viewed these different establishments not only as mutual rivals and enemies, but as uncontrolled by any common superior in their efforts to usurp the authorities of each other. These gentlemen must here be reminded of their error. They must be told that the ultimate authority, wherever the derivative may be found, resides in the people alone, and that it will not depend merely on the comparative ambition or address of the different governments whether either, or which of them, will be able

to enlarge its sphere of jurisdiction at the expense of the other. Truth, no less than decency, requires that the event in every case should be supposed to depend on the sentiments and sanction of their common constituents.

Many considerations, besides those suggested on a former occasion, seem to place it beyond doubt that the first and most natural attachment of the people will be to the governments of their respective States. Into the administration of these a greater number of individuals will expect to rise. From the gift of these a greater number of offices and emoluments will flow. By the superintending care of these, all the more domestic and personal interests of the people will be regulated and provided for. With the affairs of these, the people will be more familiarly and minutely conversant. And with the members of these, will a greater proportion of the people have the ties of personal acquaintance and friendship, and of family and party attachments; on the side of these, therefore, the popular bias may well be expected most strongly to incline.

Experience speaks the same language in this case. The federal administration, though hitherto very defective in comparison with what may be hoped under a better system, had, during the war, and particularly whilst the independent fund of paper emissions was in credit, an activity and importance as great as it can well have in any future circumstances whatever. It was engaged, too, in a course of measures which had for their object the protection of everything that was dear, and the acquisition of everything that could be desirable to the people at large. It was, nevertheless, invariably found, after the transient enthusiasm for the early Congresses was over, that the attention and attachment of the people were turned anew to their own particular governments; that the federal council was at no time the idol of popular favor; and that opposition to proposed enlargements of its powers and importance was the side usually taken by the men who

wished to build their political consequence on the prepossessions of their fellow-citizens.

If, therefore, as has been elsewhere remarked, the people should in future become more partial to the federal than to the State governments, the change can only result from such manifest and irresistible proofs of a better administration as will overcome all their antecedent propensities. And in that case, the people ought not surely to be precluded from giving most of their confidence where they may discover it to be most due; but even in that case the State governments could have little to apprehend, because it is only within a certain sphere that the federal power can, in the nature of things, be advantageously administered.

The remaining points on which I propose to compare the federal and State governments are the disposition and the faculty they may respectively possess to resist and frustrate the measures of each other.

It has been already proved that the members of the federal will be more dependent on the members of the State governments, than the latter will be on the former. It has appeared also that the prepossessions of the people, on whom both will depend, will be more on the side of the State governments than of the federal government. So far as the disposition of each towards the other may be influenced by these causes, the State governments must clearly have the advantage. But in a distinct and very important point of view, the advantage will lie on the same side. The prepossessions, which the members themselves will carry into the federal government, will generally be favorable to the States; whilst it will rarely happen that the members of the State governments will carry into the public councils a bias in favor of the general government. A local spirit will infallibly prevail much more in the members of Congress than a national spirit will prevail in the legislatures of the particular States. Every one knows that a great proportion of the errors committed by

the State legislatures proceeds from the disposition of the members to sacrifice the comprehensive and permanent interest of the State to the particular and separate views of the counties or districts in which they reside. And if they do not sufficiently enlarge their policy to embrace the collective welfare of their particular State, how can it be imagined that they will make the aggregate prosperity of the Union, and the dignity and respectability of its government, the objects of their affections and consultations? For the same reason that the members of the State legislatures will be unlikely to attach themselves sufficiently to national objects, the members of the federal legislature will be likely to attach themselves too much to local objects. The States will be to the latter what counties and towns are to the former. Measures will too often be decided according to their probable effect, not on the national prosperity and happiness, but on the prejudices, interests, and pursuits of the governments and people of the individual States. What is the spirit that has in general characterized the proceedings of Congress? A perusal of their journals, as well as the candid acknowledgments of such as have had a seat in that assembly, will inform us, that the members have but too frequently displayed the character rather of partisans of their respective States than of impartial guardians of a common interest; that where on one occasion improper sacrifices have been made of local considerations to the aggrandizement of the federal government, the great interests of the nation have suffered on a hundred from an undue attention to the local prejudices, interests, and views of the particular States. I mean not by these reflections to insinuate that the new federal government will not embrace a more enlarged plan of policy than the existing government may have pursued; much less that its views will be as confined as those of the State legislatures; but only that it will partake sufficiently of the spirit of both to be disinclined to invade the rights of the individual States, or the prerogatives of their governments. The motives on the part of the State governments to augment their prerogatives by defalcations from the federal government will be

overruled by no reciprocal predispositions in the members.

Were it admitted, however, that the Federal government may feel an equal disposition with the State governments to extend its power beyond the due limits, the latter would still have the advantage in the means of defeating such encroachments. If an act of a particular State, though unfriendly to the national government, be generally popular in that State and should not too grossly violate the oaths of the State officers, it is executed immediately and, of course, by means on the spot and depending on the State alone. The opposition of the federal government, or the interposition of federal officers, would but inflame the zeal of all parties on the side of the State, and the evil could not be prevented or repaired, if at all, without the employment of means which must always be resorted to with reluctance and difficulty. On the other hand, should an unwarrantable measure of the federal government be unpopular in particular States, which would seldom fail to be the case, or even a warrantable measure be so, which may sometimes be the case, the means of opposition to it are powerful and at hand. The disquietude of the people; their repugnance and, perhaps, refusal to co-operate with the officers of the Union; the frowns of the executive magistracy of the State; the embarrassments created by legislative devices, which would often be added on such occasions, would oppose, in any State, difficulties not to be despised; would form, in a large State, very serious impediments; and where the sentiments of several adjoining States happened to be in unison, would present obstructions which the federal government would hardly be willing to encounter.

But ambitious encroachments of the federal government on the authority of the State governments would not excite the opposition of a single State, or of a few States only. They would be signals of general alarm. Every government would espouse the common cause. A correspondence would be opened. Plans of resistance would be

concerted. One spirit would animate and conduct the whole. The same combinations, in short, would result from an apprehension of the federal, as was produced by the dread of a foreign, yoke; and unless the projected innovations should be voluntarily renounced, the same appeal to a trial of force would be made in the one case as was made in the other. But what degree of madness could ever drive the federal government to such an extremity? In the contest with Great Britain, one part of the empire was employed against the other. The more numerous part invaded the rights of the less numerous part. The attempt was unjust and unwise; but it was not in speculation absolutely chimerical. But what would be the contest in the case we are supposing? Who would be the parties? A few representatives of the people would be opposed to the people themselves; or rather one set of representatives would be contending against thirteen sets of representatives, with the whole body of their common constituents on the side of the latter.

The only refuge left for those who prophesy the downfall of the State governments is the visionary supposition that the federal government may previously accumulate a military force for the projects of ambition. The reasonings contained in these papers must have been employed to little purpose indeed, if it could be necessary now to disprove the reality of this danger. That the people and the States should, for a sufficient period of time, elect an uninterrupted succession of men ready to betray both; that the traitors should, throughout this period, uniformly and systematically pursue some fixed plan for the extension of the military establishment; that the governments and the people of the States should silently and patiently behold the gathering storm and continue to supply the materials until it should be prepared to burst on their own heads must appear to everyone more like the incoherent dreams of a delirious jealousy, or the misjudged exaggerations of a counterfeit zeal, than like the sober apprehensions of genuine patriotism. Extravagant as the supposition

is, let it however be made. Let a regular army, fully equal to the resources of the country, be formed; and let it be entirely at the devotion of the federal government; still it would not be going too far to say that the State governments, with the people on their side would be able to repel the danger. The highest number to which, according to the best computation, a standing army can be carried in any country does not exceed one hundredth part of the whole number of souls; or one twenty-fifth part of the number able to bear arms. This proportion would not yield, in the United States, an army of more than twenty-five or thirty thousand men. To these would be opposed a militia amounting to near half a million of citizens with arms in their hands, officered by men chosen from among themselves, fighting for their common liberties and united and conducted by governments possessing their affections and confidence. It may well be doubted whether a militia thus circumstanced could ever be conquered by such a proportion of regular troops. Those who are best acquainted with the last successful resistance of this country against the British arms will be most inclined to deny the possibility of it. Besides the advantage of being armed, which the Americans possess over the people of almost every other nation, the existence of subordinate governments, to which the people are attached and by which the militia officers are appointed, forms a barrier against the enterprises of ambition, more insurmountable than any which a simple government of any form can admit of. Notwithstanding the military establishments in the several kingdoms of Europe, which are carried as far as the public resources will bear, the governments are afraid to trust the people with arms. And it is not certain that with this aid alone they would not be able to shake off their yokes. But were the people to possess the additional advantages of local governments chosen by themselves, who could collect the national will and direct the national force, and of officers appointed out of the militia by these governments and attached both to them and to the militia, it may be affirmed with the greatest assurance that the throne of every tyranny

in Europe would be speedily overturned in spite of the legions which surround it. Let us not insult the free and gallant citizens of America with the suspicion that they would be less able to defend the rights of which they would be in actual possession than the debased subjects of arbitrary power would be to rescue theirs from the hands of their oppressors. Let us rather no longer insult them with the supposition that they can ever reduce themselves to the necessity of making the experiment by a blind and tame submission to the long train of insidious measures which must precede and produce it.

The argument under the present head may be put into a very concise form, which appears altogether conclusive. Either the mode in which the federal government is to be constructed will render it sufficiently dependent on the people, or it will not. On the first supposition, it will be restrained by that dependence from forming schemes obnoxious to their constituents. On the other supposition, it will not possess the confidence of the people, and its schemes of usurpation will be easily defeated by the State governments, who will be supported by the people.

On summing up the considerations stated in this and the last paper, they seem to amount to the most convincing evidence that the powers proposed to be lodged in the federal government are as little formidable to those reserved to the individual States as they are indispensably necessary to accomplish the purposes of the Union; and that all those alarms which have been sounded of a meditated and consequential annihilation of the State governments must, on the most favorable interpretation, be ascribed to the chimerical fears of the authors of them.

PUBLIUS

FEDERALIST No. 47 The Particular Structure of the New Government and the Distribution of Power Among Its Different Parts

**For the Independent Journal.
Wednesday, January 30, 1788
Madison**

To the People of the State of New York:

HAVING reviewed the general form of the proposed government and the general mass of power allotted to it, I proceed to examine the particular structure of this government, and the distribution of this mass of power among its constituent parts.

One of the principal objections inculcated by the more respectable adversaries to the Constitution is its supposed violation of the political maxim that the legislative, executive, and judiciary departments ought to be separate and distinct. In the structure of the federal government no regard, it is said, seems to have been paid to this essential precaution in favor of liberty. The several departments of power are distributed and blended in such a manner as at once to destroy all symmetry and beauty of form, and to expose some of the essential parts of the edifice to the danger of being crushed by the disproportionate weight of other parts.

No political truth is certainly of greater intrinsic value, or is stamped with the authority of more enlightened patrons of liberty than that on which the objection is founded. The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, selfappointed, or elective, may justly be pronounced the very definition of tyranny. Were the federal Constitution, therefore, really chargeable with the accumulation of power, or with a mixture of powers, having a dangerous tendency to such an accumulation, no further arguments would be necessary to inspire a universal reprobation of the system. I persuade myself, however, that it will be made apparent to everyone, that the charge cannot be supported, and that the maxim on which it relies has been totally misconceived and misapplied. In order to form correct ideas on this important subject it will be proper to investigate the sense in which the preservation of liberty requires that the three great departments of power should be separate and distinct.

The oracle who is always consulted and cited on this subject is the celebrated Montesquieu. If he be not the author of this invaluable precept in the science of politics, he has the merit at least of displaying and recommending it most effectually to the attention of mankind. Let us endeavor, in the first place, to ascertain his meaning on this point.

The British Constitution was to Montesquieu what Homer has been to the didactic writers on epic poetry. As the latter have considered the work of the immortal bard as the perfect model from which the principles and rules of the epic art were to be drawn, and by which all similar works were to be judged, so this great political critic appears to have viewed the Constitution of England as the standard, or to use his own expression, as the mirror of political liberty; and to have delivered, in the form of elementary truths, the

several characteristic principles of that particular system. That we may be sure, then, not to mistake his meaning in this case, let us recur to the source from which the maxim was drawn.

On the slightest view of the British Constitution, we must perceive that the legislative, executive, and judiciary departments are by no means totally separate and distinct from each other. The executive magistrate forms an integral part of the legislative authority. He alone has the prerogative of making treaties with foreign sovereigns which, when made, have, under certain limitations, the force of legislative acts. All the members of the judiciary department are appointed by him, can be removed by him on the address of the two Houses of Parliament, and form, when he pleases to consult them, one of his constitutional councils. One branch of the legislative department forms also a great constitutional council to the executive chief, as, on another hand, it is the sole depositary of judicial power in cases of impeachment, and is invested with the supreme appellate jurisdiction in all other cases. The judges, again, are so far connected with the legislative department as often to attend and participate in its deliberations, though not admitted to a legislative vote.

荷马和他的向导。荷马（约公元前9世纪—前8世纪），相传为古希腊的游吟诗人，创作了史诗《伊利亚特》（*Iliad*）和《奥德赛》（*Odyssey*），两者统称《荷马史诗》。

From these facts, by which Montesquieu was guided, it may clearly be inferred that in saying “There can be no liberty where the legislative and executive powers are united in the same person, or body of magistrates,” or, “if the power of judging be not separated from the legislative and executive powers,” he did not mean that these departments ought to have no partial agency in, or no control over, the acts of each other. His meaning, as his own words import, and still more conclusively as illustrated by the example in his eye, can amount

to no more than this, that where the whole power of one department is exercised by the same hands which possess the whole power of another department, the fundamental principles of a free constitution are subverted. This would have been the case in the constitution examined by him, if the king, who is the sole executive magistrate, had possessed also the complete legislative power, or the supreme administration of justice; or if the entire legislative body had possessed the supreme judiciary, or the supreme executive authority. This, however, is not among the vices of that constitution. The magistrate in whom the whole executive power resides cannot of himself make a law, though he can put a negative on every law; nor administer justice in person, though he has the appointment of those who do administer it. The judges can exercise no executive prerogative, though they are shoots from the executive stock; nor any legislative function, though they may be advised by the legislative councils. The entire legislature can perform no judiciary act, though by the joint act of two of its branches the judges may be removed from their offices, and though one of its branches is possessed of the judicial power in the last resort. The entire legislature, again, can exercise no executive prerogative, though one of its branches constitutes the supreme executive magistracy, and another, on the impeachment of a third, can try and condemn all the subordinate officers in the executive department.

The reasons on which Montesquieu grounds his maxim are a further demonstration of his meaning. "When the legislative and executive powers are united in the same person or body," says he, "there can be no liberty, because apprehensions may arise lest the same monarch or senate should enact tyrannical laws to execute them in a tyrannical manner." Again: "Were the power of judging joined with the legislative, the life and liberty of the subject would be exposed to arbitrary control, for the judge would then be the legislator. Were it joined to the executive power, the judge might behave with all the

violence of an oppressor.”Some of these reasons are more fully explained in other passages; but briefly stated as they are here they sufficiently establish the meaning which we have put on this celebrated maxim of this celebrated author.

If we look into the constitutions of the several States we find that, notwithstanding the emphatical and, in some instances, the unqualified terms in which this axiom has been laid down, there is not a single instance in which the several departments of power have been kept absolutely separate and distinct. New Hampshire, whose constitution was the last formed, seems to have been fully aware of the impossibility and inexpediency of avoiding any mixture whatever of these departments, and has qualified the doctrine by declaring“that the legislative, executive, and judiciary powers ought to be kept as separate from, and independent of, each other as the nature of a free government will admit; or as is consistent with that chain of connection that binds the whole fabric of the constitution in one indissoluble bond of unity and amity.”Her constitution accordingly mixes these departments in several respects. The Senate, which is a branch of the legislative department, is also a judicial tribunal for the trial of impeachments. The President, who is the head of the executive department, is the presiding member also of the Senate; and, besides an equal vote in all cases, has a casting vote in case of a tie. The executive head is himself eventually elective every year by the legislative department, and his council is every year chosen by and from the members of the same department. Several of the officers of state are also appointed by the legislature. And the members of the judiciary department are appointed by the executive department.

The constitution of Massachusetts has observed a sufficient though less pointed caution in expressing this fundamental article of liberty. It declares“that the legislative department shall never exercise the executive and judicial powers, or either of them; the executive

shall never exercise the legislative and judicial powers, or either of them; the judicial shall never exercise the legislative and executive powers, or either of them.”This declaration corresponds precisely with the doctrine of Montesquieu, as it has been explained, and is not in a single point violated by the plan of the convention. It goes no farther than to prohibit any one of the entire departments from exercising the powers of another department. In the very Constitution to which it is prefixed, a partial mixture of powers has been admitted. The executive magistrate has a qualified negative on the legislative body, and the Senate, which is a part of the legislature, is a court of impeachment for members both of the executive and judiciary departments. The members of the judiciary department, again, are appointable by the executive department, and removable by the same authority on the address of the two legislative branches. Lastly, a number of the officers of government are annually appointed by the legislative department. As the appointment to offices, particularly executive offices, is in its nature an executive function, the compilers of the Constitution have, in this last point at least, violated the rule established by themselves.

I pass over the constitutions of Rhode Island and Connecticut, because they were formed prior to the Revolution and even before the principle under examination had become an object of political attention.

The constitution of New York contains no declaration on this subject, but appears very clearly to have been framed with an eye to the danger of improperly blending the different departments. It gives, nevertheless, to the executive magistrate, a partial control over the legislative department; and, what is more, gives a like control to the judiciary department; and even blends the executive and judiciary departments in the exercise of this control. In its council of appointment members of the legislative are associated with the

executive authority, in the appointment of officers, both executive and judiciary. And its court for the trial of impeachments and correction of errors is to consist of one branch of the legislature and the principal members of the judiciary department.

The constitution of New Jersey has blended the different powers of government more than any of the preceding. The governor, who is the executive magistrate, is appointed by the legislature; is chancellor and ordinary, or surrogate of the State; is a member of the Supreme Court of Appeals, and president, with a casting vote, of one of the legislative branches. The same legislative branch acts again as executive council of the governor, and with him constitutes the Court of Appeals. The members of the judiciary department are appointed by the legislative department and removable by one branch of it, on the impeachment of the other.

According to the constitution of Pennsylvania, the president, who is the head of the executive department, is annually elected by a vote in which the legislative department predominates. In conjunction with an executive council, he appoints the members of the judiciary department and forms a court of impeachment for trial of all officers, judiciary as well as executive. The judges of the Supreme Court and justices of the peace seem also to be removable by the legislature; and the executive power of pardoning in certain cases, to be referred to the same department. The members of the executive council are made EX OFFICIO justices of peace throughout the State.

In Delaware, the chief executive magistrate is annually elected by the legislative department. The speakers of the two legislative branches are vice-presidents in the executive department. The executive chief, with six others appointed, three by each of the legislative branches, constitutes the Supreme Court of Appeals; he is joined with the legislative department in the appointment of the other judges. Throughout the States it appears that the members of the

legislature may at the same time be justices of the peace; in this State, the members of one branch of it are EX OFFICIO justices of the peace; as are also the members of the executive council. The principal officers of the executive department are appointed by the legislative; and one branch of the latter forms a court of impeachments. All officers may be removed on address of the legislature.

Maryland has adopted the maxim in the most unqualified terms; declaring that the legislative, executive, and judicial powers of government ought to be forever separate and distinct from each other. Her constitution, notwithstanding, makes the executive magistrate appointable by the legislative department; and the members of the judiciary by the executive department.

The language of Virginia is still more pointed on this subject. Her constitution declares, "that the legislative, executive, and judiciary departments shall be separate and distinct; so that neither exercise the powers properly belonging to the other; nor shall any person exercise the powers of more than one of them at the same time, except that the justices of county courts shall be eligible to either House of Assembly." Yet we find not only this express exception, with respect to the members of the inferior courts, but that the chief magistrate, with his executive council, are appointable by the legislature; that two members of the latter are triennially displaced at the pleasure of the legislature; and that all the principal offices, both executive and judiciary, are filled by the same department. The executive prerogative of pardon, also, is in one case vested in the legislative department.

The constitution of North Carolina, which declares "that the legislative, executive, and supreme judicial powers of government ought to be forever separate and distinct from each other," refers, at the same time, to the legislative department, the appointment not only of the executive chief but all the principal officers within both that

and the judiciary department.

In South Carolina, the constitution makes the executive magistracy eligible by the legislative department. It gives to the latter, also, the appointment of the members of the judiciary department, including even justices of the peace and sheriffs; and the appointment of officers in the executive department, down to captains in the army and navy of the State.

In the constitution of Georgia where it is declared "that the legislative, executive, and judiciary departments shall be separate and distinct, so that neither exercise the powers properly belonging to the other," we find that the executive department is to be filled by appointments of the legislature; and the executive prerogative of pardon to be finally exercised by the same authority. Even justices of the peace are to be appointed by the legislature.

In citing these cases, in which the legislative, executive, and judiciary departments have not been kept totally separate and distinct, I wish not to be regarded as an advocate for the particular organizations of the several State governments. I am fully aware that among the many excellent principles which they exemplify they carry strong marks of the haste, and still stronger of the inexperience, under which they were framed. It is but too obvious that in some instances the fundamental principle under consideration has been violated by too great a mixture, and even an actual consolidation of the different powers; and that in no instance has a competent provision been made for maintaining in practice the separation delineated on paper. What I have wished to evince is that the charge brought against the proposed Constitution of violating the sacred maxim of free government is warranted neither by the real meaning annexed to that maxim by its author, nor by the sense in which it has hitherto been understood in America. This interesting subject will be resumed in the ensuing paper.

FEDERALIST No. 48 These Departments Should Not Be So Far Separated as to Have No Constitutional Control over Each Other

**From the New York Packet.
Friday, February 1, 1788
Madison**

To the People of the State of New York:

IT WAS shown in the last paper that the political apothegm there examined does not require that the legislative, executive, and judiciary departments should be wholly unconnected with each other. I shall undertake, in the next place, to show that unless these departments be so far connected and blended as to give to each a constitutional control over the others, the degree of separation which the maxim requires, as essential to a free government, can never in practice be duly maintained.

It is agreed on all sides that the powers properly belonging to one of the departments ought not to be directly and completely administered by either of the other departments. It is equally evident that none of them ought to possess, directly or indirectly, an overruling influence over the others in the administration of their respective powers. It will not be denied that power is of an encroaching nature and that it ought to be effectually restrained from

passing the limits assigned to it. After discriminating, therefore, in theory, the several classes of power, as they may in their nature be legislative, executive, or judiciary, the next and most difficult task is to provide some practical security for each, against the invasion of the others. What this security ought to be is the great problem to be solved.

Will it be sufficient to mark, with precision, the boundaries of these departments in the constitution of the government, and to trust to these parchment barriers against the encroaching spirit of power? This is the security which appears to have been principally relied on by the compilers of most of the American constitutions. But experience assures us that the efficacy of the provision has been greatly overrated; and that some more adequate defense is indispensably necessary for the more feeble against the more powerful members of the government. The legislative department is everywhere extending the sphere of its activity, and drawing all power into its impetuous vortex.

The founders of our republics have so much merit for the wisdom which they have displayed that no task can be less pleasing than that of pointing out the errors into which they have fallen. A respect for truth, however, obliges us to remark that they seem never for a moment to have turned their eyes from the danger, to liberty, from the overgrown and all-grasping prerogative of an hereditary magistrate, supported and fortified by an hereditary branch of the legislative authority. They seem never to have recollected the danger from legislative usurpations, which, by assembling all power in the same hands, must lead to the same tyranny as is threatened by executive usurpations.

In a government where numerous and extensive prerogatives are placed in the hands of an hereditary monarch, the executive department is very justly regarded as the source of danger, and

watched with all the jealousy which a zeal for liberty ought to inspire. In a democracy, where a multitude of people exercise in person the legislative functions and are continually exposed, by their incapacity for regular deliberation and concerted measures, to the ambitious intrigues of their executive magistrates, tyranny may well be apprehended, on some favorable emergency, to start up in the same quarter. But in a representative republic where the executive magistracy is carefully limited, both in the extent and the duration of its power; and where the legislative power is exercised by an assembly, which is inspired by a supposed influence over the people with an intrepid confidence in its own strength; which is sufficiently numerous to feel all the passions which actuate a multitude, yet not so numerous as to be incapable of pursuing the objects of its passions by means which reason prescribes; it is against the enterprising ambition of this department that the people ought to indulge all their jealousy and exhaust all their precautions.

The legislative department derives a superiority in our governments from other circumstances. Its constitutional powers being at once more extensive, and less susceptible of precise limits, it can, with the greater facility, mask, under complicated and indirect measures, the encroachments which it makes on the co-ordinate departments. It is not unfrequently a question of real nicety in legislative bodies whether the operation of a particular measure will, or will not, extend beyond the legislative sphere. On the other side, the executive power being restrained within a narrower compass and being more simple in its nature, and the judiciary being described by landmarks still less uncertain, projects of usurpation by either of these departments would immediately betray and defeat themselves. Nor is this all: as the legislative department alone has access to the pockets of the people, and has in some constitutions full discretion, and in all a prevailing influence, over the pecuniary rewards of those who fill the other departments, a dependence is thus created in the latter,

which gives still greater facility to encroachments of the former.

I have appealed to our own experience for the truth of what I advance on this subject. Were it necessary to verify this experience by particular proofs, they might be multiplied without end. I might collect vouchers in abundance from the records and archives of every State in the Union. But as a more concise and at the same time equally satisfactory evidence, I will refer to the example of two States, attested by two unexceptionable authorities.

The first example is that of Virginia, a State which, as we have seen, has expressly declared in its constitution that the three great departments ought not to be intermixed. The authority in support of it is Mr. Jefferson, who, besides his other advantages for remarking the operation of the government, was himself the chief magistrate of it. In order to convey fully the ideas with which his experience had impressed him on this subject, it will be necessary to quote a passage of some length from his very interesting Notes on the State of Virginia, p. 195. "All the powers of government, legislative, executive, and judiciary, result to the legislative body. The concentrating these in the same hands is precisely the definition of despotic government. It will be no alleviation that these powers will be exercised by a plurality of hands, and not by a single one. One hundred and seventy-three despots would surely be as oppressive as one. Let those who doubt it turn their eyes on the republic of Venice. As little will it avail us that they are chosen by ourselves. An elective despotism was not the government we fought for; but one which should not only be founded on free principles, but in which the powers of government should be so divided and balanced among several bodies of magistracy as that no one could transcend their legal limits without being effectually checked and restrained by the others. For this reason that convention which passed the ordinance of government laid its foundation on this basis, that the legislative, executive, and judiciary departments should

be separate and distinct, so that no person should exercise the powers of more than one of them at the same time. But no barrier was provided between these several powers. The judiciary and the executive members were left dependent on the legislative for their subsistence in office, and some of them for their continuance in it. If, therefore, the legislature assumes executive and judiciary powers, no opposition is likely to be made; nor, if made, can be effectual; because in that case they may put their proceedings into the form of acts of Assembly, which will render them obligatory on the other branches. They have accordingly, in many instances, decided rights which should have been left to judiciary controversy, and the direction of the executive, during the whole time of their session, is becoming habitual and familiar.”

The other State which I shall have for an example is Pennsylvania; and the other authority, the Council of Censors, which assembled in the years 1783 and 1784. A part of the duty of this body, as marked out by the constitution, was “to inquire whether the constitution had been preserved inviolate in every part; and whether the legislative and executive branches of government had performed their duty as guardians of the people, or assumed to themselves, or exercised, other or greater powers than they are entitled to by the constitution.” In the execution of this trust, the council were necessarily led to a comparison of both the legislative and executive proceedings with the constitutional powers of these departments; and from the facts enumerated, and to the truth of most of which both sides in the council subscribed, it appears that the constitution had been flagrantly violated by the legislature in a variety of important instances.

A great number of laws had been passed violating, without any apparent necessity, the rule requiring that all bills of a public nature shall be previously printed for the consideration of the people;

although this is one of the precautions chiefly relied on by the constitution against improper acts of the legislature.

The constitutional trial by jury had been violated and powers assumed which had not been delegated by the constitution.

Executive powers had been usurped.

The salaries of the judges, which the constitution expressly requires to be fixed, had been occasionally varied; and cases belonging to the judiciary department frequently drawn within legislative cognizance and determination.

Those who wish to see the several particulars falling under each of these heads may consult the journals of the council which are in print. Some of them, it will be found, may be imputable to peculiar circumstances connected with the war; but the greater part of them may be considered as the spontaneous shoots of an ill-constituted government.

It appears, also, that the executive department had not been innocent of frequent breaches of the constitution. There are three observations, however, which ought to be made on this head: first, a great proportion of the instances were either immediately produced by the necessities of the war, or recommended by Congress or the commander-in-chief; second, in most of the other instances they conformed either to the declared or the known sentiments of the legislative department; third, the executive department of Pennsylvania is distinguished from that of the other States by the number of members composing it. In this respect, it has as much affinity to a legislative assembly as to an executive council. And being at once exempt from the restraint of an individual responsibility for the acts of the body, and deriving confidence from mutual example and joint influence, unauthorized measures would, of course, be more freely hazarded, than where the executive department is administered

by a single hand, or by a few hands.

The conclusion which I am warranted in drawing from these observations is that a mere demarcation on parchment of the constitutional limits of the several departments is not a sufficient guard against those encroachments which lead to a tyrannical concentration of all the powers of government in the same hands.

PUBLIUS

FEDERALIST No. 49 Method of Guarding Against the Encroachments of Any One Department of Government by Appealing to the People Through a Convention

**For the Independent Journal.
Saturday, February 2, 1788
Madison**

To the People of the State of New York:

THE author of the Notes on the State of Virginia, quoted in the last paper, has subjoined to that valuable work the draught of a constitution, which had been prepared in order to be laid before a convention expected to be called in 1783, by the legislature, for the establishment of a constitution for that commonwealth. The plan, like everything from the same pen, marks a turn of thinking, original, comprehensive, and accurate; and is the more worthy of attention as it equally displays a fervent attachment to republican government and an enlightened view of the dangerous propensities against which it ought to be guarded. One of the precautions which he proposes, and on which he appears ultimately to rely as a palladium to the weaker departments of power against the invasions of the stronger, is perhaps altogether his own, and as it immediately relates to the subject of our present inquiry, ought not to be overlooked.

His proposition is, "that whenever any two of the three branches of government shall concur in opinion, each by the voices of two thirds of their whole number, that a convention is necessary for altering the constitution, or correcting breaches of it, a convention shall be called for the purpose."

As the people are the only legitimate fountain of power, and it is from them that the constitutional charter, under which the several branches of government hold their power, is derived, it seems strictly consonant to the republican theory to recur to the same original authority, not only whenever it may be necessary to enlarge, diminish, or new-model the powers of government, but also whenever any one of the departments may commit encroachments on the chartered authorities of the others. The several departments being perfectly co-ordinate by the terms of their common commission, none of them, it is evident, can pretend to an exclusive or superior right of settling the boundaries between their respective powers; and how are the encroachments of the stronger to be prevented, or the wrongs of the weaker to be redressed, without an appeal to the people themselves, who, as the grantors of the commissions, can alone declare its true meaning, and enforce its observance?

There is certainly great force in this reasoning, and it must be allowed to prove that a constitutional road to the decision of the people ought to be marked out and kept open, for certain great and extraordinary occasions. But there appear to be insuperable objections against the proposed recurrence to the people, as a provision in all cases for keeping the several departments of power within their constitutional limits.

In the first place, the provision does not reach the case of a combination of two of the departments against the third. If the legislative authority, which possesses so many means of operating on the motives of the other departments, should be able to gain to its

interest either of the others, or even one third of its members, the remaining department could derive no advantage from its remedial provision. I do not dwell, however, on this objection, because it may be thought to be rather against the modification of the principle, than against the principle itself.

In the next place, it may be considered as an objection inherent in the principle that as every appeal to the people would carry an implication of some defect in the government, frequent appeals would, in great measure, deprive the government of that veneration which time bestows on everything, and without which perhaps the wisest and freest governments would not possess the requisite stability. If it be true that all governments rest on opinion, it is no less true that the strength of opinion in each individual, and its practical influence on his conduct, depend much on the number which he supposes to have entertained the same opinion. The reason of man, like man himself, is timid and cautious when left alone, and acquires firmness and confidence in proportion to the number with which it is associated. When the examples which fortify opinion are ancient as well as numerous, they are known to have a double effect. In a nation of philosophers, this consideration ought to be disregarded. A reverence for the laws would be sufficiently inculcated by the voice of an enlightened reason. But a nation of philosophers is as little to be expected as the philosophical race of kings wished for by Plato. And in every other nation, the most rational government will not find it a superfluous advantage to have the prejudices of the community on its side.

The danger of disturbing the public tranquillity by interesting too strongly the public passions is a still more serious objection against a frequent reference of constitutional questions to the decision of the whole society. Notwithstanding the success which has attended the revisions of our established forms of government and which does so

much honor to the virtue and intelligence of the people of America, it must be confessed that the experiments are of too ticklish a nature to be unnecessarily multiplied. We are to recollect that all the existing constitutions were formed in the midst of a danger which repressed the passions most unfriendly to order and concord; of an enthusiastic confidence of the people in their patriotic leaders, which stifled the ordinary diversity of opinions on great national questions; of a universal ardor for new and opposite forms, produced by a universal resentment and indignation against the ancient government; and whilst no spirit of party connected with the changes to be made, or the abuses to be reformed, could mingle its leaven in the operation. The future situations in which we must expect to be usually placed do not present any equivalent security against the danger which is apprehended.

But the greatest objection of all is that the decisions which would probably result from such appeals would not answer the purpose of maintaining the constitutional equilibrium of the government. We have seen that the tendency of republican governments is to an aggrandizement of the legislative at the expense of the other departments. The appeals to the people, therefore, would usually be made by the executive and judiciary departments. But whether made by one side or the other, would each side enjoy equal advantages on the trial? Let us view their different situations. The members of the executive and judiciary departments are few in number, and can be personally known to a small part only of the people. The latter, by the mode of their appointment, as well as by the nature and permanency of it, are too far removed from the people to share much in their prepossessions. The former are generally the objects of jealousy and their administration is always liable to be discolored and rendered unpopular. The members of the legislative department, on the other hand, are numerous. They are distributed and dwell among the people at large. Their connections of blood, of friendship, and of

acquaintance embrace a great proportion of the most influential part of the society. The nature of their public trust implies a personal influence among the people, and that they are more immediately the confidential guardians of the rights and liberties of the people. With these advantages it can hardly be supposed that the adverse party would have an equal chance for a favorable issue.

But the legislative party would not only be able to plead their cause most successfully with the people. They would probably be constituted themselves the judges. The same influence which had gained them an election into the legislature, would gain them a seat in the convention. If this should not be the case with all, it would probably be the case with many, and pretty certainly with those leading characters, on whom everything depends in such bodies. The convention, in short, would be composed chiefly of men who had been, who actually were, or who expected to be, members of the department whose conduct was arraigned. They would consequently be parties to the very question to be decided by them.

It might, however, sometimes happen, that appeals would be made under circumstances less adverse to the executive and judiciary departments. The usurpations of the legislature might be so flagrant and so sudden, as to admit of no specious coloring. A strong party among themselves might take side with the other branches. The executive power might be in the hands of a peculiar favorite of the people. In such a posture of things, the public decision might be less swayed by prepossessions in favor of the legislative party. But still it could never be expected to turn on the true merits of the question. It would inevitably be connected with the spirit of preexisting parties, or of parties springing out of the question itself. It would be connected with persons of distinguished character and extensive influence in the community. It would be pronounced by the very men who had been agents in, or opponents of, the measures to which the decision would

relate. The passions, therefore, not the reason, of the public would sit in judgment. But it is the reason, alone, of the public, that ought to control and regulate the government. The passions ought to be controlled and regulated by the government.

We found in the last paper that mere declarations in the written constitution are not sufficient to restrain the several departments within their legal rights. It appears in this that occasional appeals to the people would be neither a proper nor an effectual provision for that purpose. How far the provisions of a different nature contained in the plan above quoted might be adequate I do not examine. Some of them are unquestionably founded on sound political principles, and all of them are framed with singular ingenuity and precision.

PUBLIUS

FEDERALIST No. 50 Periodical Appeals to the People Considered

**From the New York Packet.
Tuesday, February 5, 1788
Madison**

To the People of the State of New York:

IT MAY be contended, perhaps, that instead of occasional appeals to the people, which are liable to the objections urged against them, periodical appeals are the proper and adequate means of preventing and correcting infractions of the constitution.

It will be attended to that in the examination of these expedients I confine myself to their aptitude for enforcing the Constitution, by keeping the several departments of power within their due bounds without particularly considering them as provisions for altering the Constitution itself. In the first view, appeals to the people at fixed periods appear to be nearly as ineligible as appeals on particular occasions as they emerge. If the periods be separated by short intervals, the measures to be reviewed and rectified will have been of recent date, and will be connected with all the circumstances which tend to vitiate and pervert the result of occasional revisions. If the periods be distant from each other, the same remark will be applicable to all recent measures; and in proportion as the remoteness of the others may favor a dispassionate review of them, this advantage is inseparable from inconveniences which seem to counterbalance it. In

the first place, a distant prospect of public censure would be a very feeble restraint on power from those excesses to which it might be urged by the force of present motives. Is it to be imagined that a legislative assembly, consisting of a hundred or two hundred members, eagerly bent on some favorite object, and breaking through the restraints of the Constitution in pursuit of it, would be arrested in their career by considerations drawn from a censorial revision of their conduct at the future distance of ten, fifteen, or twenty years? In the next place, the abuses would often have completed their mischievous effects before the remedial provision would be applied. And in the last place, where this might not be the case, they would be of long standing, would have taken deep root, and would not easily be extirpated.

The scheme of revising the constitution, in order to correct recent breaches of it, as well as for other purposes, has been actually tried in one of the States. One of the objects of the Council of Censors which met in Pennsylvania in 1783 and 1784, was, as we have seen, to inquire, “whether the constitution had been violated, and whether the legislative and executive departments had encroached on each other.” This important and novel experiment in politics merits, in several points of view, very particular attention. In some of them it may, perhaps, as a single experiment, made under circumstances somewhat peculiar, be thought to be not absolutely conclusive. But as applied to the case under consideration it involves some facts which I venture to remark, as a complete and satisfactory illustration of the reasoning which I have employed.

First. It appears, from the names of the gentlemen who composed the council that some, at least, of its most active and leading members had also been active and leading characters in the parties which preexisted in the State.

Second. It appears that the same active and leading members of

the council had been active and influential members of the legislative and executive branches within the period to be reviewed; and even patrons or opponents of the very measures to be thus brought to the test of the constitution. Two of the members had been vice-presidents of the State, and several others, members of the executive council within the seven preceding years. One of them had been speaker, and a number of others distinguished members of the legislative assembly within the same period.

Third. Every page of their proceedings witnesses the effect of all these circumstances on the temper of their deliberations. Throughout the continuance of the council, it was split into two fixed and violent parties. The fact is acknowledged and lamented by themselves. Had this not been the case, the face of their proceedings exhibits a proof equally satisfactory. In all questions, however unimportant in themselves, or unconnected with each other, the same names stand invariably contrasted on the opposite columns. Every unbiased observer may infer, without danger of mistake, and at the same time without meaning to reflect on either party, or any individuals of either party, that, unfortunately, passion, not reason, must have presided over their decisions. When men exercise their reason coolly and freely on a variety of distinct questions, they inevitably fall into different opinions on some of them. When they are governed by a common passion, their opinions, if they are so to be called, will be the same.

Fourth. It is at least problematical whether the decisions of this body do not, in several instances, misconstrue the limits prescribed for the legislative and executive departments, instead of reducing and limiting them within their constitutional places.

Fifth. I have never understood that the decisions of the council on constitutional questions, whether rightly or erroneously formed, have had any effect in varying the practice founded on legislative constructions. It even appears, if I mistake not, that in one instance

the contemporary legislature denied the constructions of the council, and actually prevailed in the contest.

This censorial body, therefore, proves at the same time, by its researches, the existence of the disease, and by its example, the inefficacy of the remedy.

This conclusion cannot be invalidated by alleging that the State in which the experiment was made was at that crisis, and had been for a long time before, violently heated and distracted by the rage of party. Is it to be presumed that at any future septennial epoch the same State will be free from parties? Is it to be presumed that any other State, at the same or any other given period, will be exempt from them? Such an event ought to be neither presumed nor desired; because an extinction of parties necessarily implies either a universal alarm for the public safety, or an absolute extinction of liberty.

Were the precaution taken of excluding from the assemblies elected by the people to revise the preceding administration of the government, all persons who should have been concerned with the government within the given period, the difficulties would not be obviated. The task would probably devolve on men, who, with inferior capacities, would in other respects be little better qualified. Although they might not have been personally concerned in the administration, and therefore not immediately agents in the measures to be examined, they would probably have been involved in the parties connected with these measures and have been elected under their auspices.

PUBLIUS

FEDERALIST No. 51 The Structure of the Government Must Furnish the Proper Checks and Balances Between the Different Departments

**For the Independent Journal.
Wednesday, February 6, 1788
Madison**

To the People of the State of New York:

TO WHAT expedient, then, shall we finally resort, for maintaining in practice the necessary partition of power among the several departments as laid down in the Constitution? The only answer that can be given is that as all these exterior provisions are found to be inadequate the defect must be supplied, by so contriving the interior structure of the government as that its several constituent parts may, by their mutual relations, be the means of keeping each other in their proper places. Without presuming to undertake a full development of this important idea I will hazard a few general observations which may perhaps place it in a clearer light, and enable us to form a more correct judgment of the principles and structure of the government planned by the convention.

In order to lay a due foundation for that separate and distinct exercise of the different powers of government, which to a certain extent is admitted on all hands to be essential to the preservation of

liberty, it is evident that each department should have a will of its own; and consequently should be so constituted that the members of each should have as little agency as possible in the appointment of the members of the others. Were this principle rigorously adhered to, it would require that all the appointments for the supreme executive, legislative, and judiciary magistracies should be drawn from the same fountain of authority, the people, through channels having no communication whatever with one another. Perhaps such a plan of constructing the several departments would be less difficult in practice than it may in contemplation appear. Some difficulties, however, and some additional expense would attend the execution of it. Some deviations, therefore, from the principle must be admitted. In the constitution of the judiciary department in particular, it might be inexpedient to insist rigorously on the principle: first, because peculiar qualifications being essential in the members, the primary consideration ought to be to select that mode of choice which best secures these qualifications; second, because the permanent tenure by which the appointments are held in that department must soon destroy all sense of dependence on the authority conferring them.

It is equally evident that the members of each department should be as little dependent as possible on those of the others for the emoluments annexed to their offices. Were the executive magistrate, or the judges, not independent of the legislature in this particular, their independence in every other would be merely nominal.

But the great security against a gradual concentration of the several powers in the same department consists in giving to those who administer each department the necessary constitutional means and personal motives to resist encroachments of the others. The provision for defense must in this, as in all other cases, be made commensurate to the danger of attack. Ambition must be made to counteract ambition. The interest of the man must be connected with the

constitutional rights of the place. It may be a reflection on human nature that such devices should be necessary to control the abuses of government. But what is government itself, but the greatest of all reflections on human nature? If men were angels, no government would be necessary. If angels were to govern men, neither external nor internal controls on government would be necessary. In framing a government which is to be administered by men over men, the great difficulty lies in this: you must first enable the government to control the governed; and in the next place oblige it to control itself. A dependence on the people is, no doubt, the primary control on the government; but experience has taught mankind the necessity of auxiliary precautions.

This policy of supplying, by opposite and rival interests, the defect of better motives, might be traced through the whole system of human affairs, private as well as public. We see it particularly displayed in all the subordinate distributions of power, where the constant aim is to divide and arrange the several offices in such a manner as that each may be a check on the other—that the private interest of every individual may be a sentinel over the public rights. These inventions of prudence cannot be less requisite in the distribution of the supreme powers of the State.

But it is not possible to give to each department an equal power of self-defense. In republican government, the legislative authority necessarily predominates. The remedy for this inconveniency is to divide the legislature into different branches; and to render them, by different modes of election and different principles of action, as little connected with each other as the nature of their common functions and their common dependence on the society will admit. It may even be necessary to guard against dangerous encroachments by still further precautions. As the weight of the legislative authority requires that it should be thus divided, the weakness of the executive may

require, on the other hand, that it should be fortified. An absolute negative on the legislature appears, at first view, to be the natural defense with which the executive magistrate should be armed. But perhaps it would be neither altogether safe nor alone sufficient. On ordinary occasions it might not be exerted with the requisite firmness, and on extraordinary occasions it might be perfidiously abused. May not this defect of an absolute negative be supplied by some qualified connection between this weaker department and the weaker branch of the stronger department, by which the latter may be led to support the constitutional rights of the former, without being too much detached from the rights of its own department?

If the principles on which these observations are founded be just, as I persuade myself they are, and they be applied as a criterion to the several State constitutions, and to the federal Constitution it will be found that if the latter does not perfectly correspond with them, the former are infinitely less able to bear such a test.

There are, moreover, two considerations particularly applicable to the federal system of America, which place that system in a very interesting point of view.

First. In a single republic, all the power surrendered by the people is submitted to the administration of a single government; and the usurpations are guarded against by a division of the government into distinct and separate departments. In the compound republic of America, the power surrendered by the people is first divided between two distinct governments, and then the portion allotted to each subdivided among distinct and separate departments. Hence a double security arises to the rights of the people. The different governments will control each other, at the same time that each will be controlled by itself.

Second. It is of great importance in a republic not only to guard

the society against the oppression of its rulers, but to guard one part of the society against the injustice of the other part.^[1] Different interests necessarily exist in different classes of citizens. If a majority be united by a common interest, the rights of the minority will be insecure. There are but two methods of providing against this evil: the one by creating a will in the community independent of the majority—that is, of the society itself; the other, by comprehending in the society so many separate descriptions of citizens as will render an unjust combination of a majority of the whole very improbable, if not impracticable. The first method prevails in all governments possessing an hereditary or self-appointed authority. This, at best, is but a precarious security; because a power independent of the society may as well espouse the unjust views of the major as the rightful interests of the minor party, and may possibly be turned against both parties. The second method will be exemplified in the federal republic of the United States. Whilst all authority in it will be derived from and dependent on the society, the society itself will be broken into so many parts, interests and classes of citizens, that the rights of individuals, or of the minority, will be in little danger from interested combinations of the majority. In a free government the security for civil rights must be the same as that for religious rights. It consists in the one case in the multiplicity of interests, and in the other in the multiplicity of sects. The degree of security in both cases will depend on the number of interests and sects; and this may be presumed to depend on the extent of country and number of people comprehended under the same government. This view of the subject must particularly recommend a proper federal system to all the sincere and considerate friends of republican government, since it shows that in exact proportion as the territory of the Union may be formed into more circumscribed Confederacies, or States oppressive combinations of a majority will be facilitated: the best security, under the republican forms, for the rights of every class of citizens, will be diminished; and consequently the stability and independence of some member of the

government, the only other security, must be proportionately increased. Justice is the end of government. It is the end of civil society. It ever has been and ever will be pursued until it be obtained, or until liberty be lost in the pursuit. In a society under the forms of which the stronger faction can readily unite and oppress the weaker, anarchy may as truly be said to reign as in a state of nature, where the weaker individual is not secured against the violence of the stronger; and as, in the latter state, even the stronger individuals are prompted, by the uncertainty of their condition, to submit to a government which may protect the weak as well as themselves; so, in the former state, will the more powerful factions or parties be gradually induced, by a like motive, to wish for a government which will protect all parties, the weaker as well as the more powerful. It can be little doubted that if the State of Rhode Island was separated from the Confederacy and left to itself, the insecurity of rights under the popular form of government within such narrow limits would be displayed by such reiterated oppressions of factious majorities that some power altogether independent of the people would soon be called for by the voice of the very factions whose misrule had proved the necessity of it. In the extended republic of the United States, and among the great variety of interests, parties, and sects which it embraces, a coalition of a majority of the whole society could seldom take place on any other principles than those of justice and the general good; whilst there being thus less danger to a minor from the will of a major party, there must be less pretext, also, to provide for the security of the former, by introducing into the government a will not dependent on the latter, or, in other words, a will independent of the society itself. It is no less certain than it is important, notwithstanding the contrary opinions which have been entertained, that the larger the society, provided it lie within a practicable sphere, the more duly capable it will be of self-government. And happily for the republican cause, the practicable sphere may be carried to a very great extent by a judicious modification and mixture of the federal

principle.

FEDERALIST No. 52 The House of Representatives

From the New York Packet.
Friday, February 8, 1788
Madison

To the People of the State of New York:

FROM the more general inquiries pursued in the four last papers, I pass on to a more particular examination of the several parts of the government. I shall begin with the House of Representatives.

The first view to be taken of this part of the government relates to the qualifications of the electors and the elected. Those of the former are to be the same with those of the electors of the most numerous branch of the State legislatures. The definition of the right of suffrage is very justly regarded as a fundamental article of republican government. It was incumbent on the convention, therefore, to define and establish this right in the Constitution. To have left it open for the occasional regulation of the Congress would have been improper for the reason just mentioned. To have submitted it to the legislative discretion of the States would have been improper for the same reason; and for the additional reason that it would have rendered too dependent on the State governments that branch of the federal government which ought to be dependent on the people alone. To have reduced the different qualifications in the different States to one uniform rule would probably have been as dissatisfactory to some of the States as it would have been difficult to the convention. The

provision made by the convention appears, therefore, to be the best that lay within their option. It must be satisfactory to every State, because it is conformable to the standard already established, or which may be established, by the State itself. It will be safe to the United States because, being fixed by the State constitutions, it is not alterable by the State governments, and it cannot be feared that the people of the States will alter this part of their constitutions in such a manner as to abridge the rights secured to them by the federal Constitution.

The qualifications of the elected, being less carefully and properly defined by the State constitutions, and being at the same time more susceptible of uniformity, have been very properly considered and regulated by the convention. A representative of the United States must be of the age of twenty-five years; must have been seven years a citizen of the United States; must, at the time of his election, be an inhabitant of the State he is to represent; and, during the time of his service, must be in no office under the United States. Under these reasonable limitations, the door of this part of the federal government is open to merit of every description, whether native or adoptive, whether young or old, and without regard to poverty or wealth, or to any particular profession of religious faith.

The term for which the representatives are to be elected falls under a second view which may be taken of this branch. In order to decide on the propriety of this article, two questions must be considered: first, whether biennial elections will, in this case, be safe; second, whether they be necessary or useful.

First. As it is essential to liberty that the government in general should have a common interest with the people, so it is particularly essential that the branch of it under consideration should have an immediate dependence on, and an intimate sympathy with, the people. Frequent elections are unquestionably the only policy by

which this dependence and sympathy can be effectually secured. But what particular degree of frequency may be absolutely necessary for the purpose does not appear to be susceptible of any precise calculation, and must depend on a variety of circumstances with which it may be connected. Let us consult experience, the guide that ought always to be followed whenever it can be found.

The scheme of representation as a substitute for a meeting of the citizens in person being at most but very imperfectly known to ancient polity, it is in more modern times only that we are to expect instructive examples. And even here, in order to avoid a research too vague and diffusive, it will be proper to confine ourselves to the few examples which are best known, and which bear the greatest analogy to our particular case. The first to which this character ought to be applied is the House of Commons in Great Britain. The history of this branch of the English Constitution, anterior to the date of Magna Carta, is too obscure to yield instruction. The very existence of it has been made a question among political antiquaries. The earliest records of subsequent date prove that parliaments were to sit only every year; not that they were to be elected every year. And even these annual sessions were left so much at the discretion of the monarch, that, under various pretexts, very long and dangerous intermissions were often contrived by royal ambition. To remedy this grievance, it was provided by a statute in the reign of Charles II that the intermissions should not be protracted beyond a period of three years. On the accession of William III, when a revolution took place in the government, the subject was still more seriously resumed, and it was declared to be among the fundamental rights of the people that parliaments ought to be held frequently. By another statute, which passed a few years later in the same reign, the term “frequently,” which had alluded to the triennial period settled in the time of Charles II, is reduced to a precise meaning, it being expressly enacted that a new parliament shall be called within three years after the termination of

the former. The last change, from three to seven years, is well known to have been introduced pretty early in the present century, under an alarm for the Hanoverian succession. From these facts it appears that the greatest frequency of elections which has been deemed necessary in that kingdom for binding the representatives to their constituents does not exceed a triennial return of them. And if we may argue from the degree of liberty retained even under septennial elections, and all the other vicious ingredients in the parliamentary constitution, we cannot doubt that a reduction of the period from seven to three years, with the other necessary reforms, would so far extend the influence of the people over their representatives as to satisfy us that biennial elections, under the federal system, cannot possibly be dangerous to the requisite dependence of the House of Representatives on their constituents.

《大宪章》，是英国最初于1215年订立的拉丁文政治性授权文件。在随后的版本中，大部分对英国王室绝对权力直接挑战的条目被删除；1225年首次成为法律；1297年的英文版本至今仍然是英格兰、威尔士的有效法律。

威廉三世（1650—1702），即苏格兰的威廉二世、奥兰治的威廉亲王三世，曾任奥兰治亲王、荷兰执政、英国国王。

Elections in Ireland, till of late, were regulated entirely by the discretion of the crown, and were seldom repeated, except on the accession of a new prince, or some other contingent event. The parliament which commenced with George II was continued throughout his whole reign, a period of about thirty-five years. The only dependence of the representatives on the people consisted in the right of the latter to supply occasional vacancies by the election of new members, and in the chance of some event which might produce a general new election. The ability also of the Irish parliament to maintain the rights of their constituents, so far as the disposition might exist, was extremely shackled by the control of the crown over

the subjects of their deliberation. Of late these shackles, if I mistake not, have been broken; and octennial parliaments have besides been established. What effect may be produced by this partial reform must be left to further experience. The example of Ireland, from this view of it, can throw but little light on the subject. As far as we can draw any conclusion from it, it must be that if the people of that country have been able under all these disadvantages to retain any liberty whatever, the advantage of biennial elections would secure to them every degree of liberty, which might depend on a due connection between their representatives and themselves.

Let us bring our inquiries nearer home. The example of these States, when British colonies, claims particular attention, at the same time that it is so well known as to require little to be said on it. The principle of representation, in one branch of the legislature at least, was established in all of them. But the periods of election were different. They varied from one to seven years. Have we any reason to infer, from the spirit and conduct of the representatives of the people, prior to the Revolution, that biennial elections would have been dangerous to the public liberties? The spirit which everywhere displayed itself at the commencement of the struggle, and which vanquished the obstacles to independence, is the best of proofs that a sufficient portion of liberty had been everywhere enjoyed to inspire both a sense of its worth and a zeal for its proper enlargement. This remark holds good as well with regard to the then colonies whose elections were least frequent, as to those whose elections were most frequent. Virginia was the colony which stood first in resisting the parliamentary usurpations of Great Britain; it was the first also in espousing, by public act, the resolution of independence. In Virginia, nevertheless, if I have not been misinformed, elections under the former government were septennial. This particular example is brought into view, not as a proof of any peculiar merit, for the priority in those instances was probably accidental; and still less of any

advantage in septennial elections, for when compared with a greater frequency they are inadmissible; but merely as a proof, and I conceive it to be a very substantial proof, that the liberties of the people can be in no danger from biennial elections.

The conclusion resulting from these examples will be not a little strengthened by recollecting three circumstances. The first is, that the federal legislature will possess a part only of that supreme legislative authority which is vested completely in the British Parliament; and which, with a few exceptions, was exercised by the colonial assemblies and the Irish legislature. It is a received and well-founded maxim that where no other circumstances affect the case, the greater the power is, the shorter ought to be its duration; and, conversely, the smaller the power, the more safely may its duration be protracted. In the second place, it has, on another occasion, been shown that the federal legislature will not only be restrained by its dependence on its people, as other legislative bodies are, but that it will be, moreover, watched and controlled by the several collateral legislatures, which other legislative bodies are not. And in the third place, no comparison can be made between the means that will be possessed by the more permanent branches of the federal government for seducing, if they should be disposed to seduce, the House of Representatives from their duty to the people, and the means of influence over the popular branch possessed by the other branches of the government above cited. With less power, therefore, to abuse, the federal representatives can be less tempted on one side, and will be doubly watched on the other.

乔治二世（1683—1760），英国国王，汉诺威选帝侯。乔治一世与索菲亚·多鲁西亚的独生子，继位前为威尔士亲王。

FEDERALIST No. 53 The Same Subject Continued (The House of Representatives)

**For the Independent Journal.
Saturday, February 9, 1788
Madison**

To the People of the State of New York:

I SHALL here, perhaps, be reminded of a current observation, “that where annual elections end, tyranny begins.” If it be true, as has often been remarked, that sayings which become proverbial are generally founded in reason, it is not less true, that when once established, they are often applied to cases to which the reason of them does not extend. I need not look for a proof beyond the case before us. What is the reason on which this proverbial observation is founded? No man will subject himself to the ridicule of pretending that any natural connection subsists between the sun or the seasons, and the period within which human virtue can bear the temptations of power. Happily for mankind, liberty is not, in this respect, confined to any single point of time; but lies within extremes, which afford sufficient latitude for all the variations which may be required by the various situations and circumstances of civil society. The election of magistrates might be, if it were found expedient, as in some instances it actually has been, daily, weekly, or monthly, as well as annual; and if circumstances may require a deviation from the rule on one side, why not also on the other side? Turning our attention to the periods established among ourselves, for the election of the most

numerous branches of the State legislatures, we find them by no means coinciding any more in this instance, than in the elections of other civil magistrates. In Connecticut and Rhode Island, the periods are half-yearly. In the other States, South Carolina excepted, they are annual. In South Carolina they are biennial—as is proposed in the federal government. Here is a difference, as four to one, between the longest and shortest periods; and yet it would be not easy to show, that Connecticut or Rhode Island is better governed, or enjoys a greater share of rational liberty, than South Carolina; or that either the one or the other of these States is distinguished in these respects, and by these causes, from the States whose elections are different from both.

In searching for the grounds of this doctrine, I can discover but one, and that is wholly inapplicable to our case. The important distinction so well understood in America, between a Constitution established by the people and unalterable by the government, and a law established by the government and alterable by the government, seems to have been little understood and less observed in any other country. Wherever the supreme power of legislation has resided, has been supposed to reside also a full power to change the form of the government. Even in Great Britain, where the principles of political and civil liberty have been most discussed, and where we hear most of the rights of the Constitution, it is maintained that the authority of the Parliament is transcendent and uncontrollable, as well with regard to the Constitution, as the ordinary objects of legislative provision. They have accordingly, in several instances, actually changed, by legislative acts, some of the most fundamental articles of the government. They have in particular, on several occasions, changed the period of election; and, on the last occasion, not only introduced septennial in place of triennial elections, but by the same act, continued themselves in place four years beyond the term for which they were elected by the people. An attention to these dangerous practices has produced a

very natural alarm in the votaries of free government, of which frequency of elections is the cornerstone; and has led them to seek for some security to liberty, against the danger to which it is exposed. Where no Constitution, paramount to the government, either existed or could be obtained, no constitutional security, similar to that established in the United States, was to be attempted. Some other security, therefore, was to be sought for; and what better security would the case admit than that of selecting and appealing to some simple and familiar portion of time as a standard for measuring the danger of innovations, for fixing the national sentiment, and for uniting the patriotic exertions? The most simple and familiar portion of time applicable to the subject was that of a year; and hence the doctrine has been inculcated by a laudable zeal to erect some barrier against the gradual innovations of an unlimited government, that the advance towards tyranny was to be calculated by the distance of departure from the fixed point of annual elections. But what necessity can there be of applying this expedient to a government limited, as the federal government will be, by the authority of a paramount Constitution? Or who will pretend that the liberties of the people of America will not be more secure under biennial elections, unalterably fixed by such a Constitution, than those of any other nation would be, where elections were annual, or even more frequent, but subject to alterations by the ordinary power of the government?

The second question stated is whether biennial elections be necessary or useful. The propriety of answering this question in the affirmative will appear from several very obvious considerations.

No man can be a competent legislator who does not add to an upright intention and a sound judgment a certain degree of knowledge of the subjects on which he is to legislate. A part of this knowledge may be acquired by means of information which lie within the compass of men in private as well as public stations. Another part can

only be attained, or at least thoroughly attained, by actual experience in the station which requires the use of it. The period of service ought, therefore, in all such cases, to bear some proportion to the extent of practical knowledge requisite to the due performance of the service. The period of legislative service established in most of the States for the more numerous branch is, as we have seen, one year. The question then may be put into this simple form: does the period of two years bear no greater proportion to the knowledge requisite for federal legislation than one year does to the knowledge requisite for State legislation? The very statement of the question, in this form, suggests the answer that ought to be given to it.

In a single State, the requisite knowledge relates to the existing laws which are uniform throughout the State, and with which all the citizens are more or less conversant; and to the general affairs of the State, which lie within a small compass, are not very diversified, and occupy much of the attention and conversation of every class of people. The great theatre of the United States presents a very different scene. The laws are so far from being uniform that they vary in every State; whilst the public affairs of the Union are spread throughout a very extensive region, and are extremely diversified by the local affairs connected with them, and can with difficulty be correctly learnt in any other place than in the central councils to which a knowledge of them will be brought by the representatives of every part of the empire. Yet some knowledge of the affairs, and even of the laws, of all the States, ought to be possessed by the members from each of the States. How can foreign trade be properly regulated by uniform laws, without some acquaintance with the commerce, the ports, the usages, and the regulations of the different States? How can the trade between the different States be duly regulated, without some knowledge of their relative situations in these and other respects? How can taxes be judiciously imposed and effectually collected, if they be not accommodated to the different laws and local circumstances

relating to these objects in the different States? How can uniform regulations for the militia be duly provided, without a similar knowledge of many internal circumstances by which the States are distinguished from each other? These are the principal objects of federal legislation, and suggest most forcibly the extensive information which the representatives ought to acquire. The other interior objects will require a proportional degree of information with regard to them.

It is true that all these difficulties will, by degrees, be very much diminished. The most laborious task will be the proper inauguration of the government and the primeval formation of a federal code. Improvements on the first draughts will every year become both easier and fewer. Past transactions of the government will be a ready and accurate source of information to new members. The affairs of the Union will become more and more objects of curiosity and conversation among the citizens at large. And the increased intercourse among those of different States will contribute not a little to diffuse a mutual knowledge of their affairs, as this again will contribute to a general assimilation of their manners and laws. But with all these abatements, the business of federal legislation must continue so far to exceed, both in novelty and difficulty, the legislative business of a single State, as to justify the longer period of service assigned to those who are to transact it.

A branch of knowledge which belongs to the acquirements of a federal representative and which has not been mentioned is that of foreign affairs. In regulating our own commerce, he ought to be not only acquainted with the treaties between the United States and other nations, but also with the commercial policy and laws of other nations. He ought not to be altogether ignorant of the law of nations; for that, as far as it is a proper object of municipal legislation, is submitted to the federal government. And although the House of

Representatives is not immediately to participate in foreign negotiations and arrangements, yet from the necessary connection between the several branches of public affairs, those particular branches will frequently deserve attention in the ordinary course of legislation, and will sometimes demand particular legislative sanction and co-operation. Some portion of this knowledge may, no doubt, be acquired in a man's closet; but some of it also can only be derived from the public sources of information; and all of it will be acquired to best effect by a practical attention to the subject during the period of actual service in the legislature.

There are other considerations, of less importance, perhaps, but which are not unworthy of notice. The distance which many of the representatives will be obliged to travel, and the arrangements rendered necessary by that circumstance, might be much more serious objections with fit men to this service, if limited to a single year, than if extended to two years. No argument can be drawn on this subject from the case of the delegates to the existing Congress. They are elected annually, it is true; but their re-election is considered by the legislative assemblies almost as a matter of course. The election of the representatives by the people would not be governed by the same principle.

A few of the members, as happens in all such assemblies, will possess superior talents; will, by frequent reelections, become members of long standing; will be thoroughly masters of the public business, and perhaps not unwilling to avail themselves of those advantages. The greater the proportion of new members, and the less the information of the bulk of the members, the more apt will they be to fall into the snares that may be laid for them. This remark is no less applicable to the relation which will subsist between the House of Representatives and the Senate.

It is an inconvenience mingled with the advantages of our

frequent elections even in single States, where they are large, and hold but one legislative session in a year, that spurious elections cannot be investigated and annulled in time for the decision to have its due effect. If a return can be obtained, no matter by what unlawful means, the irregular member, who takes his seat of course, is sure of holding it a sufficient time to answer his purposes. Hence, a very pernicious encouragement is given to the use of unlawful means for obtaining irregular returns. Were elections for the federal legislature to be annual, this practice might become a very serious abuse, particularly in the more distant States. Each house is, as it necessarily must be, the judge of the elections, qualifications, and returns of its members; and whatever improvements may be suggested by experience, for simplifying and accelerating the process in disputed cases, so great a portion of a year would unavoidably elapse, before an illegitimate member could be dispossessed of his seat, that the prospect of such an event would be little check to unfair and illicit means of obtaining a seat.

All these considerations taken together warrant us in affirming that biennial elections will be as useful to the affairs of the public as we have seen that they will be safe to the liberty of the people.

PUBLIUS

FEDERALIST No. 54 The Apportionment of Members Among the States

**From the New York Packet.
Tuesday, February 12, 1788
Madison**

To the People of the State of New York:

THE next view which I shall take of the House of Representatives relates to the appointment of its members to the several States which is to be determined by the same rule with that of direct taxes. [\[1\]](#)

It is not contended that the number of people in each State ought not to be the standard for regulating the proportion of those who are to represent the people of each State. The establishment of the same rule for the appointment of taxes will probably be as little contested; though the rule itself, in this case, is by no means founded on the same principle. In the former case, the rule is understood to refer to the personal rights of the people, with which it has a natural and universal connection. In the latter, it has reference to the proportion of wealth of which it is in no case a precise measure, and in ordinary cases a very unfit one. But notwithstanding the imperfection of the rule as applied to the relative wealth and contributions of the States, it is evidently the least objectionable among the practicable rules, and had too recently obtained the general sanction of America, not to have found a ready preference with the convention.

All this is admitted, it will perhaps be said; but does it follow, from an admission of numbers for the measure of representation, or of slaves combined with free citizens as a ratio of taxation, that slaves ought to be included in the numerical rule of representation? Slaves are considered as property, not as persons. They ought therefore to be comprehended in estimates of taxation which are founded on property, and to be excluded from representation which is regulated by a census of persons. This is the objection, as I understand it, stated in its full force. I shall be equally candid in stating the reasoning which may be offered on the opposite side.

“We subscribe to the doctrine,” might one of our Southern brethren observe, “that representation relates more immediately to persons, and taxation more immediately to property, and we join in the application of this distinction to the case of our slaves. But we must deny the fact that slaves are considered merely as property, and in no respect whatever as persons. The true state of the case is that they partake of both these qualities: being considered by our laws, in some respects, as persons, and in other respects as property. In being compelled to labor, not for himself, but for a master; in being vendible by one master to another master; and in being subject at all times to be restrained in his liberty and chastised in his body, by the capricious will of another—the slave may appear to be degraded from the human rank, and classed with those irrational animals which fall under the legal denomination of property. In being protected, on the other hand, in his life and in his limbs, against the violence of all others, even the master of his labor and his liberty; and in being punishable himself for all violence committed against others—the slave is no less evidently regarded by the law as a member of the society, not as a part of the irrational creation; as a moral person, not as a mere article of property. The federal Constitution, therefore, decides with great propriety on the case of our slaves, when it views them in the mixed character of persons and of property. This is in fact their true

character. It is the character bestowed on them by the laws under which they live; and it will not be denied that these are the proper criterion; because it is only under the pretext that the laws have transformed the Negroes into subjects of property, that a place is disputed them in the computation of numbers; and it is admitted that if the laws were to restore the rights which have been taken away, the Negroes could no longer be refused an equal share of representation with the other inhabitants.

“This question may be placed in another light. It is agreed on all sides that numbers are the best scale of wealth and taxation, as they are the only proper scale of representation. Would the convention have been impartial or consistent, if they had rejected the slaves from the list of inhabitants, when the shares of representation were to be calculated, and inserted them on the lists when the tariff of contributions was to be adjusted? Could it be reasonably expected that the Southern States would concur in a system which considered their slaves in some degree as men when burdens were to be imposed, but refused to consider them in the same light when advantages were to be conferred? Might not some surprise also be expressed that those who reproach the Southern States with the barbarous policy of considering as property a part of their human brethren should themselves contend that the government to which all the States are to be parties ought to consider this unfortunate race more completely in the unnatural light of property than the very laws of which they complain?

“It may be replied, perhaps, that slaves are not included in the estimate of representatives in any of the States possessing them. They neither vote themselves nor increase the votes of their masters. Upon what principle, then, ought they to be taken into the federal estimate of representation? In rejecting them altogether, the Constitution would, in this respect, have followed the very laws which have been

appealed to as the proper guide.

“This objection is repelled by a single observation. It is a principle of the proposed Constitution, that as the aggregate number of representatives allotted to the several States is to be determined by a federal rule founded on the aggregate number of inhabitants, so the right of choosing this allotted number in each State is to be exercised by such part of the inhabitants as the State itself may designate. The qualifications on which the right of suffrage depend are not, perhaps, the same in any two States. In some of the States the difference is very material. In every State, a certain proportion of inhabitants are deprived of this right by the constitution of the State, who will be included in the census by which the federal Constitution apportions the representatives. In this point of view the Southern States might retort the complaint by insisting that the principle laid down by the convention required that no regard should be had to the policy of particular States towards their own inhabitants; and consequently, that the slaves, as inhabitants, should have been admitted into the census according to their full number, in like manner with other inhabitants, who, by the policy of other States, are not admitted to all the rights of citizens. A rigorous adherence, however, to this principle, is waived by those who would be gainers by it. All that they ask is that equal moderation be shown on the other side. Let the case of the slaves be considered, as it is in truth, a peculiar one. Let the compromising expedient of the Constitution be mutually adopted which regards them as inhabitants, but as debased by servitude below the equal level of free inhabitants, which regards the slave as divested of two fifths of the man.

“After all, may not another ground be taken on which this article of the Constitution will admit of a still more ready defense? We have hitherto proceeded on the idea that representation related to persons only, and not at all to property. But is it a just idea? Government is

instituted no less for protection of the property than of the persons of individuals. The one as well as the other, therefore, may be considered as represented by those who are charged with the government. Upon this principle it is that in several of the States, and particularly in the State of New York, one branch of the government is intended more especially to be the guardian of property, and is accordingly elected by that part of the society which is most interested in this object of government. In the federal Constitution, this policy does not prevail. The rights of property are committed into the same hands with the personal rights. Some attention ought, therefore, to be paid to property in the choice of those hands.

“For another reason, the votes allowed in the federal legislature to the people of each State ought to bear some proportion to the comparative wealth of the States. States have not, like individuals, an influence over each other, arising from superior advantages of fortune. If the law allows an opulent citizen but a single vote in the choice of his representative, the respect and consequence which he derives from his fortunate situation very frequently guide the votes of others to the objects of his choice; and through this imperceptible channel the rights of property are conveyed into the public representation. A State possesses no such influence over other States. It is not probable that the richest State in the Confederacy will ever influence the choice of a single representative in any other State. Nor will the representatives of the larger and richer States possess any other advantage in the federal legislature, over the representatives of other States, than what may result from their superior number alone. As far, therefore, as their superior wealth and weight may justly entitle them to any advantage, it ought to be secured to them by a superior share of representation. The new Constitution is, in this respect, materially different from the existing Confederation, as well as from that of the United Netherlands, and other similar confederacies. In each of the latter, the efficacy of the federal resolutions depends on the subsequent and voluntary

resolutions of the states composing the union. Hence the states, though possessing an equal vote in the public councils, have an unequal influence, corresponding with the unequal importance of these subsequent and voluntary resolutions. Under the proposed Constitution, the federal acts will take effect without the necessary intervention of the individual States. They will depend merely on the majority of votes in the federal legislature, and consequently each vote, whether proceeding from a larger or smaller State, or a State more or less wealthy or powerful, will have an equal weight and efficacy: in the same manner as the votes individually given in a State legislature, by the representatives of unequal counties or other districts, have each a precise equality of value and effect; or if there be any difference in the case, it proceeds from the difference in the personal character of the individual representative, rather than from any regard to the extent of the district from which he comes.”

Such is the reasoning which an advocate for the Southern interests might employ on this subject; and although it may appear to be a little strained in some points, yet, on the whole, I must confess that it fully reconciles me to the scale of representation which the convention have established.

In one respect, the establishment of a common measure for representation and taxation will have a very salutary effect. As the accuracy of the census to be obtained by the Congress will necessarily depend, in a considerable degree, on the disposition, if not on the co-operation of the States, it is of great importance that the States should feel as little bias as possible to swell or to reduce the amount of their numbers. Were their share of representation alone to be governed by this rule, they would have an interest in exaggerating their inhabitants. Were the rule to decide their share of taxation alone, a contrary temptation would prevail. By extending the rule to both objects, the States will have opposite interests which will control and

balance each other, and produce the requisite impartiality.

FEDERALIST No. 55 The Total Number of the House of Representatives

**For the Independent Journal.
Wednesday, February 13, 1788
Madison**

To the People of the State of New York:

THE number of which the House of Representatives is to consist forms another and a very interesting point of view under which this branch of the federal legislature may be contemplated. Scarce any article, indeed, in the whole Constitution seems to be rendered more worthy of attention by the weight of character and the apparent force of argument with which it has been assailed. The charges exhibited against it are, first, that so small a number of representatives will be an unsafe depositary of the public interests; secondly, that they will not possess a proper knowledge of the local circumstances of their numerous constituents; thirdly, that they will be taken from that class of citizens which will sympathize least with the feelings of the mass of the people, and be most likely to aim at a permanent elevation of the few on the depression of the many; fourthly, that defective as the number will be in the first instance, it will be more and more disproportionate, by the increase of the people, and the obstacles which will prevent a correspondent increase of the representatives.

In general it may be remarked on this subject that no political problem is less susceptible of a precise solution than that which

relates to the number most convenient for a representative legislature; nor is there any point on which the policy of the several States is more at variance, whether we compare their legislative assemblies directly with each other, or consider the proportions which they respectively bear to the number of their constituents. Passing over the difference between the smallest and largest States, as Delaware, whose most numerous branch consists of twenty-one representatives, and Massachusetts, where it amounts to between three and four hundred, a very considerable difference is observable among States nearly equal in population. The number of representatives in Pennsylvania is not more than one fifth of that in the State last mentioned. New York, whose population is to that of South Carolina as six to five, has little more than one third of the number of representatives. As great a disparity prevails between the States of Georgia and Delaware or Rhode Island. In Pennsylvania, the representatives do not bear a greater proportion to their constituents than of one for every four or five thousand. In Rhode Island, they bear a proportion of at least one for every thousand. And according to the constitution of Georgia, the proportion may be carried to one to every ten electors; and must unavoidably far exceed the proportion in any of the other States.

Another general remark to be made is that the ratio between the representatives and the people ought not to be the same where the latter are very numerous as where they are very few. Were the representatives in Virginia to be regulated by the standard in Rhode Island, they would, at this time, amount to between four and five hundred; and twenty or thirty years hence, to a thousand. On the other hand, the ratio of Pennsylvania, if applied to the State of Delaware, would reduce the representative assembly of the latter to seven or eight members. Nothing can be more fallacious than to found our political calculations on arithmetical principles. Sixty or seventy men may be more properly trusted with a given degree of power than six or seven. But it does not follow that six or seven hundred would be

proportionably a better depository. And if we carry on the supposition to six or seven thousand, the whole reasoning ought to be reversed. The truth is that in all cases a certain number at least seems to be necessary to secure the benefits of free consultation and discussion, and to guard against too easy a combination for improper purposes; as, on the other hand, the number ought at most to be kept within a certain limit, in order to avoid the confusion and intemperance of a multitude. In all very numerous assemblies, of whatever character composed, passion never fails to wrest the sceptre from reason. Had every Athenian citizen been a Socrates, every Athenian assembly would still have been a mob.

It is necessary also to recollect here the observations which were applied to the case of biennial elections. For the same reason that the limited powers of the Congress, and the control of the State legislatures, justify less frequent elections than the public safely might otherwise require, the members of the Congress need be less numerous than if they possessed the whole power of legislation, and were under no other than the ordinary restraints of other legislative bodies.

With these general ideas in our mind, let us weigh the objections which have been stated against the number of members proposed for the House of Representatives. It is said, in the first place, that so small a number cannot be safely trusted with so much power.

The number of which this branch of the legislature is to consist, at the outset of the government, will be sixty-five. Within three years a census is to be taken, when the number may be augmented to one for every thirty thousand inhabitants; and within every successive period of ten years the census is to be renewed, and augmentations may continue to be made under the above limitation. It will not be thought an extravagant conjecture that the first census will, at the rate of one for every thirty thousand, raise the number of representatives

to at least one hundred. Estimating the Negroes in the proportion of three fifths, it can scarcely be doubted that the population of the United States will by that time, if it does not already, amount to three millions. At the expiration of twenty-five years, according to the computed rate of increase, the number of representatives will amount to two hundred; and of fifty years, to four hundred. This is a number which, I presume, will put an end to all fears arising from the smallness of the body. I take for granted here what I shall, in answering the fourth objection, hereafter show, that the number of representatives will be augmented from time to time in the manner provided by the Constitution. On a contrary supposition, I should admit the objection to have very great weight indeed.

The true question to be decided then is, whether the smallness of the number, as a temporary regulation, be dangerous to the public liberty? Whether sixty-five members for a few years, and a hundred or two hundred for a few more, be a safe depositary for a limited and well-guarded power of legislating for the United States? I must own that I could not give a negative answer to this question, without first obliterating every impression which I have received with regard to the present genius of the people of America, the spirit which actuates the State legislatures, and the principles which are incorporated with the political character of every class of citizens I am unable to conceive that the people of America, in their present temper, or under any circumstances which can speedily happen, will choose, and every second year repeat the choice of, sixty-five or a hundred men who would be disposed to form and pursue a scheme of tyranny or treachery. I am unable to conceive that the State legislatures, which must feel so many motives to watch, and which possess so many means of counteracting, the federal legislature, would fail either to detect or to defeat a conspiracy of the latter against the liberties of their common constituents. I am equally unable to conceive that there are at this time, or can be in any short time, in the United States, any

sixty-five or a hundred men capable of recommending themselves to the choice of the people at large, who would either desire or dare, within the short space of two years, to betray the solemn trust committed to them. What change of circumstances, time, and a fuller population of our country may produce, requires a prophetic spirit to declare, which makes no part of my pretensions. But judging from the circumstances now before us, and from the probable state of them within a moderate period of time, I must pronounce that the liberties of America cannot be unsafe in the number of hands proposed by the federal Constitution.

From what quarter can the danger proceed? Are we afraid of foreign gold? If foreign gold could so easily corrupt our federal rulers and enable them to ensnare and betray their constituents, how has it happened that we are at this time a free and independent nation? The Congress which conducted us through the Revolution was a less numerous body than their successors will be; they were not chosen by, nor responsible to, their fellowcitizens at large; though appointed from year to year, and recallable at pleasure, they were generally continued for three years, and prior to the ratification of the federal articles, for a still longer term. They held their consultations always under the veil of secrecy; they had the sole transaction of our affairs with foreign nations; through the whole course of the war they had the fate of their country more in their hands than it is to be hoped will ever be the case with our future representatives; and from the greatness of the prize at stake, and the eagerness of the party which lost it, it may well be supposed that the use of other means than force would not have been scrupled. Yet we know by happy experience that the public trust was not betrayed; nor has the purity of our public councils in this particular ever suffered, even from the whispers of calumny.

Is the danger apprehended from the other branches of the federal

government? But where are the means to be found by the President, or the Senate, or both? Their emoluments of office, it is to be presumed, will not, and without a previous corruption of the House of Representatives cannot, more than suffice for very different purposes; their private fortunes, as they must all be American citizens, cannot possibly be sources of danger. The only means, then, which they can possess, will be in the dispensation of appointments. Is it here that suspicion rests her charge? Sometimes we are told that this fund of corruption is to be exhausted by the President in subduing the virtue of the Senate. Now, the fidelity of the other House is to be the victim. The improbability of such a mercenary and perfidious combination of the several members of government, standing on as different foundations as republican principles will well admit, and at the same time accountable to the society over which they are placed, ought alone to quiet this apprehension. But, fortunately, the Constitution has provided a still further safeguard. The members of the Congress are rendered ineligible to any civil offices that may be created, or of which the emoluments may be increased, during the term of their election. No offices therefore can be dealt out to the existing members but such as may become vacant by ordinary casualties: and to suppose that these would be sufficient to purchase the guardians of the people, selected by the people themselves, is to renounce every rule by which events ought to be calculated, and to substitute an indiscriminate and unbounded jealousy, with which all reasoning must be vain. The sincere friends of liberty, who give themselves up to the extravagancies of this passion, are not aware of the injury they do their own cause. As there is a degree of depravity in mankind which requires a certain degree of circumspection and distrust, so there are other qualities in human nature which justify a certain portion of esteem and confidence. Republican government presupposes the existence of these qualities in a higher degree than any other form. Were the pictures which have been drawn by the political jealousy of some among us faithful likenesses of the human character, the

inference would be that there is not sufficient virtue among men for self-government; and that nothing less than the chains of despotism can restrain them from destroying and devouring one another.

PUBLIUS

FEDERALIST No. 56 The Same Subject Continued (The Total Number of the House of Representatives)

**For the Independent Journal.
Saturday, February 16, 1788
Madison**

To the People of the State of New York:

THE second charge against the House of Representatives is that it will be too small to possess a due knowledge of the interests of its constituents.

As this objection evidently proceeds from a comparison of the proposed number of representatives with the great extent of the United States, the number of their inhabitants, and the diversity of their interests, without taking into view at the same time the circumstances which will distinguish the Congress from other legislative bodies, the best answer that can be given to it will be a brief explanation of these peculiarities.

It is a sound and important principle that the representative ought to be acquainted with the interests and circumstances of his constituents. But this principle can extend no further than to those circumstances and interests to which the authority and care of the representative relate. An ignorance of a variety of minute and particular objects which do not lie within the compass of legislation is

consistent with every attribute necessary to a due performance of the legislative trust. In determining the extent of information required in the exercise of a particular authority, recourse then must be had to the objects within the purview of that authority.

What are to be the objects of federal legislation? Those which are of most importance, and which seem most to require local knowledge, are commerce, taxation, and the militia.

A proper regulation of commerce requires much information, as has been elsewhere remarked; but as far as this information relates to the laws and local situation of each individual State, a very few representatives would be very sufficient vehicles of it to the federal councils.

Taxation will consist, in a great measure, of duties which will be involved in the regulation of commerce. So far the preceding remark is applicable to this object. As far as it may consist of internal collections, a more diffusive knowledge of the circumstances of the State may be necessary. But will not this also be possessed in sufficient degree by a very few intelligent men, diffusively elected within the State? Divide the largest State into ten or twelve districts, and it will be found that there will be no peculiar local interests in either, which will not be within the knowledge of the representative of the district. Besides this source of information, the laws of the State, framed by representatives from every part of it, will be almost of themselves a sufficient guide. In every State there have been made, and must continue to be made, regulations on this subject which will, in many cases, leave little more to be done by the federal legislature than to review the different laws and reduce them in one general act. A skillful individual in his closet, with all the local codes before him, might compile a law on some subjects of taxation for the whole union, without any aid from oral information, and it may be expected that whenever internal taxes may be necessary, and particularly in cases

requiring uniformity throughout the States, the more simple objects will be preferred. To be fully sensible of the facility which will be given to this branch of federal legislation by the assistance of the State codes, we need only suppose for a moment that this or any other State were divided into a number of parts, each having and exercising within itself a power of local legislation. Is it not evident that a degree of local information and preparatory labor would be found in the several volumes of their proceedings, which would very much shorten the labors of the general legislature, and render a much smaller number of members sufficient for it? The federal councils will derive great advantage from another circumstance. The representatives of each State will not only bring with them a considerable knowledge of its laws, and a local knowledge of their respective districts, but will probably in all cases have been members, and may even at the very time be members, of the State legislature, where all the local information and interests of the State are assembled, and from whence they may easily be conveyed by a very few hands into the legislature of the United States.

With regard to the regulation of the militia, there are scarcely any circumstances in reference to which local knowledge can be said to be necessary. The general face of the country, whether mountainous or level, most fit for the operations of infantry or cavalry, is almost the only consideration of this nature that can occur. The art of war teaches general principles of organization, movement, and discipline, which apply universally.

The attentive reader will discern that the reasoning here used to prove the sufficiency of a moderate number of representatives does not in any respect contradict what was urged on another occasion with regard to the extensive information which the representatives ought to possess, and the time that might be necessary for acquiring it. This information, so far as it may relate to local objects, is rendered

necessary and difficult, not by a difference of laws and local circumstances within a single State, but of those among different States. Taking each State by itself, its laws are the same, and its interests but little diversified. A few men, therefore, will possess all the knowledge requisite for a proper representation of them. Were the interests and affairs of each individual State perfectly simple and uniform, a knowledge of them in one part would involve a knowledge of them in every other, and the whole State might be competently represented by a single member taken from any part of it. On a comparison of the different States together, we find a great dissimilarity in their laws, and in many other circumstances connected with the objects of federal legislation, with all of which the federal representatives ought to have some acquaintance. Whilst a few representatives, therefore, from each State, may bring with them a due knowledge of their own State, every representative will have much information to acquire concerning all the other States. The changes of time, as was formerly remarked, on the comparative situation of the different States, will have an assimilating effect. The effect of time on the internal affairs of the States, taken singly, will be just the contrary. At present some of the States are little more than a society of husbandmen. Few of them have made much progress in those branches of industry which give a variety and complexity to the affairs of a nation. These, however, will in all of them be the fruits of a more advanced population, and will require, on the part of each State, a fuller representation. The foresight of the convention has accordingly taken care that the progress of population may be accompanied with a proper increase of the representative branch of the government.

The experience of Great Britain, which presents to mankind so many political lessons, both of the monitory and exemplary kind, and which has been frequently consulted in the course of these inquiries, corroborates the result of the reflections which we have just made.

The number of inhabitants in the two kingdoms of England and Scotland cannot be stated at less than eight millions. The representatives of these eight millions in the House of Commons amount to five hundred and fifty-eight. Of this number, one ninth are elected by three hundred and sixty-four persons, and one half, by five thousand seven hundred and twenty-three persons.^[1] It cannot be supposed that the half thus elected, and who do not even reside among the people at large, can add anything either to the security of the people against the government, or to the knowledge of their circumstances and interests in the legislative councils. On the contrary, it is notorious that they are more frequently the representatives and instruments of the executive magistrate than the guardians and advocates of the popular rights. They might therefore, with great propriety, be considered as something more than a mere deduction from the real representatives of the nation. We will, however, consider them in this light alone, and will not extend the deduction to a considerable number of others who do not reside among their constituents, are very faintly connected with them, and have very little particular knowledge of their affairs. With all these concessions, two hundred and seventy-nine persons only will be the depository of the safety, interest, and happiness of eight millions—that is to say, there will be one representative only to maintain the rights and explain the situation of twenty-eight thousand six hundred and seventy constituents, in an assembly exposed to the whole force of executive influence, and extending its authority to every object of legislation within a nation whose affairs are in the highest degree diversified and complicated. Yet it is very certain, not only that a valuable portion of freedom has been preserved under all these circumstances, but that the defects in the British code are chargeable, in a very small proportion, on the ignorance of the legislature concerning the circumstances of the people. Allowing to this case the weight which is due to it, and comparing it with that of the House of Representatives as above explained, it seems to give the fullest

assurance that a representative for every thirty thousand inhabitants will render the latter both a safe and competent guardian of the interests which will be confided to it.

FEDERALIST No. 57 The Alleged Tendency of the New Plan to Elevate the Few at the Expense of the Many Considered in Connection with Representation

**From the New York Packet.
Tuesday, February 19, 1788
Madison**

To the People of the State of New York:

THE third charge against the House of Representatives is that it will be taken from that class of citizens which will have least sympathy with the mass of the people, and be most likely to aim at an ambitious sacrifice of the many to the aggrandizement of the few.

Of all the objections which have been framed against the federal Constitution, this is perhaps the most extraordinary. Whilst the objection itself is levelled against a pretended oligarchy, the principle of it strikes at the very root of republican government.

The aim of every political constitution is, or ought to be, first to obtain for rulers men who possess most wisdom to discern, and most virtue to pursue, the common good of the society; and in the next place, to take the most effectual precautions for keeping them virtuous whilst they continue to hold their public trust. The elective mode of

obtaining rulers is the characteristic policy of republican government. The means relied on in this form of government for preventing their degeneracy are numerous and various. The most effectual one is such a limitation of the term of appointments as will maintain a proper responsibility to the people.

Let me now ask what circumstance there is in the constitution of the House of Representatives that violates the principles of republican government, or favors the elevation of the few on the ruins of the many? Let me ask whether every circumstance is not, on the contrary, strictly conformable to these principles, and scrupulously impartial to the rights and pretensions of every class and description of citizens?

Who are to be the electors of the federal representatives? Not the rich, more than the poor; not the learned, more than the ignorant; not the haughty heirs of distinguished names, more than the humble sons of obscure and unpropitious fortune. The electors are to be the great body of the people of the United States. They are to be the same who exercise the right in every State of electing the corresponding branch of the legislature of the State.

Who are to be the objects of popular choice? Every citizen whose merit may recommend him to the esteem and confidence of his country. No qualification of wealth, of birth, of religious faith, or of civil profession is permitted to fetter the judgement or disappoint the inclination of the people.

If we consider the situation of the men on whom the free suffrages of their fellow-citizens may confer the representative trust, we shall find it involving every security which can be devised or desired for their fidelity to their constituents.

In the first place, as they will have been distinguished by the preference of their fellow-citizens, we are to presume that in general they will be somewhat distinguished also by those qualities which

entitle them to it, and which promise a sincere and scrupulous regard to the nature of their engagements.

In the second place, they will enter into the public service under circumstances which cannot fail to produce a temporary affection at least to their constituents. There is in every breast a sensibility to marks of honor, of favor, of esteem, and of confidence, which, apart from all considerations of interest, is some pledge for grateful and benevolent returns. Ingratitude is a common topic of declamation against human nature; and it must be confessed that instances of it are but too frequent and flagrant, both in public and in private life. But the universal and extreme indignation which it inspires is itself a proof of the energy and prevalence of the contrary sentiment.

In the third place, those ties which bind the representative to his constituents are strengthened by motives of a more selfish nature. His pride and vanity attach him to a form of government which favors his pretensions and gives him a share in its honors and distinctions. Whatever hopes or projects might be entertained by a few aspiring characters, it must generally happen that a great proportion of the men deriving their advancement from their influence with the people would have more to hope from a preservation of the favor than from innovations in the government subversive of the authority of the people.

All these securities, however, would be found very insufficient without the restraint of frequent elections. Hence, in the fourth place, the House of Representatives is so constituted as to support in the members an habitual recollection of their dependence on the people. Before the sentiments impressed on their minds by the mode of their elevation can be effaced by the exercise of power, they will be compelled to anticipate the moment when their power is to cease, when their exercise of it is to be reviewed, and when they must descend to the level from which they were raised; there forever to

remain unless a faithful discharge of their trust shall have established their title to a renewal of it.

I will add, as a fifth circumstance in the situation of the House of Representatives, restraining them from oppressive measures, that they can make no law which will not have its full operation on themselves and their friends, as well as on the great mass of the society. This has always been deemed one of the strongest bonds by which human policy can connect the rulers and the people together. It creates between them that communion of interests and sympathy of sentiments of which few governments have furnished examples; but without which every government degenerates into tyranny. If it be asked, what is to restrain the House of Representatives from making legal discriminations in favor of themselves and a particular class of the society? I answer: the genius of the whole system; the nature of just and constitutional laws; and above all, the vigilant and manly spirit which actuates the people of America—a spirit which nourishes freedom, and in return is nourished by it.

If this spirit shall ever be so far debased as to tolerate a law not obligatory on the legislature, as well as on the people, the people will be prepared to tolerate anything but liberty.

Such will be the relation between the House of Representatives and their constituents. Duty, gratitude, interest, ambition itself, are the chords by which they will be bound to fidelity and sympathy with the great mass of the people. It is possible that these may all be insufficient to control the caprice and wickedness of men. But are they not all that government will admit, and that human prudence can devise? Are they not the genuine and the characteristic means by which republican government provides for the liberty and happiness of the people? Are they not the identical means on which every State government in the Union relies for the attainment of these important ends? What, then, are we to understand by the objection which this

paper has combated? What are we to say to the men who profess the most flaming zeal for republican government, yet boldly impeach the principle of it; who pretend to be champions for the right and the capacity of the people to choose their own rulers, yet maintain that they will prefer those only who will immediately and infallibly betray the trust committed to them?

Were the objection to be read by one who had not seen the mode prescribed by the Constitution for the choice of representatives, he could suppose nothing less than that some unreasonable qualification of property was annexed to the right of suffrage; or that the right of eligibility was limited to persons of particular families or fortunes; or at least that the mode prescribed by the State constitutions was in some respect or other, very grossly departed from. We have seen how far such a supposition would err, as to the two first points. Nor would it, in fact, be less erroneous as to the last. The only difference discoverable between the two cases is that each representative of the United States will be elected by five or six thousand citizens; whilst in the individual States, the election of a representative is left to about as many hundreds. Will it be pretended that this difference is sufficient to justify an attachment to the State governments and an abhorrence to the federal government? If this be the point on which the objection turns, it deserves to be examined.

Is it supported by reason? This cannot be said, without maintaining that five or six thousand citizens are less capable of choosing a fit representative, or more liable to be corrupted by an unfit one, than five or six hundred. Reason, on the contrary, assures us that as in so great a number a fit representative would be most likely to be found, so the choice would be less likely to be diverted from him by the intrigues of the ambitious or the bribes of the rich.

Is the consequence from this doctrine admissible? If we say that five or six hundred citizens are as many as can jointly exercise their

right of suffrage, must we not deprive the people of the immediate choice of their public servants in every instance where the administration of the government does not require as many of them as will amount to one for that number of citizens?

Is the doctrine warranted by facts? It was shown in the last paper that the real representation in the British House of Commons very little exceeds the proportion of one for every thirty thousand inhabitants. Besides a variety of powerful causes not existing here, and which favor in that country the pretensions of rank and wealth, no person is eligible as a representative of a county unless he possess real estate of the clear value of six hundred pounds sterling per year; nor of a city or borough, unless he possess a like estate of half that annual value. To this qualification on the part of the county representatives is added another on the part of the county electors, which restrains the right of suffrage to persons having a freehold estate of the annual value of more than twenty pounds sterling, according to the present rate of money. Notwithstanding these unfavorable circumstances, and notwithstanding some very unequal laws in the British code, it cannot be said that the representatives of the nation have elevated the few on the ruins of the many.

But we need not resort to foreign experience on this subject. Our own is explicit and decisive. The districts in New Hampshire in which the senators are chosen immediately by the people are nearly as large as will be necessary for her representatives in the Congress. Those of Massachusetts are larger than will be necessary for that purpose; and those of New York still more so. In the last State the members of Assembly for the cities and counties of New York and Albany are elected by very nearly as many voters as will be entitled to a representative in the Congress, calculating on the number of sixty-five representatives only. It makes no difference that in these senatorial districts and counties a number of representatives are voted for by

each elector at the same time. If the same electors at the same time are capable of choosing four or five representatives, they cannot be incapable of choosing one. Pennsylvania is an additional example. Some of her counties, which elect her State representatives, are almost as large as her districts will be by which her federal representatives will be elected. The city of Philadelphia is supposed to contain between fifty and sixty thousand souls. It will therefore form nearly two districts for the choice of federal representatives. It forms, however, but one county, in which every elector votes for each of its representatives in the State legislature. And what may appear to be still more directly to our purpose, the whole city actually elects a single member for the executive council. This is the case in all the other counties of the State.

Are not these facts the most satisfactory proofs of the fallacy which has been employed against the branch of the federal government under consideration? Has it appeared on trial that the senators of New Hampshire, Massachusetts, and New York, or the executive council of Pennsylvania, or the members of the Assembly in the two last States, have betrayed any peculiar disposition to sacrifice the many to the few, or are in any respect less worthy of their places than the representatives and magistrates appointed in other States by very small divisions of the people?

But there are cases of a stronger complexion than any which I have yet quoted. One branch of the legislature of Connecticut is so constituted that each member of it is elected by the whole State. So is the governor of that State, of Massachusetts, and of this State, and the president of New Hampshire. I leave every man to decide whether the result of any one of these experiments can be said to countenance a suspicion that a diffusive mode of choosing representatives of the people tends to elevate traitors and to undermine the public liberty.

FEDERALIST No. 58 Objection That the Number of Members Will Not Be Augmented as the Progress of Population Demands Considered

**For the Independent Journal.
Wednesday, February 20, 1788
Madison**

To the People of the State of New York:

THE remaining charge against the House of Representatives, which I am to examine, is grounded on a supposition that the number of members will not be augmented from time to time, as the progress of population may demand.

It has been admitted that this objection, if well supported, would have great weight. The following observations will show that, like most other objections against the Constitution, it can only proceed from a partial view of the subject or from a jealousy which discolours and disfigures every object which is beheld.

1. Those who urge the objection seem not to have recollected that the federal Constitution will not suffer by a comparison with the State constitutions, in the security provided for a gradual augmentation of the number of representatives. The number which is to prevail in the first instance is declared to be temporary. Its duration is limited to the

short term of three years.

Within every successive term of ten years a census of inhabitants is to be repeated. The unequivocal objects of these regulations are, first, to readjust, from time to time, the apportionment of representatives to the number of inhabitants, under the single exception that each State shall have one representative at least; secondly, to augment the number of representatives at the same periods, under the sole limitation that the whole number shall not exceed one for every thirty thousand inhabitants. If we review the constitutions of the several States, we shall find that some of them contain no determinate regulations on this subject, that others correspond pretty much on this point with the federal Constitution, and that the most effectual security in any of them is resolvable into a mere directory provision.

2. As far as experience has taken place on this subject, a gradual increase of representatives under the State constitutions has at least kept pace with that of the constituents, and it appears that the former have been as ready to concur in such measures as the latter have been to call for them.

3. There is a peculiarity in the federal Constitution which insures a watchful attention in a majority both of the people and of their representatives to a constitutional augmentation of the latter. The peculiarity lies in this, that one branch of the legislature is a representation of citizens, the other of the States: in the former, consequently, the larger States will have most weight; in the latter, the advantage will be in favor of the smaller States. From this circumstance it may with certainty be inferred that the larger States will be strenuous advocates for increasing the number and weight of that part of the legislature in which their influence predominates. And it so happens that four only of the largest will have a majority of the whole votes in the House of Representatives. Should the

representatives or people, therefore, of the smaller States oppose at any time a reasonable addition of members, a coalition of a very few States will be sufficient to overrule the opposition; a coalition which, notwithstanding the rivalry and local prejudices which might prevent it on ordinary occasions, would not fail to take place when not merely prompted by common interest, but justified by equity and the principles of the Constitution.

It may be alleged, perhaps, that the Senate would be prompted by like motives to an adverse coalition; and as their concurrence would be indispensable, the just and constitutional views of the other branch might be defeated. This is the difficulty which has probably created the most serious apprehensions in the jealous friends of a numerous representation. Fortunately it is among the difficulties which, existing only in appearance, vanish on a close and accurate inspection. The following reflections will, if I mistake not, be admitted to be conclusive and satisfactory on this point. Notwithstanding the equal authority which will subsist between the two houses on all legislative subjects, except the originating of money bills, it cannot be doubted that the House, composed of the greater number of members, when supported by the more powerful States, and speaking the known and determined sense of a majority of the people, will have no small advantage in a question depending on the comparative firmness of the two houses.

This advantage must be increased by the consciousness, felt by the same side of being supported in its demands by right, by reason, and by the Constitution; and the consciousness, on the opposite side, of contending against the force of all these solemn considerations.

It is farther to be considered, that in the gradation between the smallest and largest States there are several which, though most likely in general to arrange themselves among the former, are too little removed in extent and population from the latter, to second an

opposition to their just and legitimate pretensions. Hence it is by no means certain that a majority of votes, even in the Senate, would be unfriendly to proper augmentations in the number of representatives.

It will not be looking too far to add that the senators from all the new States may be gained over to the just views of the House of Representatives by an expedient too obvious to be overlooked. As these States will, for a great length of time, advance in population with peculiar rapidity, they will be interested in frequent reapportionments of the representatives to the number of inhabitants. The large States, therefore, who will prevail in the House of Representatives, will have nothing to do but to make reapportionments and augmentations mutually conditions of each other; and the senators from all the most growing States will be bound to contend for the latter, by the interest which their States will feel in the former.

These considerations seem to afford ample security on this subject, and ought alone to satisfy all the doubts and fears which have been indulged with regard to it. Admitting, however, that they should all be insufficient to subdue the unjust policy of the smaller States, or their predominant influence in the councils of the Senate, a constitutional and infallible resource still remains with the larger States by which they will be able at all times to accomplish their just purposes. The House of Representatives cannot only refuse, but they alone can propose, the supplies requisite for the support of government. They, in a word, hold the purse—that powerful instrument by which we behold, in the history of the British Constitution, an infant and humble representation of the people gradually enlarging the sphere of its activity and importance, and finally reducing, as far as it seems to have wished, all the overgrown prerogatives of the other branches of the government. This power over the purse may, in fact, be regarded as the most complete and effectual

weapon with which any constitution can arm the immediate representatives of the people, for obtaining a redress of every grievance, and for carrying into effect every just and salutary measure.

But will not the House of Representatives be as much interested as the Senate in maintaining the government in its proper functions, and will they not therefore be unwilling to stake its existence or its reputation on the pliancy of the Senate? For, if such a trial of firmness between the two branches were hazarded, would not the one be as likely first to yield as the other? These questions will create no difficulty with those who reflect that in all cases the smaller the number, and the more permanent and conspicuous the station of men in power, the stronger must be the interest which they will individually feel in whatever concerns the government. Those who represent the dignity of their country in the eyes of other nations will be particularly sensible to every prospect of public danger, or of dishonorable stagnation in public affairs. To those causes we are to ascribe the continual triumph of the British House of Commons over the other branches of the government, whenever the engine of a money bill has been employed. An absolute inflexibility on the side of the latter, although it could not have failed to involve every department of the state in the general confusion, has neither been apprehended nor experienced. The utmost degree of firmness that can be displayed by the federal Senate or President will not be more than equal to a resistance in which they will be supported by constitutional and patriotic principles.

In this review of the Constitution of the House of Representatives, I have passed over the circumstances of economy which, in the present state of affairs, might have had some effect in lessening the temporary number of representatives, and a disregard of which would probably have been as rich a theme of declamation against the Constitution as has been furnished by the smallness of the number

proposed. I omit also any remarks on the difficulty which might be found, under present circumstances, in engaging in the federal service a large number of such characters as the people will probably elect. One observation, however, I must be permitted to add on this subject as claiming, in my judgment, a very serious attention. It is that in all legislative assemblies the greater the number composing them may be, the fewer will be the men who will in fact direct their proceedings. In the first place, the more numerous an assembly may be, of whatever characters composed, the greater is known to be the ascendancy of passion over reason. In the next place, the larger the number, the greater will be the proportion of members of limited information and of weak capacities. Now, it is precisely on characters of this description that the eloquence and address of the few are known to act with all their force. In the ancient republics, where the whole body of the people assembled in person, a single orator, or an artful statesman, was generally seen to rule with as complete a sway as if a sceptre had been placed in his single hand. On the same principle, the more multitudinous a representative assembly may be rendered, the more it will partake of the infirmities incident to collective meetings of the people. Ignorance will be the dupe of cunning, and passion the slave of sophistry and declamation. The people can never err more than in supposing that by multiplying their representatives beyond a certain limit, they strengthen the barrier against the government of a few. Experience will forever admonish them that, on the contrary, after securing a sufficient number for the purposes of safety, of local information, and of diffusive sympathy with the whole society, they will counteract their own views by every addition to their representatives. The countenance of the government may become more democratic, but the soul that animates it will be more oligarchic. The machine will be enlarged, but the fewer, and often the more secret, will be the springs by which its motions are directed.

As connected with the objection against the number of

representatives may properly be here noticed that which has been suggested against the number made competent for legislative business. It has been said that more than a majority ought to have been required for a quorum; and in particular cases, if not in all, more than a majority of a quorum for a decision. That some advantages might have resulted from such a precaution cannot be denied. It might have been an additional shield to some particular interests, and another obstacle generally to hasty and partial measures. But these considerations are outweighed by the inconveniences in the opposite scale. In all cases where justice or the general good might require new laws to be passed, or active measures to be pursued, the fundamental principle of free government would be reversed. It would be no longer the majority that would rule: the power would be transferred to the minority. Were the defensive privilege limited to particular cases, an interested minority might take advantage of it to screen themselves from equitable sacrifices to the general weal, or, in particular emergencies, to extort unreasonable indulgences. Lastly, it would facilitate and foster the baneful practice of secessions; a practice which has shown itself even in States where a majority only is required; a practice subversive of all the principles of order and regular government; a practice which leads more directly to public convulsions and the ruin of popular governments than any other which has yet been displayed among us.

PUBLIUS

FEDERALIST No. 59

Concerning the Power of Congress to Regulate the Election of Members

**From the New York Packet.
Friday, February 22, 1788
Hamilton**

To the People of the State of New York:

THE natural order of the subject leads us to consider, in this place, that provision of the Constitution which authorizes the national legislature to regulate, in the last resort, the election of its own members. It is in these words: “The times, places, and manner of holding elections for senators and representatives shall be prescribed in each State by the legislature thereof; but the Congress may, at any time, by law, make or alter such regulations, except as to the places of choosing senators.”^[1] This provision has not only been declaimed against by those who condemn the Constitution in the gross, but it has been censured by those who have objected with less latitude and greater moderation; and, in one instance it has been thought exceptionable by a gentleman who has declared himself the advocate of every other part of the system.

I am greatly mistaken, notwithstanding, if there be any article in the whole plan more completely defensible than this. Its propriety rests upon the evidence of this plain proposition, that every government ought to contain in itself the means of its own

preservation. Every just reasoner will, at first sight, approve an adherence to this rule, in the work of the convention; and will disapprove every deviation from it which may not appear to have been dictated by the necessity of incorporating into the work some particular ingredient with which a rigid conformity to the rule was incompatible. Even in this case, though he may acquiesce in the necessity, yet he will not cease to regard a departure from so fundamental a principle as a portion of imperfection in the system which may prove the seed of future weakness, and perhaps anarchy.

It will not be alleged that an election law could have been framed and inserted in the Constitution which would have been applicable to every probable change in the situation of the country; and it will therefore not be denied that a discretionary power over elections ought to exist somewhere. It will, I presume, be as readily conceded that there were only three ways in which this power could have been reasonably modified and disposed: that it must either have been lodged wholly in the national legislature, or wholly in the State legislatures, or primarily in the latter and ultimately in the former. The last mode has, with reason, been preferred by the convention. They have submitted the regulation of elections for the federal government, in the first instance, to the local administrations; which, in ordinary cases, and when no improper views prevail, may be both more convenient and more satisfactory; but they have reserved to the national authority a right to interpose, whenever extraordinary circumstances might render that interposition necessary to its safety.

Nothing can be more evident than that an exclusive power of regulating elections for the national government, in the hands of the State legislatures, would leave the existence of the Union entirely at their mercy. They could at any moment annihilate it by neglecting to provide for the choice of persons to administer its affairs. It is to little purpose to say that a neglect or omission of this kind would not be

likely to take place. The constitutional possibility of the thing, without an equivalent for the risk, is an unanswerable objection. Nor has any satisfactory reason been yet assigned for incurring that risk. The extravagant surmises of a distempered jealousy can never be dignified with that character. If we are in a humor to presume abuses of power, it is as fair to presume them on the part of the State governments as on the part of the general government. And as it is more consonant to the rules of a just theory to trust the Union with the care of its own existence than to transfer that care to any other hands, if abuses of power are to be hazarded on the one side or on the other, it is more rational to hazard them where the power would naturally be placed than where it would unnaturally be placed.

Suppose an article had been introduced into the Constitution empowering the United States to regulate the elections for the particular States, would any man have hesitated to condemn it, both as an unwarrantable transposition of power and as a premeditated engine for the destruction of the State governments? The violation of principle, in this case, would have required no comment; and, to an unbiased observer, it will not be less apparent in the project of subjecting the existence of the national government, in a similar respect, to the pleasure of the State governments. An impartial view of the matter cannot fail to result in a conviction that each, as far as possible, ought to depend on itself for its own preservation.

As an objection to this position, it may be remarked that the constitution of the national Senate would involve, in its full extent, the danger which it is suggested might flow from an exclusive power in the State legislatures to regulate the federal elections. It may be alleged that by declining the appointment of Senators, they might at any time give a fatal blow to the Union; and from this it may be inferred that as its existence would be thus rendered dependent upon them in so essential a point, there can be no objection to intrusting

them with it in the particular case under consideration. The interest of each State, it may be added, to maintain its representation in the national councils, would be a complete security against an abuse of the trust.

This argument, though specious, will not, upon examination, be found solid. It is certainly true that the State legislatures, by forbearing the appointment of senators, may destroy the national government. But it will not follow that, because they have the power to do this in one instance, they ought to have it in every other. There are cases in which the pernicious tendency of such a power may be far more decisive, without any motive equally cogent with that which must have regulated the conduct of the convention in respect to the construction of the Senate to recommend their admission into the system. So far as that construction may expose the Union to the possibility of injury from the State legislatures, it is an evil; but it is an evil which could not have been avoided without excluding the States, in their political capacities, wholly from a place in the organization of the national government. If this had been done, it would doubtless have been interpreted into an entire dereliction of the federal principle, and would certainly have deprived the State governments of that absolute safeguard which they will enjoy under this provision. But however wise it may have been to have submitted in this instance to an inconvenience, for the attainment of a necessary advantage or a greater good, no inference can be drawn from thence to favor an accumulation of the evil, where no necessity urges, nor any greater good invites.

It may easily be discerned also that the national government would run a much greater risk from a power in the State legislatures over the elections of its House of Representatives than from their power of appointing the members of its Senate. The senators are to be chosen for the period of six years; there is to be a rotation, by which

the seats of a third part of them are to be vacated and replenished every two years; and no State is to be entitled to more than two senators; a quorum of the body is to consist of sixteen members. The joint result of these circumstances would be that a temporary combination of a few States to intermit the appointment of senators could neither annul the existence nor impair the activity of the body; and it is not from a general or permanent combination of the States that we can have anything to fear. The first might proceed from sinister designs in the leading members of a few of the State legislatures; the last would suppose a fixed and rooted disaffection in the great body of the people which will either never exist at all, or will, in all probability, proceed from an experience of the inaptitude of the general government to the advancement of their happiness—in which event no good citizen could desire its continuance.

But with regard to the federal House of Representatives, there is intended to be a general election of members once in two years. If the State legislatures were to be invested with an exclusive power of regulating these elections, every period of making them would be a delicate crisis in the national situation, which might issue in a dissolution of the Union, if the leaders of a few of the most important States should have entered into a previous conspiracy to prevent an election.

I shall not deny that there is a degree of weight in the observation that the interests of each State, to be represented in the federal councils, will be a security against the abuse of a power over its elections in the hands of the State legislatures. But the security will not be considered as complete by those who attend to the force of an obvious distinction between the interest of the people in the public felicity and the interest of their local rulers in the power and consequence of their offices. The people of America may be warmly attached to the government of the Union, at times when the particular

rulers of particular States, stimulated by the natural rivalry of power, and by the hopes of personal aggrandizement, and supported by a strong faction in each of those States, may be in a very opposite temper. This diversity of sentiment between a majority of the people and the individuals who have the greatest credit in their councils is exemplified in some of the States at the present moment, on the present question. The scheme of separate confederacies, which will always multiply the chances of ambition, will be a never failing bait to all such influential characters in the State administrations as are capable of preferring their own emolument and advancement to the public weal. With so effectual a weapon in their hands as the exclusive power of regulating elections for the national government, a combination of a few such men, in a few of the most considerable States, where the temptation will always be the strongest, might accomplish the destruction of the Union by seizing the opportunity of some casual dissatisfaction among the people (and which perhaps they may themselves have excited) to discontinue the choice of members for the federal House of Representatives. It ought never to be forgotten that a firm union of this country, under an efficient government, will probably be an increasing object of jealousy to more than one nation of Europe; and that enterprises to subvert it will sometimes originate in the intrigues of foreign powers and will seldom fail to be patronized and abetted by some of them. Its preservation, therefore, ought in no case that can be avoided, to be committed to the guardianship of any but those whose situation will uniformly beget an immediate interest in the faithful and vigilant performance of the trust.

FEDERALIST No. 60 The Same Subject Continued (Concerning the Power of Congress to Regulate the Election of Members)

**For the Independent Journal.
Saturday, February 23, 1788
Hamilton**

To the People of the State of New York:

WE HAVE seen that an uncontrollable power over the elections to the federal government could not, without hazard, be committed to the State legislatures. Let us now see what would be the danger on the other side; that is, from confiding the ultimate right of regulating its own elections to the Union itself. It is not pretended that this right would ever be used for the exclusion of any State from its share in the representation. The interest of all would, in this respect at least, be the security of all. But it is alleged that it might be employed in such a manner as to promote the election of some favorite class of men in exclusion of others by confining the places of election to particular districts and rendering it impracticable to the citizens at large to partake in the choice. Of all chimerical suppositions, this seems to be the most chimerical. On the one hand, no rational calculation of probabilities would lead us to imagine that the disposition which a conduct so violent and extraordinary would imply could ever find its way into the national councils; and on the other it may be concluded

with certainty that if so improper a spirit should ever gain admittance into them, it would display itself in a form altogether different and far more decisive.

The improbability of the attempt may be satisfactorily inferred from this single reflection, that it could never be made without causing an immediate revolt of the great body of the people, headed and directed by the State governments. It is not difficult to conceive that this characteristic right of freedom may, in certain turbulent and factious seasons, be violated, in respect to a particular class of citizens, by a victorious majority; but that so fundamental a privilege, in a country so situated and enlightened, should be invaded to the prejudice of the great mass of the people by the deliberate policy of the government without occasioning a popular revolution, is altogether inconceivable and incredible.

In addition to this general reflection, there are considerations of a more precise nature which forbid all apprehension on the subject. The dissimilarity in the ingredients which will compose the national government, and still more in the manner in which they will be brought into action in its various branches, must form a powerful obstacle to a concert of views in any partial scheme of elections. There is sufficient diversity in the state of property, in the genius, manners, and habits of the people of the different parts of the Union to occasion a material diversity of disposition in their representatives towards the different ranks and conditions in society. And though an intimate intercourse under the same government will promote a gradual assimilation of temper and sentiments, yet there are causes, as well physical as moral, which may, in a greater or less degree, permanently nourish different propensities and inclinations in this particular. But the circumstance which will be likely to have the greatest influence in the matter will be the dissimilar modes of constituting the several component parts of the government. The House of Representatives'

being to be elected immediately by the people, the Senate by the State legislatures, the President by electors chosen for that purpose by the people, there would be little probability of a common interest to cement these different branches in a predilection for any particular class of electors.

As to the Senate, it is impossible that any regulation of “time and manner,” which is all that is proposed to be submitted to the national government in respect to that body, can affect the spirit which will direct the choice of its members. The collective sense of the State legislatures can never be influenced by extraneous circumstances of that sort; a consideration which alone ought to satisfy us that the discrimination apprehended would never be attempted. For what inducement could the Senate have to concur in a preference in which itself would not be included? Or to what purpose would it be established, in reference to one branch of the legislature, if it could not be extended to the other? The composition of the one would in this case counteract that of the other. And we can never suppose that it would embrace the appointments to the Senate unless we can at the same time suppose the voluntary co-operation of the State legislatures. If we make the latter supposition, it then becomes immaterial where the power in question is placed—whether in their hands or in those of the Union.

But what is to be the object of this capricious partiality in the national councils? Is it to be exercised in a discrimination between the different departments of industry, or between the different kinds of property, or between the different degrees of property? Will it lean in favor of the landed interest, or the moneyed interest, or the mercantile interest, or the manufacturing interest? Or, to speak in the fashionable language of the adversaries to the Constitution, will it court the elevation of the “wealthy and the well-born,” to the exclusion and debasement of all the rest of the society?

If this partiality is to be exerted in favor of those who are concerned in any particular description of industry or property, I presume it will readily be admitted that the competition for it will lie between landed men and merchants. And I scruple not to affirm that it is infinitely less likely that either of them should gain an ascendant in the national councils, than that the one or the other of them should predominate in all the local councils. The inference will be that a conduct tending to give an undue preference to either is much less to be dreaded from the former than from the latter.

The several States are in various degrees addicted to agriculture and commerce. In most, if not all of them, agriculture is predominant. In a few of them, however, commerce nearly divides its empire, and in most of them has a considerable share of influence. In proportion as either prevails, it will be conveyed into the national representation; and for the very reason that this will be an emanation from a greater variety of interests and in much more various proportions than are to be found in any single State, it will be much less apt to espouse either of them with a decided partiality than the representation of any single State.

In a country consisting chiefly of the cultivators of land, where the rules of an equal representation obtain, the landed interest must, upon the whole, preponderate in the government. As long as this interest prevails in most of the State legislatures, so long it must maintain a correspondent superiority in the national Senate, which will generally be a faithful copy of the majorities of those assemblies. It cannot therefore be presumed that a sacrifice of the landed to the mercantile class will ever be a favorite object of this branch of the federal legislature. In applying thus particularly to the Senate a general observation suggested by the situation of the country, I am governed by the consideration that the credulous votaries of State power cannot, upon their own principles, suspect that the State

legislatures would be warped from their duty by any external influence. But in reality the same situation must have the same effect, in the primitive composition at least of the federal House of Representatives: an improper bias towards the mercantile class is as little to be expected from this quarter as from the other.

In order, perhaps, to give countenance to the objection at any rate, it may be asked, is there not danger of an opposite bias in the national government, which may dispose it to endeavor to secure a monopoly of the federal administration to the landed class? As there is little likelihood that the supposition of such a bias will have any terrors for those who would be immediately injured by it, a labored answer to this question will be dispensed with. It will be sufficient to remark, first, that for the reasons elsewhere assigned it is less likely that any decided partiality should prevail in the councils of the Union than in those of any of its members. Secondly, that there would be no temptation to violate the Constitution in favor of the landed class, because that class would, in the natural course of things, enjoy as great a preponderancy as itself could desire. And thirdly, that men accustomed to investigate the sources of public prosperity upon a large scale must be too well convinced of the utility of commerce to be inclined to inflict upon it so deep a wound as would be occasioned by the entire exclusion of those who would best understand its interest from a share in the management of them. The importance of commerce, in the view of revenue alone, must effectually guard it against the enmity of a body which would be continually importuned in its favor by the urgent calls of public necessity.

I rather consult brevity in discussing the probability of a preference founded upon a discrimination between the different kinds of industry and property, because, as far as I understand the meaning of the objectors, they contemplate a discrimination of another kind. They appear to have in view, as the objects of the preference with

which they endeavor to alarm us, those whom they designate by the description of the “wealthy and the well-born.” These, it seems, are to be exalted to an odious pre-eminence over the rest of their fellow-citizens. At one time, however, their elevation is to be a necessary consequence of the smallness of the representative body; at another time it is to be effected by depriving the people at large of the opportunity of exercising their right of suffrage in the choice of that body.

But upon what principle is the discrimination of the places of election to be made, in order to answer the purpose of the meditated preference? Are the wealthy and the well-born, as they are called, confined to particular spots in the several States? Have they, by some miraculous instinct or foresight, set apart in each of them a common place of residence? Are they only to be met with in the towns or cities? Or are they, on the contrary, scattered over the face of the country as avarice or chance may have happened to cast their own lot or that of their predecessors? If the latter is the case, (as every intelligent man knows it to be^[1]) is it not evident that the policy of confining the places of election to particular districts would be as subversive of its own aim as it would be exceptionable on every other account? The truth is that there is no method of securing to the rich the preference apprehended but by prescribing qualifications of property either for those who may elect or be elected. But this forms no part of the power to be conferred upon the national government. Its authority would be expressly restricted to the regulation of the times, the places, and the manner of elections. The qualifications of the persons who may choose or be chosen, as has been remarked upon other occasions, are defined and fixed in the Constitution, and are unalterable by the legislature.

Let it, however, be admitted, for argument sake, that the expedient suggested might be successful; and let it at the same time be

equally taken for granted that all the scruples which a sense of duty or an apprehension of the danger of the experiment might inspire were overcome in the breasts of the national rulers, still I imagine it will hardly be pretended that they could ever hope to carry such an enterprise into execution without the aid of a military force sufficient to subdue the resistance of the great body of the people. The improbability of the existence of a force equal to that object has been discussed and demonstrated in different parts of these papers; but that the futility of the objection under consideration may appear in the strongest light, it shall be conceded for a moment that such a force might exist and the national government shall be supposed to be in the actual possession of it. What will be the conclusion? With a disposition to invade the essential rights of the community and with the means of gratifying that disposition, is it presumable that the persons who were actuated by it would amuse themselves in the ridiculous task of fabricating election laws for securing a preference to a favorite class of men? Would they not be likely to prefer a conduct better adapted to their own immediate aggrandizement? Would they not rather boldly resolve to perpetuate themselves in office by one decisive act of usurpation, than to trust to precarious expedients which, in spite of all the precautions that might accompany them, might terminate in the dismissal, disgrace, and ruin of their authors? Would they not fear that citizens, not less tenacious than conscious of their rights, would flock from the remotest extremes of their respective States to the places of election, to overthrow their tyrants and to substitute men who would be disposed to avenge the violated majesty of the people?

[1] Particularly in the Southern States and in this State.

FEDERALIST No. 61 The Same Subject Continued (Concerning the Power of Congress to Regulate the Election of Members)

**From the New York Packet.
Tuesday, February 26, 1788
Hamilton**

To the People of the State of New York:

THE more candid opposers of the provision respecting elections contained in the plan of the convention, when pressed in argument, will sometimes concede the propriety of that provision; with this qualification, however, that it ought to have been accompanied with a declaration that all elections should be had in the counties where the electors resided. This, say they, was a necessary precaution against an abuse of the power. A declaration of this nature would certainly have been harmless; so far as it would have had the effect of quieting apprehensions it might not have been undesirable. But it would, in fact, have afforded little or no additional security against the danger apprehended; and the want of it will never be considered by an impartial and judicious examiner as a serious, still less as an insuperable, objection to the plan. The different views taken of the subject in the two preceding papers must be sufficient to satisfy all dispassionate and discerning men, that if the public liberty should ever be the victim of the ambition of the national rulers, the power

under examination, at least, will be guiltless of the sacrifice.

If those who are inclined to consult their jealousy only would exercise it in a careful inspection of the several State constitutions, they would find little less room for disquietude and alarm from the latitude which most of them allow in respect to elections than from the latitude which is proposed to be allowed to the national government in the same respect. A review of their situation, in this particular, would tend greatly to remove any ill impressions which may remain in regard to this matter. But as that view would lead into long and tedious details, I shall content myself with the single example of the State in which I write. The constitution of New York makes no other provision for locality of elections than that the members of the Assembly shall be elected in the counties; those of the Senate, in the great districts into which the State is or may be divided: these at present are four in number and comprehend each from two to six counties. It may readily be perceived that it would not be more difficult to the legislature of New York to defeat the suffrages of the citizens of New York by confining elections to particular places than for the legislature of the United States to defeat the suffrages of the citizens of the Union by the like expedient. Suppose, for instance, the city of Albany was to be appointed the sole place of election for the county and district of which it is a part, would not the inhabitants of that city speedily become the only electors of the members both of the Senate and Assembly for that county and district? Can we imagine that the electors who reside in the remote subdivisions of the counties of Albany, Saratoga, Cambridge, etc., or in any part of the county of Montgomery, would take the trouble to come to the city of Albany to give their votes for members of the Assembly or Senate sooner than they would repair to the city of New York to participate in the choice of the members of the federal House of Representatives? The alarming indifference discoverable in the exercise of so invaluable a privilege under the existing laws, which afford every facility to it, furnishes a

ready answer to this question. And, abstracted from any experience on the subject, we can be at no loss to determine that when the place of election is at an inconvenient distance from the elector, the effect upon his conduct will be the same whether that distance be twenty miles or twenty thousand miles. Hence it must appear that objections to the particular modification of the federal power of regulating elections will, in substance, apply with equal force to the modification of the like power in the constitution of this State; and for this reason it will be impossible to acquit the one and to condemn the other. A similar comparison would lead to the same conclusion in respect to the constitutions of most of the other States.

If it should be said that defects in the State constitutions furnish no apology for those which are to be found in the plan proposed, I answer that as the former have never been thought chargeable with inattention to the security of liberty, where the imputations thrown on the latter can be shown to be applicable to them also, the presumption is that they are rather the cavilling refinements of a predetermined opposition than the well-founded inferences of a candid research after truth. To those who are disposed to consider, as innocent omissions in the State constitutions, what they regard as unpardonable blemishes in the plan of the convention, nothing can be said; or at most, they can only be asked to assign some substantial reason why the representatives of the people in a single State should be more impregnable to the lust of power, or other sinister motives, than the representatives of the people of the United States? If they cannot do this, they ought at least to prove to us that it is easier to subvert the liberties of three millions of people, with the advantage of local governments to head their opposition, than of two hundred thousand people who are destitute of that advantage. And in relation to the point immediately under consideration, they ought to convince us that it is less probable that a predominant faction in a single State should, in order to maintain its superiority, incline to a preference of a

particular class of electors, than that a similar spirit should take possession of the representatives of thirteen States, spread over a vast region, and in several respects distinguishable from each other by a diversity of local circumstances, prejudices, and interests.

Hitherto my observations have only aimed at a vindication of the provision in question on the ground of theoretic propriety, on that of the danger of placing the power elsewhere, and on that of the safety of placing it in the manner proposed. But there remains to be mentioned a positive advantage which will result from this disposition and which could not as well have been obtained from any other: I allude to the circumstance of uniformity in the time of elections for the federal House of Representatives. It is more than possible that this uniformity may be found by experience to be of great importance to the public welfare, both as a security against the perpetuation of the same spirit in the body, and as a cure for the diseases of faction. If each State may choose its own time of election it is possible there may be at least as many different periods as there are months in the year. The times of election in the several States, as they are now established for local purposes, vary between extremes as wide as March and November. The consequence of this diversity would be that there could never happen a total dissolution or renovation of the body at one time. If an improper spirit of any kind should happen to prevail in it, that spirit would be apt to infuse itself into the new members, as they come forward in succession. The mass would be likely to remain nearly the same, assimilating constantly to itself its gradual accretions. There is a contagion in example which few men have sufficient force of mind to resist. I am inclined to think that treble the duration in office, with the condition of a total dissolution of the body at the same time, might be less formidable to liberty than one third of that duration subject to gradual and successive alterations.

Uniformity in the time of elections seems not less requisite for

executing the idea of a regular rotation in the Senate, and for conveniently assembling the legislature at a stated period in each year.

It may be asked, Why, then, could not a time have been fixed in the Constitution? As the most zealous adversaries of the plan of the convention in this State are, in general, not less zealous admirers of the constitution of the State, the question may be retorted, and it may be asked, Why was not a time for the like purpose fixed in the constitution of this State? No better answer can be given than that it was a matter which might safely be entrusted to legislative discretion; and that if a time had been appointed, it might, upon experiment, have been found less convenient than some other time. The same answer may be given to the question put on the other side. And it may be added that the supposed danger of a gradual change being merely speculative, it would have been hardly advisable upon that speculation to establish, as a fundamental point, what would deprive several States of the convenience of having the elections for their own governments and for the national government at the same epochs.

PUBLIUS

FEDERALIST No. 62 The Senate

For the Independent Journal. Wednesday, February 27, 1788 Madison

To the People of the State of New York:

HAVING examined the constitution of the House of Representatives, and answered such of the objections against it as seemed to merit notice, I enter next on the examination of the Senate. The heads into which this member of the government may be considered are: I. The qualification of senators; II. The appointment of them by the State legislatures; III. The equality of representation in the Senate; IV. The number of senators, and the term for which they are to be elected; V. The powers vested in the Senate.

I. The qualifications proposed for senators, as distinguished from those of representatives, consist in a more advanced age and a longer period of citizenship. A senator must be thirty years of age at least; as a representative must be twenty-five. And the former must have been a citizen nine years; as seven years are required for the latter. The propriety of these distinctions is explained by the nature of the senatorial trust, which, requiring greater extent of information and stability of character, requires at the same time that the senator should have reached a period of life most likely to supply these advantages; and which, participating immediately in transactions with foreign nations, ought to be exercised by none who are not thoroughly weaned from the prepossessions and habits incident to foreign birth and education. The term of nine years appears to be a prudent

mediocrity between a total exclusion of adopted citizens, whose merits and talents may claim a share in the public confidence, and an indiscriminate and hasty admission of them, which might create a channel for foreign influence on the national councils.

II. It is equally unnecessary to dilate on the appointment of senators by the State legislatures. Among the various modes which might have been devised for constituting this branch of the government, that which has been proposed by the convention is probably the most congenial with the public opinion. It is recommended by the double advantage of favoring a select appointment, and of giving to the State governments such an agency in the formation of the federal government as must secure the authority of the former, and may form a convenient link between the two systems.

III. The equality of representation in the Senate is another point, which, being evidently the result of compromise between the opposite pretensions of the large and the small States, does not call for much discussion. If indeed it be right that among a people thoroughly incorporated into one nation every district ought to have a proportional share in the government and that among independent and sovereign States, bound together by a simple league, the parties, however unequal in size, ought to have an equal share in the common councils, it does not appear to be without some reason that in a compound republic, partaking both of the national and federal character, the government ought to be founded on a mixture of the principles of proportional and equal representation. But it is superfluous to try, by the standard of theory, a part of the Constitution which is allowed on all hands to be the result, not of theory, but “of a spirit of amity, and that mutual deference and concession which the peculiarity of our political situation rendered indispensable.” A common government, with powers equal to its objects, is called for by

the voice, and still more loudly by the political situation, of America. A government founded on principles more consonant to the wishes of the larger States is not likely to be obtained from the smaller States. The only option, then, for the former, lies between the proposed government and a government still more objectionable. Under this alternative, the advice of prudence must be to embrace the lesser evil; and instead of indulging a fruitless anticipation of the possible mischiefs which may ensue, to contemplate rather the advantageous consequences which may qualify the sacrifice.

In this spirit it may be remarked that the equal vote allowed to each State is at once a constitutional recognition of the portion of sovereignty remaining in the individual States and an instrument for preserving that residuary sovereignty. So far the equality ought to be no less acceptable to the large than to the small States; since they are not less solicitous to guard, by every possible expedient, against an improper consolidation of the States into one simple republic.

Another advantage accruing from this ingredient in the constitution of the Senate is the additional impediment it must prove against improper acts of legislation. No law or resolution can now be passed without the concurrence, first, of a majority of the people, and then of a majority of the States. It must be acknowledged that this complicated check on legislation may in some instances be injurious as well as beneficial; and that the peculiar defense which it involves in favor of the smaller States would be more rational if any interests common to them and distinct from those of the other States would otherwise be exposed to peculiar danger. But as the larger States will always be able, by their power over the supplies, to defeat unreasonable exertions of this prerogative of the lesser States, and as the faculty and excess of lawmaking seem to be the diseases to which our governments are most liable, it is not impossible that this part of the Constitution may be more convenient in practice than it appears

to many in contemplation.

IV. The number of senators and the duration of their appointment come next to be considered. In order to form an accurate judgment on both these points it will be proper to inquire into the purposes which are to be answered by a senate; and in order to ascertain these it will be necessary to review the inconveniences which a republic must suffer from the want of such an institution.

First. It is a misfortune incident to republican government, though in a less degree than to other governments, that those who administer it may forget their obligations to their constituents and prove unfaithful to their important trust. In this point of view a senate, as a second branch of the legislative assembly distinct from and dividing the power with a first, must be in all cases a salutary check on the government. It doubles the security to the people by requiring the concurrence of two distinct bodies in schemes of usurpation or perfidy, where the ambition or corruption of one would otherwise be sufficient. This is a precaution founded on such clear principles, and now so well understood in the United States, that it would be more than superfluous to enlarge on it. I will barely remark that as the improbability of sinister combinations will be in proportion to the dissimilarity in the genius of the two bodies, it must be politic to distinguish them from each other by every circumstance which will consist with a due harmony in all proper measures and with the genuine principles of republican government.

Second. The necessity of a senate is not less indicated by the propensity of all single and numerous assemblies to yield to the impulse of sudden and violent passions, and to be seduced by factious leaders into intemperate and pernicious resolutions. Examples on this subject might be cited without number; and from proceedings within the United States, as well as from the history of other nations. But a position that will not be contradicted need not be proved. All that

need be remarked is that a body which is to correct this infirmity ought itself to be free from it, and consequently ought to be less numerous. It ought, moreover, to possess great firmness, and consequently ought to hold its authority by a tenure of considerable duration.

Third. Another defect to be supplied by a senate lies in a want of due acquaintance with the objects and principles of legislation. It is not possible that an assembly of men called for the most part from pursuits of a private nature continued in appointment for a short time and led by no permanent motive to devote the intervals of public occupation to a study of the laws, the affairs, and the comprehensive interests of their country, should, if left wholly to themselves, escape a variety of important errors in the exercise of their legislative trust. It may be affirmed, on the best grounds, that no small share of the present embarrassments of America is to be charged on the blunders of our governments; and that these have proceeded from the heads rather than the hearts of most of the authors of them. What indeed are all the repealing, explaining, and amending laws, which fill and disgrace our voluminous codes, but so many monuments of deficient wisdom; so many impeachments exhibited by each succeeding against each preceding session; so many admonitions to the people of the value of those aids which may be expected from a well-constituted senate?

A good government implies two things: first, fidelity to the object of government, which is the happiness of the people; secondly, a knowledge of the means by which that object can be best attained. Some governments are deficient in both these qualities; most governments are deficient in the first. I scruple not to assert that in American governments too little attention has been paid to the last. The federal Constitution avoids this error; and what merits particular notice, it provides for the last in a mode which increases the security

for the first.

Fourth. The mutability in the public councils arising from a rapid succession of new members, however qualified they may be, points out, in the strongest manner, the necessity of some stable institution in the government. Every new election in the States is found to change one half of the representatives. From this change of men must proceed a change of opinions; and from a change of opinions, a change of measures. But a continual change even of good measures is inconsistent with every rule of prudence and every prospect of success. The remark is verified in private life, and becomes more just, as well as more important, in national transactions.

To trace the mischievous effects of a mutable government would fill a volume. I will hint a few only, each of which will be perceived to be a source of innumerable others.

In the first place, it forfeits the respect and confidence of other nations, and all the advantages connected with national character. An individual who is observed to be inconstant to his plans, or perhaps to carry on his affairs without any plan at all, is marked at once by all prudent people as a speedy victim to his own unsteadiness and folly. His more friendly neighbors may pity him, but all will decline to connect their fortunes with his; and not a few will seize the opportunity of making their fortunes out of his. One nation is to another what one individual is to another; with this melancholy distinction perhaps, that the former, with fewer of the benevolent emotions than the latter, are under fewer restraints also from taking undue advantage from the indiscretions of each other. Every nation, consequently, whose affairs betray a want of wisdom and stability, may calculate on every loss which can be sustained from the more systematic policy of its wiser neighbors. But the best instruction on this subject is unhappily conveyed to America by the example of her own situation. She finds that she is held in no respect by her friends;

that she is the derision of her enemies; and that she is a prey to every nation which has an interest in speculating on her fluctuating councils and embarrassed affairs.

The internal effects of a mutable policy are still more calamitous. It poisons the blessing of liberty itself. It will be of little avail to the people that the laws are made by men of their own choice if the laws be so voluminous that they cannot be read, or so incoherent that they cannot be understood; if they be repealed or revised before they are promulgated, or undergo such incessant changes that no man, who knows what the law is today, can guess what it will be tomorrow. Law is defined to be a rule of action; but how can that be a rule, which is little known, and less fixed?

Another effect of public instability is the unreasonable advantage it gives to the sagacious, the enterprising, and the moneyed few over the industrious and uniformed mass of the people. Every new regulation concerning commerce or revenue, or in any manner affecting the value of the different species of property, presents a new harvest to those who watch the change, and can trace its consequences; a harvest, reared not by themselves, but by the toils and cares of the great body of their fellow-citizens. This is a state of things in which it may be said with some truth that laws are made for the few, not for the many.

In another point of view, great injury results from an unstable government. The want of confidence in the public councils damps every useful undertaking, the success and profit of which may depend on a continuance of existing arrangements. What prudent merchant will hazard his fortunes in any new branch of commerce when he knows not but that his plans may be rendered unlawful before they can be executed? What farmer or manufacturer will lay himself out for the encouragement given to any particular cultivation or establishment, when he can have no assurance that his preparatory

labors and advances will not render him a victim to an inconstant government? In a word, no great improvement or laudable enterprise can go forward which requires the auspices of a steady system of national policy.

But the most deplorable effect of all is that diminution of attachment and reverence which steals into the hearts of the people towards a political system which betrays so many marks of infirmity, and disappoints so many of their flattering hopes. No government, any more than an individual, will long be respected without being truly respectable; nor be truly respectable without possessing a certain portion of order and stability.

PUBLIUS

FEDERALIST No. 63 The Senate Continued

**For the Independent Journal.
Saturday, March 1, 1788
Madison**

To the People of the State of New York:

A fifth desideratum, illustrating the utility of a senate, is the want of a due sense of national character. Without a select and stable member of the government, the esteem of foreign powers will not only be forfeited by an unenlightened and variable policy, proceeding from the causes already mentioned, but the national councils will not possess that sensibility to the opinion of the world which is perhaps not less necessary in order to merit than it is to obtain its respect and confidence.

An attention to the judgment of other nations is important to every government for two reasons: the one is that independently of the merits of any particular plan or measure, it is desirable, on various accounts, that it should appear to other nations as the offspring of a wise and honorable policy; the second is that in doubtful cases, particularly where the national councils may be warped by some strong passion or momentary interest, the presumed or known opinion of the impartial world may be the best guide that can be followed. What has not America lost by her want of character with foreign nations; and how many errors and follies would she not have avoided, if the justice and propriety of her measures had, in every instance,

been previously tried by the light in which they would probably appear to the unbiased part of mankind?

Yet however requisite a sense of national character may be, it is evident that it can never be sufficiently possessed by a numerous and changeable body. It can only be found in a number so small that a sensible degree of the praise and blame of public measures may be the portion of each individual; or in an assembly so durably invested with public trust that the pride and consequence of its members may be sensibly incorporated with the reputation and prosperity of the community. The half-yearly representatives of Rhode Island would probably have been little affected in their deliberations on the iniquitous measures of that State by arguments drawn from the light in which such measures would be viewed by foreign nations, or even by the sister States; whilst it can scarcely be doubted that if the concurrence of a select and stable body had been necessary, a regard to national character alone would have prevented the calamities under which that misguided people is now laboring.

I add, as a sixth defect the want, in some important cases, of a due responsibility in the government to the people, arising from that frequency of elections which in other cases produces this responsibility. This remark will, perhaps, appear not only new, but paradoxical. It must nevertheless be acknowledged, when explained, to be as undeniable as it is important.

Responsibility, in order to be reasonable, must be limited to objects within the power of the responsible party, and in order to be effectual, must relate to operations of that power, of which a ready and proper judgment can be formed by the constituents. The objects of government may be divided into two general classes: the one depending on measures which have singly an immediate and sensible operation; the other depending on a succession of well-chosen and well-connected measures, which have a gradual and perhaps

unobserved operation. The importance of the latter description to the collective and permanent welfare of every country needs no explanation. And yet it is evident that an assembly elected for so short a term as to be unable to provide more than one or two links in a chain of measures, on which the general welfare may essentially depend, ought not to be answerable for the final result any more than a steward or tenant, engaged for one year, could be justly made to answer for places or improvements which could not be accomplished in less than half a dozen years. Nor is it possible for the people to estimate the share of influence which their annual assemblies may respectively have on events resulting from the mixed transactions of several years. It is sufficiently difficult, at any rate, to preserve a personal responsibility in the members of a numerous body, for such acts of the body as have an immediate, detached, and palpable operation on its constituents.

The proper remedy for this defect must be an additional body in the legislative department, which, having sufficient permanency to provide for such objects as require a continued attention, and a train of measures, may be justly and effectually answerable for the attainment of those objects.

Thus far I have considered the circumstances which point out the necessity of a well-constructed Senate only as they relate to the representatives of the people. To a people as little blinded by prejudice or corrupted by flattery as those whom I address, I shall not scruple to add that such an institution may be sometimes necessary as a defense to the people against their own temporary errors and delusions. As the cool and deliberate sense of the community ought, in all governments, and actually will, in all free governments, ultimately prevail over the views of its rulers; so there are particular moments in public affairs when the people, stimulated by some irregular passion, or some illicit advantage, or misled by the artful misrepresentations of

interested men, may call for measures which they themselves will afterwards be the most ready to lament and condemn. In these critical moments, how salutary will be the interference of some temperate and respectable body of citizens, in order to check the misguided career and to suspend the blow meditated by the people against themselves, until reason, justice, and truth can regain their authority over the public mind? What bitter anguish would not the people of Athens have often escaped if their government had contained so provident a safeguard against the tyranny of their own passions? Popular liberty might then have escaped the indelible reproach of decreeing to the same citizens the hemlock on one day and statues on the next.

It may be suggested that a people spread over an extensive region cannot, like the crowded inhabitants of a small district, be subject to the infection of violent passions or to the danger of combining in pursuit of unjust measures. I am far from denying that this is a distinction of peculiar importance. I have, on the contrary, endeavored in a former paper to show that it is one of the principal recommendations of a confederated republic. At the same time, this advantage ought not to be considered as superseding the use of auxiliary precautions. It may even be remarked that the same extended situation which will exempt the people of America from some of the dangers incident to lesser republics will expose them to the inconveniency of remaining for a longer time under the influence of those misrepresentations which the combined industry of interested men may succeed in distributing among them.

It adds no small weight to all these considerations to recollect that history informs us of no long-lived republic which had not a senate. Sparta, Rome, and Carthage are, in fact, the only states to whom that character can be applied. In each of the two first there was a senate for life. The constitution of the senate in the last is less known. Circumstantial evidence makes it probable that it was not

different in this particular from the two others. It is at least certain that it had some quality or other which rendered it an anchor against popular fluctuations; and that a smaller council, drawn out of the senate, was appointed not only for life, but filled up vacancies itself. These examples, though as unfit for the imitation as they are repugnant to the genius of America, are, notwithstanding, when compared with the fugitive and turbulent existence of other ancient republics, very instructive proofs of the necessity of some institution that will blend stability with liberty. I am not unaware of the circumstances which distinguish the American from other popular governments, as well ancient as modern; and which render extreme circumspection necessary, in reasoning from one case to the other. But after allowing due weight to this consideration, it may still be maintained, that there are many points of similitude which render these examples not unworthy of our attention. Many of the defects, as we have seen, which can only be supplied by a senatorial institution, are common to a numerous assembly frequently elected by the people, and to the people themselves. There are others peculiar to the former which require the control of such an institution. The people can never wilfully betray their own interests; but they may possibly be betrayed by the representatives of the people; and the danger will be evidently greater where the whole legislative trust is lodged in the hands of one body of men than where the concurrence of separate and dissimilar bodies is required in every public act.

The difference most relied on between the American and other republics consists in the principle of representation, which is the pivot on which the former move, and which is supposed to have been unknown to the latter, or at least to the ancient part of them. The use which has been made of this difference, in reasonings contained in former papers, will have shown that I am disposed neither to deny its existence nor to undervalue its importance. I feel the less restraint, therefore, in observing that the position concerning the ignorance of

the ancient governments on the subject of representation is by no means precisely true in the latitude commonly given to it. Without entering into a disquisition which here would be misplaced, I will refer to a few known facts in support of what I advance.

In the most pure democracies of Greece, many of the executive functions were performed, not by the people themselves, but by officers elected by the people, and representing the people in their executive capacity.

Prior to the reform of Solon, Athens was governed by nine Archons, annually elected by the people at large. The degree of power delegated to them seems to be left in great obscurity. Subsequent to that period we find an assembly, first of four, and afterwards of six hundred members, annually elected by the people; and partially representing them in their legislative capacity, since they were not only associated with the people in the function of making laws, but had the exclusive right of originating legislative propositions to the people. The senate of Carthage, also, whatever might be its power or the duration of its appointment, appears to have been elective by the suffrages of the people. Similar instances might be traced in most, if not all the popular governments of antiquity.

Lastly, in Sparta we meet with the Ephori, and in Rome with the Tribunes; two bodies, small indeed in numbers, but annually elected by the whole body of the people, and considered as the representatives of the people, almost in their plenipotentiary capacity. The Cosmi of Crete were also annually elected by the people, and have been considered by some authors as an institution analogous to those of Sparta and Rome, with this difference only, that in the election of that representative body the right of suffrage was communicated to a part only of the people.

From these facts, to which many others might be added, it is clear

that the principle of representation was neither unknown to the ancients nor wholly overlooked in their political constitutions. The true distinction between these and the American governments lies in the total exclusion of the people in their collective capacity, from any share in the latter, and not in the total exclusion of the representatives of the people from the administration of the former. The distinction, however, thus qualified, must be admitted to leave a most advantageous superiority in favor of the United States. But to insure to this advantage its full effect, we must be careful not to separate it from the other advantage, of an extensive territory. For it cannot be believed that any form of representative government could have succeeded within the narrow limits occupied by the democracies of Greece.

In answer to all these arguments, suggested by reason, illustrated by examples, and enforced by our own experience, the jealous adversary of the Constitution will probably content himself with repeating that a senate appointed not immediately by the people, and for the term of six years, must gradually acquire a dangerous pre-eminence in the government and finally transform it into a tyrannical aristocracy.

To this general answer the general reply ought to be sufficient, that liberty may be endangered by the abuses of liberty as well as by the abuses of power; that there are numerous instances of the former as well as of the latter; and that the former, rather than the latter, are apparently most to be apprehended by the United States. But a more particular reply may be given.

Before such a revolution can be effected, the Senate, it is to be observed, must in the first place corrupt itself; must next corrupt the State legislatures; must then corrupt the House of Representatives; and must finally corrupt the people at large. It is evident that the Senate must be first corrupted before it can attempt an establishment of

tyranny. Without corrupting the State legislatures it cannot prosecute the attempt because the periodical change of members would otherwise regenerate the whole body. Without exerting the means of corruption with equal success on the House of Representatives, the opposition of that co-equal branch of the government would inevitably defeat the attempt; and without corrupting the people themselves, a succession of new representatives would speedily restore all things to their pristine order. Is there any man who can seriously persuade himself that the proposed Senate can, by any possible means within the compass of human address, arrive at the object of a lawless ambition through all these obstructions?

If reason condemns the suspicion, the same sentence is pronounced by experience. The constitution of Maryland furnishes the most apposite example. The Senate of that State is elected, as the federal Senate will be, indirectly by the people, and for a term less by one year only than the federal Senate. It is distinguished, also, by the remarkable prerogative of filling up its own vacancies within the term of its appointment, and at the same time is not under the control of any such rotation as is provided for the federal Senate. There are some other lesser distinctions which would expose the former to colorable objections that do not lie against the latter. If the federal Senate, therefore, really contained the danger which has been so loudly proclaimed, some symptoms at least of a like danger ought by this time to have been betrayed by the Senate of Maryland, but no such symptoms have appeared. On the contrary, the jealousies at first entertained by men of the same description with those who view with terror the correspondent part of the federal Constitution have been gradually extinguished by the progress of the experiment; and the Maryland constitution is daily deriving, from the salutary operation of this part of it, a reputation in which it will probably not be rivalled by that of any State in the Union.

But if anything could silence the jealousies on this subject, it ought to be the British example. The Senate there, instead of being elected for a term of six years, and of being unconfined to particular families or fortunes, is an hereditary assembly of opulent nobles. The House of Representatives, instead of being elected for two years, and by the whole body of the people, is elected for seven years, and, in very great proportion, by a very small proportion of the people. Here, unquestionably, ought to be seen in full display the aristocratic usurpations and tyranny which are at some future period to be exemplified in the United States. Unfortunately, however, for the anti-federal argument, the British history informs us that this hereditary assembly has not been able to defend itself against the continual encroachments of the House of Representatives; and that it no sooner lost the support of the monarch than it was actually crushed by the weight of the popular branch.

As far as antiquity can instruct us on this subject, its examples support the reasoning which we have employed. In Sparta, the Ephori, the annual representatives of the people, were found an overmatch for the senate for life, continually gained on its authority and finally drew all power into their own hands. The Tribunes of Rome who were the representatives of the people prevailed, it is well known, in almost every contest with the senate for life, and in the end gained the most complete triumph over it. The fact is the more remarkable as unanimity was required in every act of the Tribunes, even after their number was augmented to ten. It proves the irresistible force possessed by that branch of a free government, which has the people on its side. To these examples might be added that of Carthage, whose senate, according to the testimony of Polybius, instead of drawing all power into its vortex had, at the commencement of the second Punic War, lost almost the whole of its original portion.

Besides the conclusive evidence resulting from this assemblage of

facts that the federal Senate will never be able to transform itself, by gradual usurpations, into an independent and aristocratic body, we are warranted in believing that if such a revolution should ever happen from causes which the foresight of man cannot guard against, the House of Representatives, with the people on their side, will at all times be able to bring back the Constitution to its primitive form and principles. Against the force of the immediate representatives of the people nothing will be able to maintain even the constitutional authority of the Senate, but such a display of enlightened policy, and attachment to the public good, as will divide with that branch of the legislature the affections and support of the entire body of the people themselves.

PUBLIUS

FEDERALIST No. 64 The Powers of the Senate

For the Independent Journal.
Wednesday, March 5, 1788 Jay

To the People of the State of New York:

IT IS a just and not a new observation that enemies to particular persons, and opponents to particular measures, seldom confine their censures to such things only in either as are worthy of blame. Unless on this principle, it is difficult to explain the motives of their conduct, who condemn the proposed Constitution in the aggregate and treat with severity some of the most unexceptionable articles in it.

The second section gives power to the President, “by and with the advice and consent of the senate, to make treaties, PROVIDED TWO THIRDS OF THE SENATORS PRESENT CONCUR.”

The power of making treaties is an important one, especially as it relates to war, peace, and commerce; and it should not be delegated but in such a mode, and with such precautions, as will afford the highest security that it will be exercised by men the best qualified for the purpose, and in the manner most conducive to the public good. The convention appears to have been attentive to both these points: they have directed the President to be chosen by select bodies of electors to be deputed by the people for that express purpose; and they have committed the appointment of senators to the State legislatures. This mode has, in such cases, vastly the advantage of elections by the people in their collective capacity where the activity

of party zeal, taking advantage of the supineness, the ignorance, and the hopes and fears of unwary and interested, often places men in office by the votes of a small proportion of the electors.

As the select assemblies for choosing the President, as well as the State legislatures who appoint the senators, will in general be composed of the most enlightened and respectable citizens, there is reason to presume that their attention and their votes will be directed to those men only who have become the most distinguished by their abilities and virtue, and in whom the people perceive just grounds for confidence. The Constitution manifests very particular attention to this object. By excluding men under thirty-five from the first office, and those under thirty from the second, it confines the electors to men of whom the people have had time to form a judgment, and with respect to whom they will not be liable to be deceived by those brilliant appearances of genius and patriotism which, like transient meteors, sometimes mislead as well as dazzle. If the observation be well founded that wise kings will always be served by able ministers, it is fair to argue that as an assembly of select electors possess, in a greater degree than kings, the means of extensive and accurate information relative to men and characters, so will their appointments bear at least equal marks of discretion and discernment. The inference which naturally results from these considerations is this, that the President and senators so chosen will always be of the number of those who best understand our national interests, whether considered in relation to the several States or to foreign nations, who are best able to promote those interests, and whose reputation for integrity inspires and merits confidence. With such men the power of making treaties may be safely lodged.

Although the absolute necessity of system, in the conduct of any business, is universally known and acknowledged, yet the high importance of it in national affairs has not yet become sufficiently

impressed on the public mind. They who wish to commit the power under consideration to a popular assembly composed of members constantly coming and going in quick succession seem not to recollect that such a body must necessarily be inadequate to the attainment of those great objects which require to be steadily contemplated in all their relations and circumstances, and which can only be approached and achieved by measures which not only talents, but also exact information, and often much time, are necessary to concert and to execute. It was wise, therefore, in the convention to provide not only that the power of making treaties should be committed to able and honest men, but also that they should continue in place a sufficient time to become perfectly acquainted with our national concerns, and to form and introduce a system for the management of them. The duration prescribed is such as will give them an opportunity of greatly extending their political information, and of rendering their accumulating experience more and more beneficial to their country. Nor has the convention discovered less prudence in providing for the frequent elections of senators in such a way as to obviate the inconvenience of periodically transferring those great affairs entirely to new men; for by leaving a considerable residue of the old ones in place, uniformity and order, as well as a constant succession of official information, will be preserved.

There are few who will not admit that the affairs of trade and navigation should be regulated by a system cautiously formed and steadily pursued; and that both our treaties and our laws should correspond with and be made to promote it. It is of much consequence that this correspondence and conformity be carefully maintained; and they who assent to the truth of this position will see and confess that it is well provided for by making the concurrence of the Senate necessary both to treaties and to laws.

It seldom happens in the negotiation of treaties, of whatever

nature, but that perfect secrecy and immediate despatch are sometimes requisite. These are cases where the most useful intelligence may be obtained, if the persons possessing it can be relieved from apprehensions of discovery. Those apprehensions will operate on those persons whether they are actuated by mercenary or friendly motives; and there doubtless are many of both descriptions who would rely on the secrecy of the President, but who would not confide in that of the Senate, and still less in that of a large popular Assembly. The convention have done well, therefore, in so disposing of the power of making treaties that although the President must, in forming them, act by the advice and consent of the Senate, yet he will be able to manage the business of intelligence in such manner as prudence may suggest.

They who have turned their attention to the affairs of men must have perceived that there are tides in them; tides very irregular in their duration, strength, and direction, and seldom found to run twice exactly in the same manner or measure. To discern and to profit by these tides in national affairs is the business of those who preside over them; and they who have had much experience on this head inform us that there frequently are occasions when days, nay, even when hours, are precious. The loss of a battle, the death of a prince, the removal of a minister, or other circumstances intervening to change the present posture and aspect of affairs may turn the most favorable tide into a course opposite to our wishes. As in the field, so in the cabinet, there are moments to be seized as they pass, and they who preside in either should be left in capacity to improve them. So often and so essentially have we heretofore suffered from the want of secrecy and despatch that the Constitution would have been inexcusably defective if no attention had been paid to those objects. Those matters which in negotiations usually require the most secrecy and the most despatch are those preparatory and auxiliary measures which are not otherwise important in a national view, than as they tend to facilitate the

attainment of the objects of the negotiation. For these the President will find no difficulty to provide; and should any circumstance occur which requires the advice and consent of the Senate, he may at any time convene them. Thus we see that the Constitution provides that our negotiations for treaties shall have every advantage which can be derived from talents, information, integrity, and deliberate investigations, on the one hand, and from secrecy and despatch on the other.

But to this plan, as to most others that have ever appeared, objections are contrived and urged.

Some are displeased with it, not on account of any errors or defects in it, but because, as the treaties, when made, are to have the force of laws, they should be made only by men invested with legislative authority. These gentlemen seem not to consider that the judgments of our courts, and the commissions constitutionally given by our governor, are as valid and as binding on all persons whom they concern as the laws passed by our legislature. All constitutional acts of power, whether in the executive or in the judicial department, have as much legal validity and obligation as if they proceeded from the legislature; and therefore, whatever name be given to the power of making treaties, or however obligatory they may be when made, certain it is that the people may, with much propriety, commit the power to a distinct body from the legislature, the executive, or the judicial. It surely does not follow that because they have given the power of making laws to the legislature, that therefore they should likewise give them power to do every other act of sovereignty by which the citizens are to be bound and affected.

Others, though content that treaties should be made in the mode proposed, are averse to their being the supreme laws of the land. They insist, and profess to believe, that treaties like acts of assembly, should be repealable at pleasure. This idea seems to be new and peculiar to

this country, but new errors, as well as new truths, often appear. These gentlemen would do well to reflect that a treaty is only another name for a bargain, and that it would be impossible to find a nation who would make any bargain with us, which should be binding on them absolutely, but on us only so long and so far as we may think proper to be bound by it. They who make laws may, without doubt, amend or repeal them; and it will not be disputed that they who make treaties may alter or cancel them; but still let us not forget that treaties are made, not by only one of the contracting parties, but by both, and consequently, that as the consent of both was essential to their formation at first, so must it ever afterwards be to alter or cancel them. The proposed Constitution, therefore, has not in the least extended the obligation of treaties. They are just as binding and just as far beyond the lawful reach of legislative acts now as they will be at any future period, or under any form of government.

However useful jealousy may be in republics, yet when like bile in the natural it abounds too much in the body politic, the eyes of both become very liable to be deceived by the delusive appearances which that malady casts on surrounding objects. From this cause, probably, proceed the fears and apprehensions of some, that the President and Senate may make treaties without an equal eye to the interests of all the States. Others suspect that the two thirds will oppress the remaining third, and ask whether those gentlemen are made sufficiently responsible for their conduct; whether, if they act corruptly, they can be punished; and if they make disadvantageous treaties, how are we to get rid of those treaties?

As all the States are equally represented in the Senate, and by men the most able and the most willing to promote the interests of their constituents, they will all have an equal degree of influence in that body, especially while they continue to be careful in appointing proper persons, and to insist on their punctual attendance. In

proportion as the United States assume a national form and a national character, so will the good of the whole be more and more an object of attention, and the government must be a weak one indeed if it should forget that the good of the whole can only be promoted by advancing the good of each of the parts or members which compose the whole. It will not be in the power of the President and Senate to make any treaties by which they and their families and estates will not be equally bound and affected with the rest of the community; and, having no private interests distinct from that of the nation, they will be under no temptations to neglect the latter.

As to corruption, the case is not supposable. He must either have been very unfortunate in his intercourse with the world, or possess a heart very susceptible of such impressions, who can think it probable that the President and two thirds of the Senate will ever be capable of such unworthy conduct. The idea is too gross and too invidious to be entertained. But in such a case, if it should ever happen, the treaty so obtained from us would, like all other fraudulent contracts, be null and void by the law of nations.

With respect to their responsibility, it is difficult to conceive how it could be increased. Every consideration that can influence the human mind, such as honor, oaths, reputations, conscience, the love of country, and family affections and attachments, afford security for their fidelity. In short, as the Constitution has taken the utmost care that they shall be men of talents and integrity, we have reason to be persuaded that the treaties they make will be as advantageous as, all circumstances considered, could be made; and so far as the fear of punishment and disgrace can operate, that motive to good behavior is amply afforded by the article on the subject of impeachments.

PUBLIUS

FEDERALIST No. 65 The Powers of the Senate Continued

From the New York Packet.
Friday, March 7, 1788 Hamilton

To the People of the State of New York:

THE remaining powers which the plan of the convention allots to the Senate, in a distinct capacity, are comprised in their participation with the executive in the appointment to offices, and in their judicial character as a court for the trial of impeachments. As in the business of appointments the executive will be the principal agent, the provisions relating to it will most properly be discussed in the examination of that department. We will, therefore, conclude this head with a view of the judicial character of the Senate.

A well-constituted court for the trial of impeachments is an object not more to be desired than difficult to be obtained in a government wholly elective. The subjects of its jurisdiction are those offenses which proceed from the misconduct of public men, or, in other words, from the abuse or violation of some public trust. They are of a nature which may with peculiar propriety be denominated POLITICAL, as they relate chiefly to injuries done immediately to the society itself. The prosecution of them, for this reason, will seldom fail to agitate the passions of the whole community, and to divide it into parties more or less friendly or inimical to the accused. In many cases it will connect itself with the pre-existing factions, and will enlist all their animosities, partialities, influence, and interest on one side or on the other; and in such cases there will always be the greatest danger that

the decision will be regulated more by the comparative strength of parties than by the real demonstrations of innocence or guilt.

The delicacy and magnitude of a trust which so deeply concerns the political reputation and existence of every man engaged in the administration of public affairs speak for themselves. The difficulty of placing it rightly in a government resting entirely on the basis of periodical elections will as readily be perceived, when it is considered that the most conspicuous characters in it will, from that circumstance, be too often the leaders or the tools of the most cunning or the most numerous faction, and on this account can hardly be expected to possess the requisite neutrality towards those whose conduct may be the subject of scrutiny.

The convention, it appears, thought the Senate the most fit depositary of this important trust. Those who can best discern the intrinsic difficulty of the thing will be the least hasty in condemning that opinion, and will be most inclined to allow due weight to the arguments which may be supposed to have produced it.

What, it may be asked, is the true spirit of the institution itself? Is it not designed as a method of NATIONAL INQUEST into the conduct of public men? If this be the design of it, who can so properly be the inquisitors for the nation as the representatives of the nation themselves? It is not disputed that the power of originating the inquiry, or, in other words, of preferring the impeachment, ought to be lodged in the hands of one branch of the legislative body. Will not the reasons which indicate the propriety of this arrangement strongly plead for an admission of the other branch of that body to a share of the inquiry? The model from which the idea of this institution has been borrowed pointed out that course to the convention. In Great Britain it is the province of the House of Commons to prefer the impeachment, and of the House of Lords to decide upon it. Several of the State constitutions have followed the example. As well the latter

as the former seem to have regarded the practice of impeachments as a bridle in the hands of the legislative body upon the executive servants of the government. Is not this the true light in which it ought to be regarded?

Where else than in the Senate could have been found a tribunal sufficiently dignified, or sufficiently independent? What other body would be likely to feel confidence enough in its own situation to preserve, unawed and uninfluenced, the necessary impartiality between an individual accused and the representatives of the people, his accusers?

Could the Supreme Court have been relied upon as answering this description? It is much to be doubted whether the members of that tribunal would at all times be endowed with so eminent a portion of fortitude as would be called for in the execution of so difficult a task; and it is still more to be doubted whether they would possess the degree of credit and authority which might, on certain occasions, be indispensable towards reconciling the people to a decision that should happen to clash with an accusation brought by their immediate representatives. A deficiency in the first would be fatal to the accused; in the last, dangerous to the public tranquillity. The hazard, in both these respects, could only be avoided, if at all, by rendering that tribunal more numerous than would consist with a reasonable attention to economy. The necessity of a numerous court for the trial of impeachments is equally dictated by the nature of the proceeding. This can never be tied down by such strict rules, either in the delineation of the offense by the prosecutors or in the construction of it by the judges, as in common cases serve to limit the discretion of courts in favor of personal security. There will be no jury to stand between the judges who are to pronounce the sentence of the law and the party who is to receive or suffer it. The awful discretion which a court of impeachments must necessarily have to doom to honor or to

infamy the most confidential and the most distinguished characters of the community forbids the commitment of the trust to a small number of persons.

美国最高法院是美国最高级别的联邦法院。在美国两百多年的历史中，美国最高法院的院址经历过几次变迁。1935年，已运行了146年的美国最高法院终于得以迁入目前的所在地。

These considerations seem alone sufficient to authorize a conclusion, that the Supreme Court would have been an improper substitute for the Senate, as a court of impeachments. There remains a further consideration, which will not a little strengthen this conclusion. It is this: The punishment which may be the consequence of conviction upon impeachment is not to terminate the chastisement of the offender. After having been sentenced to a perpetual ostracism from the esteem and confidence and honors and emoluments of his country, he will still be liable to prosecution and punishment in the ordinary course of law. Would it be proper that the persons who had disposed of his fame, and his most valuable rights as a citizen, in one trial, should, in another trial, for the same offense, be also the disposers of his life and his fortune? Would there not be the greatest reason to apprehend that error, in the first sentence, would be the parent of error in the second sentence? That the strong bias of one decision would be apt to overrule the influence of any new lights

which might be brought to vary the complexion of another decision? Those who know anything of human nature will not hesitate to answer these questions in the affirmative; and will be at no loss to perceive that by making the same persons judges in both cases, those who might happen to be the objects of prosecution would, in a great measure, be deprived of the double security intended them by a double trial. The loss of life and estate would often be virtually included in a sentence which, in its terms, imported nothing more than dismissal from a present and disqualification for a future office. It may be said that the intervention of a jury, in the second instance, would obviate the danger. But juries are frequently influenced by the opinions of judges. They are sometimes induced to find special verdicts, which refer the main question to the decision of the court. Who would be willing to stake his life and his estate upon the verdict of a jury acting under the auspices of judges who had predetermined his guilt?

Would it have been an improvement of the plan to have united the Supreme Court with the Senate in the formation of the court of impeachments? This union would certainly have been attended with several advantages; but would they not have been overbalanced by the signal disadvantage, already stated, arising from the agency of the same judges in the double prosecution to which the offender would be liable? To a certain extent, the benefits of that union will be obtained from making the chief justice of the Supreme Court the president of the court of impeachments, as is proposed to be done in the plan of the convention; while the inconveniences of an entire incorporation of the former into the latter will be substantially avoided. This was perhaps the prudent mean. I forbear to remark upon the additional pretext for clamor against the judiciary, which so considerable an augmentation of its authority would have afforded.

Would it have been desirable to have composed the court for the

trial of impeachments of persons wholly distinct from the other departments of the government? There are weighty arguments, as well against as in favor of such a plan. To some minds it will not appear a trivial objection that it could tend to increase the complexity of the political machine, and to add a new spring to the government, the utility of which would at best be questionable. But an objection which will not be thought by any unworthy of attention is this: a court formed upon such a plan would either be attended with heavy expense, or might in practice be subject to a variety of casualties and inconveniences. It must either consist of permanent officers, stationary at the seat of government, and of course entitled to fixed and regular stipends, or of certain officers of the State governments, to be called upon whenever an impeachment was actually depending. It will not be easy to imagine any third mode materially different which could rationally be proposed. As the court, for reasons already given, ought to be numerous, the first scheme will be reprobated by every man who can compare the extent of the public wants with the means of supplying them. The second will be espoused with caution by those who will seriously consider the difficulty of collecting men dispersed over the whole Union; the injury to the innocent, from the procrastinated determination of the charges which might be brought against them; the advantage to the guilty, from the opportunities which delay would afford to intrigue and corruption; and in some cases the detriment to the State, from the prolonged inaction of men whose firm and faithful execution of their duty might have exposed them to the persecution of an intemperate or designing majority in the House of Representatives. Though this latter supposition may seem harsh and might not be likely often to be verified, yet it ought not to be forgotten that the demon of faction will, at certain seasons, extend his sceptre over all numerous bodies of men.

But though one or the other of the substitutes which have been examined or some other that might be devised should be thought

preferable to the plan in this respect reported by the convention, it will not follow that the Constitution ought for this reason to be rejected. If mankind were to resolve to agree in no institution of government, until every part of it had been adjusted to the most exact standard of perfection, society would soon become a general scene of anarchy, and the world a desert. Where is the standard of perfection to be found? Who will undertake to unite the discordant opinions of a whole community in the same judgment of it; and to prevail upon one conceited projector to renounce his infallible criterion for the fallible criterion of his more conceited neighbor? To answer the purpose of the adversaries of the Constitution, they ought to prove, not merely that particular provisions in it are not the best which might have been imagined, but that the plan upon the whole is bad and pernicious.

PUBLIUS

FEDERALIST No. 66 Objections to the Power of the Senate to Sit as a Court for Impeachments Further Considered

**For the Independent Journal.
Saturday, March 8, 1788
Hamilton**

To the People of the State of New York:

A REVIEW of the principal objections that have appeared against the proposed court for the trial of impeachments will not improbably eradicate the remains of any unfavorable impressions which may still exist in regard to this matter.

The first of these objections is that the provision in question confounds legislative and judiciary authorities in the same body in violation of that important and well-established maxim which requires a separation between the different departments of power. The true meaning of this maxim has been discussed and ascertained in another place, and has been shown to be entirely compatible with a partial intermixture of those departments for special purposes, preserving them, in the main, distinct and unconnected. This partial intermixture is even, in some cases, not only proper but necessary to the mutual defense of the several members of the government against each other. An absolute or qualified negative in the executive upon the acts of the legislative body is admitted, by the ablest adepts in political science, to be an indispensable barrier against the encroachments of the latter

upon the former. And it may, perhaps, with no less reason, be contended that the powers relating to impeachments are, as before intimated, an essential check in the hands of that body upon the encroachments of the executive. The division of them between the two branches of the legislature, assigning to one the right of accusing, to the other the right of judging, avoids the inconvenience of making the same persons both accusers and judges; and guards against the danger of persecution, from the prevalency of a factious spirit in either of those branches. As the concurrence of two thirds of the Senate will be requisite to a condemnation, the security to innocence, from this additional circumstance, will be as complete as itself can desire.

It is curious to observe with what vehemence this part of the plan is assailed, on the principle here taken notice of, by men who profess to admire without exception the constitution of this State; while that constitution makes the Senate, together with the chancellor and judges of the Supreme Court, not only a court of impeachments, but the highest judicatory in the State, in all causes, civil and criminal. The proportion, in point of numbers, of the chancellor and judges to the senators, is so inconsiderable that the judiciary authority of New York in the last resort may with truth be said to reside in its Senate. If the plan of the convention be, in this respect, chargeable with a departure from the celebrated maxim which has been so often mentioned, and seems to be so little understood, how much more culpable must be the constitution of New York?^[1]

A second objection to the Senate, as a court of impeachments, is that it contributes to an undue accumulation of power in that body, tending to give to the government a countenance too aristocratic. The Senate, it is observed, is to have concurrent authority with the executive in the formation of treaties and in the appointment to offices: if, say the objectors, to these prerogatives is added that of determining in all cases of impeachment, it will give a decided

predominancy to senatorial influence. To an objection so little precise in itself it is not easy to find a very precise answer. Where is the measure or criterion to which we can appeal for estimating what will give the Senate too much, too little, or barely the proper degree of influence? Will it not be more safe, as well as more simple, to dismiss such vague and uncertain calculations, to examine each power by itself, and to decide, on general principles, where it may be deposited with most advantage and least inconvenience?

If we take this course, it will lead to a more intelligible if not to a more certain result. The disposition of the power of making treaties which has obtained in the plan of the convention will then, if I mistake not, appear to be fully justified by the considerations stated in a former number, and by others which will occur under the next head of our inquiries. The expediency of the junction of the Senate with the executive, in the power of appointing to offices, will, I trust, be placed in a light not less satisfactory in the disquisitions under the same head. And I flatter myself the observations in my last paper must have gone no inconsiderable way towards proving that it was not easy, if practicable, to find a more fit receptacle for the power of determining impeachments than that which has been chosen. If this be truly the case, the hypothetical dread of the too great weight of the Senate ought to be discarded from our reasonings.

But this hypothesis, such as it is, has already been refuted in the remarks applied to the duration in office prescribed for the senators. It was by them shown, as well on the credit of historical examples as from the reason of the thing, that the most popular branch of every government partaking of the republican genius, by being generally the favorite of the people, will be as generally a full match, if not an overmatch, for every other member of the Government.

But independent of this most active and operative principle, to secure the equilibrium of the national House of Representatives, the

plan of the convention has provided in its favor several important counterpoises to the additional authorities to be conferred upon the Senate. The exclusive privilege of originating money bills will belong to the House of Representatives. The same house will possess the sole right of instituting impeachments: is not this a complete counterbalance to that of determining them? The same house will be the umpire in all elections of the President which do not unite the suffrages of a majority of the whole number of electors; a case which it cannot be doubted will sometimes, if not frequently, happen. The constant possibility of the thing must be a fruitful source of influence to that body. The more it is contemplated, the more important will appear this ultimate though contingent power of deciding the competitions of the most illustrious citizens of the Union, for the first office in it. It would not perhaps be rash to predict, that as a mean of influence it will be found to outweigh all the peculiar attributes of the Senate.

A third objection to the Senate as a court of impeachments is drawn from the agency they are to have in the appointments to office. It is imagined that they would be too indulgent judges of the conduct of men, in whose official creation they had participated. The principle of this objection would condemn a practice which is to be seen in all the State governments, if not in all the governments with which we are acquainted: I mean that of rendering those who hold offices during pleasure dependent on the pleasure of those who appoint them. With equal plausibility might it be alleged in this case, that the favoritism of the latter would always be an asylum for the misbehavior of the former. But that practice, in contradiction to this principle, proceeds upon the presumption that the responsibility of those who appoint, for the fitness and competency of the persons on whom they bestow their choice, and the interest they have in the respectable and prosperous administration of affairs, will inspire a sufficient disposition to dismiss from a share in it all such who, by their conduct, shall have proved

themselves unworthy of the confidence reposed in them. Though facts may not always correspond with this presumption, yet if it be, in the main, just, it must destroy the supposition that the Senate, who will merely sanction the choice of the Executive, should feel a bias towards the objects of that choice strong enough to blind them to the evidences of guilt so extraordinary as to have induced the representatives of the nation to become its accusers.

If any further arguments were necessary to evince the improbability of such a bias, it might be found in the nature of the agency of the Senate in the business of appointments. It will be the office of the President to nominate, and, with the advice and consent of the Senate, to appoint. There will, of course, be no exertion of choice on the part of the Senate. They may defeat one choice of the Executive, and oblige him to make another; but they cannot themselves choose—they can only ratify or reject the choice he may have made. They might even entertain a preference to some other person at the very moment they were assenting to the one proposed, because there might be no positive ground of opposition to him; and they could not be sure, if they withheld their assent, that the subsequent nomination would fall upon their own favorite, or upon any other person in their estimation more meritorious than the one rejected. Thus it could hardly happen that the majority of the Senate would feel any other complacency towards the object of an appointment than such as the appearances of merit might inspire, and the proofs of the want of it destroy.

A fourth objection to the Senate, in the capacity of a court of impeachments, is derived from its union with the executive in the power of making treaties. This, it has been said, would constitute the senators their own judges, in every case of a corrupt or perfidious execution of that trust. After having combined with the Executive in betraying the interests of the nation in a ruinous treaty, what

prospect, it is asked, would there be of their being made to suffer the punishment they would deserve when they were themselves to decide upon the accusation brought against them for the treachery of which they have been guilty?

This objection has been circulated with more earnestness and with greater show of reason than any other which has appeared against this part of the plan; and yet I am deceived if it does not rest upon an erroneous foundation.

The security essentially intended by the Constitution against corruption and treachery in the formation of treaties is to be sought for in the numbers and characters of those who are to make them. The JOINT AGENCY of the Chief Magistrate of the Union, and of two thirds of the members of a body selected by the collective wisdom of the legislatures of the several States, is designed to be the pledge for the fidelity of the national councils in this particular. The convention might with propriety have meditated the punishment of the executive for a deviation from the instructions of the Senate or a want of integrity in the conduct of the negotiations committed to him; they might also have had in view the punishment of a few leading individuals in the Senate who should have prostituted their influence in that body as the mercenary instruments of foreign corruption: but they could not, with more or with equal propriety, have contemplated the impeachment and punishment of two thirds of the Senate, consenting to an improper treaty, than of a majority of that or of the other branch of the national legislature, consenting to a pernicious or unconstitutional law—a principle which, I believe, has never been admitted into any government. How, in fact, could a majority in the House of Representatives impeach themselves? Not better, it is evident, than two thirds of the Senate might try themselves. And yet what reason is there that a majority of the House of Representatives, sacrificing the interests of the society by an unjust and tyrannical act

of legislation, should escape with impunity, more than two thirds of the Senate sacrificing the same interests in an injurious treaty with a foreign power? The truth is that in all such cases it is essential to the freedom and to the necessary independence of the deliberations of the body that the members of it should be exempt from punishment for acts done in a collective capacity; and the security to the society must depend on the care which is taken to confide the trust to proper hands, to make it their interest to execute it with fidelity, and to make it as difficult as possible for them to combine in any interest opposite to that of the public good.

So far as might concern the misbehavior of the executive in perverting the instructions or contravening the views of the Senate, we need not be apprehensive of the want of a disposition in that body to punish the abuse of their confidence or to vindicate their own authority. We may thus far count upon their pride, if not upon their virtue. And so far even as might concern the corruption of leading members by whose arts and influence the majority may have been inveigled into measures odious to the community, if the proofs of that corruption should be satisfactory, the usual propensity of human nature will warrant us in concluding that there would be commonly no defect of inclination in the body to divert the public resentment from themselves by a ready sacrifice of the authors of their mismanagement and disgrace.

[1] In that of New Jersey, also, the final judiciary authority is in a branch of the legislature. In New Hampshire, Massachusetts, Pennsylvania, and South Carolina, one branch of the legislature is the court for the trial of impeachments.

FEDERALIST No. 67 The Executive Department

From the New York Packet.
Tuesday, March 11, 1788
Hamilton

To the People of the State of New York:

THE constitution of the executive department of the proposed government claims next our attention.

There is hardly any part of the system which could have been attended with greater difficulty in the arrangement of it than this; and there is, perhaps, none which has been inveighed against with less candor or criticised with less judgment.

Here the writers against the Constitution seem to have taken pains to signalize their talent of misrepresentation. Calculating upon the aversion of the people to monarchy, they have endeavored to enlist all their jealousies and apprehensions in opposition to the intended President of the United States; not merely as the embryo, but as the full-grown progeny of that detested parent. To establish the pretended affinity, they have not scrupled to draw resources even from the regions of fiction. The authorities of a magistrate, in few instances greater, in some instances less, than those of a governor of New York, have been magnified into more than royal prerogatives. He has been decorated with attributes superior in dignity and splendor to those of a king of Great Britain. He has been shown to us with the diadem sparkling on his brow and the imperial purple flowing in his

train. He has been seated on a throne surrounded with minions and mistresses, giving audience to the envoys of foreign potentates in all the supercilious pomp of majesty. The images of Asiatic despotism and voluptuousness have scarcely been wanting to crown the exaggerated scene. We have been almost taught to tremble at the terrific visages of murdering janizaries, and to blush at the unveiled mysteries of a future seraglio.

Attempts so extravagant as these to disfigure or, it might rather be said, to metamorphose the object, render it necessary to take an accurate view of its real nature and form: in order as well to ascertain its true aspect and genuine appearance, as to unmask the disingenuity and expose the fallacy of the counterfeit resemblances which have been so insidiously, as well as industriously, propagated.

In the execution of this task there is no man who would not find it an arduous effort either to behold with moderation or to treat with seriousness the devices, not less weak than wicked, which have been contrived to pervert the public opinion in relation to the subject. They so far exceed the usual though unjustifiable licenses of party artifice that even in a disposition the most candid and tolerant they must force the sentiments which favor an indulgent construction of the conduct of political adversaries to give place to a voluntary and unreserved indignation. It is impossible not to bestow the imputation of deliberate imposture and deception upon the gross pretense of a similitude between a king of Great Britain and a magistrate of the character marked out for that of the President of the United States. It is still more impossible to withhold that imputation from the rash and barefaced expedients which have been employed to give success to the attempted imposition.

In one instance, which I cite as a sample of the general spirit, the temerity has proceeded so far as to ascribe to the President of the United States a power which by the instrument reported is expressly

allotted to the executives of the individual States. I mean the power of filling casual vacancies in the Senate.

This bold experiment upon the discernment of his countrymen has been hazarded by a writer who (whatever may be his real merit) has had no inconsiderable share in the applauses of his party^[1]; and who, upon this false and unfounded suggestion, has built a series of observations equally false and unfounded. Let him now be confronted with the evidence of the fact, and let him, if he be able, justify or extenuate the shameful outrage he has offered to the dictates of truth and to the rules of fair dealing.

The second clause of the second section of the second article empowers the President of the United States “to nominate, and by and with the advice and consent of the Senate, to appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not in the Constitution otherwise provided for, and which shall be established by law.” Immediately after this clause follows another in these words: “The President shall have power to fill up all vacancies that may happen during the recess of the senate, by granting commissions which shall expire at the end of their next session.” It is from this last provision that the pretended power of the President to fill vacancies in the Senate has been deduced. A slight attention to the connection of the clauses and to the obvious meaning of the terms will satisfy us that the deduction is not even colorable.

The first of these two clauses, it is clear, only provides a mode for appointing such officers, “whose appointments are not otherwise provided for in the Constitution, and which shall be established by law”; of course it cannot extend to the appointments of senators, whose appointments are otherwise provided for in the Constitution^[2], and who are established by the Constitution, and will not require a future establishment by law. This position will hardly be contested.

The last of these two clauses, it is equally clear, cannot be understood to comprehend the power of filling vacancies in the Senate, for the following reasons:—First. The relation in which that clause stands to the other, which declares the general mode of appointing officers of the United States, denotes it to be nothing more than a supplement to the other for the purpose of establishing an auxiliary method of appointment, in cases to which the general method was inadequate. The ordinary power of appointment is confined to the President and Senate jointly, and can therefore only be exercised during the session of the Senate; but as it would have been improper to oblige this body to be continually in session for the appointment of officers, and as vacancies might happen in their recess, which it might be necessary for the public service to fill without delay, the succeeding clause is evidently intended to authorize the President, singly, to make temporary appointments“during the recess of the Senate, by granting commissions which shall expire at the end of their next session.”Second. If this clause is to be considered as supplementary to the one which precedes, the vacancies of which it speaks must be construed to relate to the“officers”described in the preceding one; and this, we have seen, excludes from its description the members of the Senate. Third. The time within which the power is to operate,“during the recess of the Senate,”and the duration of the appointments“to the end of the next session”of that body, conspire to elucidate the sense of the provision which, if it had been intended to comprehend senators, would naturally have referred the temporary power of filling vacancies to the recess of the State legislatures, who are to make the permanent appointments, and not to the recess of the national Senate, who are to have no concern in those appointments; and would have extended the duration in office of the temporary senators to the next session of the legislature of the State, in whose representation the vacancies had happened, instead of making it to expire at the end of the ensuing session of the national Senate. The circumstances of the

body authorized to make the permanent appointments would, of course, have governed the modification of a power which related to the temporary appointments; and as the national Senate is the body whose situation is alone contemplated in the clause upon which the suggestion under examination has been founded, the vacancies to which it alludes can only be deemed to respect those officers in whose appointment that body has a concurrent agency with the President. But lastly, the first and second clauses of the third section of the first article not only obviate all possibility of doubt, but destroy the pretext of misconception. The former provides that “the Senate of the United States shall be composed of two Senators from each State, chosen by the legislature thereof for six years”; and the latter directs that, “if vacancies in that body should happen by resignation or otherwise, during the recess of the legislature of ANY STATE, the executive THEREOF may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies.” Here is an express power given, in clear and unambiguous terms, to the State executives to fill casual vacancies in the Senate by temporary appointments; which not only invalidates the supposition that the clause before considered could have been intended to confer that power upon the President of the United States, but proves that this supposition, destitute as it is even of the merit of plausibility, must have originated in an intention to deceive the people, too palpable to be obscured by sophistry, too atrocious to be palliated by hypocrisy.

I have taken the pains to select this instance of misrepresentation and to place it in a clear and strong light, as an unequivocal proof of the unwarrantable arts which are practiced to prevent a fair and impartial judgment of the real merits of the Constitution submitted to the consideration of the people. Nor have I scrupled, in so flagrant a case, to allow myself a severity of animadversion little congenial with the general spirit of these papers. I hesitate not to submit it to the decision of any candid and honest adversary of the proposed

government whether language can furnish epithets of too much asperity for so shameless and so prostitute an attempt to impose on the citizens of America.

FEDERALIST No. 68 The Mode of Electing the President

For the Independent Journal.
Wednesday, March 12, 1788
Hamilton

To the People of the State of New York:

THE mode of appointment of the Chief Magistrate of the United States is almost the only part of the system, of any consequence, which has escaped without severe censure or which has received the slightest mark of approbation from its opponents.^[1] The most plausible of these, who has appeared in print, has even deigned to admit that the election of the President is pretty well guarded.^[2] I venture somewhat further, and hesitate not to affirm that if the manner of it be not perfect, it is at least excellent. It unites in an eminent degree all the advantages the union of which was to be desired.

It was desirable that the sense of the people should operate in the choice of the person to whom so important a trust was to be confided. This end will be answered by committing the right of making it, not to any preestablished body, but to men chosen by the people for the special purpose, and at the particular conjuncture.

It was equally desirable that the immediate election should be made by men most capable of analyzing the qualities adapted to the station and acting under circumstances favorable to deliberation, and to a judicious combination of all the reasons and inducements which

were proper to govern their choice. A small number of persons, selected by their fellow-citizens from the general mass, will be most likely to possess the information and discernment requisite to so complicated an investigation.

It was also peculiarly desirable to afford as little opportunity as possible to tumult and disorder. This evil was not least to be dreaded in the election of a magistrate who was to have so important an agency in the administration of the government as the President of the United States. But the precautions which have been so happily concerted in the system under consideration promise an effectual security against this mischief. The choice of several to form an intermediate body of electors will be much less apt to convulse the community with any extraordinary or violent movements than the choice of one who was himself to be the final object of the public wishes. And as the electors, chosen in each State, are to assemble and vote in the State in which they are chosen, this detached and divided situation will expose them much less to heats and ferments, which might be communicated from them to the people, than if they were all to be convened at one time, in one place.

Nothing was more to be desired than that every practicable obstacle should be opposed to cabal, intrigue, and corruption. These most deadly adversaries of republican government might naturally have been expected to make their approaches from more than one quarter, but chiefly from the desire in foreign powers to gain an improper ascendant in our councils. How could they better gratify this than by raising a creature of their own to the chief magistracy of the Union? But the convention have guarded against all danger of this sort with the most provident and judicious attention. They have not made the appointment of the President to depend on any preexisting bodies of men who might be tampered with beforehand to prostitute their votes; but they have referred it in the first instance to an immediate

act of the people of America, to be exerted in the choice of persons for the temporary and sole purpose of making the appointment. And they have excluded from eligibility to this trust all those who from situation might be suspected of too great devotion to the President in office. No senator, representative, or other person holding a place of trust or profit under the United States can be of the numbers of the electors. Thus without corrupting the body of the people the immediate agents in the election will at least enter upon the task free from any sinister bias. Their transient existence and their detached situation, already taken notice of, afford a satisfactory prospect of their continuing so, to the conclusion of it. The business of corruption, when it is to embrace so considerable a number of men, requires time as well as means. Nor would it be found easy suddenly to embark them, dispersed as they would be over thirteen States, in any combinations founded upon motives which though they could not properly be denominated corrupt, might yet be of a nature to mislead them from their duty.

Another and no less important desideratum was that the executive should be independent for his continuance in office on all but the people themselves. He might otherwise be tempted to sacrifice his duty to his complaisance for those whose favor was necessary to the duration of his official consequence. This advantage will also be secured, by making his re-election to depend on a special body of representatives, deputed by the society for the single purpose of making the important choice.

All these advantages will be happily combined in the plan devised by the convention; which is, that the people of each State shall choose a number of persons as electors, equal to the number of senators and representatives of such State in the national government who shall assemble within the State, and vote for some fit person as President. Their votes, thus given, are to be transmitted to the seat of the

national government, and the person who may happen to have a majority of the whole number of votes will be the President. But as a majority of the votes might not always happen to centre in one man, and as it might be unsafe to permit less than a majority to be conclusive, it is provided that, in such a contingency, the House of Representatives shall select out of the candidates who shall have the five highest number of votes the man who in their opinion may be best qualified for the office.

The process of election affords a moral certainty that the office of President will never fall to the lot of any man who is not in an eminent degree endowed with the requisite qualifications. Talents for low intrigue, and the little arts of popularity, may alone suffice to elevate a man to the first honors in a single State; but it will require other talents, and a different kind of merit, to establish him in the esteem and confidence of the whole Union, or of so considerable a portion of it as would be necessary to make him a successful candidate for the distinguished office of President of the United States. It will not be too strong to say that there will be a constant probability of seeing the station filled by characters pre-eminent for ability and virtue. And this will be thought no inconsiderable recommendation of the Constitution by those who are able to estimate the share which the executive in every government must necessarily have in its good or ill administration. Though we cannot acquiesce in the political heresy of the poet who says:

“For forms of government let fools contest—That which is best administered is best,”—

yet we may safely pronounce that the true test of a good government is its aptitude and tendency to produce a good administration.

The Vice-President is to be chosen in the same manner with the President; with this difference, that the Senate is to do, in respect to

the former, what is to be done by the House of Representatives, in respect to the latter.^[3]

The appointment of an extraordinary person, as Vice-President, has been objected to as superfluous, if not mischievous. It has been alleged that it would have been preferable to have authorized the Senate to elect out of their own body an officer answering to that description. But two considerations seem to justify the ideas of the convention in this respect. One is that to secure at all times the possibility of a definite resolution of the body, it is necessary that the President should have only a casting vote. And to take the senator of any State from his seat as senator, to place him in that of President of the Senate, would be to exchange, in regard to the State from which he came, a constant for a contingent vote. The other consideration is that as the Vice-President may occasionally become a substitute for the President, in the supreme executive magistracy, all the reasons which recommend the mode of election prescribed for the one apply with great if not with equal force to the manner of appointing the other. It is remarkable that in this, as in most other instances, the objection which is made would lie against the constitution of this State. We have a Lieutenant-Governor, chosen by the people at large, who presides in the Senate, and is the constitutional substitute for the Governor, in casualties similar to those which would authorize the Vice-President to exercise the authorities and discharge the duties of the President.

[1] 总统选举方式，几乎没有受到任何的批评，主要是宪法制定时，大家都心知肚明谁会是第一任总统，那就是乔治·华盛顿。

[2] Vide Federal Farmer.

[3] 副总统的产生与总统的选出方式相同，选举人在选举时投票选举二人。选出总统后，获得选举人票数最多者当选副总统。但实践证明，这种选举制度是有缺陷的，可能会被人操纵，会有人将投给次要候选人的票扔掉，会有对手被选为副总统或者在竞选伙伴之间出现僵局。为了弥补修复这个缺陷，国会在1803年通过了第12条修正案，从1804年的选举开始，每个选举人为总统投一票，为副总统投第二票。

FEDERALIST No. 69 The Real Character of the Executive

From the New York Packet.
Friday, March 14, 1788
Hamilton

To the People of the State of New York:

I PROCEED now to trace the real characters of the proposed Executive, as they are marked out in the plan of the convention. This will serve to place in a strong light the unfairness of the representations which have been made in regard to it.

The first thing which strikes our attention is that the executive authority, with few exceptions, is to be vested in a single magistrate. This will scarcely, however, be considered as a point upon which any comparison can be grounded; for if, in this particular, there be a resemblance to the king of Great Britain, there is not less a resemblance to the Grand Seignior, to the khan of Tartary, to the Man of the Seven Mountains, or to the governor of New York.

That magistrate is to be elected for four years; and is to be re-eligible as often as the people of the United States shall think him worthy of their confidence.^[1] In these circumstances there is a total dissimilitude between him and a king of Great Britain, who is an hereditary monarch, possessing the crown as a patrimony descendible to his heirs forever; but there is a close analogy between him and a governor of New York, who is elected for three years, and is re-eligible without limitation or intermission. If we consider how much less time

would be requisite for establishing a dangerous influence in a single State than for establishing a like influence throughout the United States, we must conclude that a duration of four years for the Chief Magistrate of the Union is a degree of permanency far less to be dreaded in that office, than a duration of three years for a corresponding office in a single State.

The President of the United States would be liable to be impeached, tried, and, upon conviction of treason, bribery, or other high crimes or misdemeanors, removed from office; and would afterwards be liable to prosecution and punishment in the ordinary course of law. The person of the king of Great Britain is sacred and inviolable; there is no constitutional tribunal to which he is amenable; no punishment to which he can be subjected without involving the crisis of a national revolution. In this delicate and important circumstance of personal responsibility, the President of Confederate America would stand upon no better ground than a governor of New York, and upon worse ground than the governors of Virginia and Delaware.

The President of the United States is to have power to return a bill, which shall have passed the two branches of the legislature, for reconsideration; and the bill so returned is not to become a law unless, upon that reconsideration, it be approved by two thirds of both houses. The king of Great Britain, on his part, has an absolute negative upon the acts of the two houses of Parliament. The disuse of that power for a considerable time past does not affect the reality of its existence and is to be ascribed wholly to the crown's having found the means of substituting influence to authority, or the art of gaining a majority in one or the other of the two houses, to the necessity of exerting a prerogative which could seldom be exerted without hazarding some degree of national agitation. The qualified negative of the President differs widely from this absolute negative of the British

sovereign and tallies exactly with the revisionary authority of the council of revision of this State, of which the governor is a constituent part. In this respect the power of the President would exceed that of the governor of New York, because the former would possess, singly, what the latter shares with the chancellor and judges; but it would be precisely the same with that of the governor of Massachusetts, whose constitution, as to this article, seems to have been the original from which the convention have copied.

The President is to be the “commander-in-chief of the army and navy of the United States, and of the militia of the several States, when called into the actual service of the United States. He is to have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment; to recommend to the consideration of Congress such measures as he shall judge necessary and expedient; to convene, on extraordinary occasions, both houses of the legislature, or either of them, and, in case of disagreement between them with respect to the time of adjournment, to adjourn them to such time as he shall think proper; to take care that the laws be faithfully executed; and to commission all officers of the United States.” In most of these particulars, the power of the President will resemble equally that of the king of Great Britain and of the governor of New York. The most material points of difference are these:—First. The President will have only the occasional command of such part of the militia of the nation as by legislative provision may be called into the actual service of the Union. The king of Great Britain and the governor of New York have at all times the entire command of all the militia within their several jurisdictions. In this article, therefore, the power of the President would be inferior to that of either the monarch or the governor. Second. The President is to be commander-in-chief of the army and navy of the United States. In this respect his authority would be nominally the same with that of the king of great Britain, but in substance much inferior to it. It would amount to nothing more

than the supreme command and direction of the military and naval forces, as first general and admiral of the Confederacy; while that of the British king extends to the declaring of war and to the raising and regulating of fleets and armies—all which, by the Constitution under consideration, would appertain to the legislature.^[2] The governor of New York, on the other hand, is by the constitution of the State vested only with the command of its militia and navy. But the constitutions of several of the States expressly declare their governors to be commanders-in-chief, as well of the army as navy; and it may well be a question whether those of New Hampshire and Massachusetts, in particular, do not, in this instance, confer larger powers upon their respective governors than could be claimed by a President of the United States. Third. The power of the President, in respect to pardons, would extend to all cases, except those of impeachment. The governor of New York may pardon in all cases, even in those of impeachment, except for treason and murder. Is not the power of the governor, in this article, on a calculation of political consequences, greater than that of the President? All conspiracies and plots against the government which have not been matured into actual treason may be screened from punishment of every kind by the interposition of the prerogative of pardoning. If a governor of New York, therefore, should be at the head of any such conspiracy, until the design had been ripened into actual hostility he could insure his accomplices and adherents an entire impunity. A President of the Union, on the other hand, though he may even pardon treason, when prosecuted in the ordinary course of law, could shelter no offender, in any degree, from the effects of impeachment and conviction. Would not the prospect of a total indemnity for all the preliminary steps be a greater temptation to undertake and persevere in an enterprise against the public liberty, than the mere prospect of an exemption from death and confiscation, if the final execution of the design, upon an actual appeal to arms, should miscarry? Would this last expectation have any influence at all, when the probability was computed that the person who was to afford

that exemption might himself be involved in the consequences of the measure, and might be incapacitated by his agency in it from affording the desired impunity? The better to judge of this matter, it will be necessary to recollect that, by the proposed Constitution, the offense of treason is limited “to levying war upon the United States, and adhering to their enemies, giving them aid and comfort”; and that by the laws of New York it is confined within similar bounds. Fourth. The President can only adjourn the national legislature in the single case of disagreement about the time of adjournment. The British monarch may prorogue or even dissolve the Parliament. The governor of New York may also prorogue the legislature of this State for a limited time; a power which, in certain situations, may be employed to very important purposes.

The President is to have power, with the advice and consent of the Senate, to make treaties, provided two thirds of the senators present concur. The king of Great Britain is the sole and absolute representative of the nation in all foreign transactions. He can of his own accord make treaties of peace, commerce, alliance, and of every other description. It has been insinuated that his authority in this respect is not conclusive, and that his conventions with foreign powers are subject to the revision, and stand in need of the ratification, of Parliament. But I believe this doctrine was never heard of until it was broached upon the present occasion. Every jurist^[3] of that kingdom, and every other man acquainted with its Constitution knows, as an established fact, that the prerogative of making treaties exists in the crown in its utmost plenitude; and that the compacts entered into by the royal authority have the most complete legal validity and perfection, independent of any other sanction. The Parliament, it is true, is sometimes seen employing itself in altering the existing laws to conform them to the stipulations in a new treaty; and this may have possibly given birth to the imagination that its co-operation was necessary to the obligatory efficacy of the treaty. But this

parliamentary interposition proceeds from a different cause: from the necessity of adjusting a most artificial and intricate system of revenue and commercial laws, to the changes made in them by the operation of the treaty; and of adapting new provisions and precautions to the new state of things, to keep the machine from running into disorder. In this respect, therefore, there is no comparison between the intended power of the President and the actual power of the British sovereign. The one can perform alone what the other can only do with the concurrence of a branch of the legislature. It must be admitted that in this instance the power of the federal executive would exceed that of any State executive. But this arises naturally from the exclusive possession by the Union of that part of the sovereign power which relates to treaties. If the Confederacy were to be dissolved, it would become a question, whether the executives of the several States were not solely invested with that delicate and important prerogative.

The President is also to be authorized to receive ambassadors and other public ministers. This, though it has been a rich theme of declamation, is more a matter of dignity than of authority. It is a circumstance which will be without consequence in the administration of the government; and it was far more convenient that it should be arranged in this manner than that there should be a necessity of convening the legislature, or one of its branches, upon every arrival of a foreign minister, though it were merely to take the place of a departed predecessor.

The President is to nominate, and, with the advice and consent of the Senate, to appoint ambassadors and other public ministers, judges of the Supreme Court, and in general all officers of the United States established by law, and whose appointments are not otherwise provided for by the Constitution. The king of Great Britain is emphatically and truly styled the fountain of honor. He not only appoints to all offices, but can create offices. He can confer titles of

nobility at pleasure, and has the disposal of an immense number of church preferments. There is evidently a great inferiority in the power of the President, in this particular, to that of the British king; nor is it equal to that of the governor of New York, if we are to interpret the meaning of the constitution of the State by the practice which has obtained under it. The power of appointment is with us lodged in a council, composed of the governor and four members of the Senate, chosen by the Assembly. The governor claims, and has frequently exercised, the right of nomination, and is entitled to a casting vote in the appointment. If he really has the right of nominating, his authority is in this respect equal to that of the President, and exceeds it in the article of the casting vote. In the national government, if the Senate should be divided, no appointment could be made; in the government of New York, if the council should be divided, the governor can turn the scale and confirm his own nomination.^[4] If we compare the publicity which must necessarily attend the mode of appointment by the President and an entire branch of the national legislature, with the privacy in the mode of appointment by the governor of New York, closeted in a secret apartment with at most four, and frequently with only two persons; and if we at the same time consider how much more easy it must be to influence the small number of which a council of appointment consists than the considerable number of which the national Senate would consist, we cannot hesitate to pronounce that the power of the chief magistrate of this State, in the disposition of offices, must, in practice, be greatly superior to that of the Chief Magistrate of the Union.

Hence it appears that except as to the concurrent authority of the President in the article of treaties, it would be difficult to determine whether that magistrate would, in the aggregate, possess more or less power than the Governor of New York. And it appears yet more unequivocally that there is no pretense for the parallel which has been attempted between him and the king of Great Britain. But to render

the contrast in this respect still more striking, it may be of use to throw the principal circumstances of dissimilitude into a closer group.

The President of the United States would be an officer elected by the people for four years; the king of Great Britain is a perpetual and hereditary prince. The one would be amenable to personal punishment and disgrace; the person of the other is sacred and inviolable. The one would have a qualified negative upon the acts of the legislative body; the other has an absolute negative. The one would have a right to command the military and naval forces of the nation; the other, in addition to this right, possesses that of declaring war, and of raising and regulating fleets and armies by his own authority. The one would have a concurrent power with a branch of the legislature in the formation of treaties; the other is the sole possessor of the power of making treaties. The one would have a like concurrent authority in appointing to offices; the other is the sole author of all appointments. The one can confer no privileges whatever; the other can make denizens of aliens, noblemen of commoners; can erect corporations with all the rights incident to corporate bodies. The one can prescribe no rules concerning the commerce or currency of the nation; the other is in several respects the arbiter of commerce, and in this capacity can establish markets and fairs, can regulate weights and measures, can lay embargoes for a limited time, can coin money, can authorize or prohibit the circulation of foreign coin. The one has no particle of spiritual jurisdiction; the other is the supreme head and governor of the national church! What answer shall we give to those who would persuade us that things so unlike resemble each other? The same that ought to be given to those who tell us that a government, the whole power of which would be in the hands of the elective and periodical servants of the people, is an aristocracy, a monarchy, and a despotism.

[1] 总统任期四年，可以连选连任（关于不能连选连任的危害，见第七十二篇）。1796年9月17日行将任满两届的首任总统乔治·华盛顿发表了著名的告别词，宣布不再竞选连任，从而开创了总统任期不超过两届的先例。以后历任总统都逐一效法，唯一打破此项惯例的是富兰克林·罗斯福。这让国会看到了其中存在的风险，于1947年3月提出了第22条宪法修正案，明确规定当选总统职务不得超过两次。

[2] A writer in a Pennsylvania paper, under the signature of TAMONY, has asserted that the king of Great Britain owes his prerogative as commander-in-chief to an annual mutiny bill. The truth is, on the contrary, that his prerogative in this respect is immemorial, and was only disputed“contrary to all reason and precedent,”as Blackstone, Vol. I., page 262, expresses it, by the Long Parliament of Charles I; but by the statute the 13th of Charles II., chap. 6, it was declared to be in the king alone, for that the sole supreme government and command of the militia within his Majesty's realms and dominions, and of all forces by sea and land, and of all forts and places of strength, EVER WAS AND IS the undoubted right of his Majesty and his royal predecessors, kings and queens of England, and that both or either house of Parliament cannot nor ought to pretend to the same.

[3] Vide Blackstone's *Commentaries*, Vol. I., p. 257.

[4] Candor, however, demands an acknowledgment that I do not think the claim of the governor to a right of nomination well founded. Yet it is always justifiable to reason from the practice of a government till its propriety has been constitutionally questioned. And independent of this claim, when we take into view the other considerations and pursue them through all their consequences, we shall be inclined to draw much the same conclusion.

FEDERALIST No. 70 The Executive Department Further Considered

**For the Independent Journal.
Saturday, March 15, 1788
Hamilton**

To the People of the State of New York:

THERE is an idea, which is not without its advocates, that a vigorous executive is inconsistent with the genius of republican government. The enlightened well-wishers to this species of government must at least hope that the supposition is destitute of foundation; since they can never admit its truth, without at the same time admitting the condemnation of their own principles. Energy in the executive is a leading character in the definition of good government. It is essential to the protection of the community against foreign attacks; it is not less essential to the steady administration of the laws; to the protection of property against those irregular and high-handed combinations which sometimes interrupt the ordinary course of justice; to the security of liberty against the enterprises and assaults of ambition, of faction, and of anarchy. Every man the least conversant in Roman history knows how often that republic was obliged to take refuge in the absolute power of a single man, under the formidable title of dictator, as well against the intrigues of ambitious individuals who aspired to the tyranny, and the seditions of whole classes of the community whose conduct threatened the existence of all government, as against the invasions of external

enemies who menaced the conquest and destruction of Rome.

There can be no need, however, to multiply arguments or examples on this head. A feeble executive implies a feeble execution of the government. A feeble execution is but another phrase for a bad execution; and a government ill executed, whatever it may be in theory, must be, in practice, a bad government.

Taking it for granted, therefore, that all men of sense will agree in the necessity of an energetic executive, it will only remain to inquire, what are the ingredients which constitute this energy? How far can they be combined with those other ingredients which constitute safety in the republican sense? And how far does this combination characterize the plan which has been reported by the convention?

The ingredients which constitute energy in the executive are unity; duration; an adequate provision for its support; and competent powers.

The ingredients which constitute safety in the republican sense are a due dependence on the people, and a due responsibility.

Those politicians and statesmen who have been the most celebrated for the soundness of their principles and for the justness of their views have declared in favor of a single executive and a numerous legislature. They have, with great propriety, considered energy as the most necessary qualification of the former, and have regarded this as most applicable to power in a single hand; while they have, with equal propriety, considered the latter as best adapted to deliberation and wisdom, and best calculated to conciliate the confidence of the people and to secure their privileges and interests.

That unity is conducive to energy will not be disputed. Decision, activity, secrecy, and despatch will generally characterize the proceedings of one man in a much more eminent degree than the

proceedings of any greater number; and in proportion as the number is increased, these qualities will be diminished.

This unity may be destroyed in two ways: either by vesting the power in two or more magistrates of equal dignity and authority, or by vesting it ostensibly in one man, subject in whole or in part to the control and co-operation of others, in the capacity of counsellors to him. Of the first, the two Consuls of Rome may serve as an example; of the last, we shall find examples in the constitutions of several of the States. New York and New Jersey, if I recollect right, are the only States which have intrusted the executive authority wholly to single men.^[1] Both these methods of destroying the unity of the executive have their partisans; but the votaries of an executive council are the most numerous. They are both liable, if not to equal, to similar objections, and may in most lights be examined in conjunction.

The experience of other nations will afford little instruction on this head. As far, however, as it teaches anything, it teaches us not to be enamoured of plurality in the Executive. We have seen that the Achaeans, on an experiment of two Praetors, were induced to abolish one. The Roman history records many instances of mischiefs to the republic from the dissensions between the Consuls, and between the military tribunes, who were at times substituted for the consuls. But it gives us no specimens of any peculiar advantages derived to the state from the circumstance of the plurality of those magistrates. That the dissensions between them were not more frequent or more fatal, is a matter of astonishment, until we advert to the singular position in which the republic was almost continually placed, and to the prudent policy pointed out by the circumstances of the state, and pursued by the consuls, of making a division of the government between them. The patricians engaged in a perpetual struggle with the plebeians for the preservation of their ancient authorities and dignities; the consuls, who were generally chosen out of the former body, were commonly

united by the personal interest they had in the defense of the privileges of their order. In addition to this motive of union, after the arms of the republic had considerably expanded the bounds of its empire, it became an established custom with the consuls to divide the administration between themselves by lot—one of them remaining at Rome to govern the city and its environs, the other taking command in the more distant provinces. This expedient must no doubt have had great influence in preventing those collisions and rivalships which might otherwise have embroiled the peace of the republic.

But quitting the dim light of historical research, and attaching ourselves purely to the dictates of reason and good sense, we shall discover much greater cause to reject than to approve the idea of plurality in the executive, under any modification whatever.

Wherever two or more persons are engaged in any common enterprise or pursuit, there is always danger of difference of opinion. If it be a public trust or office in which they are clothed with equal dignity and authority, there is peculiar danger of personal emulation and even animosity. From either, and especially from all these causes, the most bitter dissensions are apt to spring. Whenever these happen, they lessen the respectability, weaken the authority, and distract the plans and operation of those whom they divide. If they should unfortunately assail the supreme executive magistracy of a country, consisting of a plurality of persons, they might impede or frustrate the most important measures of the government in the most critical emergencies of the state. And what is still worse, they might split the community into the most violent and irreconcilable factions, adhering differently to the different individuals who composed the magistracy.

Men often oppose a thing merely because they have had no agency in planning it, or because it may have been planned by those whom they dislike. But if they have been consulted, and have happened to disapprove, opposition then becomes, in their estimation,

an indispensable duty of self-love. They seem to think themselves bound in honor, and by all the motives of personal infallibility, to defeat the success of what has been resolved upon contrary to their sentiments. Men of upright, benevolent tempers have too many opportunities of remarking, with horror, to what desperate lengths this disposition is sometimes carried, and how often the great interests of society are sacrificed to the vanity, to the conceit, and to the obstinacy of individuals, who have credit enough to make their passions and their caprices interesting to mankind. Perhaps the question now before the public may, in its consequences, afford melancholy proofs of the effects of this despicable frailty, or rather detestable vice, in the human character.

Upon the principles of a free government, inconveniences from the source just mentioned must necessarily be submitted to in the formation of the legislature; but it is unnecessary, and therefore unwise, to introduce them into the constitution of the executive. It is here too that they may be most pernicious. In the legislature, promptitude of decision is oftener an evil than a benefit. The differences of opinion, and the jarring of parties in that department of the government, though they may sometimes obstruct salutary plans, yet often promote deliberation and circumspection, and serve to check excesses in the majority. When a resolution too is once taken, the opposition must be at an end. That resolution is a law, and resistance to it punishable. But no favorable circumstances palliate or atone for the disadvantages of dissension in the executive department. Here they are pure and unmixed. There is no point at which they cease to operate. They serve to embarrass and weaken the execution of the plan or measure to which they relate, from the first step to the final conclusion of it. They constantly counteract those qualities in the executive which are the most necessary ingredients in its composition—vigor and expedition, and this without any counterbalancing good. In the conduct of war, in which the energy of the executive is the

bulwark of the national security, everything would be to be apprehended from its plurality.

It must be confessed that these observations apply with principal weight to the first case supposed—that is, to a plurality of magistrates of equal dignity and authority, a scheme, the advocates for which are not likely to form a numerous sect; but they apply, though not with equal yet with considerable weight to the project of a council, whose concurrence is made constitutionally necessary to the operations of the ostensible executive. An artful cabal in that council would be able to distract and to enervate the whole system of administration. If no such cabal should exist, the mere diversity of views and opinions would alone be sufficient to tincture the exercise of the executive authority with a spirit of habitual feebleness and dilatoriness.

But one of the weightiest objections to a plurality in the executive, and which lies as much against the last as the first plan is that it tends to conceal faults and destroy responsibility. Responsibility is of two kinds—to censure and to punishment. The first is the more important of the two, especially in an elective office. Men in public trust will much oftener act in such a manner as to render him unworthy of being any longer trusted, than in such a manner as to make him obnoxious to legal punishment. But the multiplication of the executive adds to the difficulty of detection in either case. It often becomes impossible, amidst mutual accusations, to determine on whom the blame or the punishment of a pernicious measure, or series of pernicious measures, ought really to fall. It is shifted from one to another with so much dexterity, and under such plausible appearances, that the public opinion is left in suspense about the real author. The circumstances which may have led to any national miscarriage or misfortune are sometimes so complicated that where there are a number of actors who may have had different degrees and kinds of agency, though we may clearly see upon the whole that there

has been mismanagement, yet it may be impracticable to pronounce to whose account the evil which may have been incurred is truly chargeable.

“I was overruled by my council. The council were so divided in their opinions that it was impossible to obtain any better resolution on the point.” These and similar pretexts are constantly at hand, whether true or false. And who is there that will either take the trouble or incur the odium of a strict scrutiny into the secret springs of the transaction? Should there be found a citizen zealous enough to undertake the unpromising task, if there happened to be a collusion between the parties concerned, how easy it is to clothe the circumstances with so much ambiguity as to render it uncertain what was the precise conduct of any of those parties.

In the single instance in which the governor of this State is coupled with a council—that is, in the appointment to offices, we have seen the mischiefs of it in the view now under consideration. Scandalous appointments to important offices have been made. Some cases, indeed, have been so flagrant that ALL PARTIES have agreed in the impropriety of the thing. When inquiry has been made, the blame has been laid by the governor on the members of the council, who, on their part, have charged it upon his nomination; while the people remain altogether at a loss to determine by whose influence their interests have been committed to hands so unqualified and so manifestly improper. In tenderness to individuals, I forbear to descend to particulars.

It is evident from these considerations that the plurality of the executive tends to deprive the people of the two greatest securities they can have for the faithful exercise of any delegated power, first, the restraints of public opinion, which lose their efficacy, as well on account of the division of the censure attendant on bad measures among a number as on account of the uncertainty on whom it ought

to fall; and, second, the opportunity of discovering with facility and clearness the misconduct of the persons they trust, in order either to their removal from office or to their actual punishment in cases which admit of it.

In England, the king is a perpetual magistrate; and it is a maxim which has obtained for the sake of the public peace, that he is unaccountable for his administration, and his person sacred. Nothing, therefore, can be wiser in that kingdom than to annex to the king a constitutional council, who may be responsible to the nation for the advice they give. Without this, there would be no responsibility whatever in the executive department—an idea inadmissible in a free government. But even there the king is not bound by the resolutions of his council, though they are answerable for the advice they give. He is the absolute master of his own conduct in the exercise of his office and may observe or disregard the counsel given to him at his sole discretion.

But in a republic where every magistrate ought to be personally responsible for his behavior in office, the reason which in the British Constitution dictates the propriety of a council not only ceases to apply, but turns against the institution. In the monarchy of Great Britain, it furnishes a substitute for the prohibited responsibility of the Chief Magistrate, which serves in some degree as a hostage to the national justice for his good behavior. In the American republic, it would serve to destroy, or would greatly diminish, the intended and necessary responsibility of the Chief Magistrate himself.

The idea of a council to the executive, which has so generally obtained in the State constitutions, has been derived from that maxim of republican jealousy which considers power as safer in the hands of a number of men than of a single man. If the maxim should be admitted to be applicable to the case, I should contend that the advantage on that side would not counterbalance the numerous

disadvantages on the opposite side. But I do not think the rule at all applicable to the executive power. I clearly concur in opinion, in this particular, with a writer whom the celebrated Junius pronounces to be “deep, solid, and ingenious,” that “the executive power is more easily confined when it is one”;^[2] that it is far more safe there should be a single object for the jealousy and watchfulness of the people; and, in a word, that all multiplication of the executive is rather dangerous than friendly to liberty.

A little consideration will satisfy us that the species of security sought for in the multiplication of the executive is unattainable. Numbers must be so great as to render combination difficult, or they are rather a source of danger than of security. The united credit and influence of several individuals must be more formidable to liberty than the credit and influence of either of them separately. When power, therefore, is placed in the hands of so small a number of men as to admit of their interests and views being easily combined in a common enterprise, by an artful leader, it becomes more liable to abuse, and more dangerous when abused, than if it be lodged in the hands of one man; who, from the very circumstance of his being alone, will be more narrowly watched and more readily suspected, and who cannot unite so great a mass of influence as when he is associated with others. The decemvirs of Rome, whose name denotes their number,^[3] were more to be dreaded in their usurpation than any ONE of them would have been. No person would think of proposing an executive much more numerous than that body; from six to a dozen have been suggested for the number of the council. The extreme of these numbers is not too great for an easy combination; and from such a combination America would have more to fear than from the ambition of any single individual. A council to a magistrate, who is himself responsible for what he does, are generally nothing better than a clog upon his good intentions, are often the instruments and accomplices of his bad and are almost always a cloak to his faults.

I forbear to dwell upon the subject of expense; though it be evident that if the council should be numerous enough to answer the principal end aimed at by the institution, the salaries of the members, who must be drawn from their homes to reside at the seat of government, would form an item in the catalogue of public expenditures too serious to be incurred for an object of equivocal utility. I will only add that, prior to the appearance of the Constitution, I rarely met with an intelligent man from any of the States who did not admit, as the result of experience, that the UNITY of the executive of this State was one of the best of the distinguishing features of our constitution.

FEDERALIST No. 71 The Duration in Office of the Executive

**From the New York Packet.
Tuesday, March 18, 1788
Hamilton**

To the People of the State of New York:

DURATION in office has been mentioned as the second requisite to the energy of the executive authority. This has relation to two objects: to the personal firmness of the executive magistrate in the employment of his constitutional powers, and to the stability of the system of administration which may have been adopted under his auspices. With regard to the first, it must be evident that the longer the duration in office, the greater will be the probability of obtaining so important an advantage. It is a general principle of human nature that a man will be interested in whatever he possesses, in proportion to the firmness or precariousness of the tenure by which he holds it; will be less attached to what he holds by a momentary or uncertain title, than to what he enjoys by a durable or certain title; and, of course, will be willing to risk more for the sake of the one than for the sake of the other. This remark is not less applicable to a political privilege, or honor, or trust, than to any article of ordinary property. The inference from it is that a man acting in the capacity of chief magistrate, under a consciousness that in a very short time he must lay down his office, will be apt to feel himself too little interested in it to hazard any material censure or perplexity from the independent

exertion of his powers, or from encountering the ill-humors, however transient, which may happen to prevail, either in a considerable part of the society itself, or even in a predominant faction in the legislative body. If the case should only be that he might lay it down, unless continued by a new choice, and if he should be desirous of being continued, his wishes, conspiring with his fears, would tend still more powerfully to corrupt his integrity, or debase his fortitude. In either case, feebleness and irresolution must be the characteristics of the station.

There are some who would be inclined to regard the servile pliancy of the executive to a prevailing current, either in the community or in the legislature, as its best recommendation. But such men entertain very crude notions, as well of the purposes for which government was instituted, as of the true means by which the public happiness may be promoted. The republican principle demands that the deliberate sense of the community should govern the conduct of those to whom they intrust the management of their affairs; but it does not require an unqualified complaisance to every sudden breeze of passion, or to every transient impulse which the people may receive from the arts of men, who flatter their prejudices to betray their interests. It is a just observation that the people commonly intend the PUBLIC GOOD. This often applies to their very errors. But their good sense would despise the adulator who should pretend that they always reason right about the means of promoting it. They know from experience that they sometimes err; and the wonder is that they so seldom err as they do, beset as they continually are by the wiles of parasites and sycophants, by the snares of the ambitious, the avaricious, the desperate, by the artifices of men who possess their confidence more than they deserve it, and of those who seek to possess rather than to deserve it. When occasions present themselves in which the interests of the people are at variance with their inclinations, it is the duty of the persons whom they have appointed to

be the guardians of those interests to withstand the temporary delusion in order to give them time and opportunity for more cool and sedate reflection. Instances might be cited in which a conduct of this kind has saved the people from very fatal consequences of their own mistakes, and has procured lasting monuments of their gratitude to the men who had courage and magnanimity enough to serve them at the peril of their displeasure.

But however inclined we might be to insist upon an unbounded complaisance in the executive to the inclinations of the people, we can with no propriety contend for a like complaisance to the humors of the legislature. The latter may sometimes stand in opposition to the former, and at other times the people may be entirely neutral. In either supposition, it is certainly desirable that the executive should be in a situation to dare to act his own opinion with vigor and decision.

The same rule which teaches the propriety of a partition between the various branches of power teaches likewise that this partition ought to be so contrived as to render the one independent of the other. To what purpose separate the executive or the judiciary from the legislative, if both the executive and the judiciary are so constituted as to be at the absolute devotion of the legislative? Such a separation must be merely nominal, and incapable of producing the ends for which it was established. It is one thing to be subordinate to the laws, and another to be dependent on the legislative body. The first comports with, the last violates, the fundamental principles of good government; and, whatever may be the forms of the Constitution, unites all power in the same hands. The tendency of the legislative authority to absorb every other, has been fully displayed and illustrated by examples in some preceding numbers. In governments purely republican, this tendency is almost irresistible. The representatives of the people, in a popular assembly, seem

sometimes to fancy that they are the people themselves, and betray strong symptoms of impatience and disgust at the least sign of opposition from any other quarter; as if the exercise of its rights, by either the executive or judiciary, were a breach of their privilege and an outrage to their dignity. They often appear disposed to exert an imperious control over the other departments; and as they commonly have the people on their side, they always act with such momentum as to make it very difficult for the other members of the government to maintain the balance of the Constitution.

It may perhaps be asked how the shortness of the duration in office can affect the independence of the executive on the legislature, unless the one were possessed of the power of appointing or displacing the other. One answer to this inquiry may be drawn from the principle already remarked—that is, from the slender interest a man is apt to take in a short-lived advantage, and the little inducement it affords him to expose himself, on account of it, to any considerable inconvenience or hazard. Another answer, perhaps more obvious, though not more conclusive, will result from the consideration of the influence of the legislative body over the people, which might be employed to prevent the re-election of a man who, by an upright resistance to any sinister project of that body, should have made himself obnoxious to its resentment.

It may be asked also whether a duration of four years would answer the end proposed; and if it would not, whether a less period, which would at least be recommended by greater security against ambitious designs, would not, for that reason, be preferable to a longer period which was, at the same time, too short for the purpose of inspiring the desired firmness and independence of the magistrate.

It cannot be affirmed that a duration of four years, or any other limited duration, would completely answer the end proposed; but it would contribute towards it in a degree which would have a material

influence upon the spirit and character of the government. Between the commencement and termination of such a period there would always be a considerable interval in which the prospect of annihilation would be sufficiently remote not to have an improper effect upon the conduct of a man indued with a tolerable portion of fortitude; and in which he might reasonably promise himself that there would be time enough before it arrived to make the community sensible of the propriety of the measures he might incline to pursue. Though it be probable that, as he approached the moment when the public were, by a new election, to signify their sense of his conduct, his confidence, and with it his firmness, would decline; yet both the one and the other would derive support from the opportunities which his previous continuance in the station had afforded him, of establishing himself in the esteem and good-will of his constituents. He might, then, hazard with safety, in proportion to the proofs he had given of his wisdom and integrity, and to the title he had acquired to the respect and attachment of his fellow-citizens. As on the one hand, a duration of four years will contribute to the firmness of the executive in a sufficient degree to render it a very valuable ingredient in the composition, so, on the other, it is not long enough to justify any alarm for the public liberty. If a British House of Commons, from the most feeble beginnings, from the mere power of assenting or disagreeing to the imposition of a new tax, have, by rapid strides, reduced the prerogatives of the crown and the privileges of the nobility within the limits they conceived to be compatible with the principles of a free government, while they raised themselves to the rank and consequence of a coequal branch of the legislature; if they have been able, in one instance, to abolish both the royalty and the aristocracy, and to overturn all the ancient establishments, as well in the Church as State; if they have been able, on a recent occasion, to make the monarch tremble at the prospect of an innovation^[1] attempted by them, what would be to be feared from an elective magistrate of four years' duration with the confined authorities of a

President of the United States? What, but that he might be unequal to the task which the Constitution assigns him? I shall only add, that if his duration be such as to leave a doubt of his firmness, that doubt is inconsistent with a jealousy of his encroachments.

[1] This was the case with respect to Mr. Fox's India bill, which was carried in the House of Commons and rejected in the House of Lords, to the entire satisfaction, as it is said, of the people.

FEDERALIST No. 72 The Same Subject Continued, and Re- Eligibility of the Executive Considered

**For the Independent Journal.
Wednesday, March 19, 1788
Hamilton**

To the People of the State of New York:

THE administration of government, in its largest sense, comprehends all the operations of the body politic, whether legislative, executive, or judiciary; but in its most usual and perhaps its most precise signification, it is limited to executive details, and falls peculiarly within the province of the executive department. The actual conduct of foreign negotiations, the preparatory plans of finance, the application and disbursement of the public moneys in conformity to the general appropriations of the legislature, the arrangement of the army and navy, the directions of the operations of war—these, and other matters of a like nature, constitute what seems to be most properly understood by the administration of government. The persons, therefore, to whose immediate management these different matters are committed, ought to be considered as the assistants or deputies of the chief magistrate, and on this account they ought to derive their offices from his appointment, at least from his nomination, and ought to be subject to his superintendence. This view of the subject will at once suggest to us the intimate connection

between the duration of the executive magistrate in office and the stability of the system of administration. To reverse and undo what has been done by a predecessor is very often considered by a successor as the best proof he can give of his own capacity and desert; and in addition to this propensity, where the alteration has been the result of public choice, the person substituted is warranted in supposing that the dismissal of his predecessor has proceeded from a dislike to his measures; and that the less he resembles him, the more he will recommend himself to the favor of his constituents. These considerations, and the influence of personal confidences and attachments, would be likely to induce every new President to promote a change of men to fill the subordinate stations; and these causes together could not fail to occasion a disgraceful and ruinous mutability in the administration of the government.

With a positive duration of considerable extent, I connect the circumstance of re-eligibility. The first is necessary to give the officer himself the inclination and the resolution to act his part well, and to the community time and leisure to observe the tendency of his measures, and thence to form an experimental estimate of their merits. The last is necessary to enable the people, when they see reason to approve of his conduct, to continue him in the station in order to prolong the utility of his talents and virtues, and to secure to the government the advantage of permanency in a wise system of administration.

Nothing appears more plausible at first sight, nor more ill-founded upon close inspection, than a scheme which in relation to the present point has had some respectable advocates—I mean that of continuing the chief magistrate in office for a certain time, and then excluding him from it, either for a limited period or forever after. This exclusion, whether temporary or perpetual, would have nearly the same effects, and these effects would be for the most part rather

pernicious than salutary.

One ill effect of the exclusion would be a diminution of the inducements to good behavior. There are few men who would not feel much less zeal in the discharge of a duty when they were conscious that the advantages of the station with which it was connected must be relinquished at a determinate period, than when they were permitted to entertain a hope of obtaining, by meriting, a continuance of them. This position will not be disputed so long as it is admitted that the desire of reward is one of the strongest incentives of human conduct; or that the best security for the fidelity of mankind is to make their interests coincide with their duty. Even the love of fame, the ruling passion of the noblest minds, which would prompt a man to plan and undertake extensive and arduous enterprises for the public benefit, requiring considerable time to mature and perfect them, if he could flatter himself with the prospect of being allowed to finish what he had begun, would, on the contrary, deter him from the undertaking, when he foresaw that he must quit the scene before he could accomplish the work, and must commit that, together with his own reputation, to hands which might be unequal or unfriendly to the task. The most to be expected from the generality of men, in such a situation, is the negative merit of not doing harm, instead of the positive merit of doing good.

Another ill effect of the exclusion would be the temptation to sordid views, to peculation, and, in some instances, to usurpation. An avaricious man who might happen to fill the office, looking forward to a time when he must at all events yield up the emoluments he enjoyed, would feel a propensity not easy to be resisted by such a man to make the best use of the opportunities while they lasted, and might not scruple to have recourse to the most corrupt expedients to make the harvest as abundant as it was transitory; though the same man, probably, with a different prospect before him, might content himself

with the regular perquisites of his situation, and might even be unwilling to risk the consequences of an abuse of his opportunities. His avarice might be a guard upon his avarice. Add to this that the same man might be vain or ambitious, as well as avaricious. And if he could expect to prolong his honors by his good conduct, he might hesitate to sacrifice his appetite for them to his appetite for gain. But with the prospect before him of approaching an inevitable annihilation, his avarice would be likely to get the victory over his caution, his vanity, or his ambition.

An ambitious man, too, finding himself seated on the summit of his country's honors, looking forward to the time at which he must descend from the exalted eminence forever, and reflected that no exertion of merit on his part could save him from the unwelcome reverse, would be much more violently tempted to embrace a favorable conjuncture for attempting the prolongation of his power, at every personal hazard, than if he had the probability of answering the same end by doing his duty.

Would it promote the peace of the community, or the stability of the government to have half a dozen men who had had credit enough to raise themselves to the seat of the supreme magistracy wandering among the people like discontented ghosts and sighing for a place which they were destined never more to possess?

A third ill effect of the exclusion would be the depriving the community of the advantage of the experience gained by the chief magistrate in the exercise of his office. That experience is the parent of wisdom is an adage the truth of which is recognized by the wisest as well as the simplest of mankind. What more desirable or more essential than this quality in the governors of nations? Where more desirable or more essential than in the first magistrate of a nation? Can it be wise to put this desirable and essential quality under the ban of the Constitution, and to declare that the moment it is acquired, its

possessor shall be compelled to abandon the station in which it was acquired and to which it is adapted? This, nevertheless, is the precise import of all those regulations which exclude men from serving their country, by the choice of their fellowcitizens, after they have by a course of service fitted themselves for doing it with a greater degree of utility.

A fourth ill effect of the exclusion would be the banishing men from stations in which, in certain emergencies of the state, their presence might be of the greatest moment to the public interest or safety. There is no nation which has not, at one period or another, experienced an absolute necessity of the services of particular men in particular situations, perhaps it would not be too strong to say, to the preservation of its political existence. How unwise, therefore, must be every such self-denying ordinance as serves to prohibit a nation from making use of its own citizens in the manner best suited to its exigencies and circumstances! Without supposing the personal essentiality of the man, it is evident that a change of the chief magistrate, at the breaking out of a war, or any similar crisis, for another, even of equal merit, would at all times be detrimental to the community, inasmuch as it would substitute inexperience to experience, and would tend to unhinge and set afloat the already settled train of the administration.

A fifth ill effect of the exclusion would be that it would operate as a constitutional interdiction of stability in the administration. By necessitating a change of men, in the first office of the nation, it would necessitate a mutability of measures. It is not generally to be expected that men will vary and measures remain uniform. The contrary is the usual course of things. And we need not be apprehensive there will be too much stability, while there is even the option of changing; nor need we desire to prohibit the people from continuing their confidence where they think it may be safely placed,

and where, by constancy on their part, they may obviate the fatal inconveniences of fluctuating councils and a variable policy.

These are some of the disadvantages which would flow from the principle of exclusion. They apply most forcibly to the scheme of a perpetual exclusion; but when we consider that even a partial one would always render the readmission of the person a remote and precarious object, the observations which have been made will apply nearly as fully to one case as to the other.

What are the advantages promised to counterbalance these disadvantages? They are represented to be: 1st, greater independence in the magistrate; 2nd, greater security to the people. Unless the exclusion be perpetual, there will be no pretense to infer the first advantage. But even in that case, may he have no object beyond his present station to which he may sacrifice his independence? May he have no connections, no friends, for whom he may sacrifice it? May he not be less willing, by a firm conduct, to make personal enemies, when he acts under the impression that a time is fast approaching, on the arrival of which he not only MAY, but MUST, be exposed to their resentments, upon an equal, perhaps upon an inferior, footing? It is not an easy point to determine whether his independence would be most promoted or impaired by such an arrangement.

As to the second supposed advantage, there is still greater reason to entertain doubts concerning it. If the exclusion were to be perpetual, a man of irregular ambition, of whom alone there could be reason in any case to entertain apprehension, would, with infinite reluctance, yield to the necessity of taking his leave forever of a post in which his passion for power and pre-eminence had acquired the force of habit. And if he had been fortunate or adroit enough to conciliate the good-will of the people, he might induce them to consider as a very odious and unjustifiable restraint upon themselves a provision which was calculated to debar them of the right of giving a

fresh proof of their attachment to a favorite. There may be conceived circumstances in which this disgust of the people, seconding the thwarted ambition of such a favorite, might occasion greater danger to liberty than could ever reasonably be dreaded from the possibility of a perpetuation in office by the voluntary suffrages of the community exercising a constitutional privilege.

There is an excess of refinement in the idea of disabling the people to continue in office men who had entitled themselves, in their opinion, to approbation and confidence, the advantages of which are at best speculative and equivocal, and are overbalanced by disadvantages far more certain and decisive.

PUBLIUS

FEDERALIST No. 73 The Provision for the Support of the Executive, and the Veto Power

**From the New York Packet.
Friday, March 21, 1788
Hamilton**

To the People of the State of New York:

THE third ingredient towards constituting the vigor of the executive authority is an adequate provision for its support. It is evident that without proper attention to this article, the separation of the executive from the legislative department would be merely nominal and nugatory. The legislature, with a discretionary power over the salary and emoluments of the Chief Magistrate, could render him as obsequious to their will as they might think proper to make him. They might, in most cases, either reduce him by famine, or tempt him by largesses, to surrender at discretion his judgment to their inclinations. These expressions, taken in all the latitude of the terms, would no doubt convey more than is intended. There are men who could neither be distressed nor won into a sacrifice of their duty; but this stern virtue is the growth of few soils; and in the main it will be found that a power over a man's support is a power over his will. If it were necessary to confirm so plain a truth by facts, examples would not be wanting, even in this country, of the intimidation or seduction of the executive by the terrors or allurements of the pecuniary arrangements of the legislative body.

It is not easy, therefore, to commend too highly the judicious attention which has been paid to this subject in the proposed Constitution. It is there provided that "The President of the United States shall, at stated times, receive for his services a compensation which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them." It is impossible to imagine any provision which would have been more eligible than this. The legislature, on the appointment of a President, is once for all to declare what shall be the compensation for his services during the time for which he shall have been elected. This done, they will have no power to alter it, either by increase or diminution, till a new period of service by a new election commences. They can neither weaken his fortitude by operating on his necessities, nor corrupt his integrity by appealing to his avarice. Neither the Union, nor any of its members, will be at liberty to give, nor will he be at liberty to receive, any other emolument than that which may have been determined by the first act. He can, of course, have no pecuniary inducement to renounce or desert the independence intended for him by the Constitution.

The last of the requisites to energy which have been enumerated are competent powers. Let us proceed to consider those which are proposed to be vested in the President of the United States.

The first thing that offers itself to our observation is the qualified negative of the President upon the acts or resolutions of the two houses of the legislature; or, in other words, his power of returning all bills with objections to have the effect of preventing their becoming laws, unless they should afterwards be ratified by two thirds of each of the component members of the legislative body.

The propensity of the legislative department to intrude upon the rights, and to absorb the powers, of the other departments has been

already more than once suggested. The insufficiency of a mere parchment delineation of the boundaries of each has also been remarked upon; and the necessity of furnishing each with constitutional arms for its own defense has been inferred and proved. From these clear and indubitable principles results the propriety of a negative, either absolute or qualified, in the executive upon the acts of the legislative branches. Without the one or the other, the former would be absolutely unable to defend himself against the depredations of the latter. He might gradually be stripped of his authorities by successive resolutions or annihilated by a single vote. And in the one mode or the other, the legislative and executive powers might speedily come to be blended in the same hands. If even no propensity had ever discovered itself in the legislative body to invade the rights of the executive, the rules of just reasoning and theoretic propriety would of themselves teach us that the one ought not to be left to the mercy of the other but ought to possess a constitutional and effectual power of self-defense.

But the power in question has a further use. It not only serves as a shield to the executive, but it furnishes an additional security against the enactment of improper laws. It establishes a salutary check upon the legislative body, calculated to guard the community against the effects of faction, precipitancy, or of any impulse unfriendly to the public good, which may happen to influence a majority of that body.

The propriety of a negative has, upon some occasions, been combated by an observation that it was not to be presumed a single man would possess more virtue and wisdom than a number of men; and that unless this presumption should be entertained, it would be improper to give the executive magistrate any species of control over the legislative body.

But this observation, when examined, will appear rather specious than solid. The propriety of the thing does not turn upon the

supposition of superior wisdom or virtue in the executive, but upon the supposition that the legislature will not be infallible; that the love of power may sometimes betray it into a disposition to encroach upon the rights of other members of the government; that a spirit of faction may sometimes pervert its deliberations; that impressions of the moment may sometimes hurry it into measures which itself, on maturer reflexion, would condemn. The primary inducement to conferring the power in question upon the executive is to enable him to defend himself; the secondary one is to increase the chances in favor of the community against the passing of bad laws, through haste, inadvertence, or design. The oftener the measure is brought under examination, the greater the diversity in the situations of those who are to examine it, the less must be the danger of those errors which flow from want of due deliberation, or of those missteps which proceed from the contagion of some common passion or interest. It is far less probable that culpable views of any kind should infect all the parts of the government at the same moment and in relation to the same object than that they should by turns govern and mislead every one of them.

It may perhaps be said that the power of preventing bad laws includes that of preventing good ones; and may be used to the one purpose as well as to the other. But this objection will have little weight with those who can properly estimate the mischiefs of that inconstancy and mutability in the laws, which form the greatest blemish in the character and genius of our governments. They will consider every institution calculated to restrain the excess of lawmaking, and to keep things in the same state in which they happen to be at any given period as much more likely to do good than harm; because it is favorable to greater stability in the system of legislation. The injury which may possibly be done by defeating a few good laws will be amply compensated by the advantage of preventing a number of bad ones.

Nor is this all. The superior weight and influence of the legislative body in a free government and the hazard to the executive in a trial of strength with that body afford a satisfactory security that the negative would generally be employed with great caution; and that there would oftener be room for a charge of timidity than of rashness in the exercise of it. A king of Great Britain, with all his train of sovereign attributes, and with all the influence he draws from a thousand sources, would, at this day, hesitate to put a negative upon the joint resolutions of the two houses of Parliament. He would not fail to exert the utmost resources of that influence to strangle a measure disagreeable to him, in its progress to the throne, to avoid being reduced to the dilemma of permitting it to take effect, or of risking the displeasure of the nation by an opposition to the sense of the legislative body. Nor is it probable that he would ultimately venture to exert his prerogative, but in a case of manifest propriety, or extreme necessity. All well-informed men in that kingdom will accede to the justness of this remark. A very considerable period has elapsed since the negative of the crown has been exercised.

If a magistrate so powerful and so well fortified as a British monarch would have scruples about the exercise of the power under consideration, how much greater caution may be reasonably expected in a President of the United States, clothed for the short period of four years with the executive authority of a government wholly and purely republican?

It is evident that there would be greater danger of his not using his power when necessary, than of his using it too often, or too much. An argument, indeed, against its expediency, has been drawn from this very source. It has been represented, on this account, as a power odious in appearance, useless in practice. But it will not follow, that because it might be rarely exercised, it would never be exercised. In the case for which it is chiefly designed, that of an immediate attack

upon the constitutional rights of the executive, or in a case in which the public good was evidently and palpably sacrificed, a man of tolerable firmness would avail himself of his constitutional means of defense, and would listen to the admonitions of duty and responsibility. In the former supposition, his fortitude would be stimulated by his immediate interest in the power of his office; in the latter, by the probability of the sanction of his constituents, who, though they would naturally incline to the legislative body in a doubtful case, would hardly suffer their partiality to delude them in a very plain case. I speak now with an eye to a magistrate possessing only a common share of firmness. There are men who, under any circumstances, will have the courage to do their duty at every hazard.

But the convention have pursued a mean in this business, which will both facilitate the exercise of the power vested in this respect in the executive magistrate, and make its efficacy to depend on the sense of a considerable part of the legislative body. Instead of an absolute negative, it is proposed to give the executive the qualified negative already described. This is a power which would be much more readily exercised than the other. A man who might be afraid to defeat a law by his single VETO might not scruple to return it for reconsideration, subject to being finally rejected only in the event of more than one third of each house concurring in the sufficiency of his objections. He would be encouraged by the reflection that if his opposition should prevail, it would embark in it a very respectable proportion of the legislative body whose influence would be united with his in supporting the propriety of his conduct in the public opinion. A direct and categorical negative has something in the appearance of it more harsh, and more apt to irritate, than the mere suggestion of argumentative objections to be approved or disapproved by those to whom they are addressed. In proportion as it would be less apt to offend, it would be more apt to be exercised; and for this very reason it may in practice be found more effectual. It is to be hoped that it will

not often happen that improper views will govern so large a proportion as two thirds of both branches of the legislature at the same time; and this, too, in defiance of the counterposing weight of the executive. It is at any rate far less probable that this should be the case than that such views should taint the resolutions and conduct of a bare majority. A power of this nature in the executive will often have a silent and unperceived, though forcible, operation. When men, engaged in unjustifiable pursuits, are aware that obstructions may come from a quarter which they cannot control, they will often be restrained by the bare apprehension of opposition from doing what they would with eagerness rush into if no such external impediments were to be feared.

This qualified negative, as has been elsewhere remarked, is in this State vested in a council, consisting of the governor, with the chancellor and judges of the Supreme Court, or any two of them. It has been freely employed upon a variety of occasions, and frequently with success. And its utility has become so apparent, that persons who, in compiling the Constitution, were violent opposers of it, have from experience become its declared admirers.^[1]

I have in another place remarked that the convention, in the formation of this part of their plan, had departed from the model of the constitution of this State in favor of that of Massachusetts. Two strong reasons may be imagined for this preference. One is that the judges, who are to be the interpreters of the law, might receive an improper bias from having given a previous opinion in their revisionary capacities; the other is that by being often associated with the executive, they might be induced to embark too far in the political views of that magistrate, and thus a dangerous combination might by degrees be cemented between the executive and judiciary departments. It is impossible to keep the judges too distinct from every other avocation than that of expounding the laws. It is

peculiarly dangerous to place them in a situation to be either corrupted or influenced by the executive.

FEDERALIST No. 74 The Command of the Military and Naval Forces, and the Pardoning Power of the Executive

**From the New York Packet.
Tuesday, March 25, 1788
Hamilton**

To the People of the State of New York:

THE President of the United States is to be “commander-in-chief of the army and navy of the United States, and of the militia of the several States when called into the actual service of the United States.” The propriety of this provision is so evident in itself and it is at the same time so consonant to the precedents of the State constitutions in general, that little need be said to explain or enforce it. Even those of them which have in other respects coupled the chief magistrate with a council have for the most part concentrated the military authority in him alone. Of all the cares or concerns of government, the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand. The direction of war implies the direction of the common strength; and the power of directing and employing the common strength forms a usual and essential part in the definition of the executive authority.

“The President may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective officers.” This I

consider as a mere redundancy in the plan, as the right for which it provides would result of itself from the office.

He is also to be authorized "to grant reprieves and pardons for offenses against the United States, except in cases of impeachment." Humanity and good policy conspire to dictate that the benign prerogative of pardoning should be as little as possible fettered or embarrassed. The criminal code of every country partakes so much of necessary severity that without an easy access to exceptions in favor of unfortunate guilt, justice would wear a countenance too sanguinary and cruel. As the sense of responsibility is always strongest in proportion as it is undivided, it may be inferred that a single man would be most ready to attend to the force of those motives which might plead for a mitigation of the rigor of the law, and least apt to yield to considerations which were calculated to shelter a fit object of its vengeance. The reflection that the fate of a fellow-creature depended on his sole fiat would naturally inspire scrupulousness and caution; the dread of being accused of weakness or connivance would beget equal circumspection, though of a different kind. On the other hand, as men generally derive confidence from their numbers, they might often encourage each other in an act of obduracy, and might be less sensible to the apprehension of suspicion or censure for an injudicious or affected clemency. On these accounts, one man appears to be a more eligible dispenser of the mercy of the government than a body of men.

The expediency of vesting the power of pardoning in the President has, if I mistake not, been only contested in relation to the crime of treason. This, it has been urged, ought to have depended upon the assent of one, or both, of the branches of the legislative body. I shall not deny that there are strong reasons to be assigned for requiring in this particular the concurrence of that body or of a part of it. As treason is a crime levelled at the immediate being of the society

when the laws have once ascertained the guilt of the offender, there seems a fitness in referring the expediency of an act of mercy towards him to the judgment of the legislature. And this ought the rather to be the case, as the supposition of the connivance of the Chief Magistrate ought not to be entirely excluded. But there are also strong objections to such a plan. It is not to be doubted that a single man of prudence and good sense is better fitted, in delicate conjunctures, to balance the motives which may plead for and against the remission of the punishment than any numerous body whatever. It deserves particular attention that treason will often be connected with seditions which embrace a large proportion of the community, as lately happened in Massachusetts. In every such case we might expect to see the representation of the people tainted with the same spirit which had given birth to the offense. And when parties were pretty equally matched, the secret sympathy of the friends and favorers of the condemned, availing itself of the good nature and weakness of others, might frequently bestow impunity where the terror of an example was necessary. On the other hand, when the sedition had proceeded from causes which had inflamed the resentments of the major party, they might often be found obstinate and inexorable, when policy demanded a conduct of forbearance and clemency. But the principal argument for reposing the power of pardoning in this case to the Chief Magistrate is this: in seasons of insurrection or rebellion, there are often critical moments when a well-timed offer of pardon to the insurgents or rebels may restore the tranquillity of the commonwealth; and which, if suffered to pass unimproved, it may never be possible afterwards to recall. The dilatory process of convening the legislature, or one of its branches, for the purpose of obtaining its sanction to the measure, would frequently be the occasion of letting slip the golden opportunity. The loss of a week, a day, an hour, may sometimes be fatal. If it should be observed that a discretionary power with a view to such contingencies might be occasionally conferred upon the President, it may be answered in the first place that it is questionable,

whether, in a limited Constitution, that power could be delegated by law; and in the second place, that it would generally be impolitic beforehand to take any step which might hold out the prospect of impunity. A proceeding of this kind, out of the usual course, would be likely to be construed into an argument of timidity or of weakness, and would have a tendency to embolden guilt.

FEDERALIST No. 75 The Treaty-Making Power of the Executive

**For the Independent Journal.
Wednesday, March 26, 1788
Hamilton**

To the People of the State of New York:

THE President is to have power, “by and with the advice and consent of the Senate, to make treaties, provided two thirds of the senators present concur.” Though this provision has been assailed, on different grounds, with no small degree of vehemence, I scruple not to declare my firm persuasion that it is one of the best digested and most unexceptionable parts of the plan. One ground of objection is the trite topic of the intermixture of powers; some contending that the President ought alone to possess the power of making treaties; and others, that it ought to have been exclusively deposited in the Senate. Another source of objection is derived from the small number of persons by whom a treaty may be made. Of those who espouse this objection, a part are of opinion that the House of Representatives ought to have been associated in the business, while another part seem to think that nothing more was necessary than to have substituted two thirds of all the members of the Senate to two thirds of the members present. As I flatter myself the observations made in a preceding number upon this part of the plan must have sufficed to place it, to a discerning eye, in a very favorable light, I shall here content myself with offering only some supplementary remarks,

principally with a view to the objections which have been just stated.

With regard to the intermixture of powers, I shall rely upon the explanations already given in other places of the true sense of the rule upon which that objection is founded; and shall take it for granted, as an inference from them, that the union of the Executive with the Senate, in the article of treaties, is no infringement of that rule. I venture to add that the particular nature of the power of making treaties indicates a peculiar propriety in that union. Though several writers on the subject of government place that power in the class of executive authorities, yet this is evidently an arbitrary disposition; for if we attend carefully to its operation it will be found to partake more of the legislative than of the executive character, though it does not seem strictly to fall within the definition of either of them. The essence of the legislative authority is to enact laws, or, in other words, to prescribe rules for the regulation of the society; while the execution of the laws and the employment of the common strength, either for this purpose or for the common defense, seem to comprise all the functions of the executive magistrate. The power of making treaties is, plainly, neither the one nor the other. It relates neither to the execution of the subsisting laws nor to the enactment of new ones; and still less to an exertion of the common strength. Its objects are CONTRACTS with foreign nations which have the force of law, but derive it from the obligations of good faith. They are not rules prescribed by the sovereign to the subject, but agreements between sovereign and sovereign. The power in question seems therefore to form a distinct department, and to belong, properly, neither to the legislative nor to the executive. The qualities elsewhere detailed as indispensable in the management of foreign negotiations point out the executive as the most fit agent in those transactions; while the vast importance of the trust and the operation of treaties as laws plead strongly for the participation of the whole or a portion of the legislative body in the office of making them.

However proper or safe it may be in governments where the executive magistrate is an hereditary monarch, to commit to him the entire power of making treaties, it would be utterly unsafe and improper to intrust that power to an elective magistrate of four years' duration. It has been remarked, upon another occasion, and the remark is unquestionably just, that an hereditary monarch, though often the oppressor of his people, has personally too much at stake in the government to be in any material danger of being corrupted by foreign powers. But a man raised from the station of a private citizen to the rank of chief magistrate, possessed of but a moderate or slender fortune, and looking forward to a period not very remote when he may probably be obliged to return to the station from which he was taken, might sometimes be under temptations to sacrifice his duty to his interest, which it would require superlative virtue to withstand. An avaricious man might be tempted to betray the interests of the state to the acquisition of wealth. An ambitious man might make his own aggrandizement, by the aid of a foreign power, the price of his treachery to his constituents. The history of human conduct does not warrant that exalted opinion of human virtue which would make it wise in a nation to commit interests of so delicate and momentous a kind, as those which concern its intercourse with the rest of the world, to the sole disposal of a magistrate created and circumstanced as would be a President of the United States.

To have intrusted the power of making treaties to the Senate alone would have been to relinquish the benefits of the constitutional agency of the President in the conduct of foreign negotiations. It is true that the Senate would, in that case, have the option of employing him in this capacity, but they would also have the option of letting it alone and pique or cabal might induce the latter rather than the former. Besides this, the ministerial servant of the Senate could not be expected to enjoy the confidence and respect of foreign powers in the same degree with the constitutional representatives of the nation, and,

of course, would not be able to act with an equal degree of weight or efficacy. While the Union would, from this cause, lose a considerable advantage in the management of its external concerns, the people would lose the additional security which would result from the co-operation of the Executive. Though it would be imprudent to confide in him solely so important a trust, yet it cannot be doubted that his participation in it would materially add to the safety of the society. It must indeed be clear to a demonstration that the joint possession of the power in question, by the President and Senate, would afford a greater prospect of security than the separate possession of it by either of them. And whoever has maturely weighed the circumstances which must concur in the appointment of a President will be satisfied that the office will always bid fair to be filled by men of such characters as to render their concurrence in the formation of treaties peculiarly desirable, as well on the score of wisdom as on that of integrity.

The remarks made in a former number, which have been alluded to in another part of this paper, will apply with conclusive force against the admission of the House of Representatives to a share in the formation of treaties. The fluctuating and, taking its future increase into the account, the multitudinous composition of that body, forbid us to expect in it those qualities which are essential to the proper execution of such a trust. Accurate and comprehensive knowledge of foreign politics; a steady and systematic adherence to the same views; a nice and uniform sensibility to national character, decision, secrecy, and despatch, are incompatible with the genius of a body so variable and so numerous. The very complication of the business, by introducing a necessity of the concurrence of so many different bodies, would of itself afford a solid objection. The greater frequency of the calls upon the House of Representatives, and the greater length of time which it would often be necessary to keep them together when convened to obtain their sanction in the progressive stages of a treaty would be a source of so great inconvenience and expense as alone

ought to condemn the project.

The only objection which remains to be canvassed is that which would substitute the proportion of two thirds of all the members composing the senatorial body to that of two thirds of the members present. It has been shown, under the second head of our inquiries, that all provisions which require more than the majority of any body to its resolutions have a direct tendency to embarrass the operations of the government and an indirect one to subject the sense of the majority to that of the minority. This consideration seems sufficient to determine our opinion, that the convention have gone as far in the endeavor to secure the advantage of numbers in the formation of treaties as could have been reconciled either with the activity of the public councils or with a reasonable regard to the major sense of the community. If two thirds of the whole number of members had been required, it would, in many cases, from the non-attendance of a part, amount in practice to a necessity of unanimity. And the history of every political establishment in which this principle has prevailed is a history of impotence, perplexity, and disorder. Proofs of this position might be adduced from the examples of the Roman Tribuneship, the Polish Diet, and the States-General of the Netherlands did not an example at home render foreign precedents unnecessary.

To require a fixed proportion of the whole body would not, in all probability, contribute to the advantages of a numerous agency, better then merely to require a proportion of the attending members. The former, by increasing the difficulty of resolutions disagreeable to the minority, diminishes the motives to punctual attendance. The latter, by making the capacity of the body to depend on a proportion which may be varied by the absence or presence of a single member, has the contrary effect. And as, by promoting punctuality, it tends to keep the body complete, there is great likelihood that its resolutions would generally be dictated by as great a number in this case as in the other;

while there would be much fewer occasions of delay. It ought not to be forgotten that under the existing Confederation two members may, and usually do, represent a State; whence it happens that Congress, who now are solely invested with all the powers of the Union, rarely consist of a greater number of persons than would compose the intended Senate. If we add to this that as the members vote by States, and that where there is only a single member present from a State his vote is lost, it will justify a supposition that the active voices in the Senate, where the members are to vote individually, would rarely fall short in number of the active voices in the existing Congress. When, in addition to these considerations, we take into view the co-operation of the President, we shall not hesitate to infer that the people of America would have greater security against an improper use of the power of making treaties, under the new Constitution, than they now enjoy under the Confederation. And when we proceed still one step further and look forward to the probable augmentation of the Senate, by the erection of new States, we shall not only perceive ample ground of confidence in the sufficiency of the members to whose agency that power will be intrusted, but we shall probably be led to conclude that a body more numerous than the Senate would be likely to become, would be very little fit for the proper discharge of the trust.

PUBLIUS

FEDERALIST No. 76 The Appointing Power of the Executive

**From the New York Packet.
Tuesday, April 1, 1788 Hamilton**

To the People of the State of New York:

THE President is “to nominate, and, by and with the advice and consent of the Senate, to appoint ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not otherwise provided for in the Constitution. But the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, or in the courts of law, or in the heads of departments. The President shall have power to fill up all vacancies which may happen during the recess of the Senate by granting commissions which shall expire at the end of their next session.”

It has been observed in a former paper “that the true test of a good government is its aptitude and tendency to produce a good administration.” If the justness of this observation be admitted the mode of appointing the officers of the United States contained in the foregoing clauses must, when examined, be allowed to be entitled to particular commendation. It is not easy to conceive a plan better calculated than this to promote a judicious choice of men for filling the offices of the Union; and it will not need proof that on this point must essentially depend the character of its administration.

It will be agreed on all hands that the power of appointment, in ordinary cases can be properly modified only in one of three ways. It ought either to be vested in a single man, or in a select assembly of a moderate number; or in a single man with the concurrence of such an assembly. The exercise of it by the people at large will be readily admitted to be impracticable; as waiving every other consideration, it would leave them little time to do anything else. When, therefore, mention is made in the subsequent reasonings of an assembly or body of men, what is said must be understood to relate to a select body or assembly, of the description already given. The people collectively, from their number and from their dispersed situation, cannot be regulated in their movements by that systematic spirit of cabal and intrigue which will be urged as the chief objections to reposing the power in question in a body of men.

Those who have themselves reflected upon the subject, or who have attended to the observations made in other parts of these papers in relation to the appointment of the President will, I presume, agree to the position that there would always be great probability of having the place supplied by a man of abilities, at least respectable. Premising this, I proceed to lay it down as a rule that one man of discernment is better fitted to analyze and estimate the peculiar qualities adapted to particular offices than a body of men of equal or perhaps even of superior discernment.

The sole and undivided responsibility of one man will naturally beget a livelier sense of duty and a more exact regard to reputation. He will, on this account, feel himself under stronger obligations, and more interested to investigate with care the qualities requisite to the stations to be filled, and to prefer with impartiality the persons who may have the fairest pretensions to them. He will have fewer personal attachments to gratify than a body of men who may each be supposed to have an equal number; and will be so much the less liable to be

misled by the sentiments of friendship and of affection. A single well-directed man, by a single understanding, cannot be distracted and warped by that diversity of views, feelings, and interests, which frequently distract and warp the resolutions of a collective body. There is nothing so apt to agitate the passions of mankind as personal considerations whether they relate to ourselves or to others, who are to be the objects of our choice or preference. Hence, in every exercise of the power of appointing to offices by an assembly of men we must expect to see a full display of all the private and party likings and dislikes, partialities and antipathies, attachments and animosities, which are felt by those who compose the assembly. The choice which may at any time happen to be made under such circumstances will of course be the result either of a victory gained by one party over the other, or of a compromise between the parties. In either case, the intrinsic merit of the candidate will be too often out of sight. In the first, the qualifications best adapted to uniting the suffrages of the party will be more considered than those which fit the person for the station. In the last, the coalition will commonly turn upon some interested equivalent: "Give us the man we wish for this office, and you shall have the one you wish for that." This will be the usual condition of the bargain. And it will rarely happen that the advancement of the public service will be the primary object either of party victories or of party negotiations.

The truth of the principles here advanced seems to have been felt by the most intelligent of those who have found fault with the provision made, in this respect, by the convention. They contend that the President ought solely to have been authorized to make the appointments under the federal government. But it is easy to show that every advantage to be expected from such an arrangement would, in substance, be derived from the power of nomination which is proposed to be conferred upon him; while several disadvantages which might attend the absolute power of appointment in the hands of

that officer would be avoided. In the act of nomination, his judgment alone would be exercised; and as it would be his sole duty to point out the man who, with the approbation of the Senate, should fill an office, his responsibility would be as complete as if he were to make the final appointment. There can, in this view, be no difference between nominating and appointing. The same motives which would influence a proper discharge of his duty in one case would exist in the other. And as no man could be appointed but on his previous nomination, every man who might be appointed would be, in fact, his choice.

But his nomination may be overruled: this it certainly may, yet it can only be to make place for another nomination by himself. The person ultimately appointed must be the object of his preference, though perhaps not in the first degree. It is also not very probable that his nomination would often be overruled. The Senate could not be tempted by the preference they might feel to another to reject the one proposed; because they could not assure themselves that the person they might wish would be brought forward by a second or by any subsequent nomination. They could not even be certain that a future nomination would present a candidate in any degree more acceptable to them; and as their dissent might cast a kind of stigma upon the individual rejected and might have the appearance of a reflection upon the judgment of the chief magistrate, it is not likely that their sanction would often be refused, where there were not special and strong reasons for the refusal.

To what purpose then require the co-operation of the Senate? I answer, that the necessity of their concurrence would have a powerful, though, in general, a silent operation. It would be an excellent check upon a spirit of favoritism in the President, and would tend greatly to prevent the appointment of unfit characters from State prejudice, from family connection, from personal attachment, or from a view to popularity. And, in addition to this, it would be an

efficacious source of stability in the administration.

It will readily be comprehended that a man who had himself the sole disposition of offices would be governed much more by his private inclinations and interests than when he was bound to submit the propriety of his choice to the discussion and determination of a different and independent body, and that body an entire branch of the legislature. The possibility of rejection would be a strong motive to care in proposing. The danger to his own reputation, and, in the case of an elective magistrate, to his political existence, from betraying a spirit of favoritism or an unbecoming pursuit of popularity to the observation of a body whose opinion would have great weight in forming that of the public, could not fail to operate as a barrier to the one and to the other. He would be both ashamed and afraid to bring forward, for the most distinguished or lucrative stations, candidates who had no other merit than that of coming from the same State to which he particularly belonged, or of being in some way or other personally allied to him, or of possessing the necessary insignificance and pliancy to render them the obsequious instruments of his pleasure.

To this reasoning it has been objected that the President, by the influence of the power of nomination, may secure the complaisance of the Senate to his views. The supposition of universal venality in human nature is little less an error in political reasoning than the supposition of universal rectitude. The institution of delegated power implies that there is a portion of virtue and honor among mankind, which may be a reasonable foundation of confidence. And experience justifies the theory. It has been found to exist in the most corrupt periods of the most corrupt governments. The venality of the British House of Commons has been long a topic of accusation against that body in the country to which they belong, as well as in this; and it cannot be doubted that the charge is, to a considerable extent, well

founded. But it is as little to be doubted that there is always a large proportion of the body which consists of independent and public-spirited men who have an influential weight in the councils of the nation. Hence it is (the present reign not excepted) that the sense of that body is often seen to control the inclinations of the monarch, both with regard to men and to measures. Though it might therefore be allowable to suppose that the executive might occasionally influence some individuals in the Senate, yet the supposition that he could in general purchase the integrity of the whole body would be forced and improbable. A man disposed to view human nature as it is, without either flattering its virtues or exaggerating its vices, will see sufficient ground of confidence in the probity of the Senate to rest satisfied, not only that it will be impracticable to the Executive to corrupt or seduce a majority of its members, but that the necessity of its co-operation in the business of appointments will be a considerable and salutary restraint upon the conduct of that magistrate. Nor is the integrity of the Senate the only reliance. The Constitution has provided some important guards against the danger of executive influence upon the legislative body: it declares that “No senator or representative shall during the time for which he was elected, be appointed to any civil office under the United States, which shall have been created, or the emoluments whereof shall have been increased, during such time; and no person holding any office under the United States shall be a member of either house during his continuance in office.”

PUBLIUS

FEDERALIST No. 77 The Appointing Power Continued and Other Powers of the Executive Considered

**For the Independent Journal.
Wednesday, April 2, 1788
Hamilton**

To the People of the State of New York:

IT HAS been mentioned as one of the advantages to be expected from the co-operation of the Senate, in the business of appointments, that it would contribute to the stability of the administration. The consent of that body would be necessary to displace as well as to appoint. A change of the Chief Magistrate, therefore, would not occasion so violent or so general a revolution in the officers of the government as might be expected if he were the sole disposer of offices. Where a man in any station had given satisfactory evidence of his fitness for it, a new President would be restrained from attempting a change in favor of a person more agreeable to him by the apprehension that a discountenance of the Senate might frustrate the attempt, and bring some degree of discredit upon himself. Those who can best estimate the value of a steady administration will be most disposed to prize a provision which connects the official existence of public men with the approbation or disapprobation of that body which, from the greater permanency of its own composition, will in all probability be less subject to inconstancy than any other member of

the government. To this union of the Senate with the President, in the article of appointments, it has in some cases been suggested that it would serve to give the President an undue influence over the Senate, and in others that it would have an opposite tendency—a strong proof that neither suggestion is true.

To state the first in its proper form is to refute it. It amounts to this: the President would have an improper influence over the Senate, because the Senate would have the power of restraining him. This is an absurdity in terms. It cannot admit of a doubt that the entire power of appointment would enable him much more effectually to establish a dangerous empire over that body than a mere power of nomination subject to their control.

Let us take a view of the converse of the proposition: “the Senate would influence the executive.” As I have had occasion to remark in several other instances, the indistinctness of the objection forbids a precise answer. In what manner is this influence to be exerted? In relation to what objects? The power of influencing a person, in the sense in which it is here used, must imply a power of conferring a benefit upon him. How could the Senate confer a benefit upon the President by the manner of employing their right of negative upon his nominations? If it be said they might sometimes gratify him by an acquiescence in a favorite choice, when public motives might dictate a different conduct, I answer that the instances in which the President could be personally interested in the result would be too few to admit of his being materially affected by the compliances of the Senate. Besides this, it is evident that the POWER which can originate the disposition of honors and emoluments is more likely to attract than to be attracted by the POWER which can merely obstruct their course. If by influencing the President be meant restraining him, this is precisely what must have been intended. And it has been shown that the restraint would be salutary, at the same time that it would not be such

as to destroy a single advantage to be looked for from the uncontrolled agency of that magistrate. The right of nomination would produce all the good, without the ill.

Upon a comparison of the plan for the appointment of the officers of the proposed government with that which is established by the constitution of this State, a decided preference must be given to the former. In that plan the power of nomination is unequivocally vested in the executive. And as there would be a necessity for submitting each nomination to the judgment of an entire branch of the legislature, the circumstances attending an appointment, from the mode of conducting it, would naturally become matters of notoriety, and the public would be at no loss to determine what part had been performed by the different actors. The blame of a bad nomination would fall upon the President singly and absolutely. The censure of rejecting a good one would lie entirely at the door of the Senate, aggravated by the consideration of their having counteracted the good intentions of the executive. If an ill appointment should be made, the executive, for nominating, and the Senate, for approving, would participate, though in different degrees, in the opprobrium and disgrace.

The reverse of all this characterizes the manner of appointment in this State. The council of appointment consists of from three to five persons, of whom the governor is always one. This small body, shut up in a private apartment, impenetrable to the public eye, proceed to the execution of the trust committed to them. It is known that the governor claims the right of nomination upon the strength of some ambiguous expressions in the constitution; but it is not known to what extent, or in what manner he exercises it; nor upon what occasions he is contradicted or opposed. The censure of a bad appointment, on account of the uncertainty of its author and for want of a determinate object, has neither poignancy nor duration. And while an unbounded

field for cabal and intrigue lies open, all idea of responsibility is lost. The most that the public can know, is that the governor claims the right of nomination; that two out of the inconsiderable number of four men can too often be managed without much difficulty; that if some of the members of a particular council should happen to be of an uncomplying character, it is frequently not impossible to get rid of their opposition by regulating the times of meeting in such a manner as to render their attendance inconvenient; and that from whatever cause it may proceed, a great number of very improper appointments are from time to time made. Whether a governor of this State avails himself of the ascendant, he must necessarily have in this delicate and important part of the administration to prefer to offices men who are best qualified for them; or whether he prostitutes that advantage to the advancement of persons whose chief merit is their implicit devotion to his will and to the support of a despicable and dangerous system of personal influence are questions which, unfortunately for the community, can only be the subjects of speculation and conjecture.

Every mere council of appointment, however constituted, will be a conclave in which cabal and intrigue will have their full scope. Their number, without an unwarrantable increase of expense, cannot be large enough to preclude a facility of combination. And as each member will have his friends and connections to provide for, the desire of mutual gratification will beget a scandalous bartering of votes and bargaining for places. The private attachments of one man might easily be satisfied, but to satisfy the private attachments of a dozen, or of twenty men, would occasion a monopoly of all the principal employments of the government in a few families and would lead more directly to an aristocracy or an oligarchy than any measure that could be contrived. If, to avoid an accumulation of offices, there was to be a frequent change in the persons who were to compose the council, this would involve the mischiefs of a mutable administration

in their full extent. Such a council would also be more liable to executive influence than the Senate, because they would be fewer in number, and would act less immediately under the public inspection. Such a council, in fine, as a substitute for the plan of the convention, would be productive of an increase of expense, a multiplication of the evils which spring from favoritism and intrigue in the distribution of public honors, a decrease of stability in the administration of the government, and a diminution of the security against an undue influence of the Executive. And yet such a council has been warmly contended for as an essential amendment in the proposed Constitution.

I could not with propriety conclude my observations on the subject of appointments without taking notice of a scheme for which there have appeared some, though but a few advocates; I mean that of uniting the House of Representatives in the power of making them. I shall, however, do little more than mention it, as I cannot imagine that it is likely to gain the countenance of any considerable part of the community. A body so fluctuating and at the same time so numerous can never be deemed proper for the exercise of that power. Its unfitness will appear manifest to all when it is recollected that in half a century it may consist of three or four hundred persons. All the advantages of the stability, both of the Executive and of the Senate, would be defeated by this union, and infinite delays and embarrassments would be occasioned. The example of most of the States in their local constitutions encourages us to reprobate the idea.

The only remaining powers of the executive are comprehended in giving information to Congress of the state of the Union; in recommending to their consideration such measures as he shall judge expedient; in convening them, or either branch, upon extraordinary occasions; in adjourning them when they cannot themselves agree upon the time of adjournment; in receiving ambassadors and other

public ministers; in faithfully executing the laws; and in commissioning all the officers of the United States.

Except some cavils about the power of convening either house of the legislature, and that of receiving ambassadors, no objection has been made to this class of authorities; nor could they possibly admit of any. It required, indeed, an insatiable avidity for censure to invent exceptions to the parts which have been excepted to. In regard to the power of convening either house of the legislature, I shall barely remark that in respect to the Senate at least, we can readily discover a good reason for it. As this body has a concurrent power with the executive in the article of treaties, it might often be necessary to call it together with a view to this object, when it would be unnecessary and improper to convene the House of Representatives. As to the reception of ambassadors, what I have said in a former paper will furnish a sufficient answer.

We have now completed a survey of the structure and powers of the executive department which, I have endeavored to show, combines, as far as republican principles will admit, all the requisites to energy. The remaining inquiry is: Does it also combine the requisites to safety, in the republican sense—a due dependence on the people, a due responsibility? The answer to this question has been anticipated in the investigation of its other characteristics, and is satisfactorily deducible from these circumstances; the election of the President once in four years by persons immediately chosen by the people for that purpose, and his being at all times liable to impeachment, trial, dismission from office, incapacity to serve in any other, and to the forfeiture of life and estate by subsequent prosecution in the common course of law. But these precautions, great as they are, are not the only ones which the plan of the convention has provided in favor of the public security. In the only instances in which the abuse of the executive authority was materially to be

feared, the Chief Magistrate of the United States would, by that plan, be subjected to the control of a branch of the legislative body. What more can an enlightened and reasonable people desire?

PUBLIUS

FEDERALIST No. 78 The Judiciary Department

From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton

To the People of the State of New York:

WE PROCEED now to an examination of the judiciary department of the proposed government.

In unfolding the defects of the existing Confederation, the utility and necessity of a federal judicature have been clearly pointed out. It is the less necessary to recapitulate the considerations there urged as the propriety of the institution in the abstract is not disputed; the only questions which have been raised being relative to the manner of constituting it, and to its extent. To these points, therefore, our observations shall be confined.

The manner of constituting it seems to embrace these several objects: 1st. The mode of appointing the judges. 2nd. The tenure by which they are to hold their places. 3rd. The partition of the judiciary authority between different courts, and their relations to each other.

First. As to the mode of appointing the judges: this is the same with that of appointing the officers of the Union in general and has been so fully discussed in the two last numbers that nothing can be said here which would not be useless repetition.

Second. As to the tenure by which the judges are to hold their

places: this chiefly concerns their duration in office, the provisions for their support, the precautions for their responsibility.

According to the plan of the convention, all judges who may be appointed by the United States are to hold their offices during good behavior; which is conformable to the most approved of the State constitutions, and among the rest, to that of this State. Its propriety having been drawn into question by the adversaries of that plan is no light symptom of the rage for objection which disorders their imaginations and judgments. The standard of good behavior for the continuance in office of the judicial magistracy is certainly one of the most valuable of the modern improvements in the practice of government. In a monarchy it is an excellent barrier to the despotism of the prince; in a republic it is a no less excellent barrier to the encroachments and oppressions of the representative body. And it is the best expedient which can be devised in any government to secure a steady, upright, and impartial administration of the laws.

Whoever attentively considers the different departments of power must perceive that, in a government in which they are separated from each other, the judiciary, from the nature of its functions, will always be the least dangerous to the political rights of the Constitution; because it will be least in a capacity to annoy or injure them. The executive not only dispenses the honors but holds the sword of the community. The legislature not only commands the purse but prescribes the rules by which the duties and rights of every citizen are to be regulated. The judiciary, on the contrary, has no influence over either the sword or the purse; no direction either of the strength or of the wealth of the society, and can take no active resolution whatever. It may truly be said to have neither FORCE nor WILL but merely judgment; and must ultimately depend upon the aid of the executive arm even for the efficacy of its judgments.

This simple view of the matter suggests several important

consequences. It proves incontestably that the judiciary is beyond comparison the weakest of the three departments of power^[1]; that it can never attack with success either of the other two; and that all possible care is requisite to enable it to defend itself against their attacks. It equally proves that though individual oppression may now and then proceed from the courts of justice, the general liberty of the people can never be endangered from that quarter; I mean so long as the judiciary remains truly distinct from both the legislature and the executive. For I agree that “there is no liberty if the power of judging be not separated from the legislative and executive powers.”^[2] And it proves, in the last place, that as liberty can have nothing to fear from the judiciary alone, but would have everything to fear from its union with either of the other departments; that as all the effects of such a union must ensue from a dependence of the former on the latter, notwithstanding a nominal and apparent separation; that as, from the natural feebleness of the judiciary, it is in continual jeopardy of being overpowered, awed, or influenced by its co-ordinate branches; and that as nothing can contribute so much to its firmness and independence as permanency in office, this quality may therefore be justly regarded as an indispensable ingredient in its constitution, and, in a great measure, as the citadel of the public justice and the public security.

The complete independence of the courts of justice is peculiarly essential in a limited Constitution. By a limited Constitution, I understand one which contains certain specified exceptions to the legislative authority; such, for instance, as that it shall pass no bills of attainder, no ex post facto laws, and the like. Limitations of this kind can be preserved in practice no other way than through the medium of courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this, all the reservations of particular rights or privileges would amount to nothing.

Some perplexity respecting the rights of the courts to pronounce legislative acts void, because contrary to the Constitution, has arisen from an imagination that the doctrine would imply a superiority of the judiciary to the legislative power. It is urged that the authority which can declare the acts of another void must necessarily be superior to the one whose acts may be declared void. As this doctrine is of great importance in all the American constitutions, a brief discussion of the ground on which it rests cannot be unacceptable.

There is no position which depends on clearer principles than that every act of a delegated authority, contrary to the tenor of the commission under which it is exercised, is void. No legislative act, therefore, contrary to the Constitution, can be valid. To deny this would be to affirm that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to the people themselves; that men acting by virtue of powers may do not only what their powers do not authorize, but what they forbid.

If it be said that the legislative body are themselves the constitutional judges of their own powers and that the construction they put upon them is conclusive upon the other departments, it may be answered that this cannot be the natural presumption where it is not to be collected from any particular provisions in the Constitution. It is not otherwise to be supposed that the Constitution could intend to enable the representatives of the people to substitute their will to that of their constituents. It is far more rational to suppose that the courts were designed to be an intermediate body between the people and the legislature in order, among other things, to keep the latter within the limits assigned to their authority. The interpretation of the laws is the proper and peculiar province of the courts. A constitution is, in fact, and must be regarded by the judges as a fundamental law. It therefore belongs to them to ascertain its meaning as well as the meaning of any

particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity ought, of course, to be preferred; or, in other words, the Constitution ought to be preferred to the statute, the intention of the people to the intention of their agents.

Nor does this conclusion by any means suppose a superiority of the judicial to the legislative power. It only supposes that the power of the people is superior to both, and that where the will of the legislature, declared in its statutes, stands in opposition to that of the people, declared in the Constitution, the judges ought to be governed by the latter rather than the former. They ought to regulate their decisions by the fundamental laws rather than by those which are not fundamental.

This exercise of judicial discretion in determining between two contradictory laws is exemplified in a familiar instance. It not uncommonly happens that there are two statutes existing at one time, clashing in whole or in part with each other and neither of them containing any repealing clause or expression. In such a case, it is the province of the courts to liquidate and fix their meaning and operation. So far as they can, by any fair construction, be reconciled to each other, reason and law conspire to dictate that this should be done; where this is impracticable, it becomes a matter of necessity to give effect to one in exclusion of the other. The rule which has obtained in the courts for determining their relative validity is that the last in order of time shall be preferred to the first. But this is a mere rule of construction, not derived from any positive law but from the nature and reason of the thing. It is a rule not enjoined upon the courts by legislative provision but adopted by themselves, as consonant to truth and propriety, for the direction of their conduct as interpreters of the law. They thought it reasonable that between the interfering acts of an equal authority that which was the last

indication of its will should have the preference.

But in regard to the interfering acts of a superior and subordinate authority of an original and derivative power, the nature and reason of the thing indicate the converse of that rule as proper to be followed. They teach us that the prior act of a superior ought to be preferred to the subsequent act of an inferior and subordinate authority; and that accordingly, whenever a particular statute contravenes the Constitution, it will be the duty of the judicial tribunals to adhere to the latter and disregard the former.

It can be of no weight to say that the courts, on the pretense of a repugnancy, may substitute their own pleasure to the constitutional intentions of the legislature. This might as well happen in the case of two contradictory statutes; or it might as well happen in every adjudication upon any single statute. The courts must declare the sense of the law; and if they should be disposed to exercise WILL instead of JUDGMENT, the consequence would equally be the substitution of their pleasure to that of the legislative body. The observation, if it proved anything, would prove that there ought to be no judges distinct from that body.

If, then, the courts of justice are to be considered as the bulwarks of a limited Constitution against legislative encroachments, this consideration will afford a strong argument for the permanent tenure of judicial offices, since nothing will contribute so much as this to that independent spirit in the judges which must be essential to the faithful performance of so arduous a duty.

This independence of the judges is equally requisite to guard the Constitution and the rights of individuals from the effects of those ill humors which the arts of designing men, or the influence of particular conjunctures, sometimes disseminate among the people themselves, and which, though they speedily give place to better information, and

more deliberate reflection, have a tendency, in the meantime, to occasion dangerous innovations in the government, and serious oppressions of the minor party in the community. Though I trust the friends of the proposed Constitution will never concur with its enemies^[3] in questioning that fundamental principle of republican government which admits the right of the people to alter or abolish the established Constitution whenever they find it inconsistent with their happiness; yet it is not to be inferred from this principle that the representatives of the people, whenever a momentary inclination happens to lay hold of a majority of their constituents incompatible with the provisions in the existing Constitution, would, on that account, be justifiable in a violation of those provisions; or that the courts would be under a greater obligation to connive at infractions in this shape than when they had proceeded wholly from the cabals of the representative body. Until the people have, by some solemn and authoritative act, annulled or changed the established form, it is binding upon themselves collectively, as well as individually; and no presumption, or even knowledge of their sentiments, can warrant their representatives in a departure from it prior to such an act. But it is easy to see that it would require an uncommon portion of fortitude in the judges to do their duty as faithful guardians of the Constitution, where legislative invasions of it had been instigated by the major voice of the community.

But it is not with a view to infractions of the Constitution only that the independence of the judges may be an essential safeguard against the effects of occasional ill humors in the society. These sometimes extend no farther than to the injury of the private rights of particular classes of citizens, by unjust and partial laws. Here also the firmness of the judicial magistracy is of vast importance in mitigating the severity and confining the operation of such laws. It not only serves to moderate the immediate mischiefs of those which may have been passed but it operates as a check upon the legislative body in

passing them; who, perceiving that obstacles to the success of an iniquitous intention are to be expected from the scruples of the courts, are in a manner compelled, by the very motives of the injustice they meditate, to qualify their attempts. This is a circumstance calculated to have more influence upon the character of our governments than but few may be aware of. The benefits of the integrity and moderation of the judiciary have already been felt in more States than one; and though they may have displeased those whose sinister expectations they may have disappointed, they must have commanded the esteem and applause of all the virtuous and disinterested. Considerate men of every description ought to prize whatever will tend to beget or fortify that temper in the courts: as no man can be sure that he may not be tomorrow the victim of a spirit of injustice, by which he may be a gainer today. And every man must now feel that the inevitable tendency of such a spirit is to sap the foundations of public and private confidence and to introduce in its stead universal distrust and distress.

That inflexible and uniform adherence to the rights of the Constitution, and of individuals, which we perceive to be indispensable in the courts of justice, can certainly not be expected from judges who hold their offices by a temporary commission. Periodical appointments, however regulated, or by whomsoever made, would, in some way or other, be fatal to their necessary independence. If the power of making them was committed either to the executive or legislature, there would be danger of an improper complaisance to the branch which possessed it; if to both, there would be an unwillingness to hazard the displeasure of either; if to the people, or to persons chosen by them for the special purpose, there would be too great a disposition to consult popularity to justify a reliance that nothing would be consulted but the Constitution and the laws.

There is yet a further and a weightier reason for the permanency

of the judicial offices which is deducible from the nature of the qualifications they require. It has been frequently remarked with great propriety that a voluminous code of laws is one of the inconveniences necessarily connected with the advantages of a free government. To avoid an arbitrary discretion in the courts, it is indispensable that they should be bound down by strict rules and precedents which serve to define and point out their duty in every particular case that comes before them; and it will readily be conceived from the variety of controversies which grow out of the folly and wickedness of mankind that the records of those precedents must unavoidably swell to a very considerable bulk and must demand long and laborious study to acquire a competent knowledge of them. Hence it is that there can be but few men in the society who will have sufficient skill in the laws to qualify them for the stations of judges. And making the proper deductions for the ordinary depravity of human nature, the number must be still smaller of those who unite the requisite integrity with the requisite knowledge. These considerations apprise us that the government can have no great option between fit character; and that a temporary duration in office which would naturally discourage such characters from quitting a lucrative line of practice to accept a seat on the bench would have a tendency to throw the administration of justice into hands less able and less well qualified to conduct it with utility and dignity. In the present circumstances of this country and in those in which it is likely to be for a long time to come, the disadvantages on this score would be greater than they may at first sight appear; but it must be confessed that they are far inferior to those which present themselves under the other aspects of the subject.

Upon the whole, there can be no room to doubt that the convention acted wisely in copying from the models of those constitutions which have established good behavior as the tenure of their judicial offices, in point of duration; and that so far from being blamable on this account, their plan would have been inexcusably

defective if it had wanted this important feature of good government. The experience of Great Britain affords an illustrious comment on the excellence of the institution.

FEDERALIST No. 79 The Judiciary Continued

From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton

To the People of the State of New York:

NEXT to permanency in office, nothing can contribute more to the independence of the judges than a fixed provision for their support. The remark made in relation to the President is equally applicable here. In the general course of human nature, a power over a man's subsistence amounts to a power over his will. And we can never hope to see realized in practice the complete separation of the judicial from the legislative power, in any system which leaves the former dependent for pecuniary resources on the occasional grants of the latter. The enlightened friends to good government in every State have seen cause to lament the want of precise and explicit precautions in the State constitutions on this head. Some of these indeed have declared that permanent^[1] salaries should be established for the judges; but the experiment has in some instances shown that such expressions are not sufficiently definite to preclude legislative evasions. Something still more positive and unequivocal has been evinced to be requisite. The plan of the convention accordingly has provided that the judges of the United States “shall at stated times receive for their services a compensation which shall not be diminished during their continuance in office.”

This, all circumstances considered, is the most eligible provision that could have been devised. It will readily be understood that the fluctuations in the value of money and in the state of society rendered a fixed rate of compensation in the Constitution inadmissible. What might be extravagant today might in half a century become penurious and inadequate. It was therefore necessary to leave it to the discretion of the legislature to vary its provisions in conformity to the variations in circumstances, yet under such restrictions as to put it out of the power of that body to change the condition of the individual for the worse. A man may then be sure of the ground upon which he stands, and can never be deterred from his duty by the apprehension of being placed in a less eligible situation. The clause which has been quoted combines both advantages. The salaries of judicial offices may from time to time be altered, as occasion shall require, yet so as never to lessen the allowance with which any particular judge comes into office, in respect to him. It will be observed that a difference has been made by the convention between the compensation of the President and of the judges. That of the former can neither be increased nor diminished; that of the latter can only not be diminished. This probably arose from the difference in the duration of the respective offices. As the President is to be elected for no more than four years, it can rarely happen that an adequate salary, fixed at the commencement of that period, will not continue to be such to the end of it. But with regard to the judges who, if they behave properly, will be secured in the places for life, it may well happen, especially in the early stages of the government, that a stipend which would be very sufficient at their first appointment would become too small in the progress of their service.

This provision for the support of the judges bears every mark of prudence and efficacy; and it may be safely affirmed that, together with the permanent tenure of their offices, it affords a better prospect of their independence than is discoverable in the constitutions of any

of the States in regard to their own judges.

The precautions for their responsibility are comprised in the article respecting impeachments. They are liable to be impeached for malconduct by the House of Representatives and tried by the Senate; and, if convicted, may be dismissed from office and disqualified for holding any other. This is the only provision on the point which is consistent with the necessary independence of the judicial character, and is the only one which we find in our own Constitution in respect to our own judges.

The want of a provision for removing the judges on account of inability has been a subject of complaint. But all considerate men will be sensible that such a provision would either not be practiced upon or would be more liable to abuse than calculated to answer any good purpose. The mensuration of the faculties of the mind has, I believe, no place in the catalogue of known arts. An attempt to fix the boundary between the regions of ability and inability would much oftener give scope to personal and party attachments and enmities than advance the interests of justice or the public good. The result, except in the case of insanity, must for the most part be arbitrary; and insanity, without any formal or express provision, may be safely pronounced to be a virtual disqualification.

The constitution of New York, to avoid investigations that must forever be vague and dangerous, has taken a particular age as the criterion of inability. No man can be a judge beyond sixty. I believe there are few at present who do not disapprove of this provision. There is no station in relation to which it is less proper than to that of a judge. The deliberating and comparing faculties generally preserve their strength much beyond that period in men who survive it; and when, in addition to this circumstance, we consider how few there are who outlive the season of intellectual vigor and how improbable it is that any considerable portion of the bench, whether more or less

numerous, should be in such a situation at the same time, we shall be ready to conclude that limitations of this sort have little to recommend them. In a republic where fortunes are not affluent and pensions not expedient, the dismissal of men from stations in which they have served their country long and usefully, on which they depend for subsistence, and from which it will be too late to resort to any other occupation for a livelihood, ought to have some better apology to humanity than is to be found in the imaginary danger of a superannuated bench.

FEDERALIST No. 80 The Powers of the Judiciary

From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton

To the People of the State of New York:

TO JUDGE with accuracy of the proper extent of the federal judicature, it will be necessary to consider, in the first place, what are its proper objects.

It seems scarcely to admit of controversy that the judiciary authority of the Union ought to extend to these several descriptions of cases: 1st, to all those which arise out of the laws of the United States, passed in pursuance of their just and constitutional powers of legislation; 2nd, to all those which concern the execution of the provisions expressly contained in the articles of Union; 3rd, to all those in which the United States are a party; 4th, to all those which involve the PEACE of the CONFEDERACY, whether they relate to the intercourse between the United States and foreign nations or to that between the States themselves; 5th, to all those which originate on the high seas, and are of admiralty or maritime jurisdiction; and lastly, to all those in which the State tribunals cannot be supposed to be impartial and unbiased.

The first point depends upon this obvious consideration, that there ought always to be a constitutional method of giving efficacy to constitutional provisions. What, for instance, would avail restrictions

on the authority of the State legislatures, without some constitutional mode of enforcing the observance of them? The States, by the plan of the convention, are prohibited from doing a variety of things, some of which are incompatible with the interests of the Union and others with the principles of good government. The imposition of duties on imported articles and the emission of paper money are specimens of each kind. No man of sense will believe that such prohibitions would be scrupulously regarded without some effectual power in the government to restrain or correct the infractions of them. This power must either be a direct negative on the State laws, or an authority in the federal courts to overrule such as might be in manifest contravention of the articles of Union. There is no third course that I can imagine. The latter appears to have been thought by the convention preferable to the former, and I presume will be most agreeable to the States.

As to the second point, it is impossible, by any argument or comment, to make it clearer than it is in itself. If there are such things as political axioms, the propriety of the judicial power of a government being coextensive with its legislative may be ranked among the number. The mere necessity of uniformity in the interpretation of the national laws decides the question. Thirteen independent courts of final jurisdiction over the same causes, arising upon the same laws, is a hydra in government from which nothing but contradiction and confusion can proceed.

Still less need be said in regard to the third point. Controversies between the nation and its members or citizens can only be properly referred to the national tribunals. Any other plan would be contrary to reason, to precedent, and to decorum.

The fourth point rests on this plain proposition, that the peace of the WHOLE ought not to be left at the disposal of a PART. The Union will undoubtedly be answerable to foreign powers for the conduct of

its members. And the responsibility for an injury ought ever to be accompanied with the faculty of preventing it. As the denial or perversion of justice by the sentences of courts, as well as in any other manner, is with reason classed among the just causes of war, it will follow that the federal judiciary ought to have cognizance of all causes in which the citizens of other countries are concerned. This is not less essential to the preservation of the public faith than to the security of the public tranquillity. A distinction may perhaps be imagined between cases arising upon treaties and the laws of nations and those which may stand merely on the footing of the municipal law. The former kind may be supposed proper for the federal jurisdiction, the latter for that of the States. But it is at least problematical whether an unjust sentence against a foreigner, where the subject of controversy was wholly relative to the *lex loci*, would not, if unredressed, be an aggression upon his sovereign, as well as one which violated the stipulations in a treaty or the general law of nations. And a still greater objection to the distinction would result from the immense difficulty, if not impossibility, of a practical discrimination between the cases of one complexion and those of the other. So great a proportion of the cases in which foreigners are parties involve national questions that it is by far most safe and most expedient to refer all those in which they are concerned to the national tribunals.

The power of determining causes between two States, between one State and the citizens of another, and between the citizens of different States, is perhaps not less essential to the peace of the Union than that which has been just examined. History gives us a horrid picture of the dissensions and private wars which distracted and desolated Germany prior to the institution of the IMPERIAL CHAMBER by Maximilian towards the close of the fifteenth century, and informs us, at the same time, of the vast influence of that institution in appeasing the disorders and establishing the tranquillity of the empire. This was a court invested with authority to decide

finally all differences among the members of the Germanic body.

A method of terminating territorial disputes between the States, under the authority of the federal head, was not unattended to, even in the imperfect system by which they have been hitherto held together. But there are many other sources, besides interfering claims of boundary, from which bickerings and animosities may spring up among the members of the Union. To some of these we have been witnesses in the course of our past experience. It will readily be conjectured that I allude to the fraudulent laws which have been passed in too many of the States. And though the proposed Constitution establishes particular guards against the repetition of those instances which have heretofore made their appearance, yet it is warrantable to apprehend that the spirit which produced them will assume new shapes that could not be foreseen nor specifically provided against. Whatever practices may have a tendency to disturb the harmony between the States are proper objects of federal superintendence and control.

It may be esteemed the basis of the Union that “the citizens of each State shall be entitled to all the privileges and immunities of citizens of the several States.” And if it be a just principle that every government ought to possess the means of executing its own provisions by its own authority, it will follow that in order to the inviolable maintenance of that equality of privileges and immunities to which the citizens of the Union will be entitled, the national judiciary ought to preside in all cases in which one State or its citizens are opposed to another State or its citizens. To secure the full effect of so fundamental a provision against all evasion and subterfuge, it is necessary that its construction should be committed to that tribunal which, having no local attachments, will be likely to be impartial between the different States and their citizens and which, owing its official existence to the Union, will never be likely to feel any bias

inauspicious to the principles on which it is founded.

The fifth point will demand little animadversion. The most bigoted idolizers of State authority have not thus far shown a disposition to deny the national judiciary the cognizance of maritime causes. These so generally depend on the laws of nations and so commonly affect the rights of foreigners that they fall within the considerations which are relative to the public peace. The most important part of them are, by the present Confederation, submitted to federal jurisdiction.

The reasonableness of the agency of the national courts in cases in which the State tribunals cannot be supposed to be impartial speaks for itself. No man ought certainly to be a judge in his own cause, or in any cause in respect to which he has the least interest or bias. This principle has no inconsiderable weight in designating the federal courts as the proper tribunals for the determination of controversies between different States and their citizens. And it ought to have the same operation in regard to some cases between citizens of the same State. Claims to land under grants of different States, founded upon adverse pretensions of boundary, are of this description. The courts of neither of the granting States could be expected to be unbiased. The laws may have even prejudged the question and tied the courts down to decisions in favor of the grants of the State to which they belonged. And even where this had not been done, it would be natural that the judges, as men, should feel a strong predilection to the claims of their own government.

Having thus laid down and discussed the principles which ought to regulate the constitution of the federal judiciary, we will proceed to test, by these principles, the particular powers of which, according to the plan of the convention, it is to be composed. It is to comprehend "all cases in law and equity arising under the Constitution, the laws of the United States, and treaties made or which

shall be made, under their authority; to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States; between a State and citizens of another State; between citizens of different States; between citizens of the same State claiming lands and grants of different States; and between a State or the citizens thereof and foreign states, citizens, and subjects.”This constitutes the entire mass of the judicial authority of the Union. Let us now review it in detail. It is, then, to extend:

First. To all cases in law and equity, arising under the Constitution and the laws of the United States. This corresponds to the two first classes of causes which have been enumerated, as proper for the jurisdiction of the United States. It has been asked what is meant by “cases arising under the Constitution,” in contradistinction from those “arising under the laws of the United States”? The difference has been already explained. All the restrictions upon the authority of the State legislatures furnish examples of it. They are not, for instance, to emit paper money; but the interdiction results from the Constitution and will have no connection with any law of the United States. Should paper money, notwithstanding, be emitted, the controversies concerning it would be cases arising under the Constitution and not the laws of the United States, in the ordinary signification of the terms. This may serve as a sample of the whole.

It has also been asked, what need of the word “equity”? What equitable causes can grow out of the Constitution and laws of the United States? There is hardly a subject of litigation between individuals which may not involve those ingredients of fraud, accident, trust, or hardship, which would render the matter an object of equitable rather than of legal jurisdiction, as the distinction is known and established in several of the States. It is the peculiar

province, for instance, of a court of equity to relieve against what are called hard bargains: these are contracts in which, though there may have been no direct fraud or deceit sufficient to invalidate them in a court of law, yet there may have been some undue and unconscionable advantage taken of the necessities or misfortunes of one of the parties which a court of equity would not tolerate. In such cases, where foreigners were concerned on either side, it would be impossible for the federal judicatories to do justice without an equitable as well as a legal jurisdiction. Agreements to convey lands claimed under the grants of different States may afford another example of the necessity of an equitable jurisdiction in the federal courts. This reasoning may not be so palpable in those States where the formal and technical distinction between LAW and EQUITY is not maintained as in this State, where it is exemplified by every day's practice.

The judiciary authority of the Union is to extend:

Second. To treaties made, or which shall be made, under the authority of the United States and to all cases affecting ambassadors, other public ministers, and consuls. These belong to the fourth class of the enumerated cases, as they have an evident connection with the preservation of the national peace.

Third. To cases of admiralty and maritime jurisdiction. These form, altogether, the fifth of the enumerated classes of causes proper for the cognizance of the national courts.

Fourth. To controversies to which the United States shall be a party. These constitute the third of those classes.

Fifth. To controversies between two or more States; between a State and citizens of another State; between citizens of different States. These belong to the fourth of those classes, and partake, in some measure, of the nature of the last.

Sixth. To cases between the citizens of the same State, claiming lands under grants of different States. These fall within the last class, and are the only instances in which the proposed Constitution directly contemplates the cognizance of disputes between the citizens of the same State.

Seventh. To cases between a State and the citizens thereof, and foreign States, citizens, or subjects. These have been already explained to belong to the fourth of the enumerated classes and have been shown to be, in a peculiar manner, the proper subjects of the national judicature.

From this review of the particular powers of the federal judiciary, as marked out in the Constitution, it appears that they are all conformable to the principles which ought to have governed the structure of that department and which were necessary to the perfection of the system. If some partial inconveniences should appear to be connected with the incorporation of any of them into the plan, it ought to be recollected that the national legislature will have ample authority to make such exceptions and to prescribe such regulations as will be calculated to obviate or remove these inconveniences. The possibility of particular mischiefs can never be viewed, by a wellinformed mind, as a solid objection to a general principle which is calculated to avoid general mischiefs and to obtain general advantages.

PUBLIUS

FEDERALIST No. 81 The Judiciary Continued, and the Distribution of the Judicial Authority

**From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton**

To the People of the State of New York:

LET US now return to the partition of the judiciary authority between different courts and their relations to each other.

“The judicial power of the United States is”(by the plan of the convention)“to be vested in one Supreme Court, and in such inferior courts as the Congress may, from time to time, ordain and establish.”^[1]

That there ought to be one court of supreme and final jurisdiction is a proposition which has not been, and is not likely to be contested. The reasons for it have been assigned in another place and are too obvious to need repetition. The only question that seems to have been raised concerning it is whether it ought to be a distinct body or a branch of the legislature. The same contradiction is observable in regard to this matter which has been remarked in several other cases. The very men who object to the Senate as a court of impeachments, on the ground of an improper intermixture of powers, advocate, by implication at least, the propriety of vesting the ultimate decision of

all causes in the whole or in a part of the legislative body.

The arguments, or rather suggestions, upon which this charge is founded, are to this effect:“The authority of the proposed Supreme Court of the United States, which is to be a separate and independent body, will be superior to that of the legislature. The power of construing the laws according to the spirit of the Constitution will enable that court to mould them into whatever shape it may think proper; especially as its decisions will not be in any manner subject to the revision or correction of the legislative body. This is as unprecedented as it is dangerous. In Britain the judicial power, in the last resort, resides in the House of Lords, which is a branch of the legislature; and this part of the British government has been imitated in the State constitutions, in general. The Parliament of Great Britain, and the legislatures of the several States, can at any time rectify, by law, the exceptionable decisions of their respective courts. But the errors and usurpations of the Supreme Court of the United States will be uncontrollable and remediless.”This, upon examination, will be found to be made up altogether of false reasoning upon misconceived fact.

In the first place, there is not a syllable in the plan under consideration which directly empowers the national courts to construe the laws according to the spirit of the Constitution, or which gives them any greater latitude in this respect than may be claimed by the courts of every State. I admit, however, that the Constitution ought to be the standard of construction for the laws, and that wherever there is an evident opposition, the laws ought to give place to the Constitution. But this doctrine is not deducible from any circumstance peculiar to the plan of the convention, but from the general theory of a limited Constitution; and as far as it is true is equally applicable to most if not to all the State governments. There can be no objection, therefore, on this account to the federal judicature which will not lie

against the local judicatures in general, and which will not serve to condemn every constitution that attempts to set bounds to the legislative discretion.

But perhaps the force of the objection may be thought to consist in the particular organization of the proposed Supreme Court; in its being composed of a distinct body of magistrates, instead of being one of the branches of the legislature, as in the government of Great Britain and in that of this State. To insist upon this point, the authors of the objection must renounce the meaning they have labored to annex to the celebrated maxim requiring a separation of the departments of power. It shall, nevertheless, be conceded to them, agreeably to the interpretation given to that maxim in the course of these papers, that it is not violated by vesting the ultimate power of judging in a part of the legislative body. But though this be not an absolute violation of that excellent rule, yet it verges so nearly upon it as on this account alone to be less eligible than the mode preferred by the convention. From a body which had had even a partial agency in passing bad laws we could rarely expect a disposition to temper and moderate them in the application. The same spirit which had operated in making them would be too apt to operate in interpreting them; still less could it be expected that men who had infringed the Constitution in the character of legislators would be disposed to repair the breach in the character of judges. Nor is this all. Every reason which recommends the tenure of good behavior for judicial offices militates against placing the judiciary power, in the last resort, in a body composed of men chosen for a limited period. There is an absurdity in referring the determination of causes, in the first instance, to judges of permanent standing; and in the last, to those of a temporary and mutable constitution. And there is a still greater absurdity in subjecting the decisions of men, selected for their knowledge of the laws, acquired by long and laborious study, to the revision and control of men who, for want of the same advantage, cannot but be deficient

in that knowledge. The members of the legislature will rarely be chosen with a view to those qualifications which fit men for the stations of judges; and as, on this account, there will be great reason to apprehend all the ill consequences of defective information, so, on account of the natural propensity of such bodies to party divisions, there will be no less reason to fear that the pestilential breath of faction may poison the fountains of justice. The habit of being continually marshalled on opposite sides will be too apt to stifle the voice both of law and of equity.

These considerations teach us to applaud the wisdom of those States who have committed the judicial power, in the last resort, not to a part of the legislature, but to distinct and independent bodies of men. Contrary to the supposition of those who have represented the plan of the convention, in this respect, as novel and unprecedented, it is but a copy of the constitutions of New Hampshire, Massachusetts, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia; and the preference which has been given to those models is highly to be commended.

It is not true, in the second place, that the Parliament of Great Britain, or the legislatures of the particular States, can rectify the exceptionable decisions of their respective courts, in any other sense than might be done by a future legislature of the United States. The theory, neither of the British, nor the State constitutions, authorizes the revisal of a judicial sentence by a legislative act. Nor is there anything in the proposed Constitution, more than in either of them, by which it is forbidden. In the former, as well as in the latter, the impropriety of the thing, on the general principles of law and reason, is the sole obstacle. A legislature, without exceeding its province, cannot reverse a determination once made in a particular case, though it may prescribe a new rule for future cases. This is the principle and it applies in all its consequences, exactly in the same manner and

extent, to the State governments, as to the national government now under consideration. Not the least difference can be pointed out in any view of the subject.

It may in the last place be observed that the supposed danger of judiciary encroachments on the legislative authority which has been upon many occasions reiterated is in reality a phantom. Particular misconstructions and contraventions of the will of the legislature may now and then happen; but they can never be so extensive as to amount to an inconvenience, or in any sensible degree to affect the order of the political system. This may be inferred with certainty from the general nature of the judicial power, from the objects to which it relates, from the manner in which it is exercised, from its comparative weakness, and from its total incapacity to support its usurpations by force. And the inference is greatly fortified by the consideration of the important constitutional check which the power of instituting impeachments in one part of the legislative body, and of determining upon them in the other, would give to that body upon the members of the judicial department. This is alone a complete security. There never can be danger that the judges, by a series of deliberate usurpations on the authority of the legislature, would hazard the united resentment of the body intrusted with it, while this body was possessed of the means of punishing their presumption by degrading them from their stations. While this ought to remove all apprehensions on the subject, it affords, at the same time, a cogent argument for constituting the Senate a court for the trial of impeachments.

Having now examined, and, I trust, removed the objections to the distinct and independent organization of the Supreme Court, I proceed to consider the propriety of the power of constituting inferior courts, [2] and the relations which will subsist between these and the former.

The power of constituting inferior courts is evidently calculated to obviate the necessity of having recourse to the Supreme Court in every

case of federal cognizance. It is intended to enable the national government to institute or authorize, in each State or district of the United States, a tribunal competent to the determination of matters of national jurisdiction within its limits.

But why, it is asked, might not the same purpose have been accomplished by the instrumentality of the State courts? This admits of different answers. Though the fitness and competency of those courts should be allowed in the utmost latitude, yet the substance of the power in question may still be regarded as a necessary part of the plan, if it were only to empower the national legislature to commit to them the cognizance of causes arising out of the national Constitution. To confer the power of determining such causes upon the existing courts of the several States would perhaps be as much “to constitute tribunals,” as to create new courts with the like power. But ought not a more direct and explicit provision to have been made in favor of the State courts? There are, in my opinion, substantial reasons against such a provision: the most discerning cannot foresee how far the prevalency of a local spirit may be found to disqualify the local tribunals for the jurisdiction of national causes; whilst every man may discover that courts constituted like those of some of the States would be improper channels of the judicial authority of the Union. State judges, holding their offices during pleasure, or from year to year, will be too little independent to be relied upon for an inflexible execution of the national laws. And if there was a necessity for confiding the original cognizance of causes arising under those laws to them, there would be a correspondent necessity for leaving the door of appeal as wide as possible. In proportion to the grounds of confidence in or distrust of the subordinate tribunals ought to be the facility or difficulty of appeals. And well satisfied as I am of the propriety of the appellate jurisdiction in the several classes of causes to which it is extended by the plan of the convention. I should consider everything calculated to give, in practice, an unrestrained course to appeals, as a

source of public and private inconvenience.

I am not sure but that it will be found highly expedient and useful to divide the United States into four or five or half a dozen districts, and to institute a federal court in each district in lieu of one in every State. The judges of these courts, with the aid of the State judges, may hold circuits for the trial of causes in the several parts of the respective districts. Justice through them may be administered with ease and despatch and appeals may be safely circumscribed within a narrow compass. This plan appears to me at present the most eligible of any that could be adopted and in order to it, it is necessary that the power of constituting inferior courts should exist in the full extent in which it is to be found in the proposed Constitution.

These reasons seem sufficient to satisfy a candid mind, that the want of such a power would have been a great defect in the plan. Let us now examine in what manner the judicial authority is to be distributed between the supreme and the inferior courts of the Union.

The Supreme Court is to be invested with original jurisdiction only “in cases affecting ambassadors, other public ministers, and consuls, and those in which A STATE shall be a party.” Public ministers of every class are the immediate representatives of their sovereigns. All questions in which they are concerned are so directly connected with the public peace, that, as well for the preservation of this as out of respect to the sovereignties they represent, it is both expedient and proper that such questions should be submitted in the first instance to the highest judicatory of the nation. Though consuls have not in strictness a diplomatic character, yet as they are the public agents of the nations to which they belong, the same observation is in a great measure applicable to them. In cases in which a State might happen to be a party, it would ill suit its dignity to be turned over to an inferior tribunal.

Though it may rather be a digression from the immediate subject of this paper, I shall take occasion to mention here a supposition which has excited some alarm upon very mistaken grounds. It has been suggested that an assignment of the public securities of one State to the citizens of another would enable them to prosecute that State in the federal courts for the amount of those securities; a suggestion which the following considerations prove to be without foundation.

It is inherent in the nature of sovereignty not to be amenable to the suit of an individual without its consent. This is the general sense and the general practice of mankind; and the exemption, as one of the attributes of sovereignty, is now enjoyed by the government of every State in the Union. Unless, therefore, there is a surrender of this immunity in the plan of the convention, it will remain with the States, and the danger intimated must be merely ideal. The circumstances which are necessary to produce an alienation of State sovereignty were discussed in considering the article of taxation and need not be repeated here. A recurrence to the principles there established will satisfy us that there is no color to pretend that the State governments would, by the adoption of that plan, be divested of the privilege of paying their own debts in their own way, free from every constraint but that which flows from the obligations of good faith. The contracts between a nation and individuals are only binding on the conscience of the sovereign, and have no pretensions to a compulsive force. They confer no right of action independent of the sovereign will. To what purpose would it be to authorize suits against States for the debts they owe? How could recoveries be enforced? It is evident that it could not be done without waging war against the contracting State; and to ascribe to the federal courts, by mere implication, and in destruction of a pre-existing right of the State governments, a power which would involve such a consequence, would be altogether forced and unwarrantable.

Let us resume the train of our observations. We have seen that the original jurisdiction of the Supreme Court would be confined to two classes of causes, and those of a nature rarely to occur. In all other cases of federal cognizance the original jurisdiction would appertain to the inferior tribunals; and the Supreme Court would have nothing more than an appellate jurisdiction“with such exceptions and under such regulations as the Congress shall make.”

The propriety of this appellate jurisdiction has been scarcely called in question in regard to matters of law; but the clamors have been loud against it as applied to matters of fact. Some well-intentioned men in this State, deriving their notions from the language and forms which obtain in our courts, have been induced to consider it as an implied supersedure of the trial by jury, in favor of the civil-law mode of trial, which prevails in our courts of admiralty, probate, and chancery. A technical sense has been affixed to the term“appellate,”which, in our law parlance, is commonly used in reference to appeals in the course of the civil law. But if I am not misinformed, the same meaning would not be given to it in any part of New England. There an appeal from one jury to another is familiar both in language and practice, and is even a matter of course until there have been two verdicts on one side. The word“appellate”therefore will not be understood in the same sense in New England as in New York, which shows the impropriety of a technical interpretation derived from the jurisprudence of any particular State. The expression, taken in the abstract, denotes nothing more than the power of one tribunal to review the proceedings of another, either as to the law or fact, or both. The mode of doing it may depend on ancient custom or legislative provision (in a new government it must depend on the latter), and may be with or without the aid of a jury, as may be judged advisable. If, therefore, the re-examination of a fact once determined by a jury should in any case be admitted under the proposed Constitution, it may be so regulated as to

be done by a second jury, either by remanding the cause to the court below for a second trial of the fact, or by directing an issue immediately out of the Supreme Court.

But it does not follow that the re-examination of a fact once ascertained by a jury will be permitted in the Supreme Court. Why may not it be said, with the strictest propriety, when a writ of error is brought from an inferior to a superior court of law in this State, that the latter has jurisdiction of the fact as well as the law? It is true it cannot institute a new inquiry concerning the fact but it takes cognizance of it as it appears upon the record and pronounces the law arising upon it.^[3] This is jurisdiction of both fact and law; nor is it even possible to separate them. Though the common-law courts of this State ascertain disputed facts by a jury, yet they unquestionably have jurisdiction of both fact and law; and accordingly when the former is agreed in the pleadings they have no recourse to a jury but proceed at once to judgment. I contend, therefore, on this ground, that the expressions, “appellate jurisdiction, both as to law and fact,” do not necessarily imply a re-examination in the Supreme Court of facts decided by juries in the inferior courts.

The following train of ideas may well be imagined to have influenced the convention in relation to this particular provision. The appellate jurisdiction of the Supreme Court (it may have been argued) will extend to causes determinable in different modes, some in the course of the COMMON LAW, others in the course of the CIVIL LAW. In the former, the revision of the law only will be, generally speaking, the proper province of the Supreme Court; in the latter, the re-examination of the fact is agreeable to usage, and in some cases, of which prize causes are an example, might be essential to the preservation of the public peace. It is therefore necessary that the appellate jurisdiction should, in certain cases, extend in the broadest sense to matters of fact. It will not answer to make an express

exception of cases which shall have been originally tried by a jury because in the courts of some of the States all causes are tried in this mode^[4]; and such an exception would preclude the revision of matters of fact, as well where it might be proper as where it might be improper. To avoid all inconveniencies, it will be safest to declare generally that the Supreme Court shall possess appellate jurisdiction both as to law and fact, and that this jurisdiction shall be subject to such exceptions and regulations as the national legislature may prescribe. This will enable the government to modify it in such a manner as will best answer the ends of public justice and security.

This view of the matter, at any rate, puts it out of all doubt that the supposed abolition of the trial by jury, by the operation of this provision, is fallacious and untrue. The legislature of the United States would certainly have full power to provide that in appeals to the Supreme Court there should be no re-examination of facts where they had been tried in the original causes by juries. This would certainly be an authorized exception; but if, for the reason already intimated, it should be thought too extensive, it might be qualified with a limitation to such causes only as are determinable at common law in that mode of trial.

The amount of the observations hitherto made on the authority of the judicial department is this: that it has been carefully restricted to those causes which are manifestly proper for the cognizance of the national judicature; that in the partition of this authority a very small portion of original jurisdiction has been preserved to the Supreme Court and the rest consigned to the subordinate tribunals; that the Supreme Court will possess an appellate jurisdiction, both as to law and fact, in all the cases referred to them, both subject to any exceptions and regulations which may be thought advisable; that this appellate jurisdiction does, in no case, abolish the trial by jury; and that an ordinary degree of prudence and integrity in the national

councils will insure us solid advantages from the establishment of the proposed judiciary without exposing us to any of the inconveniences which have been predicted from that source.

PUBLIUS

注释

[1] Article 3, Section 1.

[2] This power has been absurdly represented as intended to abolish all the county courts in the several States which are commonly called inferior courts. But the expressions of the Constitution are to constitute “tribunals INFERIOR TO THE SUPREME COURT”; and the evident design of the provision is to enable the institution of local courts, subordinate to the Supreme, either in States or larger districts. It is ridiculous to imagine that county courts were in contemplation.

[3] This word is composed of *JUS* and *DICTIO*, *juris*, *dictio*, or a speaking and pronouncing of the law.

[4] I hold that the States will have concurrent jurisdiction with the subordinate federal judicatories in many cases of federal cognizance as will be explained in my next paper.

FEDERALIST No. 82 The Judiciary Continued

From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton

To the People of the State of New York:

THE erection of a new government, whatever care or wisdom may distinguish the work, cannot fail to originate questions of intricacy and nicety; and these may, in a particular manner, be expected to flow from the establishment of a constitution founded upon the total or partial incorporation of a number of distinct sovereignties. 'Tis time only that can mature and perfect so compound a system, can liquidate the meaning of all the parts, and can adjust them to each other in a harmonious and consistent WHOLE.

Such questions, accordingly, have arisen upon the plan proposed by the convention, and particularly concerning the judiciary department. The principal of these respect the situation of the State courts in regard to those causes which are to be submitted to federal jurisdiction. Is this to be exclusive, or are those courts to possess a concurrent jurisdiction? If the latter, in what relation will they stand to the national tribunals? These are inquiries which we meet with in the mouths of men of sense, and which are certainly entitled to attention.

The principles established in a former paper^[1] teach us that the States will retain all preexisting authorities which may not be

exclusively delegated to the federal head; and that this exclusive delegation can only exist in one of three cases: where an exclusive authority is, in express terms, granted to the Union; or where a particular authority is granted to the Union and the exercise of a like authority is prohibited to the States; or where an authority is granted to the Union with which a similar authority in the States would be utterly incompatible. Though these principles may not apply with the same force to the judiciary as to the legislative power, yet I am inclined to think that they are, in the main, just with respect to the former, as well as the latter. And under this impression, I shall lay it down as a rule that the State courts will retain the jurisdiction they now have, unless it appears to be taken away in one of the enumerated modes.

The only thing in the proposed Constitution, which wears the appearance of confining the causes of federal cognizance to the federal courts, is contained in this passage: "THE JUDICIAL POWER of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress shall from time to time ordain and establish." This might either be construed to signify that the supreme and subordinate courts of the Union should alone have the power of deciding those causes to which their authority is to extend; or simply to denote that the organs of the national judiciary should be one Supreme Court, and as many subordinate courts as Congress should think proper to appoint; or in other words, that the United States should exercise the judicial power with which they are to be invested, through one supreme tribunal, and a certain number of inferior ones to be instituted by them. The first excludes, the last admits, the concurrent jurisdiction of the State tribunals; and as the first would amount to an alienation of State power by implication, the last appears to me the most natural and the most defensible construction.

But this doctrine of concurrent jurisdiction is only clearly

applicable to those descriptions of causes of which the State courts have previous cognizance. It is not equally evident in relation to cases which may grow out of, and be peculiar to, the Constitution to be established; for not to allow the State courts a right of jurisdiction in such cases can hardly be considered as the abridgment of a pre-existing authority. I mean not therefore to contend that the United States, in the course of legislation upon the objects intrusted to their direction, may not commit the decision of causes arising upon a particular regulation to the federal courts solely, if such a measure should be deemed expedient; but I hold that the State courts will be divested of no part of their primitive jurisdiction further than may relate to an appeal; and I am even of opinion that in every case in which they were not expressly excluded by the future acts of the national legislature, they will of course take cognizance of the causes to which those acts may give birth. This I infer from the nature of judiciary power, and from the general genius of the system. The judiciary power of every government looks beyond its own local or municipal laws, and in civil cases lays hold of all subjects of litigation between parties within its jurisdiction, though the causes of dispute are relative to the laws of the most distant part of the globe. Those of Japan, not less than of New York, may furnish the objects of legal discussion to our courts. When in addition to this we consider the State governments and the national governments, as they truly are, in the light of kindred systems, and as parts of ONE WHOLE, the inference seems to be conclusive that the State courts would have a concurrent jurisdiction in all cases arising under the laws of the Union where it was not expressly prohibited.

Here another question occurs: What relation would subsist between the national and State courts in these instances of concurrent jurisdiction? I answer that an appeal would certainly lie from the latter to the Supreme Court of the United States. The Constitution in direct terms gives an appellate jurisdiction to the Supreme Court in all

the enumerated cases of federal cognizance in which it is not to have an original one, without a single expression to confine its operation to the inferior federal courts. The objects of appeal, not the tribunals from which it is to be made, are alone contemplated. From this circumstance, and from the reason of the thing, it ought to be construed to extend to the State tribunals. Either this must be the case or the local courts must be excluded from a concurrent jurisdiction in matters of national concern, else the judiciary authority of the Union may be eluded at the pleasure of every plaintiff or prosecutor. Neither of these consequences ought, without evident necessity, to be involved; the latter would be entirely inadmissible, as it would defeat some of the most important and avowed purposes of the proposed government and would essentially embarrass its measures. Nor do I perceive any foundation for such a supposition. Agreeably to the remark already made, the national and State systems are to be regarded as ONE WHOLE. The courts of the latter will of course be natural auxiliaries to the execution of the laws of the Union, and an appeal from them will as naturally lie to that tribunal which is destined to unite and assimilate the principles of national justice and the rules of national decisions. The evident aim of the plan of the convention is that all the causes of the specified classes shall, for weighty public reasons, receive their original or final determination in the courts of the Union. To confine, therefore, the general expressions giving appellate jurisdiction to the Supreme Court to appeals from the subordinate federal courts, instead of allowing their extension to the State courts, would be to abridge the latitude of the terms, in subversion of the intent, contrary to every sound rule of interpretation.

But could an appeal be made to lie from the State courts to the subordinate federal judicatories? This is another of the questions which have been raised, and of greater difficulty than the former. The following considerations countenance the affirmative. The plan of the

convention, in the first place, authorizes the national legislature“to constitute tribunals inferior to the Supreme Court.”^[2] It declares, in the next place, that“the JUDICIAL POWER of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress shall ordain and establish”; and it then proceeds to enumerate the cases to which this judicial power shall extend. It afterwards divides the jurisdiction of the Supreme Court into original and appellate, but gives no definition of that of the subordinate courts. The only outlines described for them are that they shall be“inferior to the Supreme Court,”and that they shall not exceed the specified limits of the federal judiciary. Whether their authority shall be original or appellate, or both, is not declared. All this seems to be left to the discretion of the legislature. And this being the case, I perceive at present no impediment to the establishment of an appeal from the State courts to the subordinate national tribunals; and many advantages attending the power of doing it may be imagined. It would diminish the motives to the multiplication of federal courts and would admit of arrangements calculated to contract the appellate jurisdiction of the Supreme Court. The State tribunals may then be left with a more entire charge of federal causes; and appeals, in most cases in which they may be deemed proper, instead of being carried to the Supreme Court, may be made to lie from the State courts to district courts of the Union.

FEDERALIST No. 83 The Judiciary Continued in Relation to Trial by Jury

**From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton**

To the People of the State of New York:

THE objection to the plan of the convention, which has met with most success in this State, and perhaps in several of the other States, is that relative to the want of a constitutional provision for the trial by jury in civil cases. The disingenuous form in which this objection is usually stated has been repeatedly adverted to and exposed but continues to be pursued in all the conversations and writings of the opponents of the plan. The mere silence of the Constitution in regard to civil causes is represented as an abolition of the trial by jury, and the declamations to which it has afforded a pretext are artfully calculated to induce a persuasion that this pretended abolition is complete and universal, extending not only to every species of civil but even to criminal causes. To argue with respect to the latter would, however, be as vain and fruitless as to attempt the serious proof of the existence of matter, or to demonstrate any of those propositions which, by their own internal evidence, force conviction when expressed in language adapted to convey their meaning.

With regard to civil causes, subtleties almost too contemptible for refutation have been employed to countenance the surmise that a

thing which is only not provided for is entirely abolished. Every man of discernment must at once perceive the wide difference between silence and abolition. But as the inventors of this fallacy have attempted to support it by certain legal maxims of interpretation which they have perverted from their true meaning, it may not be wholly useless to explore the ground they have taken.

The maxims on which they rely are of this nature:“A specification of particulars is an exclusion of generals”; or,“The expression of one thing is the exclusion of another.”Hence, say they, as the Constitution has established the trial by jury in criminal cases and is silent in respect to civil, this silence is an implied prohibition of trial by jury in regard to the latter.

The rules of legal interpretation are rules of common sense, adopted by the courts in the construction of the laws. The true test, therefore, of a just application of them is its conformity to the source from which they are derived. This being the case, let me ask if it is consistent with reason or common sense to suppose that a provision obliging the legislative power to commit the trial of criminal causes to juries is a privation of its right to authorize or permit that mode of trial in other cases? Is it natural to suppose that a command to do one thing is a prohibition to the doing of another, which there was a previous power to do, and which is not incompatible with the thing commanded to be done? If such a supposition would be unnatural and unreasonable, it cannot be rational to maintain that an injunction of the trial by jury in certain cases is an interdiction of it in others.

A power to constitute courts is a power to prescribe the mode of trial; and consequently, if nothing was said in the Constitution on the subject of juries, the legislature would be at liberty either to adopt that institution or to let it alone. This discretion, in regard to criminal causes, is abridged by the express injunction of trial by jury in all such cases; but it is, of course, left at large in relation to civil causes, there

being a total silence on this head. The specification of an obligation to try all criminal causes in a particular mode excludes indeed the obligation or necessity of employing the same mode in civil causes, but does not abridge the power of the legislature to exercise that mode if it should be thought proper. The pretense, therefore, that the national legislature would not be at full liberty to submit all the civil causes of federal cognizance to the determination of juries, is a pretense destitute of all just foundation.

From these observations this conclusion results: that the trial by jury in civil cases would not be abolished; and that the use attempted to be made of the maxims which have been quoted is contrary to reason and common sense, and therefore not admissible. Even if these maxims had a precise technical sense, corresponding with the idea of those who employ them upon the present occasion, which, however, is not the case, they would still be inapplicable to a constitution of government. In relation to such a subject, the natural and obvious sense of its provisions, apart from any technical rules, is the true criterion of construction.

Having now seen that the maxims relied upon will not bear the use made of them, let us endeavor to ascertain their proper use and true meaning. This will be best done by examples. The plan of the convention declares that the power of Congress, or, in other words, of the national legislature, shall extend to certain enumerated cases. This specification of particulars evidently excludes all pretension to a general legislative authority, because an affirmative grant of special powers would be absurd as well as useless if a general authority was intended.

In like manner the judicial authority of the federal judicatures is declared by the Constitution to comprehend certain cases particularly specified. The expression of those cases marks the precise limits beyond which the federal courts cannot extend their jurisdiction,

because the objects of their cognizance being enumerated, the specification would be nugatory if it did not exclude all ideas of more extensive authority.

These examples might be sufficient to elucidate the maxims which have been mentioned and to designate the manner in which they should be used. But that there may be no possibility of misapprehensions upon this subject, I shall add one case more, to demonstrate the proper use of these maxims, and the abuse which has been made of them.

Let us suppose that by the laws of this State a married woman was incapable of conveying her estate, and that the legislature, considering this as an evil, should enact that she might dispose of her property by deed executed in the presence of a magistrate. In such a case there can be no doubt but the specification would amount to an exclusion of any other mode of conveyance, because the woman having no previous power to alienate her property, the specification determines the particular mode which she is, for that purpose, to avail herself of. But let us further suppose that in a subsequent part of the same act it should be declared that no woman should dispose of any estate of a determinate value without the consent of three of her nearest relations, signified by their signing the deed; could it be inferred from this regulation that a married woman might not procure the approbation of her relations to a deed for conveying property of inferior value? The position is too absurd to merit a refutation, and yet this is precisely the position which those must establish who contend that the trial by juries in civil cases is abolished, because it is expressly provided for in cases of a criminal nature.

From these observations it must appear unquestionably true that trial by jury is in no case abolished by the proposed Constitution, and it is equally true that in those controversies between individuals in which the great body of the people are likely to be interested, that

institution will remain precisely in the same situation in which it is placed by the State constitutions, and will be in no degree altered or influenced by the adoption of the plan under consideration. The foundation of this assertion is that the national judiciary will have no cognizance of them, and of course they will remain determinable as heretofore by the State courts only, and in the manner which the State constitutions and laws prescribe. All land causes, except where claims under the grants of different States come into question, and all other controversies between the citizens of the same State, unless where they depend upon positive violations of the articles of union by acts of the State legislatures, will belong exclusively to the jurisdiction of the State tribunals. Add to this that admiralty causes, and almost all those which are of equity jurisdiction, are determinable under our own government without the intervention of a jury, and the inference from the whole will be that this institution, as it exists with us at present, cannot possibly be affected to any great extent by the proposed alteration in our system of government.

The friends and adversaries of the plan of the convention, if they agree in nothing else, concur at least in the value they set upon the trial by jury; or if there is any difference between them it consists in this: the former regard it as a valuable safeguard to liberty; the latter represent it as the very palladium of free government. For my own part, the more the operation of the institution has fallen under my observation, the more reason I have discovered for holding it in high estimation; and it would be altogether superfluous to examine to what extent it deserves to be esteemed useful or essential in a representative republic, or how much more merit it may be entitled to as a defense against the oppressions of an hereditary monarch, than as a barrier to the tyranny of popular magistrates in a popular government. Discussions of this kind would be more curious than beneficial, as all are satisfied of the utility of the institution, and of its friendly aspect to liberty. But I must acknowledge that I cannot readily discern the

inseparable connection between the existence of liberty and the trial by jury in civil cases. Arbitrary impeachments, arbitrary methods of prosecuting pretended offenses, and arbitrary punishments upon arbitrary convictions have ever appeared to me to be the great engines of judicial despotism; and these have all relation to criminal proceedings. The trial by jury in criminal cases, aided by the habeas corpus act, seems therefore to be alone concerned in the question. And both of these are provided for in the most ample manner in the plan of the convention.

It has been observed that trial by jury is a safeguard against an oppressive exercise of the power of taxation. This observation deserves to be canvassed.

It is evident that it can have no influence upon the legislature in regard to the amount of taxes to be laid, to the objects upon which they are to be imposed, or to the rule by which they are to be apportioned. If it can have any influence, therefore, it must be upon the mode of collection and the conduct of the officers intrusted with the execution of the revenue laws.

As to the mode of collection in this State, under our own Constitution the trial by jury is in most cases out of use. The taxes are usually levied by the more summary proceeding of distress and sale, as in cases of rent. And it is acknowledged on all hands that this is essential to the efficacy of the revenue laws. The dilatory course of a trial at law to recover the taxes imposed on individuals would neither suit the exigencies of the public nor promote the convenience of the citizens. It would often occasion an accumulation of costs, more burdensome than the original sum of the tax to be levied.

And as to the conduct of the officers of the revenue, the provision in favor of trial by jury in criminal cases will afford the security aimed at. Wilful abuses of a public authority, to the oppression of the

subject, and every species of official extortion, are offenses against the government, for which the persons who commit them may be indicted and punished according to the circumstances of the case.

The excellence of the trial by jury in civil cases appears to depend on circumstances foreign to the preservation of liberty. The strongest argument in its favor is that it is a security against corruption. As there is always more time and better opportunity to tamper with a standing body of magistrates than with a jury summoned for the occasion, there is room to suppose that a corrupt influence would more easily find its way to the former than to the latter. The force of this consideration is, however, diminished by others. The sheriff, who is the summoner of ordinary juries, and the clerks of courts, who have the nomination of special juries, are themselves standing officers, and, acting individually, may be supposed more accessible to the touch of corruption than the judges, who are a collective body. It is not difficult to see that it would be in the power of those officers to select jurors who would serve the purpose of the party as well as a corrupted bench. In the next place, it may fairly be supposed that there would be less difficulty in gaining some of the jurors promiscuously taken from the public mass, than in gaining men who had been chosen by the government for their probity and good character. But making every deduction for these considerations, the trial by jury must still be a valuable check upon corruption. It greatly multiplies the impediments to its success. As matters now stand, it would be necessary to corrupt both court and jury; for where the jury have gone evidently wrong, the court will generally grant a new trial, and it would be in most cases of little use to practice upon the jury unless the court could be likewise gained. Here then is a double security; and it will readily be perceived that this complicated agency tends to preserve the purity of both institutions. By increasing the obstacles to success, it discourages attempts to seduce the integrity of either. The temptations to prostitution which the judges might have to surmount must certainly

be much fewer, while the co-operation of a jury is necessary, than they might be if they had themselves the exclusive determination of all causes.

Notwithstanding, therefore, the doubts I have expressed as to the essentiality of trial by jury in civil cases to liberty, I admit that it is in most cases, under proper regulations, an excellent method of determining questions of property; and that on this account alone it would be entitled to a constitutional provision in its favor if it were possible to fix the limits within which it ought to be comprehended. There is, however, in all cases, great difficulty in this; and men not blinded by enthusiasm must be sensible that in a federal government, which is a composition of societies whose ideas and institutions in relation to the matter materially vary from each other, that difficulty must be not a little augmented. For my own part, at every new view I take of the subject I become more convinced of the reality of the obstacles which, we are authoritatively informed, prevented the insertion of a provision on this head in the plan of the convention.

The great difference between the limits of the jury trial in different States is not generally understood; and as it must have considerable influence on the sentence we ought to pass upon the omission complained of in regard to this point, an explanation of it is necessary. In this State, our judicial establishments resemble, more nearly than in any other, those of Great Britain. We have courts of common law, courts of probates (analogous in certain matters to the spiritual courts in England), a court of admiralty and a court of chancery. In the courts of common law only, the trial by jury prevails, and this with some exceptions. In all the others a single judge presides, and proceeds in general either according to the course of the canon or civil law, without the aid of a jury.^[1] In New Jersey, there is a court of chancery which proceeds like ours, but neither courts of admiralty nor of probates, in the sense in which these last are

established with us. In that State the courts of common law have the cognizance of those causes which with us are determinable in the courts of admiralty and of probates, and of course the jury trial is more extensive in New Jersey than in New York. In Pennsylvania, this is perhaps still more the case, for there is no court of chancery in that State, and its common-law courts have equity jurisdiction. It has a court of admiralty, but none of probates, at least on the plan of ours. Delaware has in these respects imitated Pennsylvania. Maryland approaches more nearly to New York, as does also Virginia, except that the latter has a plurality of chancellors. North Carolina bears most affinity to Pennsylvania; South Carolina to Virginia. I believe, however, that in some of those States which have distinct courts of admiralty, the causes depending in them are triable by juries. In Georgia there are none but common-law courts, and an appeal of course lies from the verdict of one jury to another, which is called a special jury, and for which a particular mode of appointment is marked out. In Connecticut, they have no distinct courts either of chancery or of admiralty, and their courts of probates have no jurisdiction of causes. Their common-law courts have admiralty and, to a certain extent, equity jurisdiction. In cases of importance, their General Assembly is the only court of chancery. In Connecticut, therefore, the trial by jury extends in practice further than in any other State yet mentioned. Rhode Island is, I believe, in this particular, pretty much in the situation of Connecticut. Massachusetts and New Hampshire, in regard to the blending of law, equity, and admiralty jurisdictions, are in a similar predicament. In the four Eastern States, the trial by jury not only stands upon a broader foundation than in the other States, but it is attended with a peculiarity unknown, in its full extent, to any of them. There is an appeal of course from one jury to another, till there have been two verdicts out of three on one side.

From this sketch it appears that there is a material diversity, as well in the modification as in the extent of the institution of trial by

jury in civil cases, in the several States; and from this fact these obvious reflections flow: first, that no general rule could have been fixed upon by the convention which would have corresponded with the circumstances of all the States; and secondly, that more or at least as much might have been hazarded by taking the system of any one State for a standard, as by omitting a provision altogether and leaving the matter, as it has been left, to legislative regulation.

The propositions which have been made for supplying the omission have rather served to illustrate than to obviate the difficulty of the thing. The minority of Pennsylvania have proposed this mode of expression for the purpose—"Trial by jury shall be as heretofore"—and this I maintain would be absolutely senseless and nugatory. The United States, in their united or collective capacity, are the OBJECT to which all general provisions in the Constitution must necessarily be construed to refer. Now it is evident that though trial by jury, with various limitations, is known in each State individually, yet in the United States, as such, it is at this time altogether unknown because the present federal government has no judiciary power whatever; and consequently there is no proper antecedent or previous establishment to which the term heretofore could relate. It would therefore be destitute of a precise meaning, and inoperative from its uncertainty.

As, on the one hand, the form of the provision would not fulfil the intent of its proposers, so, on the other, if I apprehend that intent rightly, it would be in itself inexpedient. I presume it to be that causes in the federal courts should be tried by jury, if, in the State where the courts sat, that mode of trial would obtain in a similar case in the State courts; that is to say, admiralty causes should be tried in Connecticut by a jury, in New York without one. The capricious operation of so dissimilar a method of trial in the same cases, under the same government, is of itself sufficient to indispose every well-regulated judgment towards it. Whether the cause should be tried

with or without a jury would depend, in a great number of cases, on the situation of the court and parties.

But this is not, in my estimation, the greatest objection. I feel a deep and deliberate conviction that there are many cases in which the trial by jury is an ineligible one. I think it so particularly in cases which concern the public peace with foreign nations—that is, in most cases where the question turns wholly on the laws of nations. Of this nature, among others, are all prize causes. Juries cannot be supposed competent to investigations that require a thorough knowledge of the laws and usages of nations; and they will sometimes be under the influence of impressions which will not suffer them to pay sufficient regard to those considerations of public policy which ought to guide their inquiries. There would of course be always danger that the rights of other nations might be infringed by their decisions so as to afford occasions of reprisal and war. Though the proper province of juries be to determine matters of fact, yet in most cases legal consequences are complicated with fact in such a manner as to render a separation impracticable.

It will add great weight to this remark, in relation to prize causes, to mention that the method of determining them has been thought worthy of particular regulation in various treaties between different powers of Europe, and that, pursuant to such treaties, they are determinable in Great Britain, in the last resort, before the king himself, in his privy council, where the fact, as well as the law, undergoes a re-examination. This alone demonstrates the impolicy of inserting a fundamental provision in the Constitution which would make the State systems a standard for the national government in the article under consideration, and the danger of encumbering the government with any constitutional provisions the propriety of which is not indisputable.

My convictions are equally strong that great advantages result

from the separation of the equity from the law jurisdiction, and that the causes which belong to the former would be improperly committed to juries. The great and primary use of a court of equity is to give relief in extraordinary cases, which are exceptions^[2] to general rules. To unite the jurisdiction of such cases with the ordinary jurisdiction must have a tendency to unsettle the general rules, and to subject every case that arises to a special determination; while a separation of the one from the other has the contrary effect of rendering one a sentinel over the other, and of keeping each within the expedient limits. Besides this, the circumstances that constitute cases proper for courts of equity are in many instances so nice and intricate that they are incompatible with the genius of trials by jury. They require often such long, deliberate, and critical investigation as would be impracticable to men called from their occupations, and obliged to decide before they were permitted to return to them. The simplicity and expedition which form the distinguishing characters of this mode of trial require that the matter to be decided should be reduced to some single and obvious point; while the litigations usual in chancery frequently comprehend a long train of minute and independent particulars.

It is true that the separation of the equity from the legal jurisdiction is peculiar to the English system of jurisprudence: which is the model that has been followed in several of the States. But it is equally true that the trial by jury has been unknown in every case in which they have been united. And the separation is essential to the preservation of that institution in its pristine purity. The nature of a court of equity will readily permit the extension of its jurisdiction to matters of law; but it is not a little to be suspected that the attempt to extend the jurisdiction of the courts of law to matters of equity will not only be unproductive of the advantages which may be derived from courts of chancery, on the plan upon which they are established in this State, but will tend gradually to change the nature of the courts

of law, and to undermine the trial by jury, by introducing questions too complicated for a decision in that mode.

These appeared to be conclusive reasons against incorporating the systems of all the States in the formation of the national judiciary, according to what may be conjectured to have been the attempt of the Pennsylvania minority. Let us now examine how far the proposition of Massachusetts is calculated to remedy the supposed defect.

It is in this form: "In civil actions between citizens of different States, every issue of fact arising in actions at common law may be tried by a jury if the parties, or either of them, request it."

This, at best, is a proposition confined to one description of causes; and the inference is fair, either that the Massachusetts convention considered that as the only class of federal causes in which the trial by jury would be proper; or that if desirous of a more extensive provision, they found it impracticable to devise one which would properly answer the end. If the first, the omission of a regulation respecting so partial an object can never be considered as a material imperfection in the system. If the last, it affords a strong corroboration of the extreme difficulty of the thing.

But this is not all: if we advert to the observations already made respecting the courts that subsist in the several States of the Union, and the different powers exercised by them, it will appear that there are no expressions more vague and indeterminate than those which have been employed to characterize that species of causes which it is intended shall be entitled to a trial by jury. In this State, the boundaries between actions at common law and actions of equitable jurisdiction are ascertained in conformity to the rules which prevail in England upon that subject. In many of the other States the boundaries are less precise. In some of them every cause is to be tried in a court of common law, and upon that foundation every action may be

considered as an action at common law, to be determined by a jury, if the parties, or either of them, choose it. Hence the same irregularity and confusion would be introduced by a compliance with this proposition that I have already noticed as resulting from the regulation proposed by the Pennsylvania minority. In one State a cause would receive its determination from a jury, if the parties, or either of them, requested it; but in another State a cause exactly similar to the other must be decided without the intervention of a jury, because the State judicatories varied as to common-law jurisdiction.

It is obvious, therefore, that the Massachusetts proposition upon this subject cannot operate as a general regulation until some uniform plan, with respect to the limits of common-law and equitable jurisdictions, shall be adopted by the different States. To devise a plan of that kind is a task arduous in itself, and which it would require much time and reflection to mature. It would be extremely difficult, if not impossible, to suggest any general regulation that would be acceptable to all the States in the Union, or that would perfectly quadrate with the several State institutions.

It may be asked, Why could not a reference have been made to the constitution of this State, taking that which is allowed by me to be a good one, as a standard for the United States? I answer that it is not very probable the other States would entertain the same opinion of our institutions as we do ourselves. It is natural to suppose that they are hitherto more attached to their own, and that each would struggle for the preference. If the plan of taking one State as a model for the whole had been thought of in the convention, it is to be presumed that the adoption of it in that body would have been rendered difficult by the predilection of each representation in favor of its own government; and it must be uncertain which of the States would have been taken as the model. It has been shown that many of them would

be improper ones. And I leave it to conjecture whether under all circumstances it is most likely that New York, or some other State, would have been preferred. But admit that a judicious selection could have been effected in the convention, still there would have been great danger of jealousy and disgust in the other States at the partiality which had been shown to the institutions of one. The enemies of the plan would have been furnished with a fine pretext for raising a host of local prejudices against it which perhaps might have hazarded, in no inconsiderable degree, its final establishment.

To avoid the embarrassments of a definition of the cases which the trial by jury ought to embrace, it is sometimes suggested by men of enthusiastic tempers that a provision might have been inserted for establishing it in all cases whatsoever. For this I believe, no precedent is to be found in any member of the Union; and the considerations which have been stated in discussing the proposition of the minority of Pennsylvania must satisfy every sober mind that the establishment of the trial by jury in all cases would have been an unpardonable error in the plan.

In short, the more it is considered the more arduous will appear the task of fashioning a provision in such a form as not to express too little to answer the purpose, or too much to be advisable; or which might not have opened other sources of opposition to the great and essential object of introducing a firm national government.

I cannot but persuade myself, on the other hand, that the different lights in which the subject has been placed in the course of these observations will go far towards removing in candid minds the apprehensions they may have entertained on the point. They have tended to show that the security of liberty is materially concerned only in the trial by jury in criminal cases which is provided for in the most ample manner in the plan of the convention; that even in far the greatest proportion of civil cases, and those in which the great body of

the community is interested, that mode of trial will remain in its full force as established in the State constitutions, untouched and unaffected by the plan of the convention; that it is in no case abolished^[3] by that plan; and that there are great if not insurmountable difficulties in the way of making any precise and proper provision for it in a Constitution for the United States.

The best judges of the matter will be the least anxious for a constitutional establishment of the trial by jury in civil cases, and will be the most ready to admit that the changes which are continually happening in the affairs of society may render a different mode of determining questions of property preferable in many cases in which that mode of trial now prevails. For my own part, I acknowledge myself to be convinced that even in this State it might be advantageously extended to some cases to which it does not at present apply and might as advantageously be abridged in others. It is conceded by all reasonable men that it ought not to obtain in all cases. The examples of innovations which contract its ancient limits as well in these States as in Great Britain afford a strong presumption that its former extent has been found inconvenient, and give room to suppose that future experience may discover the propriety and utility of other exceptions. I suspect it to be impossible in the nature of the thing to fix the salutary point at which the operation of the institution ought to stop, and this is with me a strong argument for leaving the matter to the discretion of the legislature.

This is now clearly understood to be the case in Great Britain, and it is equally so in the State of Connecticut; and yet it may be safely affirmed that more numerous encroachments have been made upon the trial by jury in this State since the Revolution, though provided for by a positive article of our constitution, than has happened in the same time either in Connecticut or Great Britain. It may be added that these encroachments have generally originated with the men who

endeavor to persuade the people they are the warmest defenders of popular liberty, but who have rarely suffered constitutional obstacles to arrest them in a favorite career. The truth is that the general GENIUS of a government is all that can be substantially relied upon for permanent effects. Particular provisions, though not altogether useless, have far less virtue and efficacy than are commonly ascribed to them; and the want of them will never be, with men of sound discernment, a decisive objection to any plan which exhibits the leading characters of a good government.

It certainly sounds not a little harsh and extraordinary to affirm that there is no security for liberty in a Constitution which expressly establishes the trial by jury in criminal cases, because it does not do it in civil also; while it is a notorious fact that Connecticut, which has been always regarded as the most popular State in the Union, can boast of no constitutional provision for either.

注释

[1] It has been erroneously insinuated, with regard to the court of chancery, that this court generally tries disputed facts by a jury. The truth is that references to a jury in that court rarely happen, and are in no case necessary but where the validity of a devise of land comes into question.

[2] It is true that the principles by which that relief is governed are now reduced to a regular system; but it is not the less true that they are in the main applicable to SPECIAL circumstances, which form exceptions to general rules.

[3] Vide No. 81 in which the supposition of its being abolished by the appellate jurisdiction in matters of fact being vested in the

Supreme Court is examined and refuted.

FEDERALIST No. 84 Certain General and Miscellaneous Objections to the Constitution Considered and Answered

**From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton**

To the People of the State of New York:

IN THE course of the foregoing review of the Constitution, I have taken notice of, and endeavored to answer most of the objections which have appeared against it. There, however, remain a few which either did not fall naturally under any particular head or were forgotten in their proper places. These shall now be discussed; but as the subject has been drawn into great length, I shall so far consult brevity as to comprise all my observations on these miscellaneous points in a single paper.

The most considerable of these remaining objections is that the plan of the convention contains no bill of rights. Among other answers given to this, it has been upon different occasions remarked that the constitutions of several of the States are in a similar predicament. I add that New York is of this number. And yet the opposers of the new system, in this State, who profess an unlimited admiration for its constitution, are among the most intemperate partisans of a bill of rights. To justify their zeal in this matter they allege two things: one is that, though the constitution of New York has no bill of rights prefixed

to it, yet it contains, in the body of it, various provisions in favor of particular privileges and rights which, in substance amount to the same thing; the other is that the Constitution adopts, in their full extent, the common and statute law of Great Britain, by which many other rights not expressed in it are equally secured.

To the first I answer that the Constitution proposed by the convention contains, as well as the constitution of this State, a number of such provisions.

Independent of those which relate to the structure of the government, we find the following: Article 1, section 3, clause 7 —“Judgment in cases of impeachment shall not extend further than to removal from office and disqualification to hold and enjoy any office of honor, trust, or profit under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment according to law.”Section 9, of the same article, clause 2—“The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.”Clause 3—“No bill of attainder or ex post facto law shall be passed.”Clause 7—“No title of nobility shall be granted by the United States; and no person holding any office of profit or trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever, from any king, prince, or foreign state.”Article 3, section 2, clause 3—“The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the State where the said crimes shall have been committed; but when not committed within any State, the trial shall be at such place or places as the Congress may by law have directed.”Section 3, of the same article—“Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason, unless on the testimony of two witnesses to the

same overt act, or on confession in open court.” And clause 3, of the same section—“The Congress shall have power to declare the punishment of treason; but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted.”

《权利法案》

It may well be a question whether these are not, upon the whole, of equal importance with any which are to be found in the constitution of this State. The establishment of the writ of habeas corpus, the prohibition of ex post facto laws, and of TITLES OF NOBILITY, to which we have no corresponding provision in our Constitution, are perhaps greater securities to liberty and republicanism than any it contains. The creation of crimes after the commission of the fact, or, in other words, the subjecting of men to punishment for things which, when they were done, were breaches of no law, and the practice of arbitrary imprisonments, have been, in all ages, the favorite and most formidable instruments of tyranny. The observations of the judicious Blackstone,^[1] in reference to the latter, are well worthy of recital: “To bereave a man of life, [says he] or by

violence to confiscate his estate, without accusation or trial, would be so gross and notorious an act of despotism as must at once convey the alarm of tyranny throughout the whole nation; but confinement of the person, by secretly hurrying him to jail, where his sufferings are unknown or forgotten, is a less public, a less striking, and therefore a more dangerous engine of arbitrary government.”And as a remedy for this fatal evil he is everywhere peculiarly emphatical in his encomiums on the habeas corpus act, which in one place he calls “the BULWARK of the British Constitution.”[2]

Nothing need be said to illustrate the importance of the prohibition of titles of nobility. This may truly be denominated the cornerstone of republican government; for so long as they are excluded there can never be serious danger that the government will be any other than that of the people.

To the second, that is, to the pretended establishment of the common and statute law by the Constitution, I answer that they are expressly made subject “to such alterations and provisions as the legislature shall from time to time make concerning the same.”They are therefore at any moment liable to repeal by the ordinary legislative power, and of course have no constitutional sanction. The only use of the declaration was to recognize the ancient law and to remove doubts which might have been occasioned by the Revolution. This consequently can be considered as no part of a declaration of rights, which under our constitutions must be intended as limitations of the power of the government itself.

It has been several times truly remarked that bills of rights are, in their origin, stipulations between kings and their subjects, abridgements of prerogative in favor of privilege, reservations of rights not surrendered to the prince. Such was MAGNA CARTA, obtained by the barons, sword in hand, from King John. Such were the subsequent confirmations of that charter by subsequent princes. Such

was the Petition of Right assented to by Charles the First in the beginning of his reign. Such, also, was the Declaration of Right presented by the Lords and Commons to the Prince of Orange in 1688, and afterwards thrown into the form of an act of parliament called the Bill of Rights. It is evident, therefore, that, according to their primitive signification, they have no application to constitutions professedly founded upon the power of the people and executed by their immediate representatives and servants. Here, in strictness, the people surrender nothing; and as they retain everything they have no need of particular reservations. "WE, THE PEOPLE of the United States, to secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America." Here is a better recognition of popular rights than volumes of those aphorisms which make the principal figure in several of our State bills of rights and which would sound much better in a treatise of ethics than in a constitution of government.

But a minute detail of particular rights is certainly far less applicable to a Constitution like that under consideration, which is merely intended to regulate the general political interests of the nation, than to a constitution which has the regulation of every species of personal and private concerns. If, therefore, the loud clamors against the plan of the convention, on this score, are well founded, no epithets of reprobation will be too strong for the constitution of this State. But the truth is that both of them contain all which, in relation to their objects, is reasonably to be desired.

I go further and affirm that bills of rights, in the sense and to the extent in which they are contended for, are not only unnecessary in the proposed Constitution but would even be dangerous. They would contain various exceptions to powers which are not granted; and, on this very account, would afford a colorable pretext to claim more than were granted. For why declare that things shall not be done which

there is no power to do? Why, for instance, should it be said that the liberty of the press shall not be restrained, when no power is given by which restrictions may be imposed? I will not contend that such a provision would confer a regulating power; but it is evident that it would furnish, to men disposed to usurp, a plausible pretense for claiming that power. They might urge with a semblance of reason that the Constitution ought not to be charged with the absurdity of providing against the abuse of an authority which was not given, and that the provision against restraining the liberty of the press afforded a clear implication that a power to prescribe proper regulations concerning it was intended to be vested in the national government. This may serve as a specimen of the numerous handles which would be given to the doctrine of constructive powers, by the indulgence of an injudicious zeal for bills of rights.

On the subject of the liberty of the press, as much as has been said, I cannot forbear adding a remark or two: in the first place, I observe, that there is not a syllable concerning it in the constitution of this State; in the next, I contend that whatever has been said about it in that of any other State amounts to nothing. What signifies a declaration that “the liberty of the press shall be inviolably preserved”? What is the liberty of the press? Who can give it any definition which would not leave the utmost latitude for evasion? I hold it to be impracticable; and from this I infer that its security, whatever fine declarations may be inserted in any constitution respecting it, must altogether depend on public opinion, and on the general spirit of the people and of the government.^[3] And here, after all, as is intimated upon another occasion, must we seek for the only solid basis of all our rights.

There remains but one other view of this matter to conclude the point. The truth is, after all the declamations we have heard, that the Constitution is itself, in every rational sense, and to every useful

purpose, A BILL OF RIGHTS. The several bills of rights in Great Britain form its Constitution, and conversely the constitution of each State is its bill of rights. And the proposed Constitution, if adopted, will be the bill of rights of the Union. Is it one object of a bill of rights to declare and specify the political privileges of the citizens in the structure and administration of the government? This is done in the most ample and precise manner in the plan of the convention; comprehending various precautions for the public security which are not to be found in any of the State constitutions. Is another object of a bill of rights to define certain immunities and modes of proceeding, which are relative to personal and private concerns? This we have seen has also been attended to in a variety of cases in the same plan. Adverting therefore to the substantial meaning of a bill of rights, it is absurd to allege that it is not to be found in the work of the convention. It may be said that it does not go far enough though it will not be easy to make this appear; but it can with no propriety be contended that there is no such thing. It certainly must be immaterial what mode is observed as to the order of declaring the rights of the citizens if they are to be found in any part of the instrument which establishes the government. And hence it must be apparent that much of what has been said on this subject rests merely on verbal and nominal distinctions, entirely foreign from the substance of the thing.

Another objection which has been made, and which, from the frequency of its repetition, it is to be presumed is relied on, is of this nature: "It is improper [say the objectors] to confer such large powers as are proposed upon the national government, because the seat of that government must of necessity be too remote from many of the States to admit of a proper knowledge on the part of the constituent of the conduct of the representative body." This argument, if it proves anything, proves that there ought to be no general government whatever. For the powers which, it seems to be agreed on all hands, ought to be vested in the Union, cannot be safely intrusted to a body

which is not under every requisite control. But there are satisfactory reasons to show that the objection is in reality not well founded. There is in most of the arguments which relate to distance a palpable illusion of the imagination. What are the sources of information by which the people in Montgomery County must regulate their judgment of the conduct of their representatives in the State legislature? Of personal observation they can have no benefit. This is confined to the citizens on the spot. They must therefore depend on the information of intelligent men, in whom they confide; and how must these men obtain their information? Evidently from the complexion of public measures, from the public prints, from correspondences with their representatives, and with other persons who reside at the place of their deliberations. This does not apply to Montgomery County only, but to all the counties at any considerable distance from the seat of government.

It is equally evident that the same sources of information would be open to the people in relation to the conduct of their representatives in the general government, and the impediments to a prompt communication which distance may be supposed to create will be overbalanced by the effects of the vigilance of the State governments. The executive and legislative bodies of each State will be so many sentinels over the persons employed in every department of the national administration; and as it will be in their power to adopt and pursue a regular and effectual system of intelligence, they can never be at a loss to know the behavior of those who represent their constituents in the national councils, and can readily communicate the same knowledge to the people. Their disposition to apprise the community of whatever may prejudice its interests from another quarter may be relied upon, if it were only from the rivalry of power. And we may conclude with the fullest assurance that the people, through that channel, will be better informed of the conduct of their national representatives than they can be by any means they

now possess, of that of their State representatives.

It ought also to be remembered that the citizens who inhabit the country at and near the seat of government will, in all questions that affect the general liberty and prosperity, have the same interest with those who are at a distance, and that they will stand ready to sound the alarm when necessary, and to point out the actors in any pernicious project. The public papers will be expeditious messengers of intelligence to the most remote inhabitants of the Union.

Among the many extraordinary objections which have appeared against the proposed Constitution, the most extraordinary and the least colorable one is derived from the want of some provision respecting the debts due to the United States. This has been represented as a tacit relinquishment of those debts, and as a wicked contrivance to screen public defaulters. The newspapers have teemed with the most inflammatory railings on this head; and yet there is nothing clearer than that the suggestion is entirely void of foundation, and is the offspring of extreme ignorance or extreme dishonesty. In addition to the remarks I have made upon the subject in another place, I shall only observe that as it is a plain dictate of common sense, so it is also an established doctrine of political law, that “States neither lose any of their rights, nor are discharged from any of their obligations, by a change in the form of their civil government.”^[4]

The last objection of any consequence, which I at present recollect, turns upon the article of expense. If it were even true that the adoption of the proposed government would occasion a considerable increase of expense, it would be an objection that ought to have no weight against the plan.

The great bulk of the citizens of America are with reason convinced that Union is the basis of their political happiness. Men of sense of all parties now with few exceptions agree that it cannot be

preserved under the present system, nor without radical alterations; that new and extensive powers ought to be granted to the national head, and that these require a different organization of the federal government—a single body being an unsafe depository of such ample authorities. In conceding all this, the question of expense must be given up; for it is impossible, with any degree of safety, to narrow the foundation upon which the system is to stand. The two branches of the legislature are, in the first instance, to consist of only sixty-five persons, which is the same number of which Congress, under the existing Confederation, may be composed. It is true that this number is intended to be increased; but this is to keep pace with the increase of the population and resources of the country. It is evident that a less number would, even in the first instance, have been unsafe, and that a continuance of the present number would, in a more advanced stage of population, be a very inadequate representation of the people.

Whence is the dreaded augmentation of expense to spring? One source pointed out, is the multiplication of offices under the new government. Let us examine this a little.

It is evident that the principal departments of the administration under the present government are the same which will be required under the new. There are now a Secretary of War, a Secretary of Foreign Affairs, a Secretary for Domestic Affairs, a Board of Treasury, consisting of three persons, a treasurer, assistants, clerks, etc. These officers are indispensable under any system and will suffice under the new as well as under the old. As to ambassadors and other ministers and agents in foreign countries, the proposed Constitution can make no other difference than to render their characters, where they reside, more respectable, and their services more useful. As to persons to be employed in the collection of the revenues, it is unquestionably true that these will form a very considerable addition to the number of federal officers; but it will not follow that this will occasion an

increase of public expense. It will be in most cases nothing more than an exchange of State officers for national officers. In the collection of all duties, for instance, the persons employed will be wholly of the latter description. The States individually will stand in no need of any for this purpose. What difference can it make in point of expense to pay officers of the customs appointed by the State or those appointed by the United States? There is no good reason to suppose that either the number or the salaries of the latter will be greater than those of the former.

Where then are we to seek for those additional articles of expense which are to swell the account to the enormous size that has been represented to us? The chief item which occurs to me respects the support of the judges of the United States. I do not add the President, because there is now a president of Congress, whose expenses may not be far, if anything, short of those which will be incurred on account of the President of the United States. The support of the judges will clearly be an extra expense, but to what extent will depend on the particular plan which may be adopted in practice in regard to this matter. But it can upon no reasonable plan amount to a sum which will be an object of material consequence.

Let us now see what there is to counterbalance any extra expense that may attend the establishment of the proposed government. The first thing that presents itself is that a great part of the business which now keeps Congress sitting through the year will be transacted by the President. Even the management of foreign negotiations will naturally devolve upon him, according to general principles concerted with the Senate, and subject to their final concurrence. Hence it is evident that a portion of the year will suffice for the session of both the Senate and the House of Representatives; we may suppose about a fourth for the latter and a third, or perhaps a half, for the former. The extra business of treaties and appointments may give this extra occupation to the

Senate. From this circumstance we may infer that, until the House of Representatives shall be increased greatly beyond its present number, there will be a considerable saving of expense from the difference between the constant session of the present and the temporary session of the future Congress.

But there is another circumstance of great importance in the view of economy. The business of the United States has hitherto occupied the State legislatures, as well as Congress. The latter has made requisitions which the former have had to provide for. Hence it has happened that the sessions of the State legislatures have been protracted greatly beyond what was necessary for the execution of the mere local business of the States. More than half their time has been frequently employed in matters which related to the United States. Now the members who compose the legislatures of the several States amount to two thousand and upwards, which number has hitherto performed what under the new system will be done in the first instance by sixty-five persons, and probably at no future period by above a fourth or a fifth of that number. The Congress under the proposed government will do all the business of the United States themselves, without the intervention of the State legislatures, who thenceforth will have only to attend to the affairs of their particular States, and will not have to sit in any proportion as long as they have heretofore done. This difference in the time of the sessions of the State legislatures will be all clear gain, and will alone form an article of saving, which may be regarded as an equivalent for any additional objects of expense that may be occasioned by the adoption of the new system.

The result from these observations is that the sources of additional expense from the establishment of the proposed Constitution are much fewer than may have been imagined; that they are counterbalanced by considerable objects of saving; and that while

it is questionable on which side the scale will preponderate, it is certain that a government less expensive would be incompetent to the purposes of the Union.

[3] To show that there is a power in the Constitution by which the liberty of the press may be affected, recourse has been had to the power of taxation. It is said that duties may be laid upon the publications so high as to amount to a prohibition. I know not by what logic it could be maintained that the declarations in the State constitutions, in favor of the freedom of the press, would be a constitutional impediment to the imposition of duties upon publications by the State legislatures. It cannot certainly be pretended that any degree of duties, however low, would be an abridgment of the liberty of the press. We know that newspapers are taxed in Great Britain, and yet it is notorious that the press nowhere enjoys greater liberty than in that country. And if duties of any kind may be laid without a violation of that liberty, it is evident that the extent must depend on legislative discretion, regulated by public opinion; so that, after all, general declarations respecting the liberty of the press will give it no greater security than it will have without them. The same invasions of it may be effected under the State constitutions which contain those declarations through the means of taxation, as under the proposed Constitution, which has nothing of the kind. It would be quite as significant to declare that government ought to be free, that taxes ought not to be excessive, etc., as that the liberty of the press ought not to be restrained.

FEDERALIST No. 85

Concluding Remarks

**From McLean's Edition, New
York. Wednesday, May 28, 1788
Hamilton**

To the People of the State of New York:

ACCORDING to the formal division of the subject of these papers announced in my first number, there would appear still to remain for discussion two points: “the analogy of the proposed government to your own State constitution,” and “the additional security which its adoption will afford to republican government, to liberty, and to property.” But these heads have been so fully anticipated and exhausted in the progress of the work that it would now scarcely be possible to do anything more than repeat, in a more dilated form, what has been heretofore said, which the advanced stage of the question and the time already spent upon it conspire to forbid.

It is remarkable that the resemblance of the plan of the convention to the act which organizes the government of this State holds, not less with regard to many of the supposed defects than to the real excellences of the former. Among the pretended defects are the re-eligibility of the Executive, the want of a council, the omission of a formal bill of rights, the omission of a provision respecting the liberty of the press. These and several others which have been noted in the course of our inquiries are as much chargeable on the existing constitution of this State as on the one proposed for the Union; and a

man must have slender pretensions to consistency who can rail at the latter for imperfections which he finds no difficulty in excusing in the former. Nor indeed can there be a better proof of the insincerity and affectation of some of the zealous adversaries of the plan of the convention among us who profess to be the devoted admirers of the government under which they live than the fury with which they have attacked that plan, for matters in regard to which our own constitution is equally or perhaps more vulnerable.

The additional securities to republican government, to liberty and to property, to be derived from the adoption of the plan under consideration, consist chiefly in the restraints which the preservation of the Union will impose on local factions and insurrections, and on the ambition of powerful individuals in single States who might acquire credit and influence enough from leaders and favorites to become the despots of the people; in the diminution of the opportunities to foreign intrigue, which the dissolution of the Confederacy would invite and facilitate; in the prevention of extensive military establishments, which could not fail to grow out of wars between the States in a disunited situation; in the express guaranty of a republican form of government to each; in the absolute and universal exclusion of titles of nobility; and in the precautions against the repetition of those practices on the part of the State governments which have undermined the foundations of property and credit, have planted mutual distrust in the breasts of all classes of citizens, and have occasioned an almost universal prostration of morals.

Thus have I, fellow-citizens, executed the task I had assigned to myself; with what success your conduct must determine. I trust at least you will admit that I have not failed in the assurance I gave you respecting the spirit with which my endeavors should be conducted. I have addressed myself purely to your judgments, and have studiously avoided those asperities which are too apt to disgrace political

disputants of all parties and which have been not a little provoked by the language and conduct of the opponents of the Constitution. The charge of a conspiracy against the liberties of the people which has been indiscriminately brought against the advocates of the plan has something in it too wanton and too malignant not to excite the indignation of every man who feels in his own bosom a refutation of the calumny. The perpetual changes which have been rung upon the wealthy, the well-born, and the great, have been such as to inspire the disgust of all sensible men. And the unwarrantable concealments and misrepresentations which have been in various ways practiced to keep the truth from the public eye have been of a nature to demand the reprobation of all honest men. It is not impossible that these circumstances may have occasionally betrayed me into intemperances of expression which I did not intend; it is certain that I have frequently felt a struggle between sensibility and moderation; and if the former has in some instances prevailed, it must be my excuse that it has been neither often nor much.

Let us now pause and ask ourselves whether, in the course of these papers, the proposed Constitution has not been satisfactorily vindicated from the aspersions thrown upon it; and whether it has not been shown to be worthy of the public approbation and necessary to the public safety and prosperity. Every man is bound to answer these questions to himself, according to the best of his conscience and understanding, and to act agreeably to the genuine and sober dictates of his judgment. This is a duty from which nothing can give him a dispensation. 'Tis one that he is called upon, nay, constrained by all the obligations that form the bands of society, to discharge sincerely and honestly. No partial motive, no particular interest, no pride of opinion, no temporary passion or prejudice, will justify to himself, to his country, or to his posterity, an improper election of the part he is to act. Let him beware of an obstinate adherence to party; let him reflect that the object upon which he is to decide is not a particular

interest of the community, but the very existence of the nation; and let him remember that a majority of America has already given its sanction to the plan which he is to approve or reject.

I shall not dissemble that I feel an entire confidence in the arguments which recommend the proposed system to your adoption, and that I am unable to discern any real force in those by which it has been opposed. I am persuaded that it is the best which our political situation, habits, and opinions will admit, and superior to any the revolution has produced.

Concessions on the part of the friends of the plan that it has not a claim to absolute perfection have afforded matter of no small triumph to its enemies. "Why," say they, "should we adopt an imperfect thing? Why not amend it and make it perfect before it is irrevocably established?" This may be plausible enough, but it is only plausible. In the first place I remark that the extent of these concessions has been greatly exaggerated. They have been stated as amounting to an admission that the plan is radically defective and that without material alterations the rights and the interests of the community cannot be safely confided to it. This, as far as I have understood the meaning of those who make the concessions, is an entire perversion of their sense. No advocate of the measure can be found who will not declare as his sentiment that the system, though it may not be perfect in every part, is, upon the whole, a good one; is the best that the present views and circumstances of the country will permit; and is such a one as promises every species of security which a reasonable people can desire.

I answer in the next place that I should esteem it the extreme of imprudence to prolong the precarious state of our national affairs and to expose the Union to the jeopardy of successive experiments in the chimerical pursuit of a perfect plan. I never expect to see a perfect work from imperfect man. The result of the deliberations of all

collective bodies must necessarily be a compound, as well of the errors and prejudices as of the good sense and wisdom of the individuals of whom they are composed. The compacts which are to embrace thirteen distinct States in a common bond of amity and union must as necessarily be a compromise of as many dissimilar interests and inclinations. How can perfection spring from such materials?

The reasons assigned in an excellent little pamphlet lately published in this city^[1] are unanswerable to show the utter improbability of assembling a new convention under circumstances in any degree so favorable to a happy issue as those in which the late convention met, deliberated, and concluded. I will not repeat the arguments there used, as I presume the production itself has had an extensive circulation. It is certainly well worth the perusal of every friend to his country. There is, however, one point of light in which the subject of amendments still remains to be considered, and in which it has not yet been exhibited to public view. I cannot resolve to conclude without first taking a survey of it in this aspect.

It appears to me susceptible of absolute demonstration that it will be far more easy to obtain subsequent than previous amendments to the Constitution. The moment an alteration is made in the present plan, it becomes, to the purpose of adoption, a new one, and must undergo a new decision of each State. To its complete establishment throughout the Union it will therefore require the concurrence of thirteen States. If, on the contrary, the Constitution proposed should once be ratified by all the States as it stands, alterations in it may at any time be effected by nine States. Here, then, the chances are as thirteen to nine^[2] in favor of subsequent amendment, rather than of the original adoption of an entire system.

This is not all. Every Constitution for the United States must inevitably consist of a great variety of particulars in which thirteen independent States are to be accommodated in their interests or

opinions of interest. We may of course expect to see, in any body of men charged with its original formation, very different combinations of the parts upon different points. Many of those who form a majority on one question may become the minority on a second, and an association dissimilar to either may constitute the majority on a third. Hence the necessity of moulding and arranging all the particulars which are to compose the whole in such a manner as to satisfy all the parties to the compact; and hence, also, an immense multiplication of difficulties and casualties in obtaining the collective assent to a final act. The degree of that multiplication must evidently be in a ratio to the number of particulars and the number of parties.

But every amendment to the Constitution, if once established, would be a single proposition, and might be brought forward singly. There would then be no necessity for management or compromise in relation to any other point—no giving nor taking. The will of the requisite number would at once bring the matter to a decisive issue. And consequently, whenever nine, or rather ten States, were united in the desire of a particular amendment, that amendment must infallibly take place. There can, therefore, be no comparison between the facility of affecting an amendment and that of establishing, in the first instance, a complete Constitution.

In opposition to the probability of subsequent amendments, it has been urged that the persons delegated to the administration of the national government will always be disinclined to yield up any portion of the authority of which they were once possessed. For my own part, I acknowledge a thorough conviction that any amendments which may, upon mature consideration, be thought useful, will be applicable to the organization of the government, not to the mass of its powers; and on this account alone I think there is no weight in the observation just stated. I also think there is little weight in it on another account. The intrinsic difficulty of governing THIRTEEN

STATES at any rate, independent of calculations upon an ordinary degree of public spirit and integrity will, in my opinion constantly impose on the national rulers the necessity of a spirit of accommodation to the reasonable expectations of their constituents. But there is yet a further consideration, which proves beyond the possibility of a doubt that the observation is futile. It is this: that the national rulers, whenever nine States concur, will have no option upon the subject. By the fifth article of the plan, the Congress will be obliged“on the application of the legislatures of two thirds of the States [which at present amount to nine], to call a convention for proposing amendments which shall be valid, to all intents and purposes, as part of the Constitution, when ratified by the legislatures of three fourths of the States, or by conventions in three fourths thereof.”The words of this article are peremptory. The Congress“shall call a convention.”Nothing in this particular is left to the discretion of that body. And of consequence all the declamation about the disinclination to a change vanishes in air. Nor however difficult it may be supposed to unite two thirds or three fourths of the State legislatures in amendments which may affect local interests can there be any room to apprehend any such difficulty in a union on points which are merely relative to the general liberty or security of the people. We may safely rely on the disposition of the State legislatures to erect barriers against the encroachments of the national authority.

If the foregoing argument is a fallacy, certain it is that I am myself deceived by it for it is, in my conception, one of those rare instances in which a political truth can be brought to the test of mathematical demonstration. Those who see the matter in the same light with me, however zealous they may be for amendments, must agree in the propriety of a previous adoption as the most direct road to their own object.

The zeal for attempts to amend, prior to the establishment of the

Constitution, must abate in every man who is ready to accede to the truth of the following observations of a writer equally solid and ingenious:“To balance a large state or society [says he], whether monarchical or republican, on general laws, is a work of so great difficulty that no human genius, however comprehensive, is able, by the mere dint of reason and reflection, to effect it. The judgments of many must unite in the work; EXPERIENCE must guide their labor; TIME must bring it to perfection, and the FEELING of inconveniences must correct the mistakes which they inevitably fall into in their first trials and experiments.”^[3] These judicious reflections contain a lesson of moderation to all the sincere lovers of the Union, and ought to put them upon their guard against hazarding anarchy, civil war, a perpetual alienation of the States from each other, and perhaps the military despotism of a victorious demagogue, in the pursuit of what they are not likely to obtain, but from TIME and EXPERIENCE. It may be in me a defect of political fortitude but I acknowledge that I cannot entertain an equal tranquillity with those who affect to treat the dangers of a longer continuance in our present situation as imaginary. A NATION, without a NATIONAL GOVERNMENT, is, in my view, an awful spectacle. The establishment of a Constitution, in time of profound peace, by the voluntary consent of a whole people, is a PRODIGY, to the completion of which I look forward with trembling anxiety. I can reconcile it to no rules of prudence to let go the hold we now have, in so arduous an enterprise, upon seven out of the thirteen States, and after having passed over so considerable a part of the ground, to recommence the course. I dread the more the consequences of new attempts because I know that POWERFUL INDIVIDUALS, in this and in other States, are enemies to a general national government in every possible shape.

The Declaration of Independence

In Congress, July 4, 1776 The unanimous Declaration of the thirteen united States of America

When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness. —That to secure these rights, Governments are instituted among Men, deriving their just Powers from the consent of the governed. —That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it; and to institute new Government, laying its foundation on

such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security. —Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid world.

He has refused his Assent to Laws, the most wholesome and necessary for the public good.

He has forbidden his Governors to pass Laws of immediate and pressing importance, unless suspended in their operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other Laws for the accommodation of large districts of people, unless those people would relinquish the right of Representation in the Legislature, a right inestimable to them and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their Public Records, for the sole purpose of fatiguing them into compliance with his measures.

He has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers.

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of New Offices, and sent hither swarms of Officers to harass our People, and eat out their substance.

He has kept among us, in times of peace, Standing Armies without the Consent of our legislatures.

He has affected to render the Military independent of and superior to the Civil Power.

He has combined with others to subject us to a jurisdiction foreign to our constitution, and unacknowledged by our laws; giving his Assent to their Acts of pretended Legislation:

For Quartering large bodies of armed troops among us:

For protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States:

For cutting off our Trade with all parts of the world:

For imposing Taxes on us without our Consent:

For depriving us in many cases, of the benefits of Trial by Jury:

For transporting us beyond seas to be tried for pretended offences:

For abolishing the free system of English Laws in a neighbouring Province, establishing therein an Arbitrary government, and enlarging its Boundaries so as to render it at once an example and fit instrument for introducing the same absolute rule into these Colonies:

For taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

For suspending our own Legislature, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated Government here, by declaring us out of his Protection and waging War against us.

He has plundered our seas, ravaged our Coasts, burnt our towns, and destroyed the Lives of our people.

He is at this time transporting large Armies of foreign Mercenaries to complete the works of death, desolation and tyranny, already begun with circumstances of Cruelty & perfidy scarcely paralleled in the most barbarous ages, and totally unworthy the Head of a civilized nation.

He has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the executioners of their friends and Brethren, or to fall themselves by their Hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian Savages, whose known rule of warfare, is an undistinguished destruction of all ages, sexes and conditions.

In every stage of these Oppressions we have Petitioned for Redress in the most humble terms: Our repeated Petitions have been answered only by repeated injury. A Prince, whose character is thus marked by every act which may define a Tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attention to our British brethren. We have warned them from time to time of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have

reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which, would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity, which denounces our Separation, and hold them, as we hold the rest of mankind, Enemies in War, in Peace Friends. —

WE, THEREFORE, the REPRESENTATIVES of the UNITED STATES OF AMERICA, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved; and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the protection of divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor.

The Articles of Confederation

The Articles of Confederation

Articles of Confederation and perpetual Union between the States of New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina and Georgia.

Article I. The Style of this confederacy shall be “The United States of America.”

Article II. Each state retains its sovereignty, freedom and independence, and every Power, Jurisdiction and right, which is not by this confederation expressly delegated to the United States, in Congress assembled.

Article III. The said states hereby severally enter into a firm league of friendship with each other, for their common defence, the security of their Liberties, and their mutual and general welfare, binding themselves to assist each other, against all force offered to, or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretence whatever.

Article IV. The better to secure and perpetuate mutual friendship and intercourse among the people of the different states in this union, the free inhabitants of each of these states, paupers, vagabonds and fugitives from justice excepted, shall be entitled to all the privileges and immunities of free citizens in the several states; and the people of each state shall have free ingress and regress to and from any other state, and shall enjoy therein all the privileges of trade and commerce, subject to the same duties impositions and restrictions as the

inhabitants thereof respectively, provided that such restrictions shall not extend so far as to prevent the removal of property imported into any state, to any other state of which the Owner is an inhabitant; provided also that no imposition, duties or restriction shall be laid by any state, on the property of the united states, or either of them.

《邦联条例》，全称为《邦联和永久联合条例》，北美殖民地13个创始州共同承认并遵守的美利坚合众国第一部宪法。

If any Person guilty of, or charged with treason, felony, or other high misdemeanor in any state, shall flee from Justice, and be found in any of the united states, he shall upon demand of the Governor or executive power, of the state from which he fled, be delivered up and removed to the state having jurisdiction of his offence.

Full faith and credit shall be given in each of these states to the records, acts and judicial proceedings of the courts and magistrates of every other state.

Article V. For the more convenient management of the general interests of the united states, delegates shall be annually appointed in such manner as the legislature of each state shall direct, to meet in Congress on the first Monday in November, in every year, with a power reserved to each state, to recall its delegates, or any of them, at any time within the year, and to send others in their stead, for the remainder of the Year.

No state shall be represented in Congress by less than two, nor by more than seven Members; and no person shall be capable of being a delegate for more than three years in any term of six years; nor shall any person, being a delegate, be capable of holding any office under the united states, for which he, or another for his benefit receives any salary, fees or emolument of any kind.

Each state shall maintain its own delegates in a meeting of the states, and while they act as members of the committee of the states.

In determining questions in the united states, in Congress assembled, each state shall have one vote.

Freedom of speech and debate in Congress shall not be impeached or questioned in any Court, or place out of Congress, and the members of congress shall be protected in their persons from arrests and imprisonments, during the time of their going to and from, and

attendance on congress, except for treason, felony, or breach of the peace.

Article VI. No state without the Consent of the united states in congress assembled, shall send any embassy to, or receive any embassy from, or enter into any conference agreement, alliance or treaty with any King prince or state; nor shall any person holding any office of profit or trust under the united states, or any of them, accept of any present, emolument, office or title of any kind whatever from any king, prince or foreign state; nor shall the united states in congress assembled, or any of them, grant any title of nobility.

No two or more states shall enter into any treaty, confederation or alliance whatever between them, without the consent of the united states in congress assembled, specifying accurately the purposes for which the same is to be entered into, and how long it shall continue.

No state shall lay any imposts or duties, which may interfere with any stipulations in treaties, entered into by the united states in congress assembled, with any king, prince or state, in pursuance of any treaties already proposed by congress, to the courts of France and Spain.

No vessels of war shall be kept up in time of peace by any state, except such number only, as shall be deemed necessary by the united states in congress assembled, for the defence of such state, or its trade; nor shall any body of forces be kept up by any state, in time of peace, except such number only as in the judgment of the united states, in congress assembled, shall be deemed requisite to garrison the forts necessary for the defence of such state; but every state shall always keep up a well regulated and disciplined militia, sufficiently armed and accoutred, and shall provide and constantly have ready for use, in public stores, a due number of field-pieces and tents, and a proper quantity of arms, ammunition and camp equipage.

No state shall engage in any war without the consent of the united states in congress assembled, unless such state be actually invaded by enemies, or shall have received certain advice of a resolution being formed by some nation of Indians to invade such state, and the danger is so imminent as not to admit of a delay till the united states in congress assembled can be consulted: nor shall any state grant commissions to any ships or vessels of war, nor letters of marque or reprisal, except it be after a declaration of war by the united states in congress assembled, and then only against the kingdom or state and the subjects thereof, against which war has been so declared, and under such regulations as shall be established by the united states in congress assembled, unless such state be infested by pirates, in which case vessels of war may be fitted out for that occasion, and kept so long as the danger shall continue, or until the united states in congress assembled shall determine otherwise.

Article VII. When landforces are raised by any state for the common defence, all officers of or under the rank of colonel, shall be appointed by the legislature of each state respectively by whom such forces shall be raised, or in such manner as such state shall direct, and all vacancies shall be filled up by the State which first made the appointment.

Article VIII. All charges of war and all other expences that shall be incurred for the common defence or general welfare, and allowed by the united states in congress assembled, shall be defrayed out of a common treasury, which shall be supplied by the several states, in proportion to the value of all land within each state, granted to or surveyed for any Person, as such land and the buildings and improvements thereon shall be estimated according to such mode as the united states in congress assembled shall from time to time direct and appoint. The taxes for paying that proportion shall be laid and levied by the authority and direction of the legislatures of the several

states within the time agreed upon by the united states in congress assembled.

Article IX. The united states in congress assembled, shall have the sole and exclusive right and power of determining on peace and war, except in the cases mentioned in the sixth article—of sending and receiving ambassadors—entering into treaties and alliances, provided that no treaty of commerce shall be made whereby the legislative power of the respective states shall be restrained from imposing such imposts and duties on foreigners as their own people are subjected to, or from prohibiting the exportation or importation of any species of goods or commodities whatsoever—of establishing rules for deciding in all cases, which captures on land or water shall be legal, and in what manner prizes taken by land or naval forces in the service of the united states shall be divided or appropriated—of granting letters of marque and reprisal in times of peace—appointing courts for the trial of piracies and felonies committed on the high seas and establishing courts for receiving and determining finally appeals in all cases of captures, provided that no member of congress shall be appointed a judge of any of the said courts.

The united states in congress assembled shall also be the last resort on appeal in all disputes and differences now subsisting or that hereafter may arise between two or more states concerning boundary, jurisdiction or any other cause whatever; which authority shall always be exercised in the manner following. Whenever the legislative or executive authority or lawful agent of any state in controversy with another shall present a petition to congress stating the matter in question and praying for a hearing, notice thereof shall be given by order of congress to the legislative or executive authority of the other state in controversy, and a day assigned for the appearance of the parties by their lawful agents, who shall then be directed to appoint by joint consent, commissioners or judges to constitute a court for

hearing and determining the matter in question: but if they cannot agree, congress shall name three persons out of each of the united states, and from the list of such persons each party shall alternately strike out one, the petitioners beginning, until the number shall be reduced to thirteen; and from that number not less than seven, nor more than nine names as congress shall direct, shall in the presence of congress be drawn out by lot, and the persons whose names shall be so drawn or any five of them, shall be commissioners or judges, to hear and finally determine the controversy, so always as a major part of the judges who shall hear the cause shall agree in the determination: and if either party shall neglect to attend at the day appointed, without showing reasons, which congress shall judge sufficient, or being present shall refuse to strike, the congress shall proceed to nominate three persons out of each state, and the secretary of congress shall strike in behalf of such party absent or refusing; and the judgment and sentence of the court to be appointed, in the manner before prescribed, shall be final and conclusive; and if any of the parties shall refuse to submit to the authority of such court, or to appear or defend their claim or cause, the court shall nevertheless proceed to pronounce sentence, or judgment, which shall in like manner be final and decisive, the judgment or sentence and other proceedings being in either case transmitted to congress, and lodged among the acts of congress for the security of the parties concerned: provided that every commissioner, before he sits in judgment, shall take an oath to be administered by one of the judges of the supreme or superior court of the state, where the cause shall be tried, “well and truly to hear and determine the matter in question according to the best of his judgment, without favor, affection or hope of reward:” provided also that no state shall be deprived of territory for the benefit of the united states.

All controversies concerning the private right of soil claimed under different grants of two or more states, whose jurisdictions as

they may respect such lands, and the states which passed such grants are adjusted, the said grants or either of them being at the same time claimed to have originated antecedent to such settlement of jurisdiction, shall on the petition of either party to the congress of the united states, be finally determined as near as may be in the same manner as is before prescribed for deciding disputes respecting territorial jurisdiction between different states.

The united states in congress assembled shall also have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective states—fixing the standards of weights and measures throughout the united states—regulating the trade and managing all affairs with the Indians, not members of any of the states, provided that the legislative right of any state within its own limits be not infringed or violated—establishing and regulating post-offices from one state to another, throughout all the united states, and exacting such postage on the papers passing through the same as may be requisite to defray the expences of the said office—appointing all officers of the land forces, in the service of the united states, excepting regimental officers—appointing all the officers of the naval forces, and commissioning all officers whatever in the service of the united states—making rules for the government and regulation of the said land and naval forces, and directing their operations.

The united states in congress assembled shall have authority to appoint a committee, to sit in the recess of congress, to be denominated “A Committee of the States,” and to consist of one delegate from each state; and to appoint such other committees and civil officers as may be necessary for managing the general affairs of the united states under their direction—to appoint one of their number to preside, provided that no person be allowed to serve in the office of president more than one year in any term of three years; to

ascertain the necessary sums of money to be raised for the service of the united states, and to appropriate and apply the same for defraying the public expenses—to borrow money, or emit bills on the credit of the united states, transmitting every half year to the respective states an account of the sums of money so borrowed or emitted—to build and equip a navy—to agree upon the number of land forces, and to make requisitions from each state for its quota, in proportion to the number of white inhabitants in such state; which requisition shall be binding, and thereupon the legislature of each state shall appoint the regimental officers, raise the men and cloth, arm and equip them in a soldier-like manner, at the expence of the united states; and the officers and men so clothed, armed and quipped shall march to the place appointed, and within the time agreed on by the united states in congress assembled: But if the united states in congress assembled shall, on consideration of circumstances judge proper that any state should not raise men, or should raise a smaller number than its quota, and that any other state should raise a greater number of men than the quota thereof, such extra number shall be raised, officered, clothed, armed and equipped in the same manner as the quota of such state, unless the legislature of such state shall judge that such extra number cannot be safely spared out of the same, in which case they shall raise officer, clothe, arm and equip as many of such extra number as they judge can be safely spared. And the officers and men so clothed, armed, and equipped, shall march to the place appointed, and within the time agreed on by the united states in congress assembled.

The united states in congress assembled shall never engage in a war, nor grant letters of marque and reprisal in time of peace, nor enter into any treaties or alliances, nor coin money, nor regulate the value thereof, nor ascertain the sums and expences necessary for the defence and welfare of the united states, or any of them, nor emit bills, nor borrow money on the credit of the united states, nor

appropriate money, nor agree upon the number of vessels of war, to be built or purchased, or the number of land or sea forces to be raised, nor appoint a commander in chief of the army or navy, unless nine states assent to the same: nor shall a question on any other point, except for adjourning from day to day be determined, unless by the votes of the majority of the united states in congress assembled.

The congress of the united states shall have power to adjourn to any time within the year, and to any place within the united states, so that no period of adjournment be for a longer duration than the space of six Months, and shall publish the Journal of their proceedings monthly, except such parts thereof relating to treaties, alliances or military operations, as in their judgment require secrecy; and the yeas and nays of the delegates of each state on any question shall be entered on the Journal, when it is desired by any delegate; and the delegates of a state, or any of them, at his or their request shall be furnished with a transcript of the said Journal, except such parts as are above excepted, to lay before the legislatures of the several states.

Article X. The committee of the states, or any nine of them, shall be authorized to execute, in the recess of congress, such of the powers of congress as the united states in congress assembled, by the consent of nine states, shall from time to time think expedient to vest them with; provided that no power be delegated to the said committee, for the exercise of which, by the articles of confederation, the voice of nine states in the congress of the united states assembled is requisite.

Article XI. Canada acceding to this confederation, and joining in the measures of the united states, shall be admitted into, and entitled to all the advantages of this union: but no other colony shall be admitted into the same, unless such admission be agreed to by nine states.

Article XII. All bills of credit emitted, monies borrowed and debts

contracted by, or under the authority of congress, before the assembling of the united states, in pursuance of the present confederation, shall be deemed and considered as a charge against the united states, for payment and satisfaction whereof the said united states, and the public faith are hereby solemnly pledged.

《美国宪法》

Article XIII. Every state shall abide by the determinations of the united states in congress assembled, on all questions which by this confederation are submitted to them. And the Articles of this confederation shall be inviolably observed by every state, and the union shall be perpetual; nor shall any alteration at any time hereafter be made in any of them, unless such alteration be agreed to in a congress of the united states, and be afterwards confirmed by the legislatures of every state.

AND WHEREAS it hath pleased the Great Governor of the World to incline the hearts of the legislatures we respectively represent in congress, to approve of, and to authorize us to ratify the said articles of confederation and perpetual union. KNOW YE that we the undersigned delegates, by virtue of the power and authority to us given for that purpose, do by these presents, in the name and in behalf of our respective constituents, fully and entirely ratify and confirm each and every of the said articles of confederation and perpetual union, and all and singular the matters and things therein contained:

And we do further solemnly plight and engage the faith of our respective constituents, that they shall abide by the determinations of the united states in congress assembled, on all questions, which by the said confederation are submitted to them. And that the articles thereof shall be inviolably observed by the states we respectively represent, and that the union shall be perpetual. In Witness whereof we have hereunto set our hands in Congress. Done at Philadelphia in the state of Pennsylvania the ninth day of July in the Year of our Lord one Thousand seven Hundred and Seventy-eight, and in the third year of the independence of America.

The Constitution of The United States of America

As agreed Upon by the Convention September 17, 1787 (Collated with The Federalist Papers)

WE THE PEOPLE of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this CONSTITUTION for the United States of America.

Article. I.

Section. 1.

All legislative Powers herein granted shall be vested in a Congress of the United States which shall consist of a Senate and House of Representatives.

Section. 2.

The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

No Person shall be a Representative who shall not have attained to the Age of twenty five Years, and been seven Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

[Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons.] The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to chuse three, Massachusetts eight, Rhode Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

When vacancies happen in the Representation from any State, the Executive Authority thereof shall issue Writs of Election to fill such Vacancies.

The House of Representatives shall choose their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section. 3.

The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.

Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the Expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments until the next Meeting of the Legislature, which shall then fill such Vacancies.

No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

The Senate shall chuse their other Officers, and also a President pro tempore, in the absence of the Vice President, or when he shall exercise the Office of President of the United States.

The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Section. 4.

The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

Section. 5.

Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behaviour, and, with the Concurrence of two thirds, expel a Member.

Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Neither House, during the Session of Congress, shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Section. 6.

The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been encreased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section. 7.

All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Every Bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States: If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President

within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section. 8.

The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States;

To borrow Money on the credit of the United States;

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes;

To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States;

To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures;

To provide for the Punishment of counterfeiting the Securities and current Coin of the United States;

To establish Post Offices and post Roads;

To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries;

To constitute Tribunals inferior to the supreme Court;

To define and punish Piracies and Felonies committed on the high Seas, and Offences against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water;

To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years;

To provide and maintain a Navy;

To make Rules for the Government and Regulation of the land and naval Forces;

To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions;

To provide for organizing, arming, and disciplining, the Militia, and for governing such Part of them as may be employed in the Service of the United States, reserving to the States respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress;

To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the Acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—And

To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section. 9.

The Migration or Importation of such Persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a Tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

No Bill of Attainder or ex post facto Law shall be passed.

No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.

No Tax or Duty shall be laid on Articles exported from any State.

No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another; nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

No Title of Nobility shall be granted by the United States: And no

Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section. 10.

No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts, or grant any Title of Nobility.

No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Controul of the Congress.

No State shall, without the Consent of Congress, lay any Duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

Article. II.

Section. 1.

The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice-President, chosen for the same Term, be elected, as follows:

Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

[The Electors shall meet in their respective States, and vote by Ballot for two Persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the List the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this purpose shall consist of a Member or Members from two-thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice-President. But if there should remain two or more who have equal Votes, the Senate shall chuse from them by Ballot the Vice-President.]

The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be

the same throughout the United States.

No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty-five Years, and been fourteen Years a Resident within the United States.

In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Section. 2.

The President shall be Commander in Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion in writing, of the principal Officer in each of the executive

Departments, upon any Subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offences against the United States, except in Cases of Impeachment.

He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section. 3.

He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section. 4.

The President, Vice-President and all civil Officers of the United

States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

Article. III.

Section. 1.

The judicial Power of the United States shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behaviour, and shall, at stated Times, receive for their Services a Compensation, which shall not be diminished during their Continuance in Office.

Section. 2.

The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of admiralty and maritime Jurisdiction;—to Controversies to which the United States shall be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

The Trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the Trial shall be at such Place or Places as the Congress may by Law have directed.

Section. 3.

Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

The Congress shall have Power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

Article. IV.

Section. 1.

Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section. 2.

The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

A Person charged in any State with Treason, Felony, or other Crime, who shall flee from Justice, and be found in another State, shall on Demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of

the Crime.

No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.

Section. 3.

New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or Parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section. 4.

The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic Violence.

Article. V.

The Congress, whenever two thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two-thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case,

shall be valid to all Intents and Purposes, as Part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by Conventions in three-fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

Article. VI.

All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States, shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

Article. VII.

The Ratification of the Conventions of nine States, shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

DONE in Convention by the Unanimous Consent of the States
present the Seventeenth Day of September in the Year of our Lord one
thousand seven hundred and Eighty seven and of the Independance of
the United States of America the Twelfth In witness whereof We have
hereunto subscribed our Names,

ARTICLES IN ADDITION TO,AND AMENDMENT OF,THE
CONSTITUTION OF THE UNITED STATES OF AMERICA,PROPOSED
BY CONGRESS,AND RATIFIED BY THE LEGISLATURES OF THE
SEVERAL STATES.PURSUANT TO THE FIFTH ARTICLE OF THE
ORIGINAL CONSTITUTION.

AMENDMENT I

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

AMENDMENT II

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

AMENDMENT III

No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

AMENDMENT IV

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

AMENDMENT V

No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be

taken for public use, without just compensation.

AMENDMENT VI

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

AMENDMENT VII

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

AMENDMENT VIII

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

AMENDMENT IX

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

AMENDMENT X

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

AMENDMENT XI

The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.

AMENDMENT XII

The Electors shall meet in their respective states and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of Electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in case of the death or other constitutional disability of the President. —The person having the greatest number

of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of Electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

AMENDMENT XIII

Section 1.

Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2.

Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XIV

Section 1.

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2.

Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3.

No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4.

The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or

emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5.

The Congress shall have the power to enforce, by appropriate legislation, the provisions of this article.

AMENDMENT XV

Section 1.

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude—

Section 2.

The Congress shall have the power to enforce this article by appropriate legislation.

AMENDMENT XVI

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

AMENDMENT XVII

The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

When vacancies happen in the representation of any State in the

Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, That the legislature of any State may empower the executive thereof to make temporary appointments until the people fill the vacancies by election as the legislature may direct.

This Amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

AMENDMENT XVIII

Section 1.

After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Section 2.

The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

Section 3.

This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

AMENDMENT XIX

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of

sex.

Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XX

Section 1.

The terms of the President and the Vice President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3rd day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2.

The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3rd day of January, unless they shall by law appoint a different day.

Section 3.

If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

Section 4.

The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice shall have devolved upon them.

Section 5.

Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6.

This article shall be inoperative unless it shall have been ratified as an Amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.

AMENDMENT XXI

Section 1.

The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2.

The transportation or importation into any State, Territory, or Possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3.

This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several

States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

AMENDMENT XXII

Section 1.

No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President, for more than two years of a term to which some other person was elected President shall be elected to the office of President more than once. But this Article shall not apply to any person holding the office of President when this Article was proposed by the Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this Article becomes operative from holding the office of President or acting as President during the remainder of such term.

Section 2.

This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress.

AMENDMENT XXIII

Section 1.

The District constituting the seat of Government of the United States shall appoint in such manner as the Congress may direct:

A number of electors of President and Vice President equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State; they shall be in addition to those

appointed by the States, but they shall be considered, for the purposes of the election of President and Vice President, to be electors appointed by a State; and they shall meet in the District and perform such duties as provided by the twelfth article of Amendment.

Section 2.

The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XXIV

Section 1.

The right of citizens of the United States to vote in any primary or other election for President or Vice President, for electors for President or Vice President, or for Senator or Representative in Congress, shall not be denied or abridged by the United States or any State by reason of failure to pay any poll tax or other tax.

Section 2.

The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XXV

Section 1.

In case of the removal of the President from office or of his death or resignation, the Vice President shall become President.

Section 2.

Whenever there is a vacancy in the office of the Vice President, the President shall nominate a Vice President who shall take office upon confirmation by a majority vote of both Houses of Congress.

Section 3.

Whenever the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that he is unable to discharge the powers and duties of his office, and until he transmits to them a written declaration to the contrary, such powers and duties shall be discharged by the Vice President as Acting President.

Section 4.

Whenever the Vice President and a majority of either the principal officers of the executive departments or of such other body as Congress may by law provide, transmit to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office, the Vice President shall immediately assume the powers and duties of the office as Acting President.

Thereafter, when the President transmits to the President pro tempore of the Senate and the Speaker of the House of Representatives his written declaration that no inability exists, he shall resume the powers and duties of his office unless the Vice President and a majority of either the principal officers of the executive department or of such other body as Congress may by law provide, transmit within four days to the President pro tempore of the Senate and the Speaker of the House of Representatives their written declaration that the President is unable to discharge the powers and duties of his office. Thereupon Congress shall decide the issue, assembling within forty-eight hours for that purpose if not in session. If the Congress, within twenty-one days after receipt of the latter written declaration, or, if Congress is not in session, within twenty-one days after Congress is required to assemble, determines by two-thirds vote of both Houses that the President is unable to discharge the powers and duties of his

office, the Vice President shall continue to discharge the same as Acting President; otherwise, the President shall resume the powers and duties of his office.

AMENDMENT XXVI

Section 1.

The right of citizens of the United States, who are eighteen years of age or older, to vote shall not be denied or abridged by the United States or by any State on account of age.

Section 2.

The Congress shall have power to enforce this article by appropriate legislation.

AMENDMENT XXVII

No law, varying the compensation for the services of the Senators and Representatives, shall take effect, until an election of Representatives shall have intervened.

文化的定义十分宽泛，内涵和外延非常丰富，几乎包罗万象，因而没有一个定性的定义。其在中国最早的出处，可以追溯到《易经》中“观乎天文，以察时变；观乎人文，以化成天下。”可见文化最早的含义，与人情世态、国家治理和社会状况密切相关。

在当今，文化是一个十分泛化甚至被滥化的概念。当我们无法描述、无法形容某事某物时，文化可以来概括；而当某事某物被冠以文化的头衔，与文化搭界时，似乎就具有了某种合理性甚至神圣性——这就是文化。

我们认为，文化是特定地域和特定人群社会关系和生产关系归纳概括的总和（culture: the way of life of a particular people, esp. as shown in their ordinary behavior and habits, their attitudes toward each other, and their moral and religious beliefs），其核心内容是思想、信仰和行为习惯。在此原则下，一切社会存在和形态都可以具体地细分为各种文化（或者说亚文化），如雅文化、俗文化、大众文化、精英文化、儒家文化、基督教文化、西方文化、东方文化、原始文化、封建文化、资本主义文化等。

中国社会目前处在重大转型期，正处在由类似西方工业化阶段向更高阶段（现代化阶段）转化的时期。文化状况如何，应当建构何种文化，是十分急迫也是一个长期的问题；解决社会转型期一定程度的文化失序、文化无意识、文化焦虑、主流文化意识模糊，是许多人关注的问题。在此意义上，近两百年前西方的马修·阿诺德对于文化的功能和界定有一套独到的见解，体现在他的《文化与无政府状态》一书，值得我们研读、思考和借鉴。

马修·阿诺德（Mathew Arnold，1822—1888）是英国维多利亚时

期著名的评论家兼诗人。他所倡导的“文化批评”理论在西方文学史及思想史上占有重要地位。阿诺德自称为“英国文化的倡导者”，后人尊他为“文化使徒”。作为英国19世纪思想领域的代表人物，阿诺德将社会道德批评与文化理想结合起来，对工业资本主义时代的英国社会进行了深刻批判。作为19世纪人文知识分子，阿诺德把文化作为直接进行社会批判的武器，认为文化是恢复社会、实现个体完美的主导力量。

阿诺德对文化的定义和表述很简洁，他认为文化的终极使命是追求完美（perfection），其核心内容是人类普遍和谐的美好与光明（sweetness and light）。

阿诺德的文化观全面、系统地反映在1867年—1868年连续发表的6篇批评文章中。后来，这6篇文章于1869年结集出版，被冠名为《文化与无政府状态》。在该书前言中，他宣称：“全书的目的是大力推荐文化，以帮助我们走出目前的困境。文化作为我们追求全面完美的手段，要了解与我们密切相关的所有问题，以及世界以往所有的最优秀的思想和言论，通过这些最优秀的知识，调动起鲜活自由的思想之流，来冲击我们刻板地尊奉的固有观念和习惯。我们现在不屈不挠地却也是机械教条地遵循着陈旧的固有观念和习惯；我们徒然地认为，不屈不挠地走下去就是德行，可以成为机械刻板地固守旧有观念和习惯而造成的后果的借口。”（*Preface: The whole scope of the essay is to recommend culture as the great help out of our present difficulties; culture being a pursuit of our total perfection by means of getting to know, on all the matters which most concern us, the best which has been thought and said in the world, and, through this knowledge, turning a stream of fresh and free thought upon our stock notions and habits, which we now follow staunchly but mechanically, vainly imagining that there is a virtue in following them staunchly which makes up for the mischief of following them mechanically. This, and this alone, is the scope of the following essay.*）

“目前的困境”是指当时英国维多利亚时代的大工业空前扩张却缺乏文化理想，社会一派稳定、科技进步的繁荣景象下掩盖的自满、庸俗、狭隘和物质崇拜。通过对各阶层的分析，阿诺德把英国社会各色人等分

为三类：野蛮人（Barbarians）、非利士人（Philistines）和群氓（Populace）。这里的“野蛮人”指的是英国的贵族阶级（由此可见阿诺德对英国贵族阶级的一般态度），“非利士人”指的是英国的中产阶级，“群氓”指的是英国的劳工阶级。通过对英国社会的分析，阿诺德认为19世纪的英国盛行着地方主义（provinciality）、个人主义、功利主义和庸俗风气，表现出狭隘的小家子气。阿诺德认真检讨英国的国民性、习惯、心理定式，提出人类全面、和谐、整体地走向完美（perfection）的目标和标准，提倡以文化（即广义的教育）作为走向完美的途径和手段，学习、研究自古以来人类最优秀的思想、文化价值资源，从中汲取养分。阿诺德提出了人类全面、和谐、普遍地走向“完美”的目标，并倡导以至臻至美的文化作为追求人类完美的途径和手段，以抵制个人主义和工业化所导致的混乱与迷惘的无政府状态。

在阿诺德看来，文化的最高理想是追求完美，这种完美是建立在和谐基础上的完美。它最终要实现的目标，是使人性的各个方面和社会的各个组成部分都能得到全面协调的发展（*Preface: Culture, which is the study of perfection, leads us, as we in the following pages have shown, to conceive of true human perfection as a harmonious perfection, developing all sides of our humanity; and as a general perfection, develop all parts of our society.*）。阿诺德认为文化是对个体和社会完美的追求和研究，是个体和社会追求完美的过程。文化有助于人们摒弃诸如财富、进步、阶级、工业和生产这类“固有观念”。通过暴露受这类固有观念蛊惑的人们的庸俗性，文化将引导人们“认识到人性的完美是和谐完美，开发我们人性的所有方面；作为一种普遍的完美，发展我们社会的所有部分”。和谐完美的目标是个体和全社会的光明前景。

这种寻求完美的文化精神来源于阿诺德对左右文化的两种力量——希腊精神（Hellenism）和希伯来精神（Hebraism）——的批判。“希腊精神最为重视的理念是如实看清事物之本相，希伯来精神中最重要的则是行为和服从。”“希伯来精神一旦抓住了某些有关普遍秩序的朴素的、基本的默示，便以无比的认真和十足的干劲去领悟并遵循其中的道理，而希腊精神的特点则是以灵活的方式密切关注普遍秩序的整体运行，生怕疏漏了任何局部，生怕为了某一局部而不顾另一局部，它不会在有关

普遍秩序的某种默示上驻足不前，哪怕是根本性的默示。”因此，希腊精神反对机械、孤立地看待事物和问题，要求了解事物的方方面面及其潜在的联系。希腊精神的主导思想是“意识的自发性”，希伯来精神的主导思想则是“严正的良知”。对文化而言，希腊精神和希伯来精神同等重要，因为两者都“有着同样的终极目标，那就是人类的完美式救赎”。文化不仅致力于看清事物的本相，获得关于普遍秩序的知识，而且还要付诸实践，使文化所构建的完美理念通行于天下，从而显示出文化的道德品格和社会品格。所以，希腊精神和希伯来精神不应是分离的，而是融合为一体——科学的观念和坚定的行动，共同促进人性的完善和社会的和谐发展。在人类文明的发展过程中，希腊精神和希伯来精神互相更迭，要么希腊精神占据主导地位，要么希伯来精神引导着人类在黑暗中前行，智性冲动和道德冲动交替出现。

概言之，我们认为文化发展与物质建设在人类社会的发展进程中应当是彼此促进、互为表里不可偏废的关系。“仓廩实而知礼节，衣食足而知荣辱。”文化源于物质，但又应当高于物质。文化必须具有概括功能、前瞻功能和引领功能，但文化又不可能脱离和超越具体的社会历史发展阶段。缺乏文化支撑的发展是原始的发展和盲目的发展；只谈文化而不顾社会历史发展状况，则无异于空中楼阁。

我们从《文化与无政府状态》中摘录部分精彩的原文和中文译文，作为此导读的补充：

Culture is then properly described not as having its origin in curiosity, but as having its origin in the love of perfection; it is *a study of perfection*. (Chapter 1)

——文化便可恰当地表述为源于对完美的热爱，而非源于好奇；文化即对完美的追寻。（第一章）

Culture, in like manner, places human perfection in an *internal* condition, in the growth and predominance of our humanity proper, as distinguished from our animality, in the ever-increasing efficaciousness and in the general harmonious expansion of those gifts of thought and feeling which make the peculiar dignity, wealth, and

happiness of human nature. (Chapter 1)

——文化认为人的完美是一种内在的状态，是指区别于我们的动物性的、严格意义上的人性得到了发扬光大。人具有思索和感情的天赋，文化认为人的完美就是这些天赋秉性得以更加有效，更加和谐地发展，如此人性才获得特有的尊严、丰富和愉悦。（第一章）

And because men are all members of one great whole, and the sympathy which is in human nature will not allow one member to be indifferent to the rest, or to have a perfect welfare independent of the rest, the expansion of our humanity, to suit the idea of perfection which culture forms, must be a *general* expansion. Perfection, as culture conceives it, is not possible while the individual remains isolated: the individual is obliged, under pain of being stunted and enfeebled in his own development if he disobeys, to carry others along with him in his march towards perfection, to be continually doing all he can to enlarge and increase the volume of the human stream sweeping thitherward. (Chapter 1)

——因为人类是一整体，人性中的同情不允许一位成员对其他成员无动于衷，或者脱离他人，独享完美之乐；正因为如此，必须普泛地发扬光大人性，才合乎文化所构想的完美理念。文化心目中的完美，不可能是独善其身。个人必须携带他人共同走向完美，必须坚持不懈、竭其所能，使奔向完美的队伍不断壮大；如若不是这样做，他自身必将发育不良，疲软无力。（第一章）

Perfection,—as culture, from a thorough disinterested study of human nature and human experience, learns to conceive it, —is an harmonious expansion of *all* the powers which make the beauty and worth of human nature, and is not consistent with the over-development of any one power at the expense of the rest. (Chapter 1)

——完美最终应是构成人性之美和价值的所有能力的和谐发展，这是文化以完全不带偏见的态度研究人性和人类经验后所构想的完美；某

一种能力过度发展，而其他能力则停滞不前的状况，不符合文化所构想的完美。（第一章）

It is clear that culture has a very important function to fulfil for mankind. And this function is particularly important in our modern world, of which the whole civilisation is, to a much greater degree than the civilisation of Greece and Rome, mechanical and external, and tends constantly to become more so. (Chapter 1)

——文化为人类担负着重要的职责。在现代世界中，这种职责有其特殊的重要性。与希腊罗马文明相比，整个现代文明在很大程度上是机器文明，是外部文明，而且这种趋势还在愈演愈烈。（第一章）

Wealth, again, that end to which our prodigious works for material advantage are directed,—the commonest of commonplaces tells us how men are always apt to regard wealth as a precious end in itself; and certainly they have never been so apt thus to regard it as they are in England at the present time. Never did people believe anything more firmly, than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines. The people who believe most that our greatness and welfare are proved by our being very rich, and who most give their lives and thoughts to becoming rich, are just the very people whom we call the Philistines. (Chapter 1)

——再说财富。我们在物质进步方面做出骄人的业绩，为的就是积累财富。最滥的陈词滥调都会说，人性就是将财富本身当成宝贵的目的，但人们从来没有像现在的英国人那样，如此起劲地将财富视为追求

的目标。人们从来没有像我们现在那样具有坚定的信念——十个英国人里有九个都相信，我们如此富有便是伟大和幸福的明证了。然而文化的用途恰恰是通过树立完美之精神标准帮助我们认识到财富是手段，是工具；并不是只要我们嘴上这样说说而已，而是要真正看到，从心里感到财富只不过是手段。如果不是文化清扫了我们头脑中的污垢，净化了我们的心灵，那么不只是现在，就连将来的整个世界都不免成为非利士人的天下。我们叫做非利士人的，就是那些相信富得流油便是伟大幸福的明证的人，就是一门心思、一条道儿奔着致富的人。（第一章）

The pursuit of perfection, then, is the pursuit of sweetness and light. ...Culture looks beyond machinery, culture hates hatred; culture has but one great passion, the passion for sweetness and light. Yes, it has one yet greater!——the passion for making them *prevail*. It is not satisfied till we *all* come to a perfect man; it knows that the sweetness and light of the few must be imperfect until the raw and unkindled masses of humanity are touched with sweetness and light. If I have not shrunk from saying that we must work for sweetness and light, so neither have I shrunk from saying that we must have a broad basis, must have sweetness and light for as many as possible. Again and again I have insisted how those are the happy moments of humanity, how those are the marking epochs of a people's life, how those are the flowering times for literature and art and all the creative power of genius, when there is a *national* glow of life and thought, when the whole of society is in the fullest measure permeated by thought, sensible to beauty, intelligent and alive. Only it must be *real* thought and *real* beauty; *real* sweetness and *real* light. (Chapter 1)

——追求完美就是追求美好与光明……文化的视野超越机器工具手段，它憎恶怨恨。它自有强烈的爱好，那就是热切追求美好与光明。还有一件它愿意更热切追求之事，那就是让美好与光明蔚然成风。在我们全体都成为完美人之前，文化是不会满足的。文化懂得，在一般大众普遍得到美好与光明的点化之前，少数人的美好与光明必然是不完美的。既然我们毫不退缩地说出必须坚持美好与光明，那么同样，我们必须

有广阔的基础，一定要让尽可能多的人拥有美好与光明。我曾一次又一次坚持不懈地指出，当一个国家出现全民性的生命和思想闪光时，当整个社会充分浸润在思想之中，具有感受美的能力，聪明智慧，富有活力——这便是人类最幸运的时刻，是一个民族生命中的标志性时代，是文学艺术繁荣发达、天才的创造力流光溢彩的时代。只是必须有真正的思想，真正的美，真正的美好与光明。（第一章）

This is the *social idea*; and the men of culture are the true apostles of equality. The great men of culture are those who have had a passion for diffusing, for making prevail, for carrying from one end of society to the other, the best knowledge, the best ideas of their time; who have laboured to divest knowledge of all that was harsh, uncouth, difficult, abstract, professional, exclusive; to humanise it, to make it efficient outside the clique of the cultivated and learned, yet still remaining the best knowledge and thought of the time, and a true source, therefore, of sweetness and light. (Chapter 1)

——这是社会性的主张。文化人是平等的真正使徒。伟大的文化使者怀着极大的热情传播时代最优秀的知识和思想，使之蔚然成风，使之传到社会的上上下下，各个角落。伟大的文化使者努力将一切粗糙、难懂、抽象、专业和生僻的内容从知识中剥离出来，使知识变得富有人情，即使在受过良好文化教育、有学问的小团体之外也行之有效，却仍不失为时代最优秀的知识和思想，因此也成为美好与光明的真正源泉。（第一章）

And so we bring to an end what we had to say in praise of culture, and in evidence of its special utility for the circumstances in which we find ourselves, and the confusion which environs us. Through culture seems to lie our way, not only to perfection, but even to safety. (Conclusion)

——到此我们要说的话告一段落了。我们赞扬了文化，证明了文化在当下的情势下能够发挥何种独特的作用。我们的出路看来就在文化；文化不仅通向完美，而且能够通向太平。（结论）

以上导读主要由以下三位共同完成：

郭英剑，男，英语语言文学博士，美国宾夕法尼亚大学比较文学博士，现任中央民族大学外语学院院长、教授、博士生导师。郭英剑教授主要从事英美文学、文学翻译、英语教学、比较文学研究和高等教育研究。

高宏存，男，文学博士、文化产业管理博士后，现为国家行政学院社会文化部副教授，兼任中共北京市委干部理论教育讲师团特约报告人。主要从事中外文化比较研究、文化政策与管理研究等。

鞠方安，男，英语语言文学学士，历史学博士。中国人民大学出版社外语分社社长，中国翻译协会专家会员。主要兴趣领域为英语语言文学、中外文化比较、历史学和翻译学等。

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本书编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

杨慧林 教授（中国人民大学副校长、博士生导师）

金莉 教授（北京外国语大学副校长、博士生导师）

Preface

My foremost design in writing this Preface is to address a word of exhortation to the Society for Promoting Christian Knowledge. In the essay which follows, the reader will often find Bishop Wilson quoted. To me and to the members of the Society for Promoting Christian Knowledge his name and writings are still, no doubt, familiar; but the world is fast going away from old-fashioned people of his sort, and I learnt with consternation lately from a brilliant and distinguished votary of the natural sciences, that he had never so much as heard of Bishop Wilson, and that he imagined me to have invented him. At a moment when the Courts of Law have just taken off the embargo from the recreative religion furnished on Sundays by my gifted acquaintance and others, and when St. Martin's Hall and the Alhambra will soon be beginning again to resound with their pulpit-eloquence, it distresses one to think that the new lights should not only have, in general, a very low opinion of the preachers of the old religion, but that they should have it without knowing the best that these preachers can do. And that they are in this case is owing in part, certainly, to the negligence of the Christian Knowledge Society. In old times they used to print and spread abroad Bishop Wilson's *Maxims of Piety and Christianity*; the copy of this work which I use is one of their publications, bearing their imprint, and bound in the well-known brown calf which they made familiar to our childhood; but the date of my copy is 1812. I know of no copy besides, and I believe the work is no longer one of those printed and circulated by the Society. Hence the error, flattering, I own, to me personally, yet in itself to be regretted, of the distinguished physicist already mentioned.

But Bishop Wilson's *Maxims* deserve to be circulated as a religious

book, not only by comparison with the cartloads of rubbish circulated at present under this designation, but for their own sake, and even by comparison with the other works of the same author. Over the far better-known *Sacra Privata* they have this advantage, that they were prepared by him for his own private use, while the *Sacra Privata* were prepared by him for the use of the public. The *Maxims* were never meant to be printed, and have on that account, like a work of, doubtless, far deeper emotion and power, the *Meditations* of Marcus Aurelius, something peculiarly sincere and first-hand about them. Some of the best things from the *Maxims* have passed into the *Sacra Privata*; still, in the *Maxims*, we have them as they first arose; and whereas, too, in the *Sacra Privata* the writer speaks very often as one of the clergy, and as addressing the clergy, in the *Maxims* he almost always speaks solely as a man. I am not saying a word against the *Sacra Privata*, for which I have the highest respect; only the *Maxims* seem to me a better and a more edifying book still. They should be read, as Joubert says Nicole should be read, with a direct aim at practice. The reader will leave on one side things which, from the change of time and from the changed point of view which the change of time inevitably brings with it, no longer suit him; enough will remain to serve as a sample of the very best, perhaps, which our nation and race can do in the way of religious writing. Monsieur Michelet makes it a reproach to us that, in all the doubt as to the real author of the *Imitation*, no one has ever dreamed of ascribing that work to an Englishman. It is true, the *Imitation* could not well have been written by an Englishman; the religious delicacy and the profound asceticism of that admirable book are hardly in our nature. This would be more of a reproach to us if in poetry, which requires, no less than religion, a true delicacy of spiritual perception, our race had not done such great things; and if the *Imitation*, exquisite as it is, did not, as I have elsewhere remarked, belong to a class of works in which the perfect balance of human nature is lost, and which have therefore, as spiritual productions, in their contents something

excessive and morbid, in their form something not thoroughly sound. On a lower range than the *Imitation*, and awakening in our nature chords less poetical and delicate, the *Maxims* of Bishop Wilson are, as a religious work, far more solid. To the most sincere ardour and unction, Bishop Wilson unites, in these *Maxims*, that downright honesty and plain good sense which our English race has so powerfully applied to the divine impossibilities of religion; by which it has brought religion so much into practical life, and has done its allotted part in promoting upon earth the kingdom of God. But with ardour and unction religion, as we all know, may still be fanatical; with honesty and good sense, it may still be prosaic; and the fruit of honesty and good sense united with ardour and unction is often only a prosaic religion held fanatically. Bishop Wilson's excellence lies in a balance of the four qualities, and in a fulness and perfection of them, which makes this untoward result impossible; his unction is so perfect, and in such happy alliance with his good sense, that it becomes tenderness and fervent charity; his good sense is so perfect and in such happy alliance with his unction, that it becomes moderation and insight. While, therefore, the type of religion exhibited in his *Maxims* is English, it is yet a type of a far higher kind than is in general reached by Bishop Wilson's countrymen; and yet, being English, it is possible and attainable for them. And so I conclude as I began, by saying that a work of this sort is one which the Society for Promoting Christian Knowledge should not suffer to remain out of print or out of currency.

To pass now to the matters canvassed in the following essay. The whole scope of the essay is to recommend culture as the great help out of our present difficulties; culture being a pursuit of our total perfection by means of getting to know, on all the matters which most concern us, the best which has been thought and said in the world, and, through this knowledge, turning a stream of fresh and free thought upon our stock notions and habits, which we now follow

staunchly but mechanically, vainly imagining that there is a virtue in following them staunchly which makes up for the mischief of following them mechanically. This, and this alone, is the scope of the following essay. I say again here, what I have said in the pages which follow, that from the faults and weaknesses of bookmen a notion of something bookish, pedantic, and futile has got itself more or less connected with the word culture, and that it is a pity we cannot use a word more perfectly free from all shadow of reproach. And yet, futile as are many bookmen, and helpless as books and reading often prove for bringing nearer to perfection those who use them, one must, I think, be struck more and more, the longer one lives, to find how much, in our present society, a man's life of each day depends for its solidity and value on whether he reads during that day, and, far more still, on what he reads during it. More and more he who examines himself will find the difference it makes to him, at the end of any given day, whether or no he has pursued his avocations throughout it without reading at all; and whether or no, having read something, he has read the newspapers only. This, however, is a matter for each man's private conscience and experience. If a man without books or reading, or reading nothing but his letters and the newspapers, gets nevertheless a fresh and free play of the best thoughts upon his stock notions and habits, he has got culture. He has got that for which we prize and recommend culture; he has got that which at the present moment we seek culture that it may give us. This inward operation is the very life and essence of culture, as we conceive it.

Nevertheless, it is not easy so to frame one's discourse concerning the operation of culture, as to avoid giving frequent occasion to a misunderstanding whereby the essential inwardness of the operation is lost sight of. We are supposed, when we criticise by the help of culture some imperfect doing or other, to have in our eye some well-known rival plan of doing, which we want to serve and recommend. Thus, for instance, because I have freely pointed out the dangers and

inconveniences to which our literature is exposed in the absence of any centre of taste and authority like the French Academy, it is constantly said that I want to introduce here in England an institution like the French Academy. I have indeed expressly declared that I wanted no such thing; but let us notice how it is just our worship of machinery, and of external doing, which leads to this charge being brought; and how the inwardness of culture makes us seize, for watching and cure, the faults to which our want of an Academy inclines us, and yet prevents us from trusting to an arm of flesh, as the Puritans say, — from blindly flying to this outward machinery of an Academy, in order to help ourselves. For the very same culture and free inward play of thought which shows us how the Corinthian style, or the whimsies about the One Primeval Language are generated and strengthened in the absence of an Academy, shows us, too, how little any Academy, such as we should be likely to get, would cure them. Every one who knows the characteristics of our national life, and the tendencies so fully discussed in the following pages, knows exactly what an English Academy would be like. One can see the happy family in one's mind's eye as distinctly as if it was already constituted. Lord Stanhope, the Bishop of Oxford, Mr. Gladstone, the Dean of Westminster, Mr. Froude, Mr. Henry Reeve, — everything which is influential, accomplished, and distinguished; and then, some fine morning, a dissatisfaction of the public mind with this brilliant and select coterie, a flight of Corinthian leading articles, and an irruption of Mr. G. A. Sala. Clearly, this is not what will do us good. The very same faults, — the want of sensitiveness of intellectual conscience, the disbelief in right reason, the dislike of authority, — which have hindered our having an Academy and have worked injuriously in our literature, would also hinder us from making our Academy, if we established it, one which would really correct them. And culture, which shows us truly the faults, shows us this also just as truly.

It is by a like sort of misunderstanding, again, that Mr. Oscar

Browning, one of the assistant-masters at Eton, takes up in the *Quarterly Review* the cudgels for Eton, as if I had attacked Eton, because I have said, in a book about foreign schools, that a man may well prefer to teach his three or four hours a day without keeping a boarding-house; and that there are great dangers in cramming little boys of eight or ten and making them compete for an object of great value to their parents; and, again, that the manufacture and supply of school-books, in England, much needs regulation by some competent authority. Mr. Oscar Browning gives us to understand that at Eton he and others, with perfect satisfaction to themselves and the public, combine the functions of teaching and of keeping a boarding-house; that he knows excellent men (and, indeed, well he may, for a brother of his own, I am told, is one of the best of them,) engaged in preparing little boys for competitive examinations, and that the result, as tested at Eton, gives perfect satisfaction. And as to school-books he adds, finally, that Dr. William Smith, the learned and distinguished editor of the *Quarterly Review*, is, as we all know, the compiler of school-books meritorious and many. This is what Mr. Oscar Browning gives us to understand in the *Quarterly Review*, and it is impossible not to read with pleasure what he says. For what can give a finer example of that frankness and manly self-confidence which our great public schools, and none of them so much as Eton, are supposed to inspire, of that buoyant ease in holding up one's head, speaking out what is in one's mind, and flinging off all sheepishness and awkwardness, than to see an Eton assistant-master offering in fact himself as evidence that to combine boarding-house-keeping with teaching is a good thing, and his brother as evidence that to train and race little boys for competitive examinations is a good thing? Nay, and one sees that this frank-hearted Eton self-confidence is contagious; for has not Mr. Oscar Browning managed to fire Dr. William Smith (himself, no doubt, the modestest man alive, and never trained at Eton) with the same spirit, and made him insert in his own *Review* a puff, so to speak, of his own school-books, declaring that they are (as they are) meritorious and

many? Nevertheless, Mr. Oscar Browning is wrong in thinking that I wished to run down Eton; and his repetition on behalf of Eton, with this idea in his head, of the strains of his heroic ancestor, Malvina's Oscar, as they are recorded by the family poet, Ossian, is unnecessary. "The wild boar rushes over their tombs, but he does not disturb their repose. They still love the sport of their youth, and mount the wind with joy." All I meant to say was, that there were unpleasantnesses in uniting the keeping a boarding-house with teaching, and dangers in cramming and racing little boys for competitive examinations, and charlatanism and extravagance in the manufacture and supply of our school-books. But when Mr. Oscar Browning tells us that all these have been happily got rid of in his case, and his brother's case, and Dr. William Smith's case, then I say that this is just what I wish, and I hope other people will follow their good example. All I seek is that such blemishes should not through any negligence, self-love, or want of due self-examination, be suffered to continue.

Natural, as we have said, the sort of misunderstanding just noticed is; yet our usefulness depends upon our being able to clear it away, and to convince those who mechanically serve some stock notion or operation, and thereby go astray, that it is not culture's work or aim to give the victory to some rival fetish, but simply to turn a free and fresh stream of thought upon the whole matter in question. In a thing of more immediate interest, just now, than either of the two we have mentioned, the like misunderstanding prevails; and until it is dissipated, culture can do no good work in the matter. When we criticise the present operation of disestablishing the Irish Church, not by the power of reason and justice, but by the power of the antipathy of the Protestant Nonconformists, English and Scotch, to establishments, we are charged with being dreamers of dreams, which the national will has rudely shattered, for endowing the religious sects all round; or we are called enemies of the Nonconformists, blind

partisans of the Anglican Establishment. More than a few words we must give to showing how erroneous are these charges; because if they were true, we should be actually subverting our own design, and playing false to that culture which it is our very purpose to recommend.

Certainly we are no enemies of the Nonconformists; for, on the contrary, what we aim at is their perfection. Culture, which is the study of perfection, leads us, as we in the following pages have shown, to conceive of true human perfection as a *harmonious* perfection, developing all sides of our humanity; and as a general perfection, developing all parts of our society. For if one member suffer, the other members must suffer with it; and the fewer there are that follow the true way of salvation the harder that way is to find. And while the Nonconformists, the successors and representatives of the Puritans, and like them staunchly walking by the best light they have, make a large part of what is strongest and most serious in this nation and therefore attract our respect and interest, yet all that, in what follows, is said about Hebraism and Hellenism, has for its main result to show how our Puritans, ancient and modern, have not enough added to their care for walking staunchly by the best light they have, a care that that light be not darkness; how they have developed one side of their humanity at the expense of all others, and have become incomplete and mutilated men in consequence. Thus falling short of harmonious perfection, they fail to follow the true way of salvation. Therefore that way is made the harder for others to find, general perfection is put further off out of our reach, and the confusion and perplexity in which our society now labours is increased by the Nonconformists rather than diminished by them. So while we praise and esteem the zeal of the Nonconformists in walking staunchly by the best light they have, and desire to take no whit from it, we seek to add to this what we call sweetness and light, and develop their full humanity more perfectly; and to seek this is certainly not to be the

enemy of the Nonconformists.

But now, with these ideas in our head, we come across the present operation for disestablishing the Irish Church by the power of the Nonconformists' antipathy to religious establishments and endowments. And we see Liberal statesmen, for whose purpose this antipathy happens to be convenient, flattering it all they can; saying that though they have no intention of laying hands on an Establishment which is efficient and popular, like the Anglican Establishment here in England, yet it is in the abstract a fine and good thing that religion should be left to the voluntary support of its promoters, and should thus gain in energy and independence; and Mr. Gladstone has no words strong enough to express his admiration of the refusal of State-aid by the Irish Roman Catholics, who have never yet been seriously asked to accept it, but who would a good deal embarrass him if they demanded it. And we see philosophical politicians, with a turn for swimming with the stream, like Mr. Baxter or Mr. Charles Buxton, and philosophical divines with the same turn, like the Dean of Canterbury, seeking to give a sort of grand stamp of generality and solemnity to this antipathy of the Nonconformists, and to dress it out as a law of human progress in the future. Now, nothing can be pleasanter than swimming with the stream; and we might gladly, if we could, try in our unsystematic way to help Mr. Baxter, and Mr. Charles Buxton, and the Dean of Canterbury, in their labours at once philosophical and popular. But we have got fixed in our minds that a more full and harmonious development of their humanity is what the Nonconformists most want, that narrowness, one-sidedness, and incompleteness is what they most suffer from; in a word, that in what we call *provinciality* they abound, but in what we may call *totality* they fall short.

And they fall short more than the members of Establishments. The great works by which, not only in literature, art, and science

generally, but in religion itself, the human spirit has manifested its approaches to totality, and a full, harmonious perfection, and by which it stimulates and helps forward the world's general perfection, come, not from Nonconformists, but from men who either belong to Establishments or have been trained in them. A Nonconformist minister, the Rev. Edward White, who has lately written a temperate and well-reasoned pamphlet against Church Establishments, says that "the unendowed and unestablished communities of England exert full as much moral and ennobling influence upon the conduct of statesmen as that Church which is both established and endowed." That depends upon what one means by moral and ennobling influence. The believer in machinery may think that to get a Government to abolish Church-rates or to legalise marriage with a deceased wife's sister is to exert a moral and ennobling influence upon Government. But a lover of perfection, who looks to inward ripeness for the true springs of conduct, will surely think that as Shakespeare has done more for the inward ripeness of our statesmen than Dr. Watts, and has, therefore, done more to moralise and ennoble them, so an Establishment which has produced Hooker, Barrow, Butler, has done more to moralise and ennoble English statesmen and their conduct than communities which have produced the Nonconformist divines. The fruitful men of English Puritanism and Nonconformity are men who were trained within the pale of the Establishment, — Milton, Baxter, Wesley. A generation or two outside the Establishment, and Puritanism produces men of national mark no more. With the same doctrine and discipline, men of national mark are produced in Scotland; but in an Establishment. With the same doctrine and discipline, men of national and even European mark are produced in Germany, Switzerland, France; but in Establishments. Only two religious disciplines seem exempted, or comparatively exempted, from the operation of the law which seems to forbid the rearing, outside of national establishments, of men of the highest spiritual significance. These two are the Roman Catholic and the

Jewish. And these, both of them, rest on Establishments, which, though not indeed national, are cosmopolitan; and perhaps here, what the individual man does not lose by these conditions of his rearing, the citizen, and the State of which he is a citizen, loses.

What, now, can be the reason of this undeniable provincialism of the English Puritans and Protestant Nonconformists, a provincialism which has two main types, — a bitter type and a smug type, — but which in both its types is vulgarising, and thwarts the full perfection of our humanity? Men of genius and character are born and reared in this medium as in any other. From the faults of the mass such men will always be comparatively free, and they will always excite our interest; yet in this medium they seem to have a special difficulty in breaking through what bounds them, and in developing their totality. Surely the reason is, that the Nonconformist is not in contact with the main current of national life, like the member of an Establishment. In a matter of such deep and vital concern as religion, this separation from the main current of the national life has peculiar importance. In the following essay we have discussed at length the tendency in us to *Hebraise*, as we call it; that is, to sacrifice all other sides of our being to the religious side. This tendency has its cause in the divine beauty and grandeur of religion, and bears affecting testimony to them; but we have seen that it has dangers for us, we have seen that it leads to a narrow and twisted growth of our religious side itself, and to a failure in perfection. But if we tend to Hebraise even in an Establishment, with the main current of national life flowing round us, and reminding us in all ways of the variety and fulness of human existence, — by a Church which is historical as the State itself is historical, and whose order, ceremonies, and monuments reach, like those of the State, far beyond any fancies and devisings of ours, and by institutions such as the Universities, formed to defend and advance that very culture and many-sided development which it is the danger of Hebraising to make us neglect, — how

much more must we tend to Hebraise when we lack these preventives. One may say that to be reared a member of an Establishment is in itself a lesson of religious moderation, and a help towards culture and harmonious perfection. Instead of battling for his own private forms for expressing the inexpressible and defining the undefinable, a man takes those which have commended themselves most to the religious life of his nation; and while he may be sure that within those forms the religious side of his own nature may find its satisfaction, he has leisure and composure to satisfy other sides of his nature as well.

But with the member of a Nonconforming or self-made religious community how different! The sectary's *eigene grosse Erfindungen*, as Goethe calls them, — the precious discoveries of himself and his friends for expressing the inexpressible and defining the undefinable in peculiar forms of their own, cannot but, as he has voluntarily chosen them, and is personally responsible for them, fill his whole mind. He is zealous to do battle for them and affirm them, for in affirming them he affirms himself, and that is what we all like. Other sides of his being are thus neglected, because the religious side, always tending in every serious man to predominance over our other spiritual sides, is in him made quite absorbing and tyrannous by the condition of self-assertion and challenge which he has chosen for himself. And just what is not essential in religion he comes to mistake for essential, and a thousand times the more readily because he has chosen it of himself; and religious activity he fancies to consist in battling for it. All this leaves him little leisure or inclination for culture; to which, besides, he has no great institutions not of his own making, like the Universities connected with the national Establishment, to invite him; but only such institutions as, like the order and discipline of his religion, he may have invented for himself, and invented under the sway of the narrow and tyrannous notions of religion fostered in him as we have seen. Thus, while a national Establishment of religion favours totality, *hole-and-corner* forms of

religion (to use an expressive popular word) inevitably favour provincialism.

But the Nonconformists, and many of our Liberal friends along with them, have a plausible plan for getting rid of this provincialism, if, as they can hardly quite deny, it exists. "Let us all be in the same boat," they cry; "open the Universities to everybody, and let there be no establishment of religion at all!" Open the Universities by all means; but, as to the second point about establishment, let us sift the proposal a little. It does seem at first a little like that proposal of the fox, who had lost his own tail, to put all the other foxes in the same boat by a general cutting off of tails; and we know that moralists have decided that the right course here was, not to adopt this plausible suggestion, and cut off tails all round, but rather that the other foxes should keep their tails, and that the fox without a tail should get one. And so we might be inclined to urge that, to cure the evil of the Nonconformists' provincialism, the right way can hardly be to provincialise us all round.

However, perhaps we shall not be provincialised. For the Rev. Edward White says that probably, "when all good men alike are placed in a condition of religious equality, and the whole complicated iniquity of Government Church patronage is swept away, more of moral and ennobling influence than ever will be brought to bear upon the action of statesmen." We already have an example of religious equality in our colonies. "In the colonies," says *The Times*, "we see religious communities unfettered by State-control, and the State relieved from one of the most troublesome and irritating of responsibilities." But America is the great example alleged by those who are against establishments for religion. Our topic at this moment is the influence of religious establishments on culture; and it is remarkable that Mr. Bright, who has taken lately to representing himself as, above all, a promoter of reason and of the simple natural

truth of things, and his policy as a fostering of the growth of intelligence, — just the aims, as is well known, of culture also, — Mr. Bright, in a speech at Birmingham about education, seized on the very point which seems to concern our topic, when he said: “I believe the people of the United States have offered to the world more valuable information during the last forty years than all Europe put together.” So America, without religious establishments, seems to get ahead of us all in culture *and* totality; and these are the cure for provincialism.

On the other hand, another friend of reason and the simple natural truth of things, Monsieur Renan, says of America, in a book he has recently published, what seems to conflict violently with what Mr. Bright says. Mr. Bright affirms that, not only have the United States thus informed Europe, but they have done it without a great apparatus of higher and scientific instruction, and by dint of all classes in America being “sufficiently educated to be able to read, and to comprehend, and to think; and that, I maintain, is the foundation of all subsequent progress.” And then comes Monsieur Renan, and says: “The sound instruction of the people is an effect of the high culture of certain classes. The countries which, like the United States, have created a considerable popular instruction without any serious higher instruction, will long have to expiate this fault by their intellectual mediocrity, their vulgarity of manners, their superficial spirit, their lack of general intelligence.” [1]

Now, which of these two friends of culture are we to believe? Monsieur Renan seems more to have in his eye what we ourselves mean by culture; because Mr. Bright always has in his eye what he calls “a commendable interest” in politics and political agitations. As he said only the other day at Birmingham: “At this moment, — in fact, I may say at every moment in the history of a free country, — there is nothing that is so much worth discussing as politics.” And he keeps

repeating, with all the powers of his noble oratory, the old story, how to the thoughtfulness and intelligence of the people of great towns we owe all our improvements in the last thirty years, and how these improvements have hitherto consisted in Parliamentary reform, and free trade, and abolition of Church rates, and so on; and how they are now about to consist in getting rid of minoritymembers, and in introducing a free breakfast-table, and in abolishing the Irish Church by the power of the Nonconformists' antipathy to establishments, and much more of the same kind. And though our pauperism and ignorance, and all the questions which are called social, seem now to be forcing themselves upon his mind, yet he still goes on with his glorifying of the great towns, and the Liberals, and their operations for the last thirty years. It never seems to occur to him that the present troubled state of our social life has anything to do with the thirty years' blind worship of their nostrums by himself and our Liberal friends, or that it throws any doubts upon the sufficiency of this worship. But he thinks what is still amiss is due to the stupidity of the Tories, and will be cured by the thoughtfulness and intelligence of the great towns, and by the Liberals going on gloriously with their political operations as before; or that it will cure itself. So we see what Mr. Bright means by thoughtfulness and intelligence, and in what manner, according to him, we are to grow in them. And, no doubt, in America all classes read their newspaper and take a commendable interest in politics more than here or anywhere else in Europe. But, in the following essay, we have been led to doubt the sufficiency of all this political operating of ours, pursued mechanically as we pursue it; and we found that *general intelligence*, as Monsieur Renan calls it, or, in our own words, a reference of all our operating to a firm intelligible law of things, was just what we were without, and that we were without it because we worshipped our machinery so devoutly. Therefore, we conclude that Monsieur Renan, more than Mr. Bright, means by reason and intelligence the same thing as we do; and when he says that America, that chosen home of newspapers and politics, is

without general intelligence; we think it likely, from the circumstances of the case, that this is so; and that, in culture and totality, America, instead of surpassing us all, falls short.

And — to keep to our point of the influence of religious establishments upon culture and a high development of our humanity, — we can surely see reasons why, with all her energy and fine gifts, America does not show more of this development, or more promise of this. In the following essay it will be seen how our society distributes itself into Barbarians, Philistines, and Populace, and America is just ourselves, with the Barbarians quite left out, and the Populace nearly. This leaves the Philistines for the great bulk of the nation; — a livelier sort of Philistine than ours, and with the pressure and false ideal of our Barbarians taken away, but left all the more to himself and to have his full swing. And as we have found that the strongest and most vital part of English Philistinism was the Puritan and Hebraising middle-class, and that its Hebraising keeps it from culture and totality, so it is notorious that the people of the United States issues from this class, and reproduces its tendencies, — its narrow conception of man's spiritual range and of his one thing needful. From Maine to Florida, and back again, all America Hebraises. Difficult as it is to speak of a people merely from what one reads, yet that, I think, one may, without much fear of contradiction say. I mean, when, in the United States, any spiritual side in a man is wakened to activity, it is generally the religious side, and the religious side in a narrow way. Social reformers go to Moses or St. Paul for their doctrines, and have no notion there is anywhere else to go to; earnest young men at schools and universities, instead of conceiving salvation as a harmonious perfection only to be won by unreservedly cultivating many sides in us, conceive of it in the old Puritan fashion, and fling themselves ardently upon it in the old, false ways of this fashion, which we know so well, and such as Mr. Hammond, the American revivalist, has lately, at Mr. Spurgeon's Tabernacle, been refreshing

our memory with. Now, if America thus Hebraises more than either England or Germany, will any one deny that the absence of religious establishments has much to do with it? We have seen how establishments tend to give us a sense of a historical life of the human spirit, outside and beyond our own fancies and feelings; how they thus tend to suggest new sides and sympathies in us to cultivate; how, further, by saving us from having to invent and fight for our own forms of religion, they give us leisure and calm to steady our view of religion itself, — the most overpowering of objects, as it is the grandest, — and to enlarge our first crude notions of the one thing needful. But, in a serious people, where every one has to choose and strive for his own order and discipline of religion, the contention about these non-essentials occupies his mind, his first crude notions about the one thing needful do not get purged, and they invade the whole spiritual man in him, and then, making a solitude, they call it heavenly peace.

I remember a Nonconformist manufacturer, in a town of the Midland counties, telling me that when he first came there, some years ago, the place had no Dissenters; but he had opened an Independent chapel in it, and now Church and Dissent were pretty equally divided, with sharp contests between them. I said, that seemed a pity. "A pity?" cried he; "not at all! Only think of all the zeal and activity which the collision calls forth!" "Ah, but, my dear friend," I answered, "only think of all the nonsense which you now hold quite firmly, which you would never have held if you had not been contradicting your adversary in it all these years!" The more serious the people, and the more prominent the religious side in it, the greater is the danger of this side, if set to choose out forms for itself and fight for existence, swelling and spreading till it swallows all other spiritual sides up, intercepts and absorbs all nutriment which should have gone to them, and leaves Hebraism rampant in us and Hellenism stamped out.

Culture, and the harmonious perfection of our whole being, and what we call totality, then become secondary matters; and the institutions, which should develop these, take the same narrow and partial view of humanity and its wants as the free religious communities take. Just as the free churches of Mr. Beecher or Brother Noyes, with their provincialism and want of centrality, make mere Hebraisers in religion, and not perfect men, so the university of Mr. Ezra Cornell, a really noble monument of his munificence, yet seems to rest on a provincial misconception of what culture truly is, and to be calculated to produce miners, or engineers, or architects, not sweetness and light.

And, therefore, when the Rev. Edward White asks the same kind of question about America that he has asked about England, and wants to know whether, without religious establishments, as much is not done in America for the higher national life as is done for that life here, we answer in the same way as we did before, that as much is not done. Because to enable and stir up people to read their Bible and the newspapers, and to get a practical knowledge of their business, does not serve to the higher spiritual life of a nation so much as culture, truly conceived, serves; and a true conception of culture is, as Monsieur Renan's words show, just what America fails in.

To the many who think that culture, and sweetness, and light, are all moonshine, this will not appear to matter much; but with us, who value them, and who think that we have traced much of our present discomfort to the want of them, it weighs a great deal. So not only do we say that the Nonconformists have got provincialism and lost totality by the want of a religious establishment, but we say that the very example which they bring forward to help their case makes against them; and that when they triumphantly show us America without religious establishments, they only show us a whole nation touched, amidst all its greatness and promise, with that provincialism

which it is our aim to extirpate in the English Nonconformists.

But now to evince the disinterestedness which culture, as I have said, teaches us. We have seen the narrowness generated in Puritanism by its hole-and-corner organisation, and we propose to cure it by bringing Puritanism more into contact with the main current of national life. Here we are fully at one with the Dean of Westminster; and, indeed, he and we were trained in the same school to mark the narrowness of Puritanism, and to wish to cure it. But he and others would give to the present Anglican Establishment a character the most latitudinarian, as it is called, possible; availing themselves for this purpose of the diversity of tendencies and doctrines which does undoubtedly exist already in the Anglican formularies; and they would say to the Puritans: "Come all of you into this liberally conceived Anglican Establishment." But to say this is hardly, perhaps, to take sufficient account of the course of history, or of the strength of men's feelings in what concerns religion, or of the gravity which may have come to attach itself to points of religious order and discipline merely. When the Rev. Edward White talks of "sweeping away the whole complicated iniquity of Government Church patronage," he uses language which has been forced upon him by his position, but which is, as we have seen, devoid of any real solidity. But when he talks of the religious communities "which have for three hundred years contended for the power of the congregation in the management of their own affairs," then he talks history; and his language has behind it, in my opinion, facts which make the latitudinarianism of our Broad Churchmen quite illusory. Certainly, culture will never make us think it an essential of religion whether we have in our Church discipline "a popular authority of elders," as Hooker calls it, or whether we have Episcopal jurisdiction. Certainly, Hooker himself did not think it an essential; for in the dedication of his *Ecclesiastical Polity*, speaking of these questions of Church discipline which gave occasion to his great work, he says they are "in truth, for the greatest part, such silly things,

that very easiness doth make them hard to be disputed of in serious manner."Hooker's great work against the impugners of the order and discipline of the Church of England was written (and this is too indistinctly seized by many who read it), not because Episcopalianism is essential, but because its impugners maintained that Presbyterianism is essential, and that Episcopalianism is sinful. Neither the one nor the other is either essential or sinful, and much may be said on behalf of both. But what is important to be remarked is that *both were in the Church of England at the Reformation*, and that Presbyterianism was only extruded gradually. We have mentioned Hooker, and nothing better illustrates what has just been asserted than the following incident in Hooker's own career, which every one has read, for it is related in Isaac Walton's *Life of Hooker*, but of which, probably, the significance has been fully grasped by not one-half of those who have read it.

Hooker was through the influence of Archbishop Whitgift appointed, in 1585, Master of the Temple; but a great effort had just been made to obtain the place for a Mr. Walter Travers, well known in that day, though now it is Hooker's name which alone preserves his. This Travers was then afternoon-lecturer at the Temple. The Master whose death made the vacancy, Alvey, recommended on his deathbed Travers for his successor, the society was favourable to him, and he had the support of the Lord Treasurer Burghley. After Hooker's appointment to the Mastership, Travers remained afternoon-lecturer, and combated in the afternoons the doctrine which Hooker preached in the mornings. Now, this Travers, originally a Fellow of Trinity College, Cambridge, afterwards afternoonlecturer at the Temple, recommended for the Mastership by the foregoing Master, whose opinions, it is said, agreed with his, favoured by the society of the Temple, and supported by the Prime Minister, — this Travers was not an Episcopally ordained clergyman at all; he was a Presbyterian, a partisan of the Geneva church discipline, as it was then called,

and "had taken orders," says Walton, "by the Presbyters in Antwerp." In another place Walton speaks of his orders yet more fully: — "He had disowned," he says, "the English Established Church and Episcopacy, and went to Geneva, and afterwards to Antwerp, to be ordained minister, as he was by Villers and Cartwright and others the heads of a congregation there; and so came back again more confirmed for the discipline." Villers and Cartwright are in like manner examples of Presbyterianism within the Church of England, which was common enough at that time; but perhaps nothing can better give us a lively sense of its presence there than this history of Travers, which is as if Mr. Binney were now afternoon-reader at Lincoln's Inn or the Temple, were to be a candidate, favoured by the benchers and by the Prime Minister, for the Mastership, and were only kept out of the post by the accident of the Archbishop of Canterbury's influence with the Queen carrying a rival candidate.

Presbyterianism, with its popular principle of the power of the congregation in the management of their own affairs, was extruded from the Church of England, and men like Travers can no longer appear in her pulpits. Perhaps if a government like that of Elizabeth, with secular statesmen like the Cecils, and ecclesiastical statesmen like Whitgift, could have been prolonged, Presbyterianism might, by a wise mixture of concession and firmness, have been absorbed in the Establishment. Lord Bolingbroke, on a matter of this kind a very clear-judging and impartial witness, says, in a work far too little read, his *Remarks on English History*: — "The measures pursued and the temper observed in Queen Elizabeth's time tended to diminish the religious opposition by a slow, a gentle, and for that very reason an effectual progression. There was even room to hope that when the first fire of the Dissenters' zeal was passed, reasonable terms of union with the Established Church might be accepted by such of them as were not intoxicated with fanaticism. These were friends to order, though they disputed about it. If these friends of Calvin's discipline

had been once incorporated with the Established Church, the remaining sectaries would have been of little moment, either for numbers or reputation; and the very means which were proper to gain these friends, were likewise the most effectual to hinder the increase of them, and of the other sectaries in the meantime.”The temper and ill judgment of the Stuarts made shipwreck of all policy of this kind. Yet speaking even of the time of the Stuarts, but their early time, Clarendon says that if Bishop Andrewes had succeeded Bancroft at Canterbury, the disaffection of separatists might have been stayed and healed. This, however, was not to be; and Presbyterianism, after exercising for some years the law of the strongest, itself in Charles the Second's reign suffered under this law, and was finally cast out from the Church of England.

Now the points of church discipline at issue between Presbyterianism and Episcopalianism are, as has been said, not essential. They might probably once have been settled in a sense altogether favourable to Episcopalianism. Hooker may have been right in thinking that there were in his time circumstances which made it essential that they should be settled in this sense, though the points in themselves were not essential. But by the very fact of the settlement not having then been effected, of the breach having gone on and widened, of the Nonconformists not having been amicably incorporated with the Establishment but violently cast out from it, the circumstances are now altogether altered. Isaac Walton, a fervent Churchman, complains that “the principles of the Nonconformists grew at last to such a height and were vented so daringly, that, beside the loss of life and limbs, the Church and State were both forced to use such other severities as will not admit of an excuse, if it had not been to prevent confusion and the perilous consequences of it.”But those very severities have of themselves made union on an Episcopalian footing impossible. Besides, Presbyterianism, the popular authority of elders, the power of the congregation in the management of their own

affairs, has that warrant given to it by Scripture and by the proceedings of the early Christian Churches, it is so consonant with the spirit of Protestantism which made the Reformation and which has such strength in this country, it is so predominant in the practice of other reformed churches, it was so strong in the original reformed Church of England, that one cannot help doubting whether any settlement which suppressed it could have been really permanent, and whether it would not have kept appearing again and again, and causing dissension. Well, then, if culture is the disinterested endeavour after man's perfection, will it not make us wish to cure the provincialism of the Nonconformists, not by making Churchmen provincial along with them, but by letting their popular church discipline, formerly found in the National Church, and still found in the affections and practice of a good part of the nation, appear in the National Church once more; and thus to bring Nonconformists into contact again, as their greater fathers were, with the main stream of national life? Why should not a Presbyterian or Congregational Church, based on this considerable and important, though not essential principle, of the congregation's power in the church management, be established, — with equal rank for its chiefs with the chiefs of Episcopacy, and with admissibility of its ministers, under a revised system of patronage and preferment, to benefices, — side by side with the Episcopal Church, as the Calvinist and Lutheran Churches are established side by side in France and Germany? Such a Congregational Church would unite the main bodies of Protestants who are now separatists; and separation would cease to be the law of their religious order. Then, — through this concession on a really considerable point of difference, — that endless splitting into hole-and-corner churches on quite inconsiderable points of difference, which must prevail so long as separatism is the first law of a Nonconformist's religious existence, would be checked. Culture would then find a place among English followers of the popular authority of elders, as it has long found it among the followers of Episcopal

jurisdiction; and this we should gain by merely recognising, regularising, and restoring an element which appeared once in the reformed National Church, and which is considerable and national enough to have a sound claim to appear there still.

So far, then, is culture from making us unjust to the Nonconformists because it forbids us to worship their fetishes, that it even leads us to propose to do more for them than they themselves venture to claim. It leads us, also, to respect what is solid and respectable in their convictions, while their latitudinarian friends make light of it. Not that the forms in which the human spirit tries to express the inexpressible, or the forms by which man tries to worship, have or can have, as has been said, for the follower of perfection, anything necessary or eternal. If the New Testament and the practice of the primitive Christians sanctioned the popular form of church government a thousand times more expressly than they do, if the Church since Constantine were a thousand times more of a departure from the scheme of primitive Christianity than it can be shown to be, that does not at all make, as is supposed by men in bondage to the letter, the popular form of church government alone and always sacred and binding, or the work of Constantine a thing to be regretted. What is alone and always sacred and binding for man is the climbing towards his total perfection, and the machinery by which he does this varies in value according as it helps him to do it. The planters of Christianity had their roots in deep and rich grounds of human life and achievement, both Jewish and also Greek; and had thus a comparatively firm and wide basis amidst all the vehement inspiration of their mighty movement and change. By their strong inspiration they carried men off the old basis of life and culture, whether Jewish or Greek, and generations arose who had their roots in neither world, and were in contact therefore with no full and great stream of human life. Christianity might have lost herself, if it had not been for some such change as that of the fourth century, in a multitude of hole-and-

corner churches like the churches of English Nonconformity after its founders departed; churches without great men, and without furtherance for the higher life of humanity. At a critical moment came Constantine, and placed Christianity, — or let us rather say, placed the human spirit, whose totality was endangered, — in contact with the main current of human life. And his work was justified by its fruits, in men like Augustine and Dante, and indeed in all the great men of Christianity, Catholics or Protestants, ever since. And one may go beyond this. Monsieur Albert Réville, whose religious writings are always interesting, says that the conception which cultivated and philosophical Jews now entertain of Christianity and its founder, is probably destined to become the conception which Christians themselves will entertain. Socinians are fond of saying the same thing about the Socinian conception of Christianity. Even if this were true, it would still have been better for a man, through the last eighteen hundred years, to have been a Christian, and a member of one of the great Christian communions, than to have been a Jew or a Socinian; because the being in contact with the main stream of human life is of more moment for a man's total spiritual growth, and for his bringing to perfection the gifts committed to him, which is his business on earth, than any speculative opinion which he may hold or think he holds. Luther, — whom we have called a Philistine of genius, and who, because he was a Philistine, had a coarseness and lack of spiritual delicacy which have harmed his disciples, but who, because he was a genius, had splendid flashes of spiritual insight, — Luther says admirably in his Commentary on the Book of Daniel: "A God is simply *that* whereon the human heart rests with trust, faith, hope and love. If the resting is right, then the God too is right; if the resting is wrong, then the God too is illusory." In other words, the worth of what a man thinks about God and the objects of religion depends on what the man *is*; and what the man *is*, depends upon his having more or less reached the measure of a perfect and total man.

All this is true; and yet culture, as we have seen, has more tenderness for scruples of the Nonconformists than have their Broad Church friends. That is because culture, disinterestedly trying, in its aim at perfection, to see things as they really are, sees how worthy and divine a thing is the religious side in man, though it is not the whole of man. And when Mr. Greg, who differs from us about edification, (and certainly we do not seem likely to agree with him as to what edifies), finding himself moved by some extraneous considerations or other to take a Church's part against its enemies, calls taking a Church's part *returning to base uses*, culture teaches us how out of place is this language, and that to use it shows an inadequate conception of human nature, and that no Church will thank a man for taking its part in this fashion, but will leave him with indifference to the tender mercies of his Benthamite friends. But avoiding Benthamism, or an inadequate conception of the religious side in man, culture makes us also avoid Mialism, or an inadequate conception of man's totality. Therefore to the worth and grandeur of the religious side in man, culture is rejoiced and willing to pay any tribute, except the tribute of man's totality. True, the order and liturgy of the Church of England one may be well contented to live and to die with, and they are such as to inspire an affectionate and revering attachment. True, the reproaches of Nonconformists against this order for "retaining badges of Antichristian recognisance;" and for "corrupting the right form of Church polity with manifold Popish rites and ceremonies;" true, their assertion of the essentialness of their own supposed Scriptural order, and their belief in its eternal fitness, are founded on illusion. True, the whole attitude of horror and holy superiority assumed by Puritanism towards the Church of Rome, is wrong and false, and well merits Sir Henry Wotton's rebuke: — "Take heed of thinking that the farther you go from the Church of Rome, the nearer you are to God." True, one of the best wishes one could form for Mr. Spurgeon or Father Jackson is, that they might be permitted to learn on this side the grave (for if they do not, a

considerable surprise is certainly reserved for them on the other) that Whitfield and Wesley were not at all better than St. Francis, and that they themselves are not at all better than Lacordaire. Yet, in spite of all this, so noble and divine a thing is religion, so respectable is that earnestness which desires a prayerbook with one strain of doctrine, so attaching is the order and discipline by which we are used to have our religion conveyed, so many claims on our regard has that popular form of church government for which Nonconformists contend, so perfectly compatible is it with all progress towards perfection, that culture would make us shy even to propose to Nonconformists the acceptance of the Anglican prayer-book and the episcopal order; and would be forward to wish them a prayer-book of their own approving, and the church discipline to which they are attached and accustomed.

Only not at the price of Mialism; that is, of a doctrine which leaves the Nonconformists in holes and corners, out of contact with the main current of national life. One can lay one's finger, indeed, on the line by which this doctrine has grown up, and see how the essential part of Nonconformity is a popular church-discipline analogous to that of the other reformed churches, and how its voluntarism is an accident. It contended for the establishment of its own churchdiscipline as the only true one; and beaten in this contention, and seeing its rival established, it came down to the more plausible proposal "to place all good men alike in a condition of religious equality;" and this plan of proceeding, originally taken as a mere second-best, became, by long sticking to it and preaching it up, first fair, then righteous, then the only righteous, then at last necessary to salvation. This is the plan for remedying the Nonconformists' divorce from contact with the national life by divorcing churchmen too from contact with it; that is, as we have familiarly before put it, the tailless foxes are for cutting off tails all round. But this the other foxes could not wisely grant, unless it were proved that tails are of no value. And so, too, unless it is proved that

contact with the main current of national life is of no value (and we have shown that it is of the greatest value), we cannot safely, even to please the Nonconformists in a matter where we would please them as much as possible, admit Mialism.

But now, as we have shown the disinterestedness which culture enjoins, and its obedience not to likings or dislikings, but to the aim of perfection, let us show its flexibility, — its independence of machinery. That other and greater prophet of intelligence, and reason, and the simple natural truth of things, — Mr. Bright, — means by these, as we have seen, a certain set of measures which suit the special ends of Liberal and Nonconformist partisans. For instance, reason and justice towards Ireland mean the abolishment of the iniquitous Protestant ascendancy in such a particular way as to suit the Nonconformists' antipathy to establishments. Reason and justice pursued in a different way, by distributing among the three main Churches of Ireland, — the Roman Catholic, the Anglican, and the Presbyterian, — the church property of Ireland, would immediately cease, for Mr. Bright and the Nonconformists, to be reason and justice at all, and would become, as Mr. Spurgeon says, "a setting up of the Roman image." Thus we see that the sort of intelligence reached by culture is more disinterested than the sort of intelligence reached by belonging to the Liberal party in the great towns, and taking a commendable interest in politics. But still more striking is the difference between the two views of intelligence, when we see that culture not only makes a quite disinterested choice of the machinery proper to carry us towards sweetness and light, and to make reason and the will of God prevail, but by even this machinery does not hold stiffly and blindly, and easily passes on beyond it to that for the sake of which it chose it.

For instance: culture leads us to think that the ends of human perfection might be best served by establishing, — that is, by

bringing into contact with the main current of the national life, — in Ireland the Roman Catholic and the Presbyterian Churches along with the Anglican Church; and, in England, a Presbyterian or Congregational Church of like rank and *status* with our Episcopalian one. It leads us to think that we should really, in this way, be working to make reason and the will of God prevail; because we should be making Roman Catholics better citizens, and Nonconformists, — nay, and Churchmen along with them, — larger-minded and more complete men. But undoubtedly there are great difficulties in such a plan as this; and the plan is not one which looks very likely to be adopted. It is a plan more for a time of creative statesmen, like the time of Elizabeth, than for a time of instrumental statesmen like the present. The Churchman must rise above his ordinary self in order to favour it; and the Nonconformist has worshipped his fetish of separatism so long that he is likely to wish still to remain, like Ephraim, “a wild ass alone by himself.” The centre of power being where it is, our instrumental statesmen have every temptation, as is shown more at large in the following essay, in the first place, to “relieve themselves,” as *The Times* says, “of troublesome and irritating responsibilities;” in the second place, when they must act, to go along, as they do, with the ordinary self of those on whose favour they depend, to adopt as their own its desires, and to serve them with fidelity, and even, if possible, with impulsiveness. This is the more easy for them, because there are not wanting, — and there never will be wanting, — thinkers like Mr. Baxter, Mr. Charles Buxton, and the Dean of Canterbury, to swim with the stream, but to swim with it philosophically; to call the desires of the ordinary self of any great section of the community edicts of the national mind and laws of human progress, and to give them a general, a philosophic, and an imposing expression. A generous statesman may honestly, therefore, soon unlearn any disposition to put his tongue in his cheek in advocating these desires, and may advocate them with fervour and impulsiveness. Therefore a plan such as that which we have indicated

does not seem a plan so likely to find favour as a plan for abolishing the Irish Church by the power of the Nonconformists' antipathy to establishments.

But to tell us that our fond dreams are on that account shattered is inexact, and is the sort of language which ought to be addressed to the promoters of intelligence through public meetings and a commendable interest in politics, when they fail in their designs, and not to us. For we are fond stickers to no machinery, not even our own; and we have no doubt that perfection can be reached without it, — with free churches as with established churches, and with instrumental statesmen as with creative statesmen. But it can never be reached without seeing things as they really are; and it is to this, therefore, and to no machinery in the world, that culture sticks fondly. It insists that men should not mistake, as they are prone to mistake, their natural taste for the bathos for a relish for the sublime; and if statesmen, either with their tongue in their cheek or through a generous impulsiveness, tell them their natural taste for the bathos is a relish for the sublime, there is the more need for culture to tell them the contrary. It is delusion on this point which is fatal, and against delusion on this point culture works. It is not fatal to our Liberal friends to labour for free trade, extension of the suffrage, and abolition of church-rates, instead of graver social ends; but it is fatal to them to be told by their flatterers, and to believe, with our pauperism increasing more rapidly than our population, that they have performed a great, an heroic work, by occupying themselves exclusively, for the last thirty years, with these Liberal nostrums, and that the right and good course for them now is to go on occupying themselves with the like for the future. It is not fatal to Americans to have no religious establishments and no effective centres of high culture; but it is fatal to them to be told by their flatterers, and to believe, that they are the most intelligent people in the whole world, when of intelligence, in the true and fruitful sense of the word, they

even singularly, as we have seen, come short. It is not fatal to the Nonconformists to remain with their separated churches; but it is fatal to them to be told by their flatterers, and to believe, that theirs is the one pure and Christ-ordained way of worshipping God, that provincialism and loss of totality have not come to them from following it, or that provincialism and loss of totality are not evils. It is not fatal to the English nation to abolish the Irish Church by the power of the Nonconformists' antipathy to establishments; but it is fatal to it to be told by its flatterers, and to believe, that it is abolishing it through reason and justice, when it is really abolishing it through this power; or to expect the fruits of reason and justice from anything but the spirit of reason and justice themselves.

Now culture, because of its keen sense of what is really fatal, is all the more disposed to be pliant and easy about what is not fatal. And because machinery is the bane of politics, and an inward working, and not machinery, is what we most want, we keep advising our ardent young Liberal friends to think less of machinery, to stand more aloof from the arena of politics at present, and rather to try and promote, with us, an inward working. They do not listen to us, and they rush into the arena of politics, where their merits, indeed, seem to be little appreciated as yet; and then they complain of the reformed constituencies, and call the new Parliament a Philistine Parliament. As if a nation, nourished and reared in Hebraising, could give us, just yet, anything better than a Philistine Parliament! — for would a Barbarian Parliament be even so good, or a Populace Parliament? For our part, we rejoice to see our dear old friends, the Hebraising Philistines, gathered in force in the Valley of Jehoshaphat before their final conversion, which will certainly come; but for this conversion we must not try to oust them from their places, and to contend for machinery with them, but we must work on them inwardly and cure them of Hebraising.

Yet *the days of Israel are innumerable*; and in its blame of Hebraising too, and in its praise of Hellenising, culture must not fail to keep its flexibility, and to give to its judgments that passing and provisional character which we have seen it impose on its preferences and rejections of machinery. Now, and for us, it is a time to Hellenise, and to praise knowing; for we have Hebraised too much, and have overvalued doing. But the habits and discipline received from Hebraism remain for our race an eternal possession; and, as humanity is constituted, one must never assign them the second rank to-day, without being ready to restore them to the first rank to-morrow. To walk staunchly by the best light one has, to be strict and sincere with oneself, not to be of the number of those who say and do not, to be in earnest, — this is the discipline by which alone man is enabled to rescue his life from thralldom to the passing moment and to his bodily senses, to ennoble it, and to make it eternal. And this discipline has been nowhere so effectively taught as in the school of Hebraism. Sophocles and Plato knew as well as the author of the Epistle to the Hebrews that “without holiness no man shall see God,” and their notion of what goes to make up holiness was larger than his. But the intense and convinced energy with which the Hebrew, both of the Old and of the New Testament, threw himself upon his ideal, and which inspired the incomparable definition of the great Christian virtue, Faith, — *the substance of things hoped for, the evidence of things not seen*, — this energy of faith in its ideal has belonged to Hebraism alone. As our idea of holiness enlarges, and our scope of perfection widens beyond the narrow limits to which the over-rigour of Hebraising has tended to confine it, we shall come again to Hebraism for that devout energy in embracing our ideal, which alone can give to man the happiness of doing what he knows. “If ye know these things, happy are ye if ye do them!” — the last word for infirm humanity will always be that. For this word, reiterated with a power now sublime, now affecting, but always admirable, our race will, as long as the world lasts, return to Hebraism; and the Bible, which preaches this word, will forever

remain, as Goethe called it, not only a national book, but the Book of the Nations.”Again and again, after what seemed breaches and separations, the prophetic promise to Jerusalem will still be true: ——
Lo, thy sons come, whom thou sentest away; they come gathered from the west unto the east by the word of the Holy One, rejoicing in the remembrance of God.

马修·阿诺德 (1822—1888)

[1] Les pays qui comme les États-Unis ont créé un enseignement populaire considérable sans instruction supérieure sérieuse, expieront longtemps encore leur faute par leur médiocrité intellectuelle, leur grossièreté de mœurs, leur esprit superficiel, leur manque d'intelligence générale.

Introduction

In one of his speeches a year or two ago, that fine speaker and famous Liberal, Mr. Bright, took occasion to have a fling at the friends and preachers of culture. "People who talk about what they call *culture!*" said he contemptuously; "by which they mean a smattering of the two dead languages of Greek and Latin." And he went on to remark, in a strain with which modern speakers and writers have made us very familiar, how poor a thing this culture is, how little good it can do to the world, and how absurd it is for its possessors to set much store by it. And the other day a younger Liberal than Mr. Bright, one of a school whose mission it is to bring into order and system that body of truth of which the earlier Liberals merely touched the outside, a member of the University of Oxford, and a very clever writer, Mr. Frederic Harrison, developed, in the systematic and stringent manner of his school, the thesis which Mr. Bright had propounded in only general terms. "Perhaps the very silliest cant of the day," said Mr. Frederic Harrison, "is the cant about culture. Culture is a desirable quality in a critic of new books, and sits well on a possessor of *belles lettres*; but as applied to politics, it means simply a turn for small faultfinding, love of selfish ease, and indecision in action. The man of culture is in politics one of the poorest mortals alive. For simple pedantry and want of good sense no man is his equal. No assumption is too unreal, no end is too unpractical for him. But the active exercise of politics requires common sense, sympathy, trust, resolution and enthusiasm, qualities which your man of culture has carefully rooted up, lest they damage the delicacy of his critical olfactories. Perhaps they are the only class of responsible beings in the community who cannot with safety be entrusted with power."

Now for my part I do not wish to see men of culture asking to be entrusted with power; and, indeed, I have freely said, that in my opinion the speech most proper, at present, for a man of culture to make to a body of his fellow-countrymen who get him into a committee-room, is Socrates's: *Know thyself!* and this is not a speech to be made by men wanting to be entrusted with power. For this very indifference to direct political action I have been taken to task by the *Daily Telegraph*, coupled, by a strange perversity of fate, *Culture and Anarchy* with just that very one of the Hebrew prophets whose style I admire the least, and called "an elegant Jeremiah." It is because I say (to use the words which the *Daily Telegraph* puts in my mouth): — "You mustn't make a fuss because you have no vote, — that is vulgarity; you mustn't hold big meetings to agitate for reform bills and to repeal corn laws, — that is the very height of vulgarity," — it is for this reason that I am called, sometimes an elegant Jeremiah, sometimes a spurious Jeremiah, a Jeremiah about the reality of whose mission the writer in the *Daily Telegraph* has his doubts. It is evident, therefore, that I have so taken my line as not to be exposed to the whole brunt of Mr. Frederic Harrison's censure. Still, I have often spoken in praise of culture; I have striven to make all my works and ways serve the interests of culture; I take culture to be something a great deal more than what Mr. Frederic Harrison and others call it: "a desirable quality in a critic of new books." Nay, even though to a certain extent I am disposed to agree with Mr. Frederic Harrison, that men of culture are just the class of responsible beings in this community of ours who cannot properly, at present, be entrusted with power, I am not sure that I do not think this the fault of our community rather than of the men of culture. In short, although, like Mr. Bright and Mr. Frederic Harrison, and the editor of the *Daily Telegraph*, and a large body of valued friends of mine, I am a liberal, yet I am a liberal tempered by experience, reflection, and renouncement, and I am, above all, a believer in culture. Therefore I propose now to try and enquire, in the simple unsystematic way

which best suits both my taste and my powers, what culture really is, what good it can do, what is our own special need of it; and I shall seek to find some plain grounds on which a faith in culture —— both my own faith in it and the faith of others, —— may rest securely.

Chapter I

The disparagers of culture make its motive curiosity; sometimes, indeed, they make its motive mere exclusiveness and vanity. The culture which is supposed to plume itself on a smattering of Greek and Latin is a culture which is begotten by nothing so intellectual as curiosity; it is valued either out of sheer vanity and ignorance, or else as an engine of social and class distinction, separating its holder, like a badge or title, from other people who have not got it. No serious man would call this *culture*, or attach any value to it, as culture, at all. To find the real ground for the very differing estimate which serious people will set upon culture, we must find some motive for culture in the terms of which may lie a real ambiguity; and such a motive the word *curiosity* gives us. I have before now pointed out that in English we do not, like the foreigners, use this word in a good sense as well as in a bad sense; with us the word is always used in a somewhat disapproving sense; a liberal and intelligent eagerness about the things of the mind may be meant by a foreigner when he speaks of curiosity, but with us the word always conveys a certain notion of frivolous and unedifying activity. In the *Quarterly Review*, some little time ago, was an estimate of the celebrated French critic, Monsieur Sainte-Beuve, and a very inadequate estimate it, in my judgment, was. And its inadequacy consisted chiefly in this: that in our English way it left out of sight the double sense really involved in the word *curiosity*, thinking enough was said to stamp Monsieur Sainte-Beuve with blame if it was said that he was impelled in his operations as a critic by curiosity, and omitting either to perceive that Monsieur Sainte-Beuve himself, and many other people with him, would consider that this was praiseworthy and not blameworthy, or to point out why it ought really to be accounted worthy of blame and not of praise. For as there is a

curiosity about intellectual matters which is futile, and merely a disease, so there is certainly a curiosity, — a desire after the things of the mind simply for their own sakes and for the pleasure of seeing them as they are, — which is, in an intelligent being, natural and laudable. Nay, and the very desire to see things as they are implies a balance and regulation of mind which is not often attained without fruitful effort, and which is the very opposite of the blind and diseased impulse of mind which is what we mean to blame when we blame curiosity. Montesquieu says: —“The first motive which ought to impel us to study is the desire to augment the excellence of our nature, and to render an intelligent being yet more intelligent.” This is the true ground to assign for the genuine scientific passion, however manifested, and for culture, viewed simply as a fruit of this passion; and it is a worthy ground, even though we let the term *curiosity* stand to describe it.

But there is of culture another view, in which not solely the scientific passion, the sheer desire to see things as they are, natural and proper in an intelligent being, appears as the ground of it. There is a view in which all the love of our neighbour, the impulses towards action, help, and beneficence, the desire for stopping human error, clearing human confusion, and diminishing the sum of human misery, the noble aspiration to leave the world better and happier than we found it, — motives eminently such as are called social, — come in as part of the grounds of culture, and the main and pre-eminent part. Culture is then properly described not as having its origin in curiosity, but as having its origin in the love of perfection; it is *a study of perfection*. It moves by the force, not merely or primarily of the scientific passion for pure knowledge, but also of the moral and social passion for doing good. As, in the first view of it, we took for its worthy motto Montesquieu's words: “To render an intelligent being yet more intelligent!” so, in the second view of it, there is no better motto which it can have than these words of Bishop Wilson: “To make reason

and the will of God prevail!"Only, whereas the passion for doing good is apt to be overhasty in determining what reason and the will of God say, because its turn is for acting rather than thinking, and it wants to be beginning to act; and whereas it is apt to take its own conceptions, which proceed from its own state of development and share in all the imperfections and immaturities of this, for a basis of action; what distinguishes culture is, that it is possessed by the scientific passion, as well as by the passion of doing good; that it has worthy notions of reason and the will of God, and does not readily suffer its own crude conceptions to substitute themselves for them; and that, knowing that no action or institution can be salutary and stable which are not based on reason and the will of God, it is not so bent on acting and instituting, even with the great aim of diminishing human error and misery ever before its thoughts, but that it can remember that acting and instituting are of little use, unless we know how and what we ought to act and to institute.

This culture is more interesting and more far-reaching than that other, which is founded solely on the scientific passion for knowing. But it needs times of faith and ardour, times when the intellectual horizon is opening and widening all round us, to flourish in. And is not the close and bounded intellectual horizon within which we have long lived and moved now lifting up, and are not new lights finding free passage to shine in upon us? For a long time there was no passage for them to make their way in upon us, and then it was of no use to think of adapting the world's action to them. Where was the hope of making reason and the will of God prevail among people who had a routine which they had christened reason and the will of God, in which they were inextricably bound, and beyond which they had no power of looking? But now the iron force of adhesion to the old routine, — social, political, religious, — has wonderfully yielded; the iron force of exclusion of all which is new has wonderfully yielded; the danger now is, not that people should obstinately refuse

to allow anything but their old routine to pass for reason and the will of God, but either that they should allow some novelty or other to pass for these too easily, or else that they should underrate the importance of them altogether, and think it enough to follow action for its own sake, without troubling themselves to make reason and the will of God prevail therein. Now, then, is the moment for culture to be of service, culture which believes in making reason and the will of God prevail, believes in perfection, is the study and pursuit of perfection, and is no longer debarred, by a rigid invincible exclusion of whatever is new, from getting acceptance for its ideas, simply because they are new.

The moment this view of culture is seized, the moment it is regarded not solely as the endeavour to see things as they are, to draw towards a knowledge of the universal order which seems to be intended and aimed at in the world, and which it is a man's happiness to go along with or his misery to go counter to, — to learn, in short, the will of God, — the moment, I say, culture is considered not merely as the endeavour to *see* and *learn* this, but as the endeavour, also, to make it *prevail*, the moral, social, and beneficent character of culture becomes manifest. The mere endeavour to see and learn it for our own personal satisfaction is indeed a commencement for making it prevail, a preparing the way for this, which always serves this, and is wrongly, therefore, stamped with blame absolutely in itself, and not only in its caricature and degeneration. But perhaps it has got stamped with blame, and disparaged with the dubious title of curiosity, because in comparison with this wider endeavour of such great and plain utility it looks selfish, petty, and unprofitable.

And religion, the greatest and most important of the efforts by which the human race has manifested its impulse to perfect itself, — religion, that voice of the deepest human experience, — does not only enjoin and sanction the aim which is the great aim of culture,

the aim of setting ourselves to ascertain what perfection is and to make it prevail; but also, in determining generally in what human perfection consists, religion comes to a conclusion identical with that which culture, — seeking the determination of this question through all the voices of human experience which have been heard upon it, art, science, poetry, philosophy, history, as well as religion, in order to give a greater fulness and certainty to its solution, — likewise reaches. Religion says: *The kingdom of God is within you*, and culture, in like manner, places human perfection in an *internal* condition, in the growth and predominance of our humanity proper, as distinguished from our animality, in the ever-increasing efficaciousness and in the general harmonious expansion of those gifts of thought and feeling which make the peculiar dignity, wealth, and happiness of human nature. As I have said on a former occasion: “It is in making endless additions to itself, in the endless expansion of its powers, in endless growth in wisdom and beauty, that the spirit of the human race finds its ideal. To reach this ideal, culture is an indispensable aid, and that is the true value of culture.” Not a having and a resting, but a growing and a becoming, is the character of perfection as culture conceives it; and here, too, it coincides with religion. And because men are all members of one great whole, and the sympathy which is in human nature will not allow one member to be indifferent to the rest, or to have a perfect welfare independent of the rest, the expansion of our humanity, to suit the idea of perfection which culture forms, must be a *general* expansion. Perfection, as culture conceives it, is not possible while the individual remains isolated: the individual is obliged, under pain of being stunted and enfeebled in his own development if he disobeys, to carry others along with him in his march towards perfection, to be continually doing all he can to enlarge and increase the volume of the human stream sweeping thitherward; and here, once more, it lays on us the same obligation as religion, which says, as Bishop Wilson has admirably put it, that “to promote the kingdom of God is to increase and hasten one's

own happiness."Finally, perfection, —as culture, from a thorough disinterested study of human nature and human experience, learns to conceive it, —is an harmonious expansion of *all* the powers which make the beauty and worth of human nature, and is not consistent with the over-development of any one power at the expense of the rest. Here it goes beyond religion, as religion is generally conceived by us.

If culture, then, is a study of perfection, and of harmonious perfection, general perfection, and perfection which consists in becoming something rather than in having something, in an inward condition of the mind and spirit, not in an outward set of circumstances, — it is clear that culture, instead of being the frivolous and useless thing which Mr. Bright, and Mr. Frederic Harrison, and many other liberals are apt to call it, has a very important function to fulfil for mankind. And this function is particularly important in our modern world, of which the whole civilisation is, to a much greater degree than the civilisation of Greece and Rome, mechanical and external, and tends constantly to become more so. But above all in our own country has culture a weighty part to perform, because here that mechanical character, which civilisation tends to take everywhere, is shown in the most eminent degree. Indeed nearly all the characters of perfection, as culture teaches us to fix them, meet in this country with some powerful tendency which thwarts them and sets them at defiance. The idea of perfection as an *inward* condition of the mind and spirit is at variance with the mechanical and material civilisation in esteem with us, and nowhere, as I have said, so much in esteem as with us. The idea of perfection as a *general* expansion of the human family is at variance with our strong individualism, our hatred of all limits to the unrestrained swing of the individual's personality, our maxim of "every man for himself." The idea of perfection as an *harmonious* expansion of human nature is at variance with our want of flexibility, with our inaptitude for seeing

more than one side of a thing, with our intense energetic absorption in the particular pursuit we happen to be following. So culture has a rough task to achieve in this country, and its preachers have, and are likely long to have, a hard time of it, and they will much oftener be regarded, for a great while to come, as elegant or spurious Jeremiahs, than as friends and benefactors. That, however, will not prevent their doing in the end good service if they persevere; and meanwhile, the mode of action they have to pursue, and the sort of habits they must fight against, should be made quite clear to every one who may be willing to look at the matter attentively and dispassionately.

Faith in machinery is, I said, our besetting danger; often in machinery most absurdly disproportioned to the end which this machinery, if it is to do any good at all, is to serve; but always in machinery, as if it had a value in and for itself. What is freedom but machinery? what is population but machinery? what is coal but machinery? what are railroads but machinery? what is wealth but machinery? what are religious organisations but machinery? Now almost every voice in England is accustomed to speak of these things as if they were precious ends in themselves, and therefore had some of the characters of perfection indisputably joined to them. I have once before noticed Mr. Roebuck's stock argument for proving the greatness and happiness of England as she is, and for quite stopping the mouths of all gainsayers. Mr. Roebuck is never weary of reiterating this argument of his, so I do not know why I should be weary of noticing it. "May not every man in England say what he likes?"—Mr. Roebuck perpetually asks; and that, he thinks, is quite sufficient, and when every man may say what he likes, our aspirations ought to be satisfied. But the aspirations of culture, which is the study of perfection, are not satisfied, unless what men say, when they may say what they like, is worth saying, — has good in it, and more good than bad. In the same way *The Times*, replying to some foreign strictures on the dress, looks, and behaviour of the English abroad,

urges that the English ideal is that every one should be free to do and to look just as he likes. But culture indefatigably tries, not to make what each raw person may like, the rule by which he fashions himself; but to draw ever nearer to a sense of what is indeed beautiful, graceful, and becoming, and to get the raw person to like that. And in the same way with respect to railroads and coal. Every one must have observed the strange language current during the late discussions as to the possible failure of our supplies of coal. Our coal, thousands of people were saying, is the real basis of our national greatness; if our coal runs short, there is an end of the greatness of England. But what is greatness? — culture makes us ask. Greatness is a spiritual condition worthy to excite love, interest, and admiration; and the outward proof of possessing greatness is that we excite love, interest, and admiration. If England were swallowed up by the sea to-morrow, which of the two, a hundred years hence, would most excite the love, interest, and admiration of mankind, — would most, therefore, show the evidences of having possessed greatness, — the England of the last twenty years, or the England of Elizabeth, of a time of splendid spiritual effort, but when our coal, and our industrial operations depending on coal, were very little developed? Well then, what an unsound habit of mind it must be which makes us talk of things like coal or iron as constituting the greatness of England, and how salutary a friend is culture, bent on seeing things as they are, and thus dissipating delusions of this kind and fixing standards of perfection that are real!

Wealth, again, that end to which our prodigious works for material advantage are directed, — the commonest of commonplaces tells us how men are always apt to regard wealth as a precious end in itself; and certainly they have never been so apt thus to regard it as they are in England at the present time. Never did people believe anything more firmly, than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved

by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines. The people who believe most that our greatness and welfare are proved by our being very rich, and who most give their lives and thoughts to becoming rich, are just the very people whom we call the Philistines. Culture says: "Consider these people, then, their way of life, their habits, their manners, the very tones of their voice; look at them attentively; observe the literature they read, the things which give them pleasure, the words which come forth out of their mouths, the thoughts which make the furniture of their minds; would any amount of wealth be worth having with the condition that one was to become just like these people by having it?" And thus culture begets a dissatisfaction which is of the highest possible value in stemming the common tide of men's thoughts in a wealthy and industrial community, and which saves the future, as one may hope, from being vulgarised, even if it cannot save the present.

Population, again, and bodily health and vigour, are things which are nowhere treated in such an unintelligent, misleading, exaggerated way as in England. Both are really machinery; yet how many people all around us do we see rest in them and fail to look beyond them! Why, I have heard people, fresh from reading certain articles of *The Times* on the Registrar-General's returns of marriages and births in this country, who would talk of large families in quite a solemn strain, as if they had something in itself beautiful, elevating, and meritorious in them; as if the British Philistine would have only to present himself before the Great Judge with his twelve children, in order to be received among the sheep as a matter of right! But bodily health and vigour, it may be said, are not to be classed with wealth and

population as mere machinery; they have a more real and essential value. True; but only as they are more intimately connected with a perfect spiritual condition than wealth or population are. The moment we disjoin them from the idea of a perfect spiritual condition, and pursue them, as we do pursue them, for their own sake and as ends in themselves, our worship of them becomes as mere worship of machinery, as our worship of wealth or population, and as unintelligent and vulgarising a worship as that is. Every one with anything like an adequate idea of human perfection has distinctly marked this subordination to higher and spiritual ends of the cultivation of bodily vigour and activity. "Bodily exercise profiteth little; but godliness is profitable unto all things," says the author of the Epistle to Timothy. And the utilitarian Franklin says just as explicitly: — "Eat and drink such an exact quantity as suits the constitution of thy body, *in reference to the services of the mind.*" But the point of view of culture, keeping the mark of human perfection simply and broadly in view, and not assigning to this perfection, as religion or utilitarianism assign to it, a special and limited character, — this point of view, I say, of culture is best given by these words of Epictetus: — "It is a sign of ἀρῆτα," says he, — that is, of a nature not finely tempered, — "to give yourselves up to things which relate to the body; to make, for instance, a great fuss about exercise, a great fuss about eating, a great fuss about drinking, a great fuss about walking, a great fuss about riding. All these things ought to be done merely *by the way*: the formation of the spirit and character must be our real concern." This is admirable; and, indeed, the Greek words ἀρῆτα, ἐβρῆτα, a finely tempered nature, a coarsely tempered nature, give exactly the notion of perfection as culture brings us to conceive of it: a perfection in which the characters of beauty and intelligence are both present, which unites "the two noblest of things," — as Swift, who of one of the two, at any rate, had himself all too little, most happily calls them in his *Battle of the Books*, — "the two noblest of things, *sweetness and light.*" The εὐφροής is the man who tends towards

sweetness and light; the ἀφρης is precisely our Philistine. The immense spiritual significance of the Greeks is due to their having been inspired with this central and happy idea of the essential character of human perfection; and Mr. Bright's misconception of culture, as a smattering of Greek and Latin, comes itself, after all, from this wonderful significance of the Greeks having affected the very machinery of our education, and is in itself a kind of homage to it.

It is by thus making sweetness and light to be characters of perfection, that culture is of like spirit with poetry, follows one law with poetry. I have called religion a more important manifestation of human nature than poetry, because it has worked on a broader scale for perfection, and with greater masses of men. But the idea of beauty and of a human nature perfect on all its sides, which is the dominant idea of poetry, is a true and invaluable idea, though it has not yet had the success that the idea of conquering the obvious faults of our animality, and of a human nature perfect on the moral side, which is the dominant idea of religion, has been enabled to have; and it is destined, adding to itself the religious idea of a devout energy, to transform and govern the other. The best art and poetry of the Greeks, in which religion and poetry are one, in which the idea of beauty and of a human nature perfect on all sides adds to itself a religious and devout energy, and works in the strength of that, is on this account of such surpassing interest and instructiveness for us, though it was, — as, having regard to the human race in general, and, indeed, having regard to the Greeks themselves, we must own, — a premature attempt, an attempt which for success needed the moral and religious fibre in humanity to be more braced and developed than it had yet been. But Greece did not err in having the idea of beauty, harmony, and complete human perfection, so present and paramount; it is impossible to have this idea too present and paramount; only the moral fibre must be braced too. And we, because we have braced the moral fibre, are not on that account in the right way, if at the same

time the idea of beauty, harmony, and complete human perfection, is wanting or misapprehended amongst us; and evidently it is wanting or misapprehended at present. And when we rely as we do on our religious organisations, which in themselves do not and cannot give us this idea, and think we have done enough if we make them spread and prevail, then, I say, we fall into our common fault of overvaluing machinery.

Nothing is more common than for people to confound the inward peace and satisfaction which follows the subduing of the obvious faults of our animality with what I may call absolute inward peace and satisfaction, — the peace and satisfaction which are reached as we draw near to complete spiritual perfection, and not merely to moral perfection, or rather to relative moral perfection. No people in the world have done more and struggled more to attain this relative moral perfection than our English race has; for no people in the world has the command to *resist the Devil*, to *overcome the Wicked One*, in the nearest and most obvious sense of those words, had such a pressing force and reality. And we have had our reward, not only in the great worldly prosperity which our obedience to this command has brought us, but also, and far more, in great inward peace and satisfaction. But to me few things are more pathetic than to see people, on the strength of the inward peace and satisfaction which their rudimentary efforts towards perfection have brought them, use, concerning their incomplete perfection and the religious organisations within which they have found it, language which properly applies only to complete perfection, and is a far-off echo of the human soul's prophecy of it. Religion itself, I need hardly say, supplies in abundance this grand language, which is really the severest criticism of such an incomplete perfection as alone we have yet reached through our religious organisations.

The impulse of the English race towards moral development and

self-conquest has nowhere so powerfully manifested itself as in Puritanism; nowhere has Puritanism found so adequate an expression as in the religious organisation of the Independents. The modern Independents have a newspaper, the *Nonconformist*, written with great sincerity and ability. The motto, the standard, the profession of faith which this organ of theirs carries aloft, is: "The Dissidence of Dissent and the Protestantism of the Protestant religion." There is sweetness and light, and an ideal of complete harmonious human perfection! One need not go to culture and poetry to find language to judge it. Religion, with its instinct for perfection, supplies language to judge it: "Finally, be of one mind, united in feeling," says St. Peter. There is an ideal which judges the Puritan ideal — "The Dissidence of Dissent and the Protestantism of the Protestant religion!" And religious organisations like this are what people believe in, rest in, would give their lives for! Such, I say, is the wonderful virtue of even the beginnings of perfection, of having conquered even the plain faults of our animality, that the religious organisation which has helped us to do it can seem to us something precious, salutary, and to be propagated, even when it wears such a brand of imperfection on its forehead as this. And men have got such a habit of giving to the language of religion a special application, of making it a mere jargon, that for the condemnation which religion itself passes on the shortcomings of their religious organisations they have no ear; they are sure to cheat themselves and to explain this condemnation away. They can only be reached by the criticism which culture, like poetry, speaking a language not to be sophisticated, and resolutely testing these organisations by the ideal of a human perfection complete on all sides, applies to them.

But men of culture and poetry, it will be said, are again and again failing, and failing conspicuously, in the necessary first stage to perfection, in the subduing of the great obvious faults of our animality, which it is the glory of these religious organisations to have

helped us to subdue. True, they do often so fail: they have often been without the virtues as well as the faults of the Puritan; it has been one of their dangers that they so felt the Puritan's faults that they too much neglected the practice of his virtues. I will not, however, exculpate them at the Puritan's expense; they have often failed in morality, and morality is indispensable; they have been punished for their failure, as the Puritan has been rewarded for his performance. They have been punished wherein they erred; but their ideal of beauty and sweetness and light, and a human nature complete on all its sides, remains the true ideal of perfection still; just as the Puritan's ideal of perfection remains narrow and inadequate, although for what he did well he has been richly rewarded. Notwithstanding the mighty results of the Pilgrim Fathers' voyage, they and their standard of perfection are rightly judged when we figure to ourselves Shakespeare or Virgil, — souls in whom sweetness and light, and all that in human nature is most humane, were eminent, — accompanying them on their voyage, and think what intolerable company Shakespeare and Virgil would have found them! In the same way let us judge the religious organisations which we see all around us. Do not let us deny the good and the happiness which they have accomplished; but do not let us fail to see clearly that their idea of human perfection is narrow and inadequate, and that the Dissidence of Dissent and the Protestantism of the Protestant religion will never bring humanity to its true goal. As I said with regard to wealth, — let us look at the life of those who live in and for it; — so I say with regard to the religious organisations. Look at the life imagined in such a newspaper as the *Nonconformist*; — a life of jealousy of the Establishment, disputes, tea-meetings, openings of chapels, sermons; and then think of it as an ideal of a human life completing itself on all sides, and aspiring with all its organs after sweetness, light, and perfection!

Another newspaper, representing, like the *Nonconformist*, one of the religious organisations of this country, was a short time ago giving

an account of the crowd at Epsom on the Derby day, and of all the vice and hideousness which was to be seen in that crowd; and then the writer turned suddenly round upon Professor Huxley, and asked him how he proposed to cure all this vice and hideousness without religion. I confess I felt disposed to ask the asker this question: And how do you propose to cure it with such a religion as yours? How is the ideal of a life so unlovely, so unattractive, so narrow, so far removed from a true and satisfying ideal of human perfection, as is the life of your religious organisation as you yourself image it, to conquer and transform all this vice and hideousness? Indeed, the strongest plea for the study of perfection as pursued by culture, the clearest proof of the actual inadequacy of the idea of perfection held by the religious organisations, — expressing, as I have said, the most widespread effort which the human race has yet made after perfection, — is to be found in the state of our life and society with these in possession of it, and having been in possession of it I know not how many hundred years. We are all of us included in some religious organisation or other; we all call ourselves, in the sublime and aspiring language of religion which I have before noticed, *children of God*. Children of God; — it is an immense pretension! — and how are we to justify it? By the works which we do, and the words which we speak. And the work which we collective children of God do, our grand centre of life, our *city* which we have builded for us to dwell in, is London! London, with its unutterable external hideousness, and with its internal canker of *publicé egestas, privatim opulentia*, — to use the words which Sallust puts into Cato's mouth about Rome, — unequalled in the world! The word, again, which we children of God speak, the voice which most hits our collective thought, the newspaper with the largest circulation in England, nay, with the largest circulation in the whole world, is the *Daily Telegraph*! I say that when our religious organisations, — which I admit to express the most considerable effort after perfection that our race has yet made, — land us in no better result than this, it is high time to

examine carefully their idea of perfection, to see whether it does not leave out of account sides and forces of human nature which we might turn to great use; whether it would not be more operative if it were more complete. And I say that the English reliance on our religious organisations and on their ideas of human perfection just as they stand, is like our reliance on freedom, on muscular Christianity, on population, on coal, on wealth, — mere belief in machinery, and unfruitful; and that it is wholesomely counteracted by culture, bent on seeing things as they are, and on drawing the human race onwards to a more complete perfection.

Culture, however, shows its single-minded love of perfection, its desire simply to make reason and the will of God prevail, its freedom from fanaticism, by its attitude towards all this machinery, even while it insists that it is machinery. Fanatics, seeing the mischief men do themselves by their blind belief in some machinery or other, — whether it is wealth and industrialism, or whether it is the cultivation of bodily strength and activity, or whether it is a political organisation, or whether it is a religious organisation, — oppose with might and main the tendency to this or that political and religious organisation, or to games and athletic exercises, or to wealth and industrialism, and try violently to stop it. But the flexibility which sweetness and light give, and which is one of the rewards of culture pursued in good faith, enables a man to see that a tendency may be necessary, and even, as a preparation for something in the future, salutary, and yet that the generations or individuals who obey this tendency are sacrificed to it, that they fall short of the hope of perfection by following it; and that its mischiefs are to be criticised, lest it should take too firm a hold and last after it has served its purpose. Mr. Gladstone well pointed out, in a speech at Paris, — and others have pointed out the same thing, — how necessary is the present great movement towards wealth and industrialism, in order to lay broad foundations of material well-being for the society of the

future. The worst of these justifications is, that they are generally addressed to the very people engaged, body and soul, in the movement in question; at all events, they are always seized with the greatest avidity by these people, and taken by them as quite justifying their life; and that thus they tend to harden them in their sins. Now, culture admits the necessity of the movement towards fortune-making and exaggerated industrialism, readily allows that the future may derive benefit from it; but insists, at the same time, that the passing generations of industrialists, — forming, for the most part, the stout main body of Philistinism, — are sacrificed to it. In the same way, the result of all the games and sports which occupy the passing generation of boys and young men may be the establishment of a better and sounder physical type for the future to work with. Culture does not set itself against the games and sports; it congratulates the future, and hopes it will make a good use of its improved physical basis; but it points out that our passing generation of boys and young men is, meantime, sacrificed. Puritanism was necessary to develop the moral fibre of the English race, Nonconformity to break the yoke of ecclesiastical domination over men's minds and to prepare the way for freedom of thought in the distant future; still, culture points out that the harmonious perfection of generations of Puritans and Nonconformists have been, in consequence, sacrificed. Freedom of speech is necessary for the society of the future, but the young lions of the *Daily Telegraph* in the meanwhile are sacrificed. A voice for every man in his country's government is necessary for the society of the future, but meanwhile Mr. Beales and Mr. Bradlaugh are sacrificed.

Oxford, the Oxford of the past, has many faults; and she has heavily paid for them in defeat, in isolation, in want of hold upon the modern world. Yet we in Oxford, brought up amidst the beauty and sweetness of that beautiful place, have not failed to seize one truth: — the truth that beauty and sweetness are essential characters of a complete human perfection. When I insist on this, I am all in the faith

and tradition of Oxford. I say boldly that this our sentiment for beauty and sweetness, our sentiment against hideousness and rawness, has been at the bottom of our attachment to so many beaten causes, of our opposition to so many triumphant movements. And the sentiment is true, and has never been wholly defeated, and has shown its power even in its defeat. We have not won our political battles, we have not carried our main points, we have not stopped our adversaries' advance, we have not marched victoriously with the modern world; but we have told silently upon the mind of the country, we have prepared currents of feeling which sap our adversaries' position when it seems gained, we have kept up our own communications with the future. Look at the course of the great movement which shook Oxford to its centre some thirty years ago! It was directed, as any one who reads Dr. Newman's *Apology* may see, against what in one word may be called "liberalism." Liberalism prevailed; it was the appointed force to do the work of the hour; it was necessary, it was inevitable that it should prevail. The Oxford movement was broken, it failed; our wrecks are scattered on every shore:

Quæ regio in terris nostri non plena laboris?

But what was it, this liberalism, as Dr. Newman saw it, and as it really broke the Oxford movement? It was the great middle-class liberalism, which had for the cardinal points of its belief the Reform Bill of, and local self-government, in politics; in the social sphere, free-trade, unrestricted competition, and the making of large industrial fortunes; in the religious sphere, the Dissidence of Dissent and the Protestantism of the Protestant religion. I do not say that other and more intelligent forces than this were not opposed to the Oxford movement: but this was the force which really beat it; this was the force which Dr. Newman felt himself fighting with; this was the force which till only the other day seemed to be the paramount force in this country, and to be in possession of the future; this was the force whose

achievements fill Mr. Lowe with such inexpressible admiration, and whose rule he was so horror-struck to see threatened. And where is this great force of Philistinism now? It is thrust into the second rank, it is become a power of yesterday, it has lost the future. A new power has suddenly appeared, a power which it is impossible yet to judge fully, but which is certainly a wholly different force from middle-class liberalism; different in its cardinal points of belief, different in its tendencies in every sphere. It loves and admires neither the legislation of middle-class Parliaments, nor the local selfgovernment of middle-class vestries, nor the unrestricted competition of middle-class industrialists, nor the dissidence of middle-class Dissent and the Protestantism of middle-class Protestant religion. I am not now praising this new force, or saying that its own ideals are better; all I say is, that they are wholly different. And who will estimate how much the currents of feeling created by Dr. Newman's movement, the keen desire for beauty and sweetness which it nourished, the deep aversion it manifested to the hardness and vulgarity of middle-class liberalism, the strong light it turned on the hideous and grotesque illusions of middle-class Protestantism, — who will estimate how much all these contributed to swell the tide of secret dissatisfaction which has mined the ground under the self-confident liberalism of the last thirty years, and has prepared the way for its sudden collapse and supersession? It is in this manner that the sentiment of Oxford for beauty and sweetness conquers, and in this manner long may it continue to conquer!

In this manner it works to the same end as culture, and there is plenty of work for it yet to do. I have said that the new and more democratic force which is now superseding our old middle-class liberalism cannot yet be rightly judged. It has its main tendencies still to form. We hear promises of its giving us administrative reform, law reform, reform of education, and I know not what; but those promises come rather from its advocates, wishing to make a good plea for it and

to justify it for superseding middle-class liberalism, than from clear tendencies which it has itself yet developed. But meanwhile it has plenty of well-intentioned friends against whom culture may with advantage continue to uphold steadily its ideal of human perfection; that this is *an inward spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy*. Mr. Bright, who has a foot in both worlds, the world of middle-class liberalism and the world of democracy, but who brings most of his ideas from the world of middle-class liberalism in which he was bred, always inclines to inculcate that faith in machinery to which, as we have seen, Englishmen are so prone, and which has been the bane of middle-class liberalism. He complains with a sorrowful indignation of people who “appear to have no proper estimate of the value of the franchise;” he leads his disciples to believe, — what the Englishman is always too ready to believe, — that the having a vote, like the having a large family, or a large business, or large muscles, has in itself some edifying and perfecting effect upon human nature. Or else he cries out to the democracy, — “the men,” as he calls them, “upon whose shoulders the greatness of England rests,” — he cries out to them: “See what you have done! I look over this country and see the cities you have built, the railroads you have made, the manufactures you have produced, the cargoes which freight the ships of the greatest mercantile navy the world has ever seen! I see that you have converted by your labours what was once a wilderness, these islands, into a fruitful garden; I know that you have created this wealth, and are a nation whose name is a word of power throughout all the world.” Why, this is just the very style of laudation with which Mr. Roebuck or Mr. Lowe debauch the minds of the middle classes, and make such Philistines of them. It is the same fashion of teaching a man to value himself not on what he *is*, not on his progress in sweetness and light, but on the number of the railroads he has constructed, or the bigness of the Tabernacle he has built. Only the middle classes are told they have done it all with their energy, self-

reliance, and capital, and the democracy are told they have done it all with their hands and sinews. But teaching the democracy to put its trust in achievements of this kind is merely training them to be Philistines to take the place of the Philistines whom they are superseding; and they too, like the middle class, will be encouraged to sit down at the banquet of the future without having on a wedding garment, and nothing excellent can then come from them. Those who know their besetting faults, those who have watched them and listened to them, or those who will read the instructive account recently given of them by one of themselves, the *Journeyman Engineer*, will agree that the idea which culture sets before us of perfection, — an increased spiritual activity, having for its characters increased sweetness, increased light, increased life, increased sympathy, — is an idea which the new democracy needs far more than the idea of the blessedness of the franchise, or the wonderfulness of their own industrial performances.

Other well-meaning friends of this new power are for leading it, not in the old ruts of middle-class Philistinism, but in ways which are naturally alluring to the feet of democracy, though in this country they are novel and untried ways. I may call them the ways of Jacobinism. Violent indignation with the past, abstract systems of renovation applied wholesale, a new doctrine drawn up in black and white for elaborating down to the very smallest details a rational society for the future, — these are the ways of Jacobinism. Mr. Frederic Harrison and other disciples of Comte, — one of them, Mr. Congreve, is an old acquaintance of mine, and I am glad to have an opportunity of publicly expressing my respect for his talents and character, — are among the friends of democracy who are for leading it in paths of this kind. Mr. Frederic Harrison is very hostile to culture, and from a natural enough motive; for culture is the eternal opponent of the two things which are the signal marks of Jacobinism, — its fierceness, and its addiction to an abstract system. Culture is

always assigning to systemmakers and systems a smaller share in the bent of human destiny than their friends like. A current in people's minds sets towards new ideas; people are dissatisfied with their old narrow stock of Philistine ideas, Anglo-Saxon ideas, or any other; and some man, some Bentham or Comte, who has the real merit of having early and strongly felt and helped the new current, but who brings plenty of narrownesses and mistakes of his own into his feeling and help of it, is credited with being the author of the whole current, the fit person to be entrusted with its regulation and to guide the human race. The excellent German historian of the mythology of Rome, Preller, relating the introduction at Rome under the Tarquins of the worship of Apollo, the god of light, healing, and reconciliation, observes that it was not so much the Tarquins who brought to Rome the new worship of Apollo, as a current in the mind of the Roman people which set powerfully at that time towards a new worship of this kind, and away from the old run of Latin and Sabine religious ideas. In a similar way, culture directs our attention to the current in human affairs, and to its continual working, and will not let us rivet our faith upon any one man and his doings. It makes us see, not only his good side, but also how much in him was of necessity limited and transient; nay, it even feels a pleasure, a sense of an increased freedom and of an ampler future, in so doing. I remember, when I was under the influence of a mind to which I feel the greatest obligations, the mind of a man who was the very incarnation of sanity and clear sense, a man the most considerable, it seems to me, whom America has yet produced, — Benjamin Franklin, — I remember the relief with which, after long feeling the sway of Franklin's imperturbable commonsense, I came upon a project of his for a new version of the Book of Job, to replace the old version, the style of which, says Franklin, has become obsolete, and thence less agreeable. "I give," he continues, "a few verses, which may serve as a sample of the kind of version I would recommend." We all recollect the famous verse in our translation: "Then Satan answered the Lord and said: 'Doth Job fear

God for nought?" Franklin makes this: "Does Your Majesty imagine that Job's good conduct is the effect of mere personal attachment and affection?" I well remember how when first I read that, I drew a deep breath of relief, and said to myself: "After all, there is a stretch of humanity beyond Franklin's victorious good sense!" So, after hearing Bentham cried loudly up as the renovator of modern society, and Bentham's mind and ideas proposed as the rulers of our future, I open the *Deontology*. There I read: "While Xenophon was writing his history and Euclid teaching geometry, Socrates and Plato were talking nonsense under pretence of talking wisdom and morality. This morality of theirs consisted in words; this wisdom of theirs was the denial of matters known to every man's experience." From the moment of reading that, I am delivered from the bondage of Bentham! the fanaticism of his adherents can touch me no longer; I feel the inadequacy of his mind and ideas for being the rule of human society, for perfection. Culture tends always thus to deal with the men of a system, of disciples, of a school; with men like Comte, or the late Mr. Buckle, or Mr. Mill. However much it may find to admire in these personages, or in some of them, it nevertheless remembers the text: "Be not ye called Rabbi!" and it soon passes on from any Rabbi. But Jacobinism loves a Rabbi; it does not want to pass on from its Rabbi in pursuit of a future and still unreached perfection; it wants its Rabbi and his ideas to stand for perfection, that they may with the more authority recast the world; and for Jacobinism, therefore, culture, — eternally passing onwards and seeking, — is an impertinence and an offence. But culture, just because it resists this tendency of Jacobinism to impose on us a man with limitations and errors of his own along with the true ideas of which he is the organ, really does the world and Jacobinism itself a service.

So, too, Jacobinism, in its fierce hatred of the past and of those whom it makes liable for the sins of the past, cannot away with culture, — culture with its inexhaustible indulgence, its

consideration of circumstances, its severe judgment of actions joined to its merciful judgment of persons. "The man of culture is in politics," cries Mr. Frederic Harrison, "one of the poorest mortals alive!" Mr. Frederic Harrison wants to be doing business, and he complains that the man of culture stops him with a "turn for small fault-finding, love of selfish ease, and indecision in action." Of what use is culture, he asks, except for "a critic of new books or a professor of *belles lettres*?" Why, it is of use because, in presence of the fierce exasperation which breathes, or rather, I may say, hisses, through the whole production in which Mr. Frederic Harrison asks that question, it reminds us that the perfection of human nature is sweetness and light. It is of use because, like religion, — that other effort after perfection, — it testifies that, where bitter envying and strife are, there is confusion and every evil work.

The pursuit of perfection, then, is the pursuit of sweetness and light. He who works for sweetness works in the end for light also; he who works for light works in the end for sweetness also. But he who works for sweetness and light united, works to make reason and the will of God prevail. He who works for machinery, he who works for hatred, works only for confusion. Culture looks beyond machinery, culture hates hatred; culture has but one great passion, the passion for sweetness and light. Yes, it has one yet greater! — the passion for making them *prevail*. It is not satisfied till we *all* come to a perfect man; it knows that the sweetness and light of the few must be imperfect until the raw and unkindled masses of humanity are touched with sweetness and light. If I have not shrunk from saying that we must work for sweetness and light, so neither have I shrunk from saying that we must have a broad basis, must have sweetness and light for as many as possible. Again and again I have insisted how those are the happy moments of humanity, how those are the marking epochs of a people's life, how those are the flowering times for literature and art and all the creative power of genius, when there is a

national glow of life and thought, when the whole of society is in the fullest measure permeated by thought, sensible to beauty, intelligent and alive. Only it must be *real* thought and *real* beauty; *real* sweetness and *real* light. Plenty of people will try to give the masses, as they call them, an intellectual food prepared and adapted in the way they think proper for the actual condition of the masses. The ordinary popular literature is an example of this way of working on the masses. Plenty of people will try to indoctrinate the masses with the set of ideas and judgments constituting the creed of their own profession or party. Our religious and political organisations give an example of this way of working on the masses. I condemn neither way; but culture works differently. It does not try to teach down to the level of inferior classes; it does not try to win them for this or that sect of its own, with ready-made judgments and watchwords. It seeks to do away with classes; to make all live in an atmosphere of sweetness and light, and use ideas, as it uses them itself, freely, — to be nourished and not bound by them. This is the *social idea*; and the men of culture are the true apostles of equality. The great men of culture are those who have had a passion for diffusing, for making prevail, for carrying from one end of society to the other, the best knowledge, the best ideas of their time; who have laboured to divest knowledge of all that was harsh, uncouth, difficult, abstract, professional, exclusive; to humanise it, to make it efficient outside the clique of the cultivated and learned, yet still remaining the *best* knowledge and thought of the time, and a true source, therefore, of sweetness and light. Such a man was Abelard in the Middle Ages, in spite of all his imperfections; and thence the boundless emotion and enthusiasm which Abelard excited. Such were Lessing and Herder in Germany, at the end of the last century; and their services to Germany were in this way inestimably precious. Generations will pass, and literary monuments will accumulate, and works far more perfect than the works of Lessing and Herder will be produced in Germany; and yet the names of these two men will fill a German with a reverence and enthusiasm such as the names of the

most gifted masters will hardly awaken. Because they *humanised* knowledge; because they broadened the basis of life and intelligence; because they worked powerfully to diffuse sweetness and light, to make reason and the will of God prevail. With Saint Augustine they said:“Let us not leave Thee alone to make in the secret of thy knowledge, as thou didst before the creation of the firmament, the division of light from darkness; let the children of thy spirit, placed in their firmament, make their light shine upon the earth, mark the division of night and day, and announce the revolution of the times; for the old order is passed, and the new arises; the night is spent, the day is come forth; and thou shalt crown the year with thy blessing, when thou shalt send forth labourers into thy harvest sown by other hands than theirs; when thou shalt send forth new labourers to new seed-times, whereof the harvest shall be not yet.”

菲利普·斯坦霍普（1694—1773），切斯特菲尔德第四任伯爵。

Chapter II

I have been trying to show that culture is, or ought to be, the study and pursuit of perfection; and that of perfection as pursued by culture, beauty and intelligence, or, in other words, sweetness and light, are the main characters. But hitherto I have been insisting chiefly on beauty, or sweetness, as a character of perfection. To complete rightly my design, it evidently remains to speak also of intelligence, or light, as a character of perfection. First, however, I ought perhaps to notice that, both here and on the other side of the Atlantic, all sorts of objections are raised against the "religion of culture," as the objectors mockingly call it, which I am supposed to be promulgating. It is said to be a religion proposing parmaceti, or some scented salve or other, as a cure for human miseries; a religion breathing a spirit of cultivated inaction, making its believer refuse to lend a hand at uprooting the definite evils on all sides of us, and filling him with antipathy against the reforms and reformers which try to extirpate them. In general, it is summed up as being not practical, or, — as some critics more familiarly put it, — all moonshine. That Alcibiades, the editor of the *Morning Star*, taunts me, as its promulgator, with living out of the world and knowing nothing of life and men. That great austere toiler, the editor of the *Daily Telegraph*, upbraids me, — but kindly, and more in sorrow than in anger, — for trifling with aesthetics and poetical fancies, while he himself, in that arsenal of his in Fleet Street, is bearing the burden and heat of the day. An intelligent American newspaper, the *Nation*, says that it is very easy to sit in one's study and find fault with the course of modern society, but the thing is to propose practical improvements for it. While, finally, Mr. Frederic Harrison, in a very good-tempered and witty satire, which makes me quite understand his having apparently

achieved such a conquest of my young Prussian friend, Arminius, at last gets moved to an almost stern moral impatience, to behold, as he says, "Death, sin, cruelty stalk among us, filling their maws with innocence and youth," and me, in the midst of the general tribulation, handing out my pouncet-box.

It is impossible that all these remonstrances and reproofs should not affect me, and I shall try my very best, in completing my design and in speaking of light as one of the characters of perfection, and of culture as giving us light, to profit by the objections I have heard and read, and to drive at practice as much as I can, by showing the communications and passages into practical life from the doctrine which I am inculcating.

It is said that a man with my theories of sweetness and light is full of antipathy against the rougher or coarser movements going on around him, that he will not lend a hand to the humble operation of uprooting evil by their means, and that therefore the believers in action grow impatient with them. But what if rough and coarse action, ill-calculated action, action with insufficient light, is, and has for a long time been, our bane? What if our urgent want now is, not to act at any price, but rather to lay in a stock of light for our difficulties? In that case, to refuse to lend a hand to the rougher and coarser movements going on round us, to make the primary need, both for oneself and others, to consist in enlightening ourselves and qualifying ourselves to act less at random, is surely the best, and in real truth the most practical line, our endeavours can take. So that if I can show what my opponents call rough or coarse action, but what I would rather call random and ill-regulated action, — action with insufficient light, action pursued because we like to be doing something and doing it as we please, and do not like the trouble of thinking, and the severe constraint of any kind of rule, — if I can show this to be, at the present moment, a practical mischief and

danger to us, then I have found a practical use for light in correcting this state of things, and have only to exemplify how, in cases which fall under everybody's observation, it may deal with it.

When I began to speak of culture, I insisted on our bondage to machinery, on our proneness to value machinery as an end in itself, without looking beyond it to the end for which alone, in truth, it is valuable. Freedom, I said, was one of those things which we thus worshipped in itself, without enough regarding the ends for which freedom is to be desired. In our common notions and talk about freedom, we eminently show our idolatry of machinery. Our prevalent notion is, — and I quoted a number of instances to prove it, — that it is a most happy and important thing for a man merely to be able to do as he likes. On what he is to do when he is thus free to do as he likes, we do not lay so much stress. Our familiar praise of the British Constitution under which we live, is that it is a system of checks, — a system which stops and paralyses any power in interfering with the free action of individuals. To this effect Mr. Bright, who loves to walk in the old ways of the Constitution, said forcibly in one of his great speeches, what many other people are every day saying less forcibly, that the central idea of English life and politics is *the assertion of personal liberty*. Evidently this is so; but evidently, also, as feudalism, which with its ideas and habits of subordination was for many centuries silently behind the British Constitution, dies out, and we are left with nothing but our system of checks, and our notion of its being the great right and happiness of an Englishman to do as far as possible what he likes, we are in danger of drifting towards anarchy. We have not the notion, so familiar on the Continent and to antiquity, of *the State* — the nation, in its collective and corporate character, entrusted with stringent powers for the general advantage, and controlling individual wills in the name of an interest wider than that of individuals. We say, what is very true, that this notion is often made instrumental to tyranny; we say that a

State is in reality made up of the individuals who compose it, and that every individual is the best judge of his own interests. Our leading class is an aristocracy, and no aristocracy likes the notion of a State-authority greater than itself, with a stringent administrative machinery superseding the decorative inutilities of lord-lieutenancy, deputy-lieutenancy, and the *posse comitatûs*, which are all in its own hands. Our middle-class, the great representative of trade and Dissent, with its maxims of every man for himself in business, every man for himself in religion, dreads a powerful administration which might somehow interfere with it; and besides, it has its own decorative inutilities of vestrymanship and guardianship, which are to this class what lord-lieutenancy and the county magistracy are to the aristocratic class, and a stringent administration might either take these functions out of its hands, or prevent its exercising them in its own comfortable, independent manner, as at present.

Then as to our working-class. This class, pressed constantly by the hard daily compulsion of material wants, is naturally the very centre and stronghold of our national idea, that it is man's ideal right and felicity to do as he likes. I think I have somewhere related how Monsieur Michelet said to me of the people of France, that it was "a nation of barbarians civilised by the conscription." He meant that through their military service the idea of public duty and of discipline was brought to the mind of these masses, in other respects so raw and uncultivated. Our masses are quite as raw and uncultivated as the French; and, so far from their having the idea of public duty and of discipline, superior to the individual's self-will, brought to their mind by a universal obligation of military service, such as that of the conscription, — so far from their having this, the very idea of a conscription is so at variance with our English notion of the prime right and blessedness of doing as one likes, that I remember the manager of the Clay Cross works in Derbyshire told me during the Crimean war, when our want of soldiers was much felt and some

people were talking of a conscription, that sooner than submit to a conscription the population of that district would flee to the mines, and lead a sort of Robin Hood life under ground.

For a long time, as I have said, the strong feudal habits of subordination and deference continued to tell upon the working-class. The modern spirit has now almost entirely dissolved those habits, and the anarchical tendency of our worship of freedom in and for itself, of our superstitious faith, as I say, in machinery, is becoming very manifest. More and more, because of this our blind faith in machinery, because of our want of light to enable us to look beyond machinery to the end for which machinery is valuable, this and that man, and this and that body of men, all over the country, are beginning to assert and put in practice an Englishman's right to do what he likes; his right to march where he likes, meet where he likes, enter where he likes, hoot as he likes, threaten as he likes, smash as he likes. All this, I say, tends to anarchy; and though a number of excellent people, and particularly my friends of the liberal or progressive party, as they call themselves, are kind enough to reassure us by saying that these are trifles, that a few transient outbreaks of rowdyism signify nothing, that our system of liberty is one which itself cures all the evils which it works, that the educated and intelligent classes stand in overwhelming strength and majestic repose, ready, like our military force in riots, to act at a moment's notice, — yet one finds that one's liberal friends generally say this because they have such faith in themselves and their nostrums, when they shall return, as the public welfare requires, to place and power. But this faith of theirs one cannot exactly share, when one has so long had them and their nostrums at work, and sees that they have not prevented our coming to our present embarrassed condition; and one finds, also, that the outbreaks of rowdyism tend to become less and less of trifles, to become more frequent rather than less frequent; and that meanwhile our educated and intelligent classes remain in their majestic repose, and somehow or other, whatever

happens, their overwhelming strength, like our military force in riots, never does act.

How, indeed, *should* their overwhelming strength act, when the man who gives an inflammatory lecture, or breaks down the Park railings, or invades a Secretary of State's office, is only following an Englishman's impulse to do as he likes; and our own conscience tells us that we ourselves have always regarded this impulse as something primary and sacred? Mr. Murphy lectures at Birmingham, and showers on the Catholic population of that town, "words," says Mr. Hardy, "only fit to be addressed to thieves or murderers." What then? Mr. Murphy has his own reasons of several kinds. He suspects the Roman Catholic Church of designs upon Mrs. Murphy; and he says, if mayors and magistrates do not care for their wives and daughters, he does. But, above all, he is doing as he likes, or, in worthier language, asserting his personal liberty. "I will carry out my lectures if they walk over my body as a dead corpse; and I say to the Mayor of Birmingham that he is my servant while I am in Birmingham, and as my servant he must do his duty and protect me. Touching and beautiful words, which find a sympathetic chord in every British bosom! The moment it is plainly put before us that a man is asserting his personal liberty, we are half disarmed; because we are believers in freedom, and not in some dream of a right reason to which the assertion of our freedom is to be subordinated. Accordingly, the Secretary of State had to say that although the lecturer's language was "only fit to be addressed to thieves or murderers," yet, "I do not think he is to be deprived, I do not think that anything I have said could justify the inference that he is to be deprived, of the right of protection in a place built by him for the purpose of these lectures; because the language was not language which afforded grounds for a criminal prosecution." No, nor to be silenced by Mayor, or Home Secretary, or any administrative authority on earth, simply on their notion of what is discreet and reasonable! This is in perfect consonance with our public opinion, and with our

national love for the assertion of personal liberty.

In quite another department of affairs, an experienced and distinguished Chancery Judge relates an incident which is just to the same effect as this of Mr. Murphy. A testator bequeathed 300*l.*a year to be for ever applied as a pension to some person who had been unsuccessful in literature, and whose duty should be to support and diffuse, by his writings, the testator's own views, as enforced in the testator's publications. This bequest was appealed against in the Court of Chancery, on the ground of its absurdity; but, being only absurd, it was upheld, and the so-called charity was established. Having, I say, at the bottom of our English hearts a very strong belief in freedom, and a very weak belief in right reason, we are soon silenced when a man pleads the prime right to do as he likes, because this is the prime right for ourselves too; and even if we attempt now and then to mumble something about reason, yet we have ourselves thought so little about this and so much about liberty, that we are in conscience forced, when our brother Philistine with whom we are meddling turns boldly round upon us and asks: *Have you any light?* — to shake our heads ruefully, and to let him go his own way after all.

There are many things to be said on behalf of this exclusive attention of ours to liberty, and of the relaxed habits of government which it has engendered. It is very easy to mistake or to exaggerate the sort of anarchy from which we are in danger through them. We are not in danger from Fenianism, fierce and turbulent as it may show itself; for against this our conscience is free enough to let us act resolutely and put forth our overwhelming strength the moment there is any real need for it. In the first place, it never was any part of our creed that the great right and blessedness of an Irishman, or, indeed, of anybody on earth except an Englishman, is to do as he likes, and we can have no scruple at all about abridging, if necessary, a non-Englishman's assertion of personal liberty. The British Constitution, its

checks, and its prime virtues, are for Englishmen. We may extend them to others out of love and kindness; but we find no real divine law written on our hearts constraining us so to extend them. And then the difference between an Irish Fenian and an English rough is so immense, and the case, in dealing with the Fenian, so much more clear! He is so evidently desperate and dangerous, a man of a conquered race, a Papist, with centuries of ill-usage to inflame him against us, with an alien religion established in his country by us at his expense, with no admiration of our institutions, no love of our virtues, no talents for our business, no turn for our comfort! Show him our symbolical Truss Manufactory on the finest site in Europe, and tell him that British industrialism and individualism can bring a man to that, and he remains cold! Evidently, if we deal tenderly with a sentimentalist like this, it is out of pure philanthropy. But with the Hyde Park rioter how different! He is our own flesh and blood; he is a Protestant; he is framed by nature to do as we do, hate what we hate, love what we love; he is capable of feeling the symbolical force of the Truss Manufactory; the question of questions, for him, is a wages' question. That beautiful sentence Sir Daniel Gooch quoted to the Swindon workmen, and which I treasure as Mrs. Gooch's Golden Rule, or the Divine Injunction "Be ye Perfect" done into British, — the sentence Sir Daniel Gooch's mother repeated to him every morning when he was a boy going to work: "*Ever remember, my dear Dan, that you should look forward to being some day manager of that concern!*" — this fruitful maxim is perfectly fitted to shine forth in the heart of the Hyde Park rough also, and to be his guiding-star through life. He has no visionary schemes of revolution and transformation, though of course he would like his class to rule, as the aristocratic class like their class to rule, and the middle-class theirs. Meanwhile, our social machine is a little out of order; there are a good many people in our paradisiacal centres of industrialism and individualism taking the bread out of one another's mouths; the rioter has not yet quite found his groove and settled down to his work, and so he is just asserting his

personal liberty a little, going where he likes, assembling where he likes, bawling as he likes, hustling as he likes. Just as the rest of us, — as the country squires in the aristocratic class, as the political dissenters in the middle-class, — he has no idea of a *State*, of the nation in its collective and corporate character controlling, as government, the free swing of this or that one of its members in the name of the higher reason of all of them, his own as well as that of others. He sees the rich, the aristocratic class, in occupation of the executive government, and so if he is stopped from making Hyde Park a bear-garden or the streets impassable, he says he is being butchered by the aristocracy.

His apparition is somewhat embarrassing, because too many cooks spoil the broth; because, while the aristocratic and middle classes have long been doing as they like with great vigour, he has been too undeveloped and submissive hitherto to join in the game; and now, when he does come, he comes in immense numbers, and is rather raw and rough. But he does not break many laws, or not many at one time; and, as our laws were made for very different circumstances from our present (but always with an eye to Englishmen doing as they like), and as the clear letter of the law must be against our Englishman who does as he likes and not only the spirit of the law and public policy, and as Government must neither have any discretionary power nor act resolutely on its own interpretation of the law if any one disputes it, it is evident our laws give our playful giant, in doing as he likes, considerable advantage. Besides, even if he can be clearly proved to commit an illegality in doing as he likes, there is always the resource of not putting the law in force, or of abolishing it. So he has his way, and if he has his way he is soon satisfied for the time; however, he falls into the habit of taking it oftener and oftener, and at last begins to create by his operations a confusion of which mischievous people can take advantage, and which at any rate, by troubling the common course of business throughout

the country tends to cause distress, and so to increase the sort of anarchy and social disintegration which had previously commenced. And thus that profound sense of settled order and security, without which a society like ours cannot live and grow at all, is beginning to threaten us with taking its departure.

Now, if culture, which simply means trying to perfect oneself, and one's mind as part of oneself, brings us light, and if light shows us that there is nothing so very blessed in merely doing as one likes, that the worship of the mere freedom to do as one likes is worship of machinery, that the really blessed thing is to like what right reason ordains, and to follow her authority, then we have got a practical benefit out of culture. We have got a much wanted principle, a principle of authority, to counteract the tendency to anarchy which seems to be threatening us.

But how to organise this authority, or to what hands to entrust the wielding of it? How to get your *State*, summing up the right reason of the community, and giving effect to it, as circumstances may require, with vigour? And here I think I see my enemies waiting for me with a hungry joy in their eyes. But I shall elude them.

The State, the power most representing the right reason of the nation, and most worthy, therefore, of ruling, — of exercising, when circumstances require it, authority over us all, — is for Mr. Carlyle the aristocracy. For Mr. Lowe, it is the middle-class with its incomparable Parliament. For the Reform League, it is the working-class, with its “brightest powers of sympathy and readiest powers of action.” Now, culture, with its disinterested pursuit of perfection, culture, simply trying to see things as they are, in order to seize on the best and to make it prevail, is surely well fitted to help us to judge rightly, by all the aids of observing, reading, and thinking, the qualifications and titles to our confidence of these three candidates for authority, and can thus render us a practical service of no mean value.

So when Mr. Carlyle, a man of genius to whom we have all at one time or other been indebted for refreshment and stimulus, says we should give rule to the aristocracy, mainly because of its dignity and politeness, surely culture is useful in reminding us, that in our idea of perfection the characters of beauty and intelligence are both of them present, and sweetness and light, the two noblest of things, are united. Allowing, therefore, with Mr. Carlyle, the aristocratic class to possess sweetness, culture insists on the necessity of light also, and shows us that aristocracies, being by the very nature of things inaccessible to ideas, unapt to see how the world is going, must be somewhat wanting in light, and must therefore be, at a moment when light is our great requisite, inadequate to our needs. Aristocracies, those children of the established fact, are for epochs of concentration. In epochs of expansion, epochs such as that in which we now live, epochs when always the warning voice is again heard: *Now is the judgment of this world* — in such epochs aristocracies, with their natural clinging to the established fact, their want of sense for the flux of things, for the inevitable transitoriness of all human institutions, are bewildered and helpless. Their serenity, their high spirit, their power of haughty resistance, — the great qualities of an aristocracy, and the secret of its distinguished manners and dignity, — these very qualities, in an epoch of expansion, turn against their possessors. Again and again I have said how the refinement of an aristocracy may be precious and educative to a raw nation as a kind of shadow of true refinement; how its serenity and dignified freedom from petty cares may serve as a useful foil to set off the vulgarity and hideousness of that type of life which a hard middle-class tends to establish, and to help people to see this vulgarity and hideousness in their true colours. From such an ignoble spectacle as that of poor Mrs. Lincoln, — a spectacle to vulgarise a whole nation, — aristocracies undoubtedly preserve us. But the true grace and serenity is that of which Greece and Greek art suggest the admirable ideals of perfection, — a serenity which comes from having made order among ideas and harmonised them;

whereas the serenity of aristocracies, at least the peculiar serenity of aristocracies of Teutonic origin, appears to come from their never having had any ideas to trouble them. And so, in a time of expansion like the present, a time for ideas, one gets, perhaps, in regarding an aristocracy, even more than the idea of serenity, the idea of futility and sterility. One has often wondered whether upon the whole earth there is anything so unintelligent, so unapt to perceive how the world is really going, as an ordinary young Englishman of our upper class. Ideas he has not, and neither has he that seriousness of our middle-class, which is, as I have often said, the great strength of this class, and may become its salvation. Why, a man may hear a young Dives of the aristocratic class, when the whim takes him to sing the praises of wealth and material comfort, sing them with a cynicism from which the conscience of the veriest Philistine of our industrial middle-class would recoil in affright. And when, with the natural sympathy of aristocracies for firm dealing with the multitude, and his uneasiness at our feeble dealing with it at home, an unvarnished young Englishman of our aristocratic class applauds the absolute rulers on the Continent, he in general manages completely to miss the grounds of reason and intelligence which alone can give any colour of justification, any possibility of existence, to those rulers, and applauds them on grounds which it would make their own hair stand on end to listen to.

And all this time, we are in an epoch of expansion; and the essence of an epoch of expansion is a movement of ideas, and the one salvation of an epoch of expansion is a harmony of ideas. The very principle of the authority which we are seeking as a defence against anarchy is right reason, ideas, light. The more, therefore, an aristocracy calls to its aid its innate forces, — its impenetrability, its high spirit, its power of haughty resistance, — to deal with an epoch of expansion, the graver is the danger, the greater the certainty of explosion, the surer the aristocracy's defeat; for it is trying to do violence to nature instead of working along with it. The best powers

shown by the best men of an aristocracy at such an epoch are, it will be observed, nonaristocratical powers, powers of industry, powers of intelligence; and these powers, thus exhibited, tend really not to strengthen the aristocracy, but to take their owners out of it, to expose them to the dissolving agencies of thought and change, to make them men of the modern spirit and of the future. If, as sometimes happens, they add to their non-aristocratical qualities of labour and thought, a strong dose of aristocratical qualities also, — of pride, defiance, turn for resistance — this truly aristocratical side of them, so far from adding any strength to them really neutralises their force and makes them impracticable and ineffective.

Knowing myself to be indeed sadly to seek, as one of my many critics says, in “a philosophy with coherent, interdependent, subordinate and derivative principles,” I continually have recourse to a plain man's expedient of trying to make what few simple notions I have, clearer, and more intelligible to myself, by means of example and illustration. And having been brought up at Oxford in the bad old times, when we were stuffed with Greek and Aristotle, and thought nothing of preparing ourselves, — as after Mr. Lowe's great speech at Edinburgh we shall do, — to fight the battle of life with the German waiters, my head is still full of a lumber of phrases we learnt at Oxford from Aristotle, about virtue being in a mean, and about excess and defect, and so on. Once when I had had the advantage of listening to the Reform debates in the House of Commons, having heard a number of interesting speakers, and among them Lord Elcho and Sir Thomas Bateson, I remember it struck me, applying Aristotle's machinery of the mean to my ideas about our aristocracy, that Lord Elcho was exactly the perfection, or happy mean, or virtue, of aristocracy, and Sir Thomas Bateson the excess; and I fancied that by observing these two we might see both the inadequacy of aristocracy to supply the principle of authority needful for our present wants, and the danger of its trying to supply it when it was not really competent

for the business. On the one hand, in Lord Elcho, showing plenty of high spirit, but remarkable, far above and beyond his gift of high spirit, for the fine tempering of his high spirit, for ease, serenity, politeness, — the great virtues, as Mr. Carlyle says, of aristocracy, — in this beautiful and virtuous mean, there seemed evidently some insufficiency of light; while, on the other hand, Sir Thomas Bateson, in whom the high spirit of aristocracy, its impenetrability, defiant courage, and pride of resistance, were developed even in excess, was manifestly capable, if he had his way given him, of causing us great danger, and, indeed, of throwing the whole commonwealth into confusion. Then I reverted to that old fundamental notion of mine about the grand merit of our race being really our honesty, and the very helplessness of our aristocratic or governing class in dealing with our perturbed social state gave me a sort of pride and satisfaction, because I saw they were, as a whole, too honest to try and manage a business for which they did not feel themselves capable.

Surely, now, it is no inconsiderable boon culture confers upon us, if in embarrassed times like the present it enables us to look at the ins and the outs of things in this way, without hatred and without partiality, and with a disposition to see the good in everybody all round. And I try to follow just the same course with our middle-class as with our aristocracy. Mr. Lowe talks to us of this strong middle part of the nation, of the unrivalled deeds of our liberal middle-class Parliament, of the noble, the heroic work it has performed in the last thirty years; and I begin to ask myself if we shall not, then, find in our middle-class the principle of authority we want, and if we had not better take administration as well as legislation away from the weak extreme which now administers for us, and commit both to the strong middle part. I observe, too, that the heroes of middle-class liberalism, such as we have hitherto known it, speak with a kind of prophetic anticipation of the great destiny which awaits them, and as if the future was clearly theirs. The advanced party, the progressive party,

the party in alliance with the future, are the names they like to give themselves. "The principles which will obtain recognition in the future," says Mr. Miall, a personage of deserved eminence among the political Dissenters, as they are called, who have been the backbone of middle-class liberalism — "the principles which will obtain recognition in the future are the principles for which I have long and zealously laboured. I qualified myself for joining in the work of harvest by doing to the best of my ability the duties of seedtime." These duties, if one is to gather them from the works of the great liberal party in the last thirty years, are, as I have elsewhere summed them up, the advocacy of free-trade, of parliamentary reform, of abolition of church-rates, of voluntarism in religion and education, of non-interference of the State between employers and employed, and of marriage with one's deceased wife's sister.

Now I know, when I object that all this is machinery, the great liberal middle-class has by this time grown cunning enough to answer, that it always meant more by these things than meets the eye; that it has had that within which passes show, and that we are soon going to see, in a Free Church and all manner of good things, what it was. But I have learned from Bishop Wilson (if Mr. Frederic Harrison will forgive my again quoting that poor old hierophant of a decayed superstition): "If we would really know our heart let us impartially view our actions;" and I cannot help thinking that if our liberals had had so much sweetness and light in their inner minds as they allege, more of it must have come out in their saying and doings. An American friend of the English liberals says, indeed, that their Dissidence or Dissent has been a mere instrument of the political Dissenters for making reason and the will of God prevail (and no doubt he would say the same of marriage with one's deceased wife's sister); and that the abolition of a State Church is merely the Dissenter's means to this end, just as culture is mine. Another American defender of theirs says just the same of their industrialism

and freetrade; indeed, this gentleman, taking the bull by the horns, proposes that we should for the future call industrialism culture, and the industrialists the men of culture, and then of course there can be no longer any misapprehension about their true character; and besides the pleasure of being wealthy and comfortable, they will have authentic recognition as vessels of sweetness and light. All this is undoubtedly specious; but I must remark that the culture of which I talked was an endeavour to come at reason and the will of God by means of reading, observing, and thinking; and that whoever calls anything else culture, may, indeed, call it so if he likes, but then he talks of something quite different from what I talked of. And, again, as culture's way of working for reason and the will of God is by directly trying to know more about them, while the Dissidence of Dissent is evidently in itself no effort of this kind, nor is its Free Church, in fact, a church with worthier conceptions of God and the ordering of the world than the State Church professes, but with mainly the same conceptions of these as the State Church has, only that every man is to comport himself as he likes in professing them, — this being so, I cannot at once accept the Nonconformity any more than the industrialism and the other great works of our liberal middle-class as proof positive that this class is in possession of light, and that here is the true seat of authority for which we are in search; but I must try a little further, and seek for other indications which may enable me to make up my mind.

Why should we not do with the middle-class as we have done with the aristocratic class, — find in it some representative men who may stand for the virtuous mean of this class, for the perfection of its present qualities and mode of being, and also for the excess of them. Such men must clearly not be men of genius like Mr. Bright; for, as I have formerly said, so far as a man has genius he tends to take himself out of the category of class altogether, and to become simply a man. Mr. Bright's brother, Mr. Jacob Bright, would, perhaps, be more

to the purpose; he seems to sum up very well in himself, without disturbing influences, the general liberal force of the middle-class, the force by which it has done its great works of free-trade, parliamentary reform, voluntaryism, and so on, and the spirit in which it has done them. Now it is clear, from what has been already said, that there has been at least an apparent want of light in the force and spirit through which these great works have been done, and that the works have worn in consequence too much a look of machinery. But this will be clearer still if we take, as the happy mean of the middle-class, not Mr. Jacob Bright, but his colleague in the representation of Manchester, Mr. Bazley. Mr. Bazley sums up for us, in general, the middle-class, its spirit and its works, at least as well as Mr. Jacob Bright; and he has given us, moreover, a famous sentence, which bears directly on the resolution of our present question, — whether there is light enough in our middle-class to make it the proper seat of the authority we wish to establish. When there was a talk some little while ago about the state of middle-class education, Mr. Bazley, as the representative of that class, spoke some memorable words: —“There had been a cry that middle-class education ought to receive more attention. He confessed himself very much surprised by the clamour that was raised. He did not think that class need excite the sympathy either of the legislature or the public.”Now this satisfaction of Mr. Bazley with the mental state of the middleclass was truly representative, and enhances his claim (if that were necessary) to stand as the beautiful and virtuous mean of that class. But it is obviously at variance with our definition of culture, or the pursuit of light and perfection, which made light and perfection consist, not in resting and being, but in growing and becoming, in a perpetual advance in beauty and wisdom. So the middle-class is by its essence, as one may say, by its incomparable self-satisfaction decisively expressed through its beautiful and virtuous mean, selfexcluded from wielding an authority of which light is to be the very soul.

Clear as this is, it will be made clearer still if we take some representative man as the excess of the middle-class, and remember that the middle-class, in general, is to be conceived as a body swaying between the qualities of its mean and of its excess, and on the whole, of course, as human nature is constituted, inclining rather towards the excess than the mean. Of its excess no better representative can possibly be imagined than the Rev. W. Cattle, a Dissenting minister from Walsall, who came before the public in connection with the proceedings at Birmingham of Mr. Murphy, already mentioned. Speaking in the midst of an irritated population of Catholics, the Rev. W. Cattle exclaimed: —“I say, then, away with the mass! It is from the bottomless pit; and in the bottomless pit shall all liars have their part, in the lake that burneth with fire and brimstone.”And again:“When all the praties were black in Ireland, why didn't the priests say the hocus-pocus over them, and make them all good again?”He shared, too, Mr. Murphy's fears of some invasion of his domestic happiness:“What I wish to say to you as Protestant husbands is, *Take care of your wives!*”And, finally, in the true vein of an Englishman doing as he likes, a vein of which I have at some length pointed out the present dangers, he recommended for imitation the example of some churchwardens at Dublin, among whom, said he,“there was a Luther and also a Melancthon,”who had made very short work with some ritualist or other, handed him down from his pulpit, and kicked him out of church. Now it is manifest, as I said in the case of Sir Thomas Bateson, that if we let this excess of the sturdy English middle-class, this conscientious Protestant Dissenter, so strong, so self-reliant, so fully persuaded in his own mind, have his way, he would be capable, with his want of light — or, to use the language of the religious world, with his zeal without knowledge — of stirring up strife which neither he nor any one else could easily compose.

And then comes in, as it did also with the aristocracy, the honesty

of our race, and by the voice of another middle-class man, Alderman Wilson, Alderman of the City of London and Colonel of the City of London Militia, proclaims that it has twinges of conscience, and that it will not attempt to cope with our social disorders, and to deal with a business which it feels to be too high for it. Every one remembers how this virtuous Alderman-Colonel, or Colonel-Alderman, led his militia through the London streets; how the bystanders gathered to see him pass; how the London roughs, asserting an Englishman's best and most blissful right of doing what he likes, robbed and beat the bystanders; and how the blameless warrior-magistrate refused to let his troops interfere. "The crowd," he touchingly said afterwards, "was mostly composed of fine healthy strong men, bent on mischief; if he had allowed his soldiers to interfere they might have been overpowered, their rifles taken from them and used against them by the mob; a riot, in fact, might have ensued, and been attended with bloodshed, compared with which the assaults and loss of property that actually occurred would have been as nothing." Honest and affecting testimony of the English middle-class to its own inadequacy for the authoritative part one's admiration would sometimes incline one to assign to it! "Who are we," they say by the voice of their Alderman-Colonel, "that we should not be overpowered if we attempt to cope with social anarchy, our rifles taken from us and used against us by the mob, and we, perhaps, robbed and beaten ourselves? Or what light have we, beyond a free-born Englishman's impulse to do as he likes, which could justify us in preventing, at the cost of bloodshed, other free-born Englishmen from doing as they like, and robbing and beating us as much as they please?"

This distrust of themselves as an adequate centre of authority does not mark the working-class, as was shown by their readiness the other day in Hyde Park to take upon themselves all the functions of government. But this comes from the working-class being, as I have often said, still an embryo, of which no one can yet quite foresee the

final development; and from its not having the same experience and self-knowledge as the aristocratic and middle classes. Honesty it no doubt has, just like the other classes of Englishmen, but honesty in an inchoate and untrained state; and meanwhile its powers of action, which are, as Mr. Frederic Harrison says, exceedingly ready, easily run away with it. That it cannot at present have a sufficiency of light which comes by culture, — that is, by reading, observing, and thinking, — is clear from the very nature of its condition; and, indeed, we saw that Mr. Frederic Harrison, in seeking to make a free stage for its bright powers of sympathy and ready powers of action, had to begin by throwing overboard culture, and flouting it as only fit for a professor of *belles lettres*. Still, to make it perfectly manifest that no more in the working-class than in the aristocratic and middle classes can one find an adequate centre of authority, — that is, as culture teaches us to conceive our required authority, of light, — let us again follow, with this class, the method we have followed with the aristocratic and middle classes, and try to bring before our minds representative men, who may figure to us its virtue and its excess. We must not take, of course, Colonel Dickson or Mr. Beales; because Colonel Dickson, by his martial profession and dashing exterior, seems to belong properly, like Julius Cæsar and Mirabeau and other great popular leaders, to the aristocratic class, and to be carried into the popular ranks only by his ambition or his genius; while Mr. Beales belongs to our solid middle-class, and, perhaps, if he had not been a great popular leader, would have been a Philistine. But Mr. Odger, whose speeches we have all read, and of whom his friends relate, besides, much that is favourable, may very well stand for the beautiful and virtuous mean of our present working-class; and I think everybody will admit that in Mr. Odger, as in Lord Elcho, there is manifestly, with all his good points, some insufficiency of light. The excess of the working-class, in its present state of development, is perhaps best shown in Mr. Bradlaugh, the iconoclast, who seems to be almost for baptizing us all in blood and fire into his new social

dispensation, and to whose reflections, now that I have once been set going on Bishop Wilson's track, I cannot forbear commending this maxim of the good old man: "Intemperance in talk makes a dreadful havoc in the heart." Mr. Bradlaugh, like Sir Thomas Bateson and the Rev. W. Cattle, is evidently capable, if he had his head given him, of running us all into great dangers and confusion. I conclude, therefore, — what, indeed, few of those who do me the honour to read this disquisition are likely to dispute, — that we can as little find in the working-class as in the aristocratic or in the middle class our much-wanted source of authority, as culture suggests it to us.

Well, then, what if we tried to rise above the idea of class to the idea of the whole community, *the State*, and to find our centre of light and authority there? Every one of us has the idea of country, as a sentiment; hardly any one of us has the idea of *the State*, as a working power. And why? Because we habitually live in our ordinary selves, which do not carry us beyond the ideas and wishes of the class to which we happen to belong. And we are all afraid of giving to the State too much power, because we only conceive of the State as something equivalent to the class in occupation of the executive government, and are afraid of that class abusing power to its own purposes. If we strengthen the State with the aristocratic class in occupation of the executive government, we imagine we are delivering ourselves up captive to the ideas and wishes of Sir Thomas Bateson; if with the middle-class in occupation of the executive government, to those of the Rev. W. Cattle; if with the working-class, to those of Mr. Bradlaugh. And with much justice; owing to the exaggerated notion which we English, as I have said, entertain of the right and blessedness of the mere doing as one likes, of the affirming oneself, and oneself just as it is. People of the aristocratic class want to affirm their ordinary selves, their likings and dislikings; people of the middle-class the same, people of the working-class the same. By our everyday selves, however, we are separate, personal, at war; we are

only safe from one another's tyranny when no one has any power, and this safety, in its turn, cannot save us from anarchy. And when, therefore, anarchy presents itself as a danger to us, we know not where to turn.

But by our *best self* we are united, impersonal, at harmony. We are in no peril from giving authority to this, because it is the truest friend we all of us can have; and when anarchy is a danger to us, to this authority we may turn with sure trust. Well, and this is the very self which culture, or the study of perfection, seeks to develop in us; at the expense of our old untransformed self, taking pleasure only in doing what it likes or is used to do, and exposing us to the risk of clashing with every one else who is doing the same! So that our poor culture, which is flouted as so unpractical, leads us to the very ideas capable of meeting the great want of our present embarrassed times! We want an authority, and we find nothing but jealous classes, checks, and a dead-lock; culture suggests the idea of *the State*. We find no basis for a firm State-power in our ordinary selves; culture suggests one to us in our *best self*.

It cannot but acutely try a tender conscience to be accused, in a practical country like ours, of keeping aloof from the work and hope of a multitude of earnest-hearted men, and of merely toying with poetry and aesthetics. So it is with no little sense of relief that I find myself thus in the position of one who makes a contribution in aid of the practical necessities of our times. The great thing, it will be observed, is to find our *best self*, and to seek to affirm nothing but that; not, —as we English with our over-value for merely being free and busy have been so accustomed to do, —resting satisfied with a self which comes uppermost long before our best self, and affirming that with blind energy. In short, —to go back yet once more to Bishop Wilson, —of these two excellent rules of Bishop Wilson's for a man's guidance: "Firstly, never go against the best light you have;

secondly, take care that your light be not darkness,"we English have followed with praiseworthy zeal the first rule, but we have not given so much heed to the second. We have gone manfully, the Rev. W. Cattle and the rest of us, according to the best light we have; but we have not taken enough care that this should be really the best light possible for us, that it should not be darkness. And, our honesty being very great, conscience has whispered to us that the light we were following, our ordinary self, was, indeed, perhaps, only an inferior self, only darkness; and that it would not do to impose this seriously on all the world.

But our best self inspires faith, and is capable of affording a serious principle of authority. For example. We are on our way to what the late Duke of Wellington, with his strong sagacity, foresaw and admirably described as "a revolution by due course of law." This is undoubtedly, — if we are still to live and grow, and this famous nation is not to stagnate and dwindle away on the one hand, or, on the other, to perish miserably in mere anarchy and confusion, — what we are on the way to. Great changes there must be, for a revolution cannot accomplish itself without great changes; yet order there must be, for without order a revolution cannot accomplish itself by due course of law. So whatever brings risk of tumult and disorder, multitudinous processions in the streets of our crowded towns, multitudinous meetings in their public places and parks, — demonstrations perfectly unnecessary in the present course of our affairs, — our best self, or right reason, plainly enjoins us to set our faces against. It enjoins us to encourage and uphold the occupants of the executive power, whoever they may be, in firmly prohibiting them. But it does this clearly and resolutely, and is thus a real principle of authority, because it does it with a free conscience; because in thus provisionally strengthening the executive power, it knows that it is not doing this merely to enable Sir Thomas Bateson to affirm himself as against Mr. Bradlaugh, or the Rev. W. Cattle to

affirm himself as against both. It knows that it is establishing *the State*, or organ of our collective best self, of our national right reason; and it has the testimony of conscience that it is establishing the State on behalf of whatever great changes are needed, just as much as on behalf of order; establishing it to deal just as stringently, when the time comes, with Sir Thomas Bateson's Protestant ascendancy, or with the Rev. W. Cattle's sorry education of his children, as it deals with Mr. Bradlaugh's street-processions.

威尔逊·托马斯主教（1663—1755）。作者在书中多次引用托马斯主教的言论。

Chapter III

From a man without a philosophy no one can expect philosophical completeness. Therefore I may observe without shame, that in trying to get a distinct notion of our aristocratic, our middle, and our working class, with a view of testing the claims of each of these classes to become a centre of authority, I have omitted, I find, to complete the old-fashioned analysis which I had the fancy of applying, and have not shown in these classes, as well as the virtuous mean and the excess, the defect also. I do not know that the omission very much matters; still as clearness is the one merit which a plain, unsystematic writer, without a philosophy, can hope to have, and as our notion of the three great English classes may perhaps be made clearer if we see their distinctive qualities in the defect, as well as in the excess and in the mean, let us try, before proceeding further, to remedy this omission.

It is manifest, if the perfect and virtuous mean of that fine spirit which is the distinctive quality of aristocracies, is to be found in Lord Elcho's chivalrous style, and its excess in Sir Thomas Bateson's turn for resistance, that its defect must lie in a spirit not bold and high enough, and in an excessive and pusillanimous unaptness for resistance. If, again, the perfect and virtuous mean of that force by which our middle-class has done its great works, and of that selfreliance with which it contemplates itself and them, is to be seen in the performances and speeches of Mr. Bazley, and the excess of that force and that self-reliance in the performances and speeches of the Rev. W. Cattle, then it is manifest that their defect must lie in a helpless inaptitude for the great works of the middle-class, and in a poor and despicable lack of its self-satisfaction. To be chosen to exemplify the

happy mean of a good quality, or set of good qualities, is evidently a praise to a man; nay, to be chosen to exemplify even their excess, is a kind of praise. Therefore I could have no hesitation in taking Lord Elcho and Mr. Bazley, the Rev. W. Cattle and Sir Thomas Bateson, to exemplify, respectively, the mean and the excess of aristocratic and middle-class qualities. But perhaps there might be a want of urbanity in singling out this or that personage as the representative of defect. Therefore I shall leave the defect of aristocracy unillustrated by any representative man. But with oneself one may always, without impropriety, deal quite freely; and, indeed, this sort of plain-dealing with oneself has in it, as all the moralists tell us, something very wholesome. So I will venture to humbly offer myself as an illustration of defect in those forces and qualities which make our middle-class what it is. The too wellfounded reproaches of my opponents declare how little I have lent a hand to the great works of the middle-class; for it is evidently these works, and my slackness at them, which are meant, when I am said to“refuse to lend a hand to the humble operation of uprooting certain definite evils”(such as church-rates and others), and that therefore“the believers in action grow impatient”with me. The line, again, of a still unsatisfied seeker which I have followed, the idea of self-transformation, of growing towards some measure of sweetness and light not yet reached, is evidently at clean variance with the perfect self-satisfaction current in my class, the middle-class, and may serve to indicate in me, therefore, the extreme defect of this feeling. But these confessions, though salutary, are bitter and unpleasant.

To pass, then, to the working-class. The defect of this class would be the falling short in what Mr. Frederic Harrison calls those“bright powers of sympathy and ready powers of action,”of which we saw in Mr. Odger the virtuous mean, and in Mr. Bradlaugh the excess. The working-class is so fast growing and rising at the present time, that instances of this defect cannot well be now very common. Perhaps

Canning's "Needy Knife-grinder" (who is dead, and therefore cannot be pained at my taking him for an illustration) may serve to give us the notion of defect in the essential quality of a working-class; or I might even cite (since, though he is alive in the flesh, he is dead to all heed of criticism) my poor old poaching friend, Zephaniah Diggs, who, between his hare-snaring and his gin-drinking, has got his powers of sympathy quite dulled and his powers of action in any great movement of his class hopelessly impaired. But examples of this defect belong, as I have said, to a bygone age rather than to the present.

The same desire for clearness, which has led me thus to extend a little my first analysis of the three great classes of English society, prompts me also to make my nomenclature for them a little fuller, with a view to making it thereby more clear and manageable. It is awkward and tiresome to be always saying the aristocratic class, the middle-class, the working-class. For the middle-class, for that great body which, as we know, "has done all the great things that have been done in all departments," and which is to be conceived as chiefly moving between its two cardinal points of Mr. Bazley and the Rev. W. Cattle, but inclining, in the mass, rather towards the latter than the former — for this class we have a designation which now has become pretty well known, and which we may as well still keep for them, the designation of Philistines. What this term means I have so often explained that I need not repeat it here. For the aristocratic class, conceived mainly as a body moving between the two cardinal points of Lord Elcho and Sir Thomas Bateson, but as a whole nearer to the latter than the former, we have as yet got no special designation. Almost all my attention has naturally been concentrated on my own class, the middle-class, with which I am in closest sympathy, and which has been, besides, the great power of our day, and has had its praises sung by all speakers and newspapers. Still the aristocratic class is so important in itself, and the weighty functions which Mr. Carlyle proposes at the present critical time to commit to it must add so much

to its importance, that it seems neglectful, and a strong instance of that want of coherent philosophic method for which Mr. Frederic Harrison blames me, to leave the aristocratic class so much without notice and denomination. It may be thought that the characteristic which I have occasionally mentioned as proper to aristocracies, — their natural inaccessibility, as children of the established fact, to ideas, — points to our extending to this class also the designation of Philistines; the Philistine being, as is well known, the enemy of the children of light, or servants of the idea. Nevertheless, there seems to be an inconvenience in thus giving one and the same designation to two very different classes; and besides, if we look into the thing closely, we shall find that the term Philistine conveys a sense which makes it more peculiarly appropriate to our middle class than to our aristocratic. For gives the notion of something particularly stiff-necked and perverse in the resistance to light and its children, and therein it specially suits our middle-class, who not only do not pursue sweetness and light, but who prefer to them that sort of machinery of business, chapels, tea meetings, and addresses from Mr. Murphy and the Rev. W. Cattle, which makes up the dismal and illiberal life on which I have so often touched. But the aristocratic class has actually, as we have seen, in its well-known politeness, a kind of image or shadow of sweetness; and as for light, if it does not pursue light, it is not that it perversely cherishes some dismal and illiberal existence in preference to light, but it is seduced from following light by those mighty and eternal seducers of our race which weave for this class their most irresistible charms, — by worldly splendour, security, power and pleasure. These seducers are exterior goods, but they are goods; and he who is hindered by them from caring for light and ideas, is not so much doing what is perverse as what is natural.

Keeping this in view, I have in my own mind often indulged myself with the fancy of putting side by side with the idea of our aristocratic class, the idea of *the Barbarians*. The Barbarians, to whom

we all owe so much, and who reinvigorated and renewed our worn-out Europe, had, as is well-known, eminent merits; and in this country, where we are for the most part sprung from the Barbarians, we have never had the prejudice against them which prevails among the races of Latin origin. The Barbarians brought with them that staunch individualism, as the modern phrase is, and that passion for doing as one likes, for the assertion of personal liberty, which appears to Mr. Bright the central idea of English life, and of which we have, at any rate, a very rich supply. The stronghold and natural seat of this passion was in the nobles of whom our aristocratic class are the inheritors; and this class, accordingly, have signally manifested it, and have done much by their example to recommend it to the body of the nation, who already, indeed, had it in their blood. The Barbarians, again, had the passion for field-sports; and they have handed it on to our aristocratic class, who of this passion too, as of the passion for asserting one's personal liberty, are the great natural stronghold. The care of the Barbarians for the body, and for all manly exercises; the vigour, good looks, and fine complexion which they acquired and perpetuated in their families by these means, — all this may be observed still in our aristocratic class. The chivalry of the Barbarians, with its characteristics of high spirit, choice manners, and distinguished bearing, — what is this but the beautiful commencement of the politeness of our aristocratic class? In some Barbarian noble, no doubt, one would have admired, if one could have been then alive to see it, the rudiments of Lord Elcho. Only, all this culture (to call it by that name) of the Barbarians was an exterior culture mainly: it consisted principally in outward gifts and graces, in looks, manners, accomplishments, prowess; the chief inward gifts which had part in it were the most exterior, so to speak, of inward gifts, those which come nearest to outward ones: they were courage, a high spirit, self-confidence. Far within, and unawakened, lay a whole range of powers of thought and feeling, to which these interesting productions of nature had, from the circumstances of their life, no

access. Making allowances for the difference of the times, surely we can observe precisely the same thing now in our aristocratic class. In general its culture is exterior chiefly; all the exterior graces and accomplishments, and the more external of the inward virtues, seem to be principally its portion. It now, of course, cannot but be often in contact with those studies by which, from the world of thought and feeling, true culture teaches us to fetch sweetness and light; but its hold upon these very studies appears remarkably external, and unable to exert any deep power upon its spirit. There fore the one insufficiency which we noted in the perfect mean of this class, Lord Elcho, was an insufficiency of light. And owing to the same causes, does not a subtle criticism lead us to make, even on the good looks and politeness of our aristocratic class, the one qualifying remark, that in these charming gifts there should perhaps be, for ideal perfection, a shade more *soul*?

I often, therefore, when I want to distinguish clearly the aristocratic class from the Philistines proper, or middle-class, name the former, in my own mind, *the Barbarians*: and when I go through the country, and see this and that beautiful and imposing seat of theirs crowning the landscape, “There,” I say to myself, “is a great fortified post of the Barbarians.”

It is obvious that that part of the working-class which, working diligently by the light of Mrs. Gooch's Golden Rule, looks forward to the happy day when it will sit on thrones with Mr. Bazley and other middle-class potentates, to survey, as Mr. Bright beautifully says, “the cities it has built, the railroads it has made, the manufactures it has produced, the cargoes which freight the ships of the greatest mercantile navy the world has ever seen,”—— it is obvious, I say, that this part of the working-class is, or is in a fair way to be, one in spirit with the industrial middle-class. It is notorious that our middle-class liberals have long looked forward to this consummation, when the

working-class shall join forces with them, aid them heartily to carry forward their great works, go in a body to their tea-meetings, and, in short, enable them to bring about their millennium. That part of the working-class, therefore, which does really seem to lend itself to these great aims, may, with propriety, be numbered by us among the Philistines. That part of it, again, which so much occupies the attention of philanthropists at present, — the part which gives all its energies to organising itself, through trades' unions and other means, so as to constitute, first, a great working-class power, independent of the middle and aristocratic classes, and then, by dint of numbers, give the law to them, and itself reign absolutely, — this lively and interesting part must also, according to our definition, go with the Philistines; because it is its class and its class-instinct which it seeks to affirm, its ordinary self not its best self; and it is a machinery, an industrial machinery, and power and pre-eminence and other external goods which fill its thoughts, and not an inward perfection. It is wholly occupied, according to Plato's subtle expression, with the things of itself and not its real self, with the things of the State and not the real State. But that vast portion, lastly, of the workingclass which, raw and half-developed, has long lain half-hidden amidst its poverty and squalor, and is now issuing from its hiding-place to assert an Englishman's heaven-born privilege of doing as he likes, and is beginning to perplex us by marching where it likes, meeting where it likes, bawling what it likes, breaking what it likes, — to this vast residuum we may with great propriety give the name of *Populace*.

Thus we have got three distinct terms, *Barbarians*, *Philistines*, *Populace*, to denote roughly the three great classes into which our society is divided; and though this humble attempt at a scientific nomenclature falls, no doubt, very far short in precision of what might be required from a writer equipped with a complete and coherent philosophy, yet, from a notoriously unsystematic and unpretending writer, it will, I trust, be accepted as sufficient.

But in using this new, and, I hope, convenient division of English society, two things are to be borne in mind. The first is, that since, under all our class divisions, there is a common basis of human nature, therefore, in every one of us, whether we be properly Barbarians, Philistines, or Populace, there exists, sometimes only in germ and potentially, sometimes more or less developed, the same tendencies and passions which have made our fellow-citizens of other classes what they are. This consideration is very important, because it has great influence in begetting that spirit of indulgence which is a necessary part of sweetness, and which, indeed, when our culture is complete, is, as I have said, inexhaustible. Thus, an English Barbarian who examines himself, will, in general, find himself to be not so entirely a Barbarian but that he has in him, also, something of the Philistine, and even something of the Populace as well. And the same with Englishmen of the two other classes. This is an experience which we may all verify every day. For instance, I myself (I again take myself as a sort of *corpus vile* to serve for illustration in a matter where serving for illustration may not by every one be thought agreeable), I myself am properly a Philistine, — Mr. Swinburne would add, the son of a Philistine, — and though, through circumstances which will perhaps one day be known, if ever the affecting history of my conversion comes to be written, I have, for the most part, broken with the ideas and the tea-meetings of my own class, yet I have not, on that account, been brought much the nearer to the ideas and works of the Barbarians or of the Populace. Nevertheless, I never take a gun or a fishing-rod in my hands without feeling that I have in the ground of my nature the self-same seeds which, fostered by circumstances, do so much to make the Barbarian; and that, with the Barbarian's advantages, I might have rivalled him. Place me in one of his great fortified posts, with these seeds of a love for field-sports sown in my nature, with all the means of developing them, with all pleasures at my command, with most whom I met deferring to me, every one I met smiling on me, and with every appearance of permanence and security

before me and behind me, — then I too might have grown, I feel, into a very passable child of the established fact, of commendable spirit and politeness, and, at the same time, a little inaccessible to ideas and light; not, of course, with either the eminent fine spirit of Lord Elcho, or the eminent power of resistance of Sir Thomas Bateson, but, according to the measure of the common run of mankind, something between the two. And as to the Populace, who, whether he be Barbarian or Philistine, can look at them without sympathy, when he remembers how often, — every time that we snatch up a vehement opinion in ignorance and passion, every time that we long to crush an adversary by sheer violence, every time that we are envious, every time that we are brutal, every time that we adore mere power or success, every time that we add our voice to swell a blind clamour against some unpopular personage, every time that we trample savagely on the fallen, — he has found in his own bosom the eternal spirit of the Populace, and that there needs only a little help from circumstances to make it triumph in him untameably?

The second thing to be borne in mind I have indicated several times already. It is this. All of us, so far as we are Barbarians, Philistines, or Populace, imagine happiness to consist in doing what one's ordinary self likes. What one's ordinary self likes differs according to the class to which one belongs, and has its severer and its lighter side; always, however, remaining machinery, and nothing more. The graver self of the Barbarian likes honours and consideration; his more relaxed self, field-sports and pleasure. The graver self of one kind of Philistine likes business and money-making; his more relaxed self, comfort and tea-meetings. Of another kind of Philistine, the graver self likes trades' unions, the relaxed self, deputations, or hearing Mr. Odger speak. The sterner self of the Populace likes bawling, hustling, and smashing; the lighter self, beer. But in each class there are born a certain number of natures with a curiosity about their best self, with a bent for seeing things as they

are, for disentangling themselves from machinery, for simply concerning themselves with reason and the will of God, and doing their best to make these prevail;—for the pursuit, in a word, of perfection. To certain manifestations of this love for perfection mankind have accustomed themselves to give the name of genius; implying, by this name, something original and heaven-bestowed in the passion. But the passion is to be found far beyond those manifestations of it to which the world usually gives the name of genius, and in which there is, for the most part, a *talent* of some kind or other, a special and striking faculty of execution, informed by the heaven-bestowed ardour, or genius. It is to be found in many manifestations besides these, and may best be called, as we have called it, the love and pursuit of perfection; culture being the true nurse of the pursuing love, and sweetness and light the true character of the pursued perfection. Natures with this bent emerge in all classes, —among the Barbarians, among the Philistines, among the Populace. And this bent always tends, as I have said, to take them out of their class, and to make their distinguishing characteristic not their Barbarianism or their Philistinism, but their *humanity*. They have, in general, a rough time of it in their lives; but they are sown more abundantly than one might think, they appear where and when one least expects it, they set up a fire which enfilades, so to speak, the class with which they are ranked; and, in general, by the extrication of their best self as the self to develope, and by the simplicity of the ends fixed by them as paramount, they hinder the unchecked predominance of that class-life which is the affirmation of our ordinary self, and seasonably disconcert mankind in their worship of machinery.

Therefore, when we speak of ourselves as divided into Barbarians, Philistines, and Populace, we must be understood always to imply that within each of these classes there are a certain number of *aliens*, if we may so call them, — persons who are mainly led, not by their class spirit, but by a general *humane* spirit, by the love of human perfection;

and that this number is capable of being diminished or augmented. I mean, the number of those who will succeed in developing this happy instinct will be greater or smaller, in proportion both to the force of the original instinct within them, and to the hindrance or encouragement which it meets with from without. In almost all who have it, it is mixed with some infusion of the spirit of an ordinary self, some quantity of class-instinct, and even, as has been shown, of more than one class-instinct at the same time; so that, in general, the extrication of the best self, the predominance of the *humane* instinct, will very much depend upon its meeting, or not, with what is fitted to help and elicit it. At a moment, therefore, when it is agreed that we want a source of authority, and when it seems probable that the right source is our best self, it becomes of vast importance to see whether or not the things around us are, in general, such as to help and elicit our best self, and if they are not, to see why they are not, and the most promising way of mending them.

Now, it is clear that the very absence of any powerful authority amongst us, and the prevalent doctrine of the duty and happiness of doing as one likes, and asserting our personal liberty, must tend to prevent the erection of any very strict standard of excellence, the belief in any very paramount authority of right reason, the recognition of our best self as anything very recondite and hard to come at. It may be, as I have said, a proof of our honesty that we do not attempt to give to our ordinary self, as we have it in action, predominant authority, and to impose its rule upon other people; but it is evident, also, that it is not easy, with our style of proceeding, to get beyond the notion of an ordinary self at all, or to get the paramount authority of a commanding best self, or right reason, recognised. The learned Martinus Scriblerus well says: —“The taste of the bathos is implanted by nature itself in the soul of man; till, perverted by custom or example, he is taught, or rather compelled, to relish the sublime.” But with us everything seems directed to prevent any such

perversion of us by custom or example as might compel us to relish the sublime; by all means we are encouraged to keep our natural taste for the bathos unimpaired. I have formerly pointed out how in literature the absence of any authoritative centre, like an Academy, tends to do this; each section of the public has its own literary organ, and the mass of the public is without any suspicion that the value of these organs is relative to their being nearer a certain ideal centre of correct information, taste, and intelligence, or farther away from it. I have said that within certain limits, which any one who is likely to read this will have no difficulty in drawing for himself, my old adversary, the *Saturday Review*, may, on matters of literature and taste, be fairly enough regarded, relatively to a great number of newspapers which treat these matters, as a kind of organ of reason. But I remember once conversing with a company of Nonconformist admirers of some lecturer who had let off a great fire-work, which the *Saturday Review* said was all noise and false lights, and feeling my way as tenderly as I could about the effect of this unfavourable judgment upon those with whom I was conversing. "Oh," said one who was their spokesman, with the most tranquil air of conviction, "it is true the *Saturday Review* abuses the lecture, but the *British Banner*" (I am not quite sure it was the *British Banner*, but it was some newspaper of that stamp) "says that the *Saturday Review* is quite wrong." The speaker had evidently no notion that there was a scale of value for judgments on these topics, and that the judgments of the *Saturday Review* ranked high on this scale, and those of the *British Banner* low; the taste of the bathos implanted by nature in the literary judgments of man had never, in my friend's case, encountered any let or hindrance.

Just the same in religion as in literature. We have most of us little idea of a high standard to choose our guides by, of a great and profound spirit, which is an authority, while inferior spirits are none; it is enough to give importance to things that this or that person says them decisively, and has a large following of some strong kind when

he says them. This habit of ours is very well shown in that able and interesting work of Mr. Hepworth Dixon's, which we were all reading lately, *The Mormons, by One of Themselves*. Here, again, I am not quite sure that my memory serves me as to the exact title, but I mean the well-known book in which Mr. Hepworth Dixon described the Mormons, and other similar religious bodies in America, with so much detail and such warm sympathy. In this work it seems enough for Mr. Dixon that this or that doctrine has its Rabbi, who talks big to him, has a staunch body of disciples, and, above all, has plenty of rifles. That there are any further stricter tests to be applied to a doctrine, before it is pronounced important, never seems to occur to him. "It is easy to say," he writes of the Mormons, "that these saints are dupes and fanatics, to laugh at Joe Smith and his church, but what then? *The great facts remain*. Young and his people are at Utah; a church of 200,000 souls; an army of 200,000 rifles." But if the followers of a doctrine are really dupes, or worse, and its promulgators are really fanatics, or worse, it gives the doctrine no seriousness or authority the more that there should be found 200,000 souls, — 200,000 of the innumerable multitude with a natural taste for the bathos, — to hold it, and 200,000 rifles to defend it. And again, of another religious organisation in America: "A fair and open field is not to be refused when hosts so mighty throw down wager of battle on behalf of what they hold to be true, however strange their faith may seem." A fair and open field is not to be refused to any speaker; but this solemn way of heralding him is quite out of place unless he has, for the best reason and spirit of man, some significance. "Well, but," says Mr. Hepworth Dixon, "a theory which has been accepted by men like Judge Edmonds, Dr. Hare, Elder Frederick, and Professor Bush!" And again: "Such are, in brief, the bases of what Newman Weeks, Sarah Horton, Deborah Butler, and the associated brethren, proclaimed in Rolt's Hall as the new covenant!" If he was summing up an account of the teaching of Plato or St. Paul, Mr. Hepworth Dixon could not be more earnestly reverential. But the question is, have personages like Judge Edmonds,

and Newman Weeks, and Elderess Polly, and Elderess Antoinette, and the rest of Mr. Hepworth Dixon's heroes and heroines, anything of the weight and significance for the best reason and spirit of man that Plato and St. Paul have? Evidently they, at present, have not; and a very small taste of them and their doctrines ought to have convinced Mr. Hepworth Dixon that they never could have. "But," says he, "the magnetic power which Shakerism is exercising on American thought would of itself compel us," — and so on. Now as far as real thought is concerned, — thought which affects the best reason and spirit of man, the scientific thought of the world, the only thought which deserves speaking of in this solemn way, — America has up to the present time been hardly more than a province of England, and even now would not herself claim to be more than abreast of England, and of this only real human thought, English thought itself is not just now, as we must all admit, one of the most significant factors. Neither, then, can American thought be; and the magnetic power which Shakerism exercises on American thought is about as important, for the best reason and spirit of man, as the magnetic power which Mr. Murphy exercises on Birmingham Protestantism. And as we shall never get rid of our natural taste for the bathos in religion, — never get access to a best self and right reason which may stand as a serious authority, — by treating Mr. Murphy as his own disciples treat him, seriously, and as if he was as much an authority as any one else: so we shall never get rid of it while our able and popular writers treat their Joe Smiths and Deborah Butlers, with their so many thousand souls and so many thousand rifles, in the like exaggerated and misleading manner, and so do their best to confirm us in a bad mental habit to which we are already too prone.

If our habits make it hard for us to come at the idea of a high best self, of a paramount authority, in literature or religion, how much more do they make this hard in the sphere of politics! In other countries, the governors, not depending so immediately on the favour

of the governed, have everything to urge them, if they know anything of right reason (and it is at least supposed that governors should know more of this than the mass of the governed), to set it authoritatively before the community. But our whole scheme of government being representative, every one of our governors has all possible temptation, instead of setting up before the governed who elect him, and on whose favour he depends, a high standard of right reason, to accommodate himself as much as possible to their natural taste for the bathos; and even if he tries to go counter to it, to proceed in this with so much flattering and coaxing, that they shall not suspect their ignorance and prejudices to be anything very unlike right reason, or their natural taste for the bathos to differ much from a relish for the sublime. Every one is thus in every possible way encouraged to trust in his own heart; but "he that trusteth in his own heart," says the Wise Man, "is a fool;" and at any rate this, which Bishop Wilson says, is undeniably true: "The number of those who need to be awakened is far greater than that of those who need comfort." But in our political system everybody is comforted. Our guides and governors who have to be elected by the influence of the Barbarians, and who depend on their favour, sing the praises of the Barbarians, and say all the smooth things that can be said of them. With Mr. Tennyson, they celebrate "the great broad-shouldered genial Englishman," with his "sense of duty," his "reverence for the laws," and his "patient force," who saves us from the "revolts, republics, revolutions, most no graver than a schoolboy's barring out," which upset other and less broad-shouldered nations. Our guides who are chosen by the Philistines and who have to look to their favour, tell the Philistines how "all the world knows that the great middle-class of this country supplies the mind, the will, and the power requisite for all the great and good things that have to be done," and congratulate them on their "earnest good sense, which penetrates through sophisms, ignores commonplaces, and gives to conventional illusions their true value." Our guides who look to the favour of the Populace, tell them that "theirs are the brightest powers

of sympathy, and the readiest powers of action."Harsh things are said too, no doubt, against all the great classes of the community; but these things so evidently come from a hostile class, and are so manifestly dictated by the passions and prepossessions of a hostile class, and not by right reason, that they make no serious impression on those at whom they are launched, but slide easily off their minds. For instance, when the Reform League orators inveigh against our cruel and bloated aristocracy, these invectives so evidently show the passions and point of view of the Populace, that they do not sink into the minds of those at whom they are addressed, or awaken any thought or selfexamination in them. Again, when Sir Thomas Bateson describes the Philistines and the Populace as influenced with a kind of hideous mania for emasculating the aristocracy, that reproach so clearly comes from the wrath and excited imagination of the Barbarians, that it does not much set the Philistines and the Populace thinking. Or when Mr. Lowe calls the Populace drunken and venal, he so evidently calls them this in an agony of apprehension for his Philistine or middle-class Parliament, which has done so many great and heroic works, and is now threatened with mixture and debasement, that the Populace do not lay his words seriously to heart. So the voice which makes a permanent impression on each of our classes is the voice of its friends, and this is from the nature of things, as I have said, a comforting voice. The Barbarians remain in the belief that the great broad-shouldered genial Englishman may be well satisfied with himself; the Philistines remain in the belief that the great middle-class of this country, with its earnest common-sense penetrating through sophisms and ignoring commonplaces, may be well satisfied with itself: the Populace, that the working-man with his bright powers of sympathy and ready powers of action, may be well satisfied with himself. What hope, at this rate, of extinguishing the taste of the bathos implanted by nature itself in the soul of man, or of inculcating the belief that excellence dwells among high and steep rocks, and can only be reached by those who sweat blood to reach her?

But it will be said, perhaps, that candidates for political influence and leadership, who thus caress the self-love of those whose suffrages they desire, know quite well that they are not saying the sheer truth as reason sees it, but that they are using a sort of conventional language, or what we call clap-trap, which is essential to the working of representative institutions. And therefore, I suppose, we ought rather to say with Figaro: *Qui est-ce qu' on trompe ici?* Now, I admit that often, but not always, when our governors say smooth things to the self-love of the class whose political support they want, they know very well that they are overstepping, by a long stride, the bounds of truth and soberness; and while they talk, they in a manner, no doubt, put their tongue in their cheek. Not always; because, when a Barbarian appeals to his own class to make him their representative and give him political power, he, when he pleases their self-love by extolling broad-shouldered genial Englishmen with their sense of duty, reverence for the laws, and patient force, pleases his own selflove and extols himself, and is, therefore, himself ensnared by his own smooth words. And so, too, when a Philistine wants to represent his brother Philistines, and extols the earnest good sense which characterises Manchester, and supplies the mind, the will, and the power, as the *Daily News* eloquently says, requisite for all the great and good things that have to be done, he intoxicates and deludes himself as well as his brother Philistines who hear him. But it is true that a Barbarian often wants the political support of the Philistines; and he unquestionably, when he flatters the self-love of Philistinism, and extols, in the approved fashion, its energy, enterprise, and selfreliance, knows that he is talking clap-trap, and, so to say, puts his tongue in his cheek. On all matters where Nonconformity and its catchwords are concerned, this insincerity of Barbarians needing Nonconformist support, and, therefore, flattering the self-love of Nonconformity and repeating its catchwords without the least real belief in them, is very noticeable. When the Nonconformists, in a transport of blind zeal, threw out Sir James Graham's useful Education Clauses in 1843, one-half of their

parliamentary representatives, no doubt, who cried aloud against“trampling on the religious liberty of the Dissenters by taking the money of Dissenters to teach the tenets of the Church of England,”put their tongue in their cheek while they so cried out. And perhaps there is even a sort of motion of Mr. Frederic Harrison's tongue towards his cheek when he talks of the“shriek of superstition,”and tells the working-class that theirs are the brightest powers of sympathy and the readiest powers of action. But the point on which I would insist is, that this involuntary tribute to truth and soberness on the part of certain of our governors and guides never reaches at all the mass of us governed, to serve as a lesson to us, to abate our self-love, and to awaken in us a suspicion that our favourite prejudices may be, to a higher reason, all nonsense. Whatever by-play goes on among the more intelligent of our leaders, we do not see it; and we are left to believe that, not only in our own eyes, but in the eyes of our representative and ruling men, there is nothing more admirable than our ordinary self whatever our ordinary self happens to be, — Barbarian, Philistine, or Populace.

Thus everything in our political life tends to hide from us that there is anything wiser than our ordinary selves, and to prevent our getting the notion of a paramount right reason. Royalty itself, in its idea the expression of the collective nation, and a sort of constituted witness to its best mind, we try to turn into a kind of grand advertising van, to give publicity and credit to the inventions, sound or unsound, of the ordinary self of individuals. I remember, when I was in North Germany, having this very strongly brought to my mind in the matter of schools and their institution. In Prussia, the best schools are Crown patronage schools, as they are called; schools which have been established and endowed (and new ones are to this day being established and endowed) by the Sovereign himself out of his own revenues, to be under the direct control and management of him or of those representing him, and to serve as types of what schools

should be. The Sovereign, as his position raises him above many prejudices and littlenesses, and as he can always have at his disposal the best advice, has evident advantages over private founders in well planning and directing a school; while at the same time his great means and his great influence secure, to a well-planned school of his, credit and authority. This is what, in North Germany, the governors do, in the matter of education, for the governed; and one may say that they thus give the governed a lesson, and draw out in them the idea of a right reason higher than the suggestions of an ordinary man's ordinary self. But in England how different is the part which in this matter our governors are accustomed to play! The Licensed Victuallers or the Commercial Travellers propose to make a school for their children; and I suppose, in the matter of schools, one may call the Licensed Victuallers or the Commercial Travellers ordinary men, with their natural taste for the bathos still strong; and a Sovereign with the advice of men like Wilhelm von Humboldt or Schleiermacher may, in this matter, be a better judge, and nearer to right reason. And it will be allowed, probably, that right reason would suggest that, to have a sheer school of Licensed Victuallers' children, or a sheer school of Commercial Travellers' children, and to bring them all up, not only at home but at school too, in a kind of odour of licensed victualism or of bagmanism, is not a wise training to give to these children. And in Germany, I have said, the action of the national guides or governors is to suggest and provide a better. But, in England, the action of the national guides or governors is, for a Royal Prince or a great Minister to go down to the opening of the Licensed Victuallers' or of the Commercial Travellers' school, to take the chair, to extol the energy and self-reliance of the Licensed Victuallers or the Commercial Travellers, to be all of their way of thinking, to predict full success to their schools, and never so much as to hint to them that they are doing a very foolish thing, and that the right way to go to work with their children's education is quite different. And it is the same in almost every department of affairs. While, on the Continent, the idea

prevails that it is the business of the heads and representatives of the nation, by virtue of their superior means, power, and information, to set an example and to provide suggestions of right reason, among us the idea is that the business of the heads and representatives of the nation is to do nothing of the kind, but to applaud the natural taste for the bathos showing itself vigorously in any part of the community, and to encourage its works.

Now I do not say that the political system of foreign countries has not inconveniences which may outweigh the inconveniences of our own political system; nor am I the least proposing to get rid of our own political system and to adopt theirs. But a sound centre of authority being what, in this disquisition, we have been led to seek, and right reason, or our best self, appearing alone to offer such a sound centre of authority, it is necessary to take note of the chief impediments which hinder, in this country, the extrication or recognition of this right reason as a paramount authority, with a view to afterwards trying in what way they can best be removed.

This being borne in mind, I proceed to remark how not only do we get no suggestions of right reason, and no rebukes of our ordinary self, from our governors, but a kind of philosophical theory is widely spread among us to the effect that there is no such thing at all as a best self and a right reason having claim to paramount authority, or, at any rate, no such thing ascertainable and capable of being made use of; and that there is nothing but an infinite number of ideas and works of our ordinary selves, and suggestions of our natural taste for the bathos, pretty equal in value, which are doomed either to an irreconcilable conflict, or else to a perpetual give and take; and that wisdom consists in choosing the give and take rather than the conflict, and in sticking to our choice with patience and good humour. And, on the other hand, we have another philosophical theory rife among us, to the effect that without the labour of perverting our-

selves by custom or example to relish right reason, but by continuing all of us to follow freely our natural taste for the bathos, we shall, by the mercy of Providence, and by a kind of natural tendency of things, come in due time to relish and follow right reason. The great promoters of these philosophical theories are our newspapers, which, no less than our parliamentary representatives, may be said to act the part of guides and governors to us; and these favourite doctrines of theirs I call, — or should call, if the doctrines were not preached by authorities I so much respect, — the first, a peculiarly British form of Atheism, the second, a peculiarly British form of Quietism. The first-named melancholy doctrine is preached in *The Times* with great clearness and force of style; indeed, it is well known, from the example of the poet Lucretius and others, what great masters of style the atheistic doctrine has always counted among its promulgators. “It is of no use,” says *The Times*, “for us to attempt to force upon our neighbours our several likings and dislikings. We must take things as they are. Everybody has his own little vision of religious or civil perfection. Under the evident impossibility of satisfying everybody, we agree to take our stand on equal laws and on a system as open and liberal as is possible. The result is that everybody has more liberty of action and of speaking here than anywhere else in the Old World.” We come again here upon Mr. Roebuck's celebrated definition of happiness, on which I have so often commented: “I look around me and ask what is the state of England? Is not every man able to say what he likes? I ask you whether the world over, or in past history, there is anything like it? Nothing. I pray that our unrivalled happiness may last.” This is the old story of our system of checks and every Englishman doing as he likes, which we have already seen to have been convenient enough so long as there were only Barbarians and the Philistines to do what they liked, but to be getting inconvenient, and productive of anarchy, now that the Populace wants to do what it likes too. But for all that, I will not at once dismiss this famous doctrine, but will first quote another passage from *The Times*, applying

the doctrine to a matter of which we have just been speaking, — education. “The difficulty here” (in providing a national system of education), says *The Times*, “does not reside in any removeable arrangements. It is inherent and native in the actual and inveterate state of things in this country. All these powers and personages, all these conflicting influences and varieties of character, exist, and have long existed among us; they are fighting it out, and will long continue to fight it out, without coming to that happy consummation when some one element of the British character is to destroy or to absorb all the rest.” There it is; the various promptings of the natural taste for the bathos in this man and that amongst us are fighting it out; and the day will never come (and, indeed, why should we wish it to come?) when one man’s particular sort of taste for the bathos shall tyrannise over another man’s; nor when right reason (if that may be called an element of the British character) shall absorb and rule them all. “The whole system of this country, like the constitution we boast to inherit, and are glad to uphold, is made up of established facts, prescriptive authorities, existing usages, powers that be, persons in possession, and communities or classes that have won dominion for themselves, and will hold it against all comers.” Every force in the world, evidently, except the one reconciling force, right reason! Sir Thomas Bateson here, the Rev. W. Cattle on this side, Mr. Bradlaugh on that! — pull devil, pull baker! Really, presented with the mastery of style of our leading journal, the sad picture, as one gazes upon it, assumes the iron and inexorable solemnity of tragic Destiny.

After this, the milder doctrine of our other philosophical teacher, the *Daily News*, has, at first, something very attractive and assuaging. The *Daily News* begins, indeed, in appearance, to weave the iron web of necessity round us like *The Times*. “The alternative is between a man’s doing what he likes and his doing what some one else, probably not one whit wiser than himself, likes.” This points to the tacit compact, mentioned in my last paper, between the Barbarians and the

Philistines, and into which it is hoped that the Populace will one day enter; the compact, so creditable to English honesty, that no class, if it exercise power, having only the ideas and aims of its ordinary self to give effect to, shall treat its ordinary self too seriously, or attempt to impose it on others; but shall let these others, — the Rev. W. Cattle, for instance, in his Papist-baiting, and Mr. Bradlaugh in his Hyde Park anarchy-mongering, — have their fling. But then the *Daily News* suddenly lights up the gloom of necessitarianism with bright beams of hope. “No doubt,” it says, “the common reason of society ought to check the aberrations of individual eccentricity.” This common reason of society looks very like our best self or right reason, to which we want to give authority, by making the action of the *State*, or nation in its collective character, the expression of it. But of this project of ours, the *Daily News*, with its subtle dialectics, makes havoc. “Make the State the organ of the common reason?” — it says. “You may make it the organ of something or other, but how can you be certain that reason will be the quality which will be embodied in it?” You cannot be certain of it, undoubtedly, if you never try to bring the thing about; but the question is, the action of the State being the action of the collective nation, and the action of the collective nation carrying naturally great publicity, weight, and force of example with it, whether we should not try to put into the action of the State as much as possible of right reason, or our best self, which may, in this manner, come back to us with new force and authority, may have visibility, form, and influence, and help to confirm us, in the many moments when we are tempted to be our ordinary selves merely, in resisting our natural taste of the bathos rather than in giving way to it?

But no! says our teacher: “it is better there should be an infinite variety of experiments in human action, because, as the explorers multiply, the true track is more likely to be discovered. The common reason of society can check the aberrations of individual eccentricity

only by acting on the individual reason; and it will do so in the main sufficiently, if left to this natural operation.”This is what I call the specially British form of Quietism, or a devout, but excessive, reliance on an over-ruling Providence. Providence, as the moralists are careful to tell us, generally works in human affairs by human means; so when we want to make right reason act on individual reason, our best self on our ordinary self, we seek to give it more power of doing so by giving it public recognition and authority, and embodying it, so far as we can, in the State. It seems too much to ask of Providence, that while we, on our part, leave our congenital taste for the bathos to its natural operation and its infinite variety of experiments, Providence should mysteriously guide it into the true track, and compel it to relish the sublime. At any rate, great men and great institutions have hitherto seemed necessary for producing any considerable effect of this kind. No doubt we have an infinite variety of experiments, and an ever-multiplying multitude of explorers; even in this short paper I have enumerated many: the *British Banner*, Judge Edmonds, Newman Weeks, Deborah Butler, Elderess Polly, Brother Noyes, the Rev. W. Cattle, the Licensed Victuallers, the Commercial Travellers, and I know not how many more; and the numbers of this noble army are swelling every day. But what a depth of Quietism, or rather, what an over-bold call on the direct interposition of Providence, to believe that these interesting explorers will discover the true track, or at any rate, “will do so in the main sufficiently”(whatever that may mean) if left to their natural operation; that is, by going on as they are! Philosophers say, indeed, that we learn virtue by performing acts of virtue; but to say that we shall learn virtue by performing any acts to which our natural taste for the bathos carries us, that the Rev. W. Cattle comes at his best self by Papist-baiting, or Newman Weeks and Deborah Butler at right reason by following their noses, this certainly does appear over-sanguine.

It is true, what we want is to make right reason act on individual

reason, the reason of individuals; all our search for authority has that for its end and aim. The *Daily News* says, I observe, that all my argument for authority “has a non-intellectual root;” and from what I know of my own mind and its inertness, I think this so probable, that I should be inclined easily to admit it, if it were not that, in the first place, nothing of this kind, perhaps, should be admitted without examination; and, in the second, a way of accounting for this charge being made, in this particular instance, without full grounds, appears to present itself. What seems to me to account here, perhaps, for the charge, is the want of flexibility of our race, on which I have so often remarked. I mean, it being admitted that the conformity of the individual reason of the Rev. W. Cattle or Mr. Bradlaugh with right reason is our true object, and not the mere restraining them, by the strong arm of the State, from Papist-baiting or railing-breaking, — admitting this, we have so little flexibility that we cannot readily perceive that the State's restraining them from these indulgences may yet fix clearly in their minds that, to the collective nation, these indulgences appear irrational and unallowable, may make them pause and reflect, and may contribute to bringing, with time, their individual reason into harmony with right reason. But in no country, owing to the want of intellectual flexibility above mentioned, is the learning which is our natural one, and, therefore, needs no recommending to us, so sedulously recommended, and the learning which is not our natural one, and, therefore, does not need dispraising to us, so sedulously dispraised, as in ours. To rely on the individual being, with us, the natural learning, we will hear of nothing but the good of relying on the individual; to act through the collective nation on the individual being not our natural learning, we will hear nothing in recommendation of it. But the wise know that we often need to hear most of that to which we are least inclined, and even to learn to employ, in certain circumstances, that which is capable, if employed amiss, of being a danger to us. Elsewhere this is certainly better understood than here. In a recent number of the *Westminster Review*,

an able writer, but with precisely our national want of flexibility of which I have been speaking, has unearthed, I see, for our present needs, an English translation, published some years ago, of Wilhelm von Humboldt's book, *The Sphere and Duties of Government*. Humboldt's object in this book is to show that the operation of government ought to be severely limited to what directly and immediately relates to the security of person and property. Wilhelm von Humboldt, one of the most beautiful and perfect souls that have ever existed, used to say that one's business in life was, first, to perfect oneself by all the means in one's power, and, secondly, to try and create in the world around one an aristocracy, the most numerous that one possibly could, of talents and characters. He saw, of course, that, in the end, everything comes to this, — that the individual must act for himself, and must be perfect in himself; and he lived in a country, Germany, where people were disposed to act too little for themselves, and to rely too much on the Government. But even thus, such was his flexibility, so little was he in bondage to a mere abstract maxim, that he saw very well that for his purpose itself, of enabling the individual to stand perfect on his own foundations and to do without the State, the action of the State would for long, long years be necessary; and soon after he wrote his book on *The Sphere and Duties of Government*, Wilhelm von Humboldt became Minister of Education in Prussia, and from his ministry all the great reforms which give the control of Prussian education to the State, —the transference of the management of public schools from their old boards of trustees to the State, the obligatory State-examination for schools, the obligatory State-examination for schoolmasters, and the foundation of the great State University of Berlin, —take their origin. This his English reviewer says not a word of. But, writing for a people whose dangers lie, as we have seen, on the side of their unchecked and unguided individual action, whose dangers none of them lie on the side of an over-reliance on the State, he quotes just so much of Wilhelm von Humboldt's example as can flatter them in their propensities, and do them no

good; and just what might make them think, and be of use to them, he leaves on one side. This precisely recalls the manner, it will be observed, in which we have seen that our royal and noble personages proceed with the Licensed Victuallers.

In France the action of the State on individuals is yet more preponderant than in Germany; and the need which friends of human perfection feel to enable the individual to stand perfect on his own foundations is all the stronger. But what says one of the staunchest of these friends, Monsieur Renan, on State action, and even State action in that very sphere where in France it is most excessive, the sphere of education? Here are his words: —“A liberal believes in liberty, and liberty signifies the non-intervention of the State. *But such an ideal is still a long way off from us, and the very means to remove it to an indefinite distance would be precisely the State's withdrawing its action too soon.*”And this, he adds, is even truer of education than of any other department of public affairs.

We see, then, how indispensable to that human perfection which we seek is, in the opinion of good judges, some public recognition and establishment of our best self, or right reason. We see how our habits and practice oppose themselves to such a recognition, and the many inconveniences which we therefore suffer. But now let us try to go a little deeper, and to find, beneath our actual habits and practice, the very ground and cause out of which they spring.

约翰·惠特吉夫特（1530—1604），坎特伯雷大主教。

Chapter IV

This fundamental ground is our preference of doing to thinking. Now this preference is a main element in our nature, and as we study it we find ourselves opening up a number of large questions on every side.

Let me go back for a moment to what I have already quoted from Bishop Wilson: —“First, never go against the best light you have; secondly, take care that your light be not darkness.”I said we show, as a nation, laudable energy and persistence in walking according to the best light we have, but are not quite careful enough, perhaps, to see that our light be not darkness. This is only another version of the old story that energy is our strong point and favourable characteristic, rather than intelligence. But we may give to this idea a more general form still, in which it will have a yet larger range of application. We may regard this energy driving at practice, this paramount sense of the obligation of duty, self-control, and work, this earnestness in going manfully with the best light we have as one force. And we may regard the intelligence driving at those ideas which are, after all, the basis of right practice, the ardent sense for all the new and changing combinations of them which man's development brings with it, the indomitable impulse to know and adjust them perfectly, as another force. And these two forces we may regard as in some sense rivals, — rivals not by the necessity of their own nature, but as exhibited in man and his history, — and rivals dividing the empire of the world between them. And to give these forces names from the two races of men who have supplied the most signal and splendid manifestations of them, we may call them respectively the forces of Hebraism and Hellenism. Hebraism and Hellenism, —between these

two points of influence moves our world. At one time it feels more powerfully the attraction of one of them, at another time of the other; and it ought to be, though it never is, evenly and happily balanced between them.

The final aim of both Hellenism and Hebraism, as of all great spiritual disciplines, is no doubt the same: man's perfection or salvation. The very language which they both of them use in schooling us to reach this aim is often identical. Even when their language indicates by variation, — sometimes a broad variation, often a but slight and subtle variation, — the different courses of thought which are uppermost in each discipline, even then the unity of the final end and aim is still apparent. To employ the actual words of that discipline with which we ourselves are all of us most familiar, and the words of which, therefore, come most home to us, that final end and aim is "that we might be partakers of the divine nature." These are the words of a Hebrew apostle, but of Hellenism and Hebraism alike this is, I say, the aim. When the two are confronted, as they very often are confronted, it is nearly always with what I may call a rhetorical purpose; the speaker's whole design is to exalt and enthrone one of the two, and he uses the other only as a foil and to enable him the better to give effect to his purpose. Obviously, with us, it is usually Hellenism which is thus reduced to minister to the triumph of Hebraism. There is a sermon on Greece and the Greek spirit by a man never to be mentioned without interest and respect, Frederick Robertson, in which this rhetorical use of Greece and the Greek spirit, and the inadequate exhibition of them necessarily consequent upon this, is almost ludicrous, and would be censurable if it were not to be explained by the exigences of a sermon. On the other hand, Heinrich Heine, and other writers of his sort, give us the spectacle of the tables completely turned, and of Hebraism brought in just as a foil and contrast to Hellenism, and to make the superiority of Hellenism more manifest. In both these cases there is injustice and misrepresentation.

The aim and end of both Hebraism and Hellenism is, as I have said, one and the same, and this aim and end is august and admirable.

Still, they pursue this aim by very different courses. The uppermost idea with Hellenism is to see things as they really are; the uppermost idea with Hebraism is conduct and obedience. Nothing can do away with this ineffaceable difference; the Greek quarrel with the body and its desires is, that they hinder right thinking, the Hebrew quarrel with them is that they hinder right acting. "He that keepeth the law, happy is he;" "There is nothing sweeter than to take heed unto the commandments of the Lord;" — that is the Hebrew notion of felicity; and, pursued with passion and tenacity, this notion would not let the Hebrew rest till, as is well known, he had, at last, got out of the law a network of prescriptions to enwrap his whole life, to govern every moment of it, every impulse, every action. The Greek notion of felicity, on the other hand, is perfectly conveyed in these words of a great French moralist: "*C'est le bonheur des hommes*" — when? when they abhor that which is evil? — no; when they exercise themselves in the law of the Lord day and night? — no; when they die daily? — no; when they walk about the New Jerusalem with palms in their hands? — no; but when they think aright, when their thought hits, — "*quand ils pensent juste*. At the bottom of both the Greek and the Hebrew notion is the desire, native in man, for reason and the will of God, the feeling after the universal order, — in a word, the love of God. But, while Hebraism seizes upon certain plain, capital intimations of the universal order, and rivets itself, one may say, with unequalled grandeur of earnestness and intensity on the study and observance of them, the bent of Hellenism is to follow, with flexible activity, the whole play of the universal order, to be apprehensive of missing any part of it, of sacrificing one part to another, to slip away from resting in this or that intimation of it, however capital. An unclouded clearness of mind, an unimpeded play of thought, is what this bent drives at. The governing idea of Hellenism is *spontaneity* of

consciousness; that of Hebraism, strictness of conscience.

Christianity changed nothing in this essential bent of Hebraism to set doing above knowing. Self-conquest, self-devotion, the following not our own individual will, but the will of God, *obedience*, is the fundamental idea of this form, also, of the discipline to which we have attached the general name of Hebraism. Only, as the old law and the network of prescriptions with which it enveloped human life were evidently a motive power not driving and searching enough to produce the result aimed at, — patient continuance in well doing, self-conquest, — Christianity substituted for them boundless devotion to that inspiring and affecting pattern of self-conquest offered by Christ; and by the new motive power, of which the essence was this, though the love and admiration of Christian churches have for centuries been employed in varying, amplifying, and adorning the plain description of it, Christianity, as St. Paul truly says, “establishes the law,” and in the strength of the ampler power which she has thus supplied to fulfil it, has accomplished the miracles, which we all see, of her history.

So long as we do not forget that both Hellenism and Hebraism are profound and admirable manifestations of man's life, tendencies, and powers, and that both of them aim at a like final result, we can hardly insist too strongly on the divergence of line and of operation with which they proceed. It is a divergence so great that it most truly, as the prophet Zechariah says, “has raised up thy sons, O Zion, against thy sons, O Greece!” The difference whether it is by doing or by knowing that we set most store, and the practical consequences which follow from this difference, leave their mark on all the history of our race and of its development. Language may be abundantly quoted from both Hellenism and Hebraism to make it seem that one follows the same current as the other towards the same goal. They are, truly, borne towards the same goal; but the currents which bear them are

infinitely different. It is true, Solomon will praise knowing: "Understanding is a well-spring of life unto him that hath it." And in the New Testament, again, Christ is a "light," and "truth makes us free." It is true, Aristotle will undervalue knowing. "In what concerns virtue," says he, "three things are necessary, — knowledge, deliberate will, and perseverance; but, whereas the two last are all important, the first is a matter of little importance." It is true that with the same impatience with which St. James enjoins a man to be not a forgetful hearer, but a *doer of the work*, Epictetus exhorts us to *do* what we have demonstrated to ourselves we ought to do; or he taunts us with futility, for being armed at all points to prove that lying is wrong, yet all the time continuing to lie. It is true, Plato, in words which are almost the words of the New Testament or the Imitation, calls life a learning to die. But underneath the superficial agreement the fundamental divergence still subsists. The understanding of Solomon is "the walking in the way of the commandments;" this is "the way of peace," and it is of this that blessedness comes. In the New Testament, the truth which gives us the peace of God and makes us free, is the love of Christ constraining us to crucify, as he did, and with a like purpose of moral regeneration, the flesh with its affections and lusts, and thus establishing, as we have seen, the law. To St. Paul it appears possible to "hold the truth in unrighteousness," which is just what Socrates judged impossible. The moral virtues, on the other hand, are with Aristotle but the porch and access to the intellectual, and with these last is blessedness. That partaking of the divine life, which both Hellenism and Hebraism, as we have said, fix as their crowning aim, Plato expressly denies to the man of practical virtue merely, of self-conquest with any other motive than that of perfect intellectual vision; he reserves it for the lover of pure knowledge, of seeing things as they really are, the *φιλομαθής*.

Both Hellenism and Hebraism arise out of the wants of human nature and address themselves to satisfying those wants. But their

methods are so different, they lay stress on such different points, and call into being by their respective disciplines such different activities, that the face which human nature presents when it passes from the hands of one of them to those of the other, is no longer the same. To get rid of one's ignorance, to see things as they are, and by seeing them as they are to see them in their beauty, is the simple and attractive ideal which Hellenism holds out before human nature; and from the simplicity and charm of this ideal, Hellenism, and human life in the hands of Hellenism, is invested with a kind of aerial ease, clearness, and radiancy; they are full of what we call sweetness and light. Difficulties are kept out of view, and the beauty and rationalness of the ideal have all our thoughts. "The best man is he who most tries to perfect himself, and the happiest man is he who most feels that he is perfecting himself," — this account of the matter by Socrates, the true Socrates of the *Memorabilia*, has something so simple, spontaneous, and unsophisticated about it, that it seems to fill us with clearness and hope when we hear it. But there is a saying which I have heard attributed to Mr. Carlyle about Socrates, — a very happy saying, whether it is really Mr. Carlyle's or not, — which excellently marks the essential point in which Hebraism differs from Hellenism. "Socrates," this saying goes, "is terribly *at ease in Zion*." Hebraism, — and here is the source of its wonderful strength, — has always been severely preoccupied with an awful sense of the impossibility of being at ease in Zion; of the difficulties which oppose themselves to man's pursuit or attainment of that perfection of which Socrates talks so hopefully, and, as from this point of view one might almost say, so glibly. It is all very well to talk of getting rid of one's ignorance, of seeing things in their reality, seeing them in their beauty; but how is this to be done when there is something which thwarts and spoils all our efforts? This something is *sin*; and the space which sin fills in Hebraism, as compared with Hellenism, is indeed prodigious. This obstacle to perfection fills the whole scene, and perfection appears remote and rising away from earth, in the

background. Under the name of sin, the difficulties of knowing oneself and conquering oneself which impede man's passage to perfection, become, for Hebraism, a positive, active entity hostile to man, a mysterious power which I heard Dr. Pusey the other day, in one of his impressive sermons, compare to a hideous hunchback seated on our shoulders, and which it is the main business of our lives to hate and oppose. The discipline of the Old Testament may be summed up as a discipline teaching us to abhor and flee from sin; the discipline of the New Testament, as a discipline teaching us to die to it. As Hellenism speaks of thinking clearly, seeing things in their essence and beauty, as a grand and precious feat for man to achieve, so Hebraism speaks of becoming conscious of sin, of awakening to a sense of sin, as a feat of this kind. It is obvious to what wide divergence these differing tendencies, actively followed, must lead. As one passes and repasses from Hellenism to Hebraism, from Plato to St. Paul, one feels inclined to rub one's eyes and ask oneself whether man is indeed a gentle and simple being, showing the traces of a noble and divine nature; or an unhappy chained captive, labouring with groanings that cannot be uttered to free himself from the body of this death.

Apparently it was the Hellenic conception of human nature which was unsound, for the world could not live by it. Absolutely to call it unsound, however, is to fall into the common error of its Hebraising enemies; but it was unsound at that particular moment of man's development, it was premature. The indispensable basis of conduct and self-control, the platform upon which alone the perfection aimed at by Greece can come into bloom, was not to be reached by our race so easily; centuries of probation and discipline were needed to bring us to it. Therefore the bright promise of Hellenism faded, and Hebraism ruled the world. Then was seen that astonishing spectacle, so well marked by the often quoted words of the prophet Zechariah, when men of all languages of the nations took hold of the skirt of him that was a Jew, saying: —“*We will go with you, for we have heard that*

God is with you.” And the Hebraism which thus received and ruled a world all gone out of the way and altogether become unprofitable, was, and could not but be, the later, the more spiritual, the more attractive development of Hebraism. It was Christianity; that is to say, Hebraism aiming at self-conquest and rescue from the thrall of vile affections, not by obedience to the letter of a law, but by conformity to the image of a self-sacrificing example. To a world stricken with moral enervation Christianity offered its spectacle of an inspired self-sacrifice; to men who refused themselves nothing, it showed one who refused himself everything: —“*my Saviour banished joy!*” says George Herbert. When the *alma Venus*, the life-giving and joy-giving power of nature, so fondly cherished by the Pagan world, could not save her followers from self-dissatisfaction and ennui, the severe words of the apostle came bracingly and refreshingly: “Let no man deceive you with vain words, for because of these things cometh the wrath of God upon the children of disobedience.” Throughout age after age, and generation after generation, our race, or all that part of our race which was most living and progressive, was *baptized into a death*; and endeavoured, by suffering in the flesh, to cease from sin. Of this endeavour, the animating labours and afflictions of early Christianity, the touching asceticism of mediæval Christianity, are the great historical manifestations. Literary monuments of it, each, in its own way, incomparable, remain in the Epistles of St. Paul, in St. Augustine's Confessions, and in the two original and simplest books of the Imitation. [1]

Of two disciplines laying their main stress, the one, on clear intelligence, the other, on firm obedience; the one, on comprehensively knowing the grounds of one's duty, the other, on diligently practising it; the one on taking all possible care (to use Bishop Wilson's words again) that the light we have be not darkness, the other, that according to the best light we have we diligently walk, — the priority naturally belongs to that discipline which braces

man's moral powers, and founds for him an indispensable basis of character. And, therefore, it is justly said of the Jewish people, who were charged with setting powerfully forth that side of the divine order to which the words *conscience* and *self-conquest* point, that they were "entrusted with the oracles of God:" as it is justly said of Christianity, which followed Judaism and which set forth this side with a much deeper effectiveness and a much wider influence, that the wisdom of the old Pagan world was foolishness compared to it. No words of devotion and admiration can be too strong to render thanks to these beneficent forces which have so borne forward humanity in its appointed work of coming to the knowledge and possession of itself; above all, in those great moments when their action was the wholesomest and the most necessary.

But the evolution of these forces, separately and in themselves, is not the whole evolution of humanity, —their single history is not the whole history of man; whereas their admirers are always apt to make it stand for the whole history. Hebraism and Hellenism are, neither of them, the law of human development, as their admirers are prone to make them; they are, each of them, *contributions* to human development, —august contributions, invaluable contributions; and each showing itself to us more august, more invaluable, more preponderant over the other, according to the moment in which we take them, and the relation in which we stand to them. The nations of our modern world, children of that immense and salutary movement which broke up the Pagan world, inevitably stand to Hellenism in a relation which dwarfs it, and to Hebraism in a relation which magnifies it. They are inevitably prone to take Hebraism as the law of human development, and not as simply a contribution to it, however precious. And yet the lesson must perforce be learned, that the human spirit is wider than the most priceless of the forces which bear it onward, and that to the whole development of man Hebraism itself is, like Hellenism, but a contribution.

Perhaps we may help ourselves to see this clearer by an illustration drawn from the treatment of a single great idea which has profoundly engaged the human spirit, and has given it eminent opportunities for showing its nobleness and energy. It surely must be perceived that the idea of the immortality of the soul, as this idea rises in its generality before the human spirit, is something grander, truer, and more satisfying, than it is in the particular forms by which St. Paul, in the famous fifteenth chapter of the Epistle to the Corinthians, and Plato, in the *Phædo*, endeavour to develope and establish it. Surely we cannot but feel, that the argumentation with which the Hebrew apostle goes about to expound this great idea is, after all, confused and inconclusive; and that the reasoning, drawn from analogies of likeness and equality, which is employed upon it by the Greek philosopher, is over-subtle and sterile? Above and beyond the inadequate solutions which Hebraism and Hellenism here attempt, extends the immense and august problem itself, and the human spirit which gave birth to it. And this single illustration may suggest to us how the same thing happens in other cases also.

But meanwhile, by alternations of Hebraism and Hellenism, of man's intellectual and moral impulses, of the effort to see things as they really are, and the effort to win peace by self-conquest, the human spirit proceeds, and each of these two forces has its appointed hours of culmination and seasons of rule. As the great movement of Christianity was a triumph of Hebraism and man's moral impulses, so the great movement which goes by the name of the Renaissance [2] was an uprising and re-instatement of man's intellectual impulses and of Hellenism. We in England, the devoted children of Protestantism, chiefly know the Renaissance by its subordinate and secondary side of the Reformation. The Reformation has been often called a Hebraising revival, a return to the ardour and sincereness of primitive Christianity. No one, however, can study the development of Protestantism and of Protestant churches without feeling that into the

Reformation too, — Hebraising child of the Renaissance and offspring of its fervour, rather than its intelligence, as it undoubtedly was, — the subtle Hellenic leaven of the Renaissance found its way, and that the exact respective parts in the Reformation, of Hebraism and of Hellenism, are not easy to separate. But what we may with truth say is, that all which Protestantism was to itself clearly conscious of, all which it succeeded in clearly setting forth in words, had the characters of Hebraism rather than of Hellenism. The Reformation was strong, in that it was an earnest return to the Bible and to doing from the heart the will of God as there written; it was weak, in that it never consciously grasped or applied the central idea of the Renaissance, — the Hellenic idea of pursuing, in all lines of activity, the law and science, to use Plato's words, of things as they really are. Whatever direct superiority, therefore, Protestantism had over Catholicism was a moral superiority, a superiority arising out of its greater sincerity and earnestness, — at the moment of its apparition at any rate, — in dealing with the heart and conscience; its pretensions to an intellectual superiority are in general quite illusory. For Hellenism, for the thinking side in man as distinguished from the acting side, the attitude of mind of Protestantism towards the Bible in no respect differs from the attitude of mind of Catholicism towards the Church. The mental habit of him who imagines that Balaam's ass spoke, in no respect differs from the mental habit of him who imagines that a Madonna of wood or stone winked; and the one, who says that God's Church makes him believe what he believes, and the other, who says that God's Word makes him believe what he believes, are for the philosopher perfectly alike in not really and truly knowing, when they say *God's Church* and *God's Word*, what it is they say, of whereof they affirm.

In the sixteenth century, therefore, Hellenism re-entered the world, and again stood in presence of Hebraism, — a Hebraism renewed and purged. Now, it has not been enough observed, how, in

the seventeenth century, a fate befell Hellenism in some respects analogous to that which befell it at the commencement of our era. The Renaissance, that great reawakening of Hellenism, that irresistible return of humanity to nature and to seeing things as they are, which in art, in literature, and in physics, produced such splendid fruits, had, like the anterior Hellenism of the Pagan world, a side of moral weakness, and of relaxation or insensibility of the moral fibre, which in Italy showed itself with the most startling plainness, but which in France, England, and other countries was very apparent too. Again this loss of spiritual balance, this exclusive preponderance given to man's perceiving and knowing side, this unnatural defect of his feeling and acting side, provoked a reaction. Let us trace that reaction where it most nearly concerns us.

Science has now made visible to everybody the great and pregnant elements of difference which lie in race, and in how signal a manner they make the genius and history of an Indo-European people vary from those of a Semitic people. Hellenism is of Indo-European growth, Hebraism is of Semitic growth; and we English, a nation of Indo-European stock, seem to belong naturally to the movement of Hellenism. But nothing more strongly marks the essential unity of man than the affinities we can perceive, in this point or that, between members of one family of peoples and members of another; and no affinity of this kind is more strongly marked than that likeness in the strength and prominence of the moral fibre, which, notwithstanding immense elements of difference, knits in some special sort the genius and history of us English, and of our American descendants across the Atlantic, to the genius and history of the Hebrew people. Puritanism, which has been so great a power in the English nation, and in the strongest part of the English nation, was originally the reaction, in the seventeenth century, of the conscience and moral sense of our race, against the moral indifference and lax rule of conduct which in the sixteenth century came in with the Renaissance. It was a reaction of

Hebraism against Hellenism; and it powerfully manifested itself, as was natural, in a people with much of what we call a Hebraising turn, with a signal affinity for the bent which was the master-bent of Hebrew life. Eminently Indo-European by its *humour*, by the power it shows, through this gift, of imaginatively acknowledging the multiform aspects of the problem of life, and of thus getting itself unfixed from its own over-certainty, of smiling at its own over-tenacity, our race has yet (and a great part of its strength lies here), in matters of practical life and moral conduct, a strong share of the assuredness, the tenacity, the intensity of the Hebrews. This turn manifested itself in Puritanism, and has had a great part in shaping our history for the last two hundred years. Undoubtedly it checked and changed amongst us that movement of the Renaissance which we see producing in the reign of Elizabeth such wonderful fruits; undoubtedly it stopped the prominent rule and direct development of that order of ideas which we call by the name of Hellenism, and gave the first rank to a different order of ideas. Apparently, too, as we said of the former defeat of Hellenism, if Hellenism was defeated, this shows that Hellenism was imperfect, and that its ascendancy at that moment would not have been for the world's good.

Yet there is a very important difference between the defeat inflicted on Hellenism by Christianity eighteen hundred years ago, and the check given to the Renaissance by Puritanism. The greatness of the difference is well measured by the difference in force, beauty, significance and usefulness, between primitive Christianity and Protestantism. Eighteen hundred years ago it was altogether the hour of Hebraism; primitive Christianity was legitimately and truly the ascendent force in the world at that time, and the way of mankind's progress lay through its full development. Another hour in man's development began in the fifteenth century, and the main road of his progress then lay for a time through Hellenism. Puritanism was no longer the central current of the world's progress, it was a side stream

crossing the central current and checking it. The cross and the check may have been necessary and salutary, but that does not do away with the essential difference between the main stream of man's advance and a cross or side stream. For more than two hundred years the main stream of man's advance has moved towards knowing himself and the world, seeing things as they are, spontaneity of consciousness; the main impulse of a great part, and that the strongest part, of our nation, has been towards strictness of conscience. They have made the secondary the principal at the wrong moment, and the principal they have at the wrong moment treated as secondary. This contravention of the natural order has produced, as such contravention always must produce, a certain confusion and false movement, of which we are now beginning to feel, in almost every direction, the inconvenience. In all directions our habitual courses of action seem to be losing efficaciousness, credit, and control, both with others and even with ourselves; everywhere we see the beginnings of confusion, and we want a clue to some sound order and authority. This we can only get by going back upon the actual instincts and forces which rule our life, seeing them as they really are, connecting them with other instincts and forces, and enlarging our whole view and rule of life.

但丁·阿利吉耶里（1265—1321），意大利中世纪诗人，欧洲文艺复兴时代的开拓人物，以史诗《神曲》留名后世。

[1] The two first books.

[2] I have ventured to give to the foreign word *Renaissance*, destined to become of more common use amongst us as the movement which it denotes comes, as it will come, increasingly to interest us, an English form.

Chapter V

The matter here opened is so large, and the trains of thought to which it gives rise are so manifold, that we must be careful to limit ourselves scrupulously to what has a direct bearing upon our actual discussion. We have found that at the bottom of our present unsettled state, so full of the seeds of trouble, lies the notion of its being the prime right and happiness, for each of us, to affirm himself, and his ordinary self; to be doing, and to be doing freely and as he likes. We have found at the bottom of it the disbelief in right reason as a lawful authority. It was easy to show from our practice and current history that this is so; but it was impossible to show why it is so without taking a somewhat wider sweep and going into things a little more deeply. Why, in fact, should good, well-meaning, energetic, sensible people, like the bulk of our countrymen, come to have such light belief in right reason, and such an exaggerated value for their own independent doing, however crude? The answer is: because of an exclusive and excessive development in them, without due allowance for time, place, and circumstance, of that side of human nature, and that group of human forces, to which we have given the general name of Hebraism. Because they have thought their real and only important homage was owed to a power concerned with their obedience rather than with their intelligence, a power interested in the moral side of their nature almost exclusively. Thus they have been led to regard in themselves, as the one thing needful, *strictness of conscience*, the staunch adherence to some fixed law of doing we have got already, instead of *spontaneity of consciousness*, which tends continually to enlarge our whole law of doing. They have fancied themselves to have in their religion a sufficient basis for the whole of their life fixed and certain for ever, a full law of conduct and a full law of thought, so far

as thought is needed, as well; whereas what they really have is a law of conduct, a law of unexampled power for enabling them to war against the law of sin in their members and not to serve it in the lusts thereof. The book which contains this invaluable law they call the Word of God, and attribute to it, as I have said, and as, indeed, is perfectly well known, a reach and sufficiency coextensive with all the wants of human nature. This might, no doubt, be so, if humanity were not the composite thing it is, if it had only, or in quite overpowering eminence, a moral side, and the group of instincts and powers which we call moral. But it has besides, and in notable eminence, an intellectual side, and the group of instincts and powers which we call intellectual. No doubt, mankind makes in general its progress in a fashion which gives at one time full swing to one of these groups of instincts, at another time to the other; and man's faculties are so intertwined, that when his moral side, and the current of force which we call Hebraism, is uppermost, this side will manage somehow to provide, or appear to provide, satisfaction for his intellectual needs; and when his moral side, and the current of force which we call Hellenism, is uppermost, this, again, will provide, or appear to provide, satisfaction for men's moral needs. But sooner or later it becomes manifest that when the two sides of humanity proceed in this fashion of alternate preponderance, and not of mutual understanding and balance, the side which is uppermost does not really provide in a satisfactory manner for the needs of the side which is undermost, and a state of confusion is, sooner or later, the result. The Hellenic half of our nature, bearing rule, makes a sort of provision for the Hebrew half, but it turns out to be an inadequate provision; and again the Hebrew half of our nature bearing rule makes a sort of provision for the Hellenic half, but this, too, turns out to be an inadequate provision. The true and smooth order of humanity's development is not reached in either way. And therefore, while we willingly admit with the Christian apostle that the world by wisdom, — that is, by the isolated preponderance of its intellectual impulses, — knew not

God, or the true order of things, it is yet necessary, also, to set up a sort of converse to this proposition, and to say likewise (what is equally true) that the world by Puritanism knew not God. And it is on this converse of the apostle's proposition that it is particularly needful to insist in our own country just at present.

Here, indeed, is the answer to many criticisms which have been addressed to all that we have said in praise of sweetness and light. Sweetness and light evidently have to do with the bent or side in humanity which we call Hellenic. Greek intelligence has obviously for its essence the instinct for what Plato calls the true, firm, intelligible law of things; the love of light, of seeing things as they are. Even in the natural sciences, where the Greeks had not time and means adequately to apply this instinct, and where we have gone a great deal further than they did, it is this instinct which is the root of the whole matter and the ground of all our success; and this instinct the world has mainly learnt of the Greeks, inasmuch as they are humanity's most signal manifestation of it. Greek art, again, Greek beauty, have their root in the same impulse to see things as they really are, inasmuch as Greek art and beauty rest on fidelity to nature, — the *best* nature, —and on a delicate discrimination of what this best nature is. To say we work for sweetness and light, then, is only another way of saying that we work for Hellenism. But, oh! cry many people, sweetness and light are not enough; you must put strength or energy along with them, and make a kind of trinity of strength, sweetness and light, and then, perhaps, you may do some good. That is to say, we are to join Hebraism, strictness of the moral conscience, and manful walking by the best light we have, together with Hellenism, inculcate both, and rehearse the praises of both.

Or, rather, we may praise both in conjunction, but we must be careful to praise Hebraism most. "Culture," says an acute, though somewhat rigid critic, Mr. Sidgwick, "diffuses sweetness and light. I do

not undervalue these blessings, but religion gives fire and strength, and the world wants fire and strength even more than sweetness and light."By religion, let me explain, Mr. Sidgwick here means particularly that Puritanism on the insufficiency of which I have been commenting and to which he says I am unfair. Now, no doubt, it is possible to be a fanatical partisan of light and the instincts which push us to it, a fanatical enemy of strictness of moral conscience and the instincts which push us to it. A fanaticism of this sort deforms and vulgarises the well-known work, in some respects so remarkable, of the late Mr. Buckle. Such a fanaticism carries its own mark with it, in lacking sweetness; and its own penalty, in that, lacking sweetness, it comes in the end to lack light too. And the Greeks, — the great exponents of humanity's bent for sweetness and light united, of its perception that the truth of things must be at the same time beauty, — singularly escaped the fanaticism which we moderns, whether we Hellenise or whether we Hebraise, are so apt to show, and arrived, — though failing, as has been said, to give adequate practical satisfaction to the claims of man's moral side, — at the idea of a comprehensive adjustment of the claims of both the sides in man, the moral as well as the intellectual, of a full estimate of both, and of a reconciliation of both; an idea which is philosophically of the greatest value, and the best of lessons for us moderns. So we ought to have no difficulty in conceding to Mr. Sidgwick that manful walking by the best light one has, — fire and strength as he calls it, — has its high value as well as culture, the endeavour to see things in their truth and beauty, the pursuit of sweetness and light. But whether at this or that time, and to this or that set of persons, one ought to insist most on the praises of fire and strength, or on the praises of sweetness and light, must depend, one would think, on the circumstances and needs of that particular time and those particular persons. And all that we have been saying, and indeed any glance at the world around us, shows that with us, with the most respectable and strongest part of us, the ruling force is now, and long has been, a Puritan force, the care for

fire and strength, strictness of conscience, Hebraism, rather than the care for sweetness and light, spontaneity of consciousness, Hellenism.

Well, then, what is the good of our now rehearsing the praises of fire and strength to ourselves, who dwell too exclusively on them already? When Mr. Sidgwick says so broadly, that the world wants fire and strength even more than sweetness and light, is he not carried away by a turn from powerful generalisation? does he not forget that the world is not all of one piece, and every piece with the same needs at the same time? It may be true that the Roman world at the beginning of our era, or Leo the Tenth's Court at the time of the Reformation, or French society in the eighteenth century, needed fire and strength even more than sweetness and light. But can it be said that the Barbarians who overran the empire, needed fire and strength even more than sweetness and light; or that the Puritans needed them more; or that Mr. Murphy, the Birmingham lecturer, and the Rev. W. Cattle and his friends, need them more?

The Puritan's great danger is that he imagines himself in possession of a rule telling him the *unum necessarium*, or one thing needful, and that he then remains satisfied with a very crude conception of what this rule really is and what it tells him, thinks he has now knowledge and henceforth needs only to act, and, in this dangerous state of assurance and self-satisfaction, proceeds to give full swing to a number of the instincts of his ordinary self. Some of the instincts of his ordinary self he has, by the help of his rule of life, conquered; but others which he has not conquered by this help he is so far from perceiving to need subjugation, and to be instincts of an inferior self, that he even fancies it to be his right and duty, in virtue of having conquered a limited part of himself, to give unchecked swing to the remainder. He is, I say, a victim of Hebraism, of the tendency to cultivate strictness of conscience rather than spontaneity of consciousness. And what he wants is a larger conception of human

nature, showing him the number of other points at which his nature must come to its best, besides the points which he himself knows and thinks of. There is no *unum necessarium*, or one thing needful, which can free human nature from the obligation of trying to come to its best at all these points. The real *unum necessarium* for us is to come to our best at all points. Instead of our "one thing needful," justifying in us vulgarity, hideousness, ignorance, violence, —our vulgarity, hideousness, ignorance, violence, are really so many touchstones which try our one thing needful, and which prove that in the state, at any rate, in which we ourselves have it, it is not all we want. And as the force which encourages us to stand staunch and fast by the rule and ground we have is Hebraism, so the force which encourages us to go back upon this rule, and to try the very ground on which we appear to stand, is Hellenism, —a turn for giving our consciousness free play and enlarging its range. And what I say is, not that Hellenism is always for everybody more wanted than Hebraism, but that for the Rev. W. Cattle at this particular moment, and for the great majority of us his fellow-countrymen, it is more wanted.

Nothing is more striking than to observe in how many ways a limited conception of human nature, the notion of a one thing needful, a one side in us to be made uppermost, the disregard of a full and harmonious development of ourselves, tells injuriously on our thinking and acting. In the first place, our hold upon the rule or standard to which we look for our one thing needful, tends to become less and less near and vital, our conception of it more and more mechanical, and unlike the thing itself as it was conceived in the mind where it originated. The dealings of Puritanism with the writings of St. Paul afford a noteworthy illustration of this. Nowhere so much as in the writings of St. Paul, and in that great apostle's greatest work, the Epistle to the Romans, has Puritanism found what seemed to furnish it with the one thing needful, and to give it canons of truth absolute and final. Now all writings, as has been already said, even the most

precious writings and the most fruitful, must inevitably, from the very nature of things, be but contributions to human thought and human development, which extend wider than they do. Indeed, St. Paul, in the very Epistle of which we are speaking, shows, when he asks, "Who hath known the mind of the Lord?"—who hath known, that is, the true and divine order of things in its entirety, —that he himself acknowledges this fully. And we have already pointed out in another Epistle of St. Paul a great and vital idea of the human spirit, —the idea of the immortality of the soul, —transcending and overlapping, so to speak, the expositor's power to give it adequate definition and expression. But quite distinct from the question whether St. Paul's expression, or any man's expression, can be a perfect and final expression of truth, comes the question whether we rightly seize and understand his expression as it exists. Now, perfectly to seize another man's meaning, as it stood in his own mind, is not easy; especially when the man is separated from us by such differences of race, training, time, and circumstances as St. Paul. But there are degrees of nearness in getting at a man's meaning; and though we cannot arrive quite at what St. Paul had in his mind, yet we may come near it. And who, that comes thus near it, must not feel how terms which St. Paul employs in trying to follow, with his analysis of such profound power and originality, some of the most delicate, intricate, obscure, and contradictory workings and states of the human spirit, are detached and employed by Puritanism, not in the connected and fluid way in which St. Paul employs them, and for which alone words are really meant, but in an isolated, fixed, mechanical way, as if they were talismans; and how all trace and sense of St. Paul's true movement of ideas, and sustained masterly analysis, is thus lost? Who, I say, that has watched Puritanism, —the force which so strongly Hebraises, which so takes St. Paul's writings as something absolute and final, containing the one thing needful, — handle such terms as *grace*, *faith*, *election*, *righteousness*, but must feel, not only that these terms have for the mind of Puritanism a sense false and misleading, but also

that this sense is the most monstrous, and grotesque caricature of the sense of St. Paul, and that his true meaning is by these worshippers of his words altogether lost?

Or to take another eminent example, in which not Puritanism only, but, one may say, the whole religious world, by their mechanical use of St. Paul's writings, can be shown to miss or change his real meaning. The whole religious world, one may say, use now the word *resurrection*, — a word which is so often in their thoughts and on their lips, and which they find so often in St. Paul's writings, — in one sense only. They use it to mean a rising again after the physical death of the body. Now it is quite true that St. Paul speaks of resurrection in this sense, that he tries to describe and explain it, and that he condemns those who doubt and deny it. But it is true, also, that in nine cases out of ten where St. Paul thinks and speaks of resurrection, he thinks and speaks of it in a sense different from this; in the sense of a rising to a new life before the physical death of the body, and not after it. The idea on which we have already touched, the profound idea of being baptized into the death of the great exemplar of self-devotion and self-annulment, of repeating in our own person, by virtue of identification with our exemplar, his course of self-devotion and self-annulment, and of thus coming, within the limits of our present life, to a new life, in which, as in the death going before it, we are identified with our exemplar, — this is the fruitful and original conception of being *risen with Christ* which possesses the mind of St. Paul, and this is the central point around which, with such incomparable emotion and eloquence, all his teaching moves. For him, the life after our physical death is really in the main but a consequence and continuation of the inexhaustible energy of the new life thus originated on this side the grave. This grand Pauline idea of Christian resurrection is worthily rehearsed in one of the noblest collects of the Prayer-Book, and is destined, no doubt, to fill a more and more important place in the Christianity of the future; but almost

as signal as is the essentialness of this characteristic idea in St. Paul's teaching, is the completeness with which the worshippers of St. Paul's words, as an absolute final expression of saving truth, have lost it, and have substituted for the apostle's living and near conception of a resurrection now, their mechanical and remote conception of a resurrection hereafter!

In short, so fatal is the notion of possessing, even in the most precious words or standards, the one thing needful, of having in them, once for all, a full and sufficient measure of light to guide us, and of there being no duty left for us except to make our practice square exactly with them, — so fatal, I say, is this notion to the right knowledge and comprehension of the very words or standards we thus adopt, and to such strange distortions and perversions of them does it inevitably lead, that whenever we hear that commonplace which Hebraism, if we venture to inquire what a man knows, is so apt to bring out against us in disparagement of what we call culture, and in praise of a man's sticking to the one thing needful, — *he knows*, says Hebraism, *his Bible!* — whenever we hear this said, we may, without any elaborate defence of culture, content ourselves with answering simply: "No man, who knows nothing else, knows even his Bible."

Now the force which we have so much neglected, Hellenism, may be liable to fail in moral force and earnestness, but by the law of its nature, — the very same law which makes it sometimes deficient in intensity when intensity is required, — it opposes itself to the notion of cutting our being in two, of attributing to one part the dignity of dealing with the one thing needful, and leaving the other part to take its chance, which is the bane of Hebraism. Essential in Hellenism is the impulse to the development of the whole man, to connecting and harmonising all parts of him, perfecting all, leaving none to take their chance; because the characteristic bent of Hellenism, as has been said, is to find the intelligible law of things, and there is no intelligible law

of things, things cannot really appear intelligible, unless they are also beautiful. The body is not intelligible, is not seen in its true nature and as it really is, unless it is seen as beautiful; behaviour is not intelligible, does not account for itself to the mind and show the reason for its existing, unless it is beautiful. The same with discourse, the same with song, the same with worship, the same with all the modes in which man proves his activity and expresses himself. To think that when one shows what is mean, or vulgar, or hideous, one can be permitted to plead that one has that within which passes show; to suppose that the possession of what benefits and satisfies one part of our being can make allowable either discourse like Mr. Murphy's and the Rev. W. Cattle's, or poetry like the hymns we all hear, or places of worship like the chapels we all see, — this it is abhorrent to the nature of Hellenism to concede. And to be, like our honoured and justly honoured Faraday, a great natural philosopher with one side of his being and a Sandemanian with the other, would to Archimedes have been impossible. It is evident to what a manysided perfecting of man's powers and activities this demand of Hellenism for satisfaction to be given to the mind by everything which we do, is calculated to impel our race. It has its dangers, as has been fully granted; the notion of this sort of equipollency in man's modes of activity may lead to moral relaxation, what we do not make our one thing needful we may come to treat not enough as if it were needful, though it is indeed very needful and at the same time very hard. Still, what side in us has not its dangers, and which of our impulses can be a talisman to give us perfection outright, and not merely a help to bring us towards it? Has not Hebraism, as we have shown, its dangers as well as Hellenism; and have we used so excessively the tendencies in ourselves to which Hellenism makes appeal, that we are now suffering from it? Are we not, on the contrary, now suffering because we have not enough used these tendencies as a help towards perfection?

For we see whither it has brought us, the long exclusive predominance of Hebraism, — the insisting on perfection in one part of our nature and not in all; the singling out the moral side, the side of obedience and action, for such intent regard; making strictness of the moral conscience so far the principal thing, and putting off for hereafter and for another world the care for being complete at all points, the full and harmonious development of our humanity. Instead of watching and following on its ways the desire which, as Plato says, “for ever through all the universe tends towards that which is lovely,” we think that the world has settled its accounts with this desire, knows what this desire wants of it, and that all the impulses of our ordinary self which do not conflict with the terms of this settlement, in our narrow view of it, we may follow unrestrainedly, under the sanction of some such text as “Not slothful in business,” or “Whatsoever thy hand findeth to do, do it with all thy might,” or something else of the same kind. And to any of these impulses we soon come to give that same character of a mechanical, absolute law, which we give to our religion; we regard it, as we do our religion, as an object for strictness of conscience, not for spontaneity of consciousness; for unremitting adherence on its own account, not for going back upon, viewing in its connection with other things, and adjusting to a number of changing circumstances; we treat it, in short, just as we treat our religion, — as machinery. It is in this way that the Barbarians treat their bodily exercises, the Philistines their business, Mr. Spurgeon his voluntaryism, Mr. Bright the assertion of personal liberty, Mr. Beales the right of meeting in Hyde Park. In all those cases what is needed is a freer play of consciousness upon the object of pursuit; and in all of them Hebraism, the valuing staunchness and earnestness more than this free play, the entire subordination of thinking to doing, has led to a mistaken and misleading treatment of things.

The newspapers a short time ago contained an account of the

suicide of a Mr. Smith, secretary to some insurance company, who, it was said, "laboured under the apprehension that he would come to poverty, and that he was eternally lost." And when I read these words, it occurred to me that the poor man who came to such a mournful end was, in truth, a kind of type, by the selection of his two grand objects of concern, by their isolation from everything else, and their juxtaposition to one another, of all the strongest, most respectable, and most representative part of our nation. "He laboured under the apprehension that he would come to poverty, and that he was eternally lost." The whole middle-class have a conception of things, — a conception which makes us call them Philistines, — just like that of this poor man; though we are seldom, of course, shocked by seeing it take the distressing, violently morbid, and fatal turn, which it took with him. But how generally, with how many of us, are the main concerns of life limited to these two, — the concern for making money, and the concern for saving our souls! And how entirely does the narrow and mechanical conception of our secular business proceed from a narrow and mechanical conception of our religious business! What havoc do the united conceptions make of our lives! It is because the second-named of these two master-concerns presents to us the one thing needful in so fixed, narrow, and mechanical a way, that so ignoble a fellow master-concern to it as the first-named becomes possible; and, having been once admitted, takes the same rigid and absolute character as the other. Poor Mr. Smith had sincerely the nobler master-concern as well as the meaner, — the concern for saving his soul (according to the narrow and mechanical conception which Puritanism has of what the salvation of the soul is), and the concern for making money. But let us remark how many people there are, especially outside the limits of the serious and conscientious middle-class to which Mr. Smith belonged, who take up with a meaner master-concern, — whether it be pleasure, or field-sports, or bodily exercises, or business, or popular agitation, — who take up with one of these exclusively, and neglect Mr. Smith's nobler master-concern,

because of the mechanical form which Hebraism has given to this nobler master-concern, making it stand, as we have said, as something talismanic, isolated, and all sufficient, justifying our giving our ordinary selves free play in amusement, or business, or popular agitation, if we have made our accounts square with this master-concern; and, if we have not, rendering other things indifferent, and our ordinary self all we have to follow, and to follow with all the energy that is in us, till we do. Whereas the idea of perfection at all points, the encouraging in ourselves spontaneity of consciousness, the letting a free play of thought live and flow around all our activity, the indisposition to allow one side of our activity to stand as so all-important and all-sufficing that it makes other sides indifferent, — this bent of mind in us may not only check us in following unreservedly a mean master-concern of any kind, but may even, also, bring new life and movement into that side of us with which alone Hebraism concerns itself, and awaken a healthier and less mechanical activity there. Hellenism may thus actually serve to further the designs of Hebraism.

Undoubtedly it thus served in the first days of Christianity. Christianity, as has been said, occupied itself, like Hebraism, with the moral side of man exclusively, with his moral affections and moral conduct; and so far it was but a continuation of Hebraism. But it transformed and renewed Hebraism by going back upon a fixed rule, which had become mechanical, and had thus lost its vital motive-power; by letting the thought play freely around this old rule, and perceive its inadequacy; by developing a new motive-power, which men's moral consciousness could take living hold of, and could move in sympathy with. What was this but an importation of Hellenism, as we have defined it, into Hebraism? And as St. Paul used the contradiction between the Jew's profession and practice, his shortcomings on that very side of moral affection and moral conduct which the Jew and St. Paul, both of them, regarded as all in all —

("Thou that sayest a man should not steal, dost thou steal? thou that sayest a man should not commit adultery, dost thou commit adultery?") —for a proof of the inadequacy of the old rule of life, in the Jew's mechanical conception of it, and tried to rescue him by making his consciousness play freely around this rule, —that is, by a, so far, Hellenic treatment of it, —even so, when we hear so much said of the growth of commercial immorality in our serious middle-class, of the melting away of habits of strict probity before the temptation to get quickly rich and to cut a figure in the world; when we see, at any rate, so much confusion of thought and of practice in this great representative class of our nation, may we not be disposed to say that this confusion shows that his new motive-power of grace and imputed righteousness has become to the Puritan as mechanical, and with as ineffective a hold upon his practice, as the old motive-power of the law was to the Jew? and that the remedy is the same as that which St. Paul employed, —an importation of what we have called Hellenism into his Hebraism, a making his consciousness flow freely round his petrified rule of life and renew it? Only with this difference: that whereas St. Paul imported Hellenism within the limits of our moral part only, this part being still treated by him as all in all; and whereas he exhausted, one may say, and used to the very uttermost, the possibilities of fruitfully importing it on that side exclusively; we ought to try and import it, —guiding ourselves by the ideal of a human nature harmoniously perfect at all points, —into all the lines of our activity, and only by so doing can we rightly quicken, refresh, and renew those very instincts, now so much baffled, to which Hebraism makes appeal.

But if we will not be warned by the confusion visible enough at present in our thinking and acting, that we are in a false line in having developed our Hebrew side so exclusively, and our Hellenic side so feebly and at random, in loving fixed rules of action so much more than the intelligible law of things, let us listen to a remarkable

testimony which the opinion of the world around us offers. All the world now sets great and increasing value on three objects which have long been very dear to us, and pursues them in its own way, or tries to pursue them. These three objects are industrial enterprise, bodily exercises, and freedom. Certainly we have, before and beyond our neighbours, given ourselves to these three things with ardent passion and with high success. And this our neighbours cannot but acknowledge; and they must needs, when they themselves turn to these things, have an eye to our example, and take something of our practice. Now, generally, when people are interested in an object of pursuit, they cannot help feeling an enthusiasm for those who have already laboured successfully at it, and for their success; not only do they study them, they also love and admire them. In this way a man who is interested in the art of war not only acquaints himself with the performance of great generals, but he has an admiration and enthusiasm for them. So, too, one who wants to be a painter or a poet cannot help loving and admiring the great painters or poets who have gone before him and shown him the way. But it is strange with how little of love, admiration, or enthusiasm, the world regards us and our freedom, our bodily exercises, and our industrial prowess, much as these things themselves are beginning to interest it. And is not the reason because we follow each of these things in a mechanical manner, as an end in and for itself, and not in reference to a general end of human perfection? and this makes our pursuit of them uninteresting to humanity, and not what the world truly wants? It seems to them mere machinery that we can, knowingly, teach them to worship, — a mere fetish. British freedom, British industry, British muscularity, we work for each of these three things blindly, with no notion of giving each its due proportion and prominence, because we have no ideal of harmonious human perfection before our minds, to set our work in motion, and to guide it. So the rest of the world, desiring industry, or freedom, or bodily strength, yet desiring these not, as we do, absolutely, but as means to something else, imitate,

indeed, of our practice what seems useful for them, but us, whose practice they imitate, they seem to entertain neither love nor admiration for. Let us observe, on the other hand, the love and enthusiasm excited by others who have laboured for these very things. Perhaps of what we call industrial enterprise it is not easy to find examples in former times; but let us consider how Greek freedom and Greek gymnastics have attracted the love and praise of mankind, who give so little love and praise to ours. And what can be the reason of this difference? Surely because the Greeks pursued freedom and pursued gymnastics not mechanically, but with constant reference to some ideal of complete human perfection and happiness. And therefore, in spite of faults and failures, they interest and delight by their pursuit of them all the rest of mankind, who instinctively feel that only as things are pursued with reference to this ideal are they valuable.

Here again, therefore, as in the confusion into which the thought and action of even the steadiest class amongst us is beginning to fall, we seem to have an admonition that we have fostered our Hebraising instincts, our preference of earnestness of doing to delicacy and flexibility of thinking, too exclusively, and have been landed by them in a mechanical and unfruitful routine. And again we seem taught that the development of our Hellenising instincts, seeking skilfully the intelligible law of things, and making a stream of fresh thought play freely about our stock notions and habits, is what is most wanted by us at present.

Well, then, from all sides, the more we go into the matter, the currents seem to converge, and together to bear us along towards culture. If we look at the world outside us we find a disquieting absence of sure authority; we discover that only in right reason can we get a source of sure authority, and culture brings us towards right reason. If we look at our own inner world, we find all manner of

confusion arising out of the habits of unintelligent routine and one-sided growth, to which a too exclusive worship of fire, strength, earnestness, and action has brought us. What we want is a fuller harmonious development of our humanity, a free play of thought upon our routine notions, spontaneity of consciousness, sweetness and light; and these are just what culture generates and fosters. Proceeding from this idea of the harmonious perfection of our humanity, and seeking to help itself up towards this perfection by knowing and spreading the best which has been reached in the world — an object not to be gained without books and reading — culture has got its name touched, in the fancies of men, with a sort of air of bookishness and pedantry, cast upon it from the follies of the many bookmen who forget the end in the means, and use their books with no real aim at perfection. We will not stickle for a name, and the name of culture one might easily give up, if only those who decry the frivolous and pedantic sort of culture, but wish at bottom for the same things as we do, would be careful on their part, not, in disparaging and discrediting the false culture, to unwittingly disparage and discredit, among a people with little natural reverence for it, the true also. But what we are concerned for is the thing, not the name; and the thing, call it by what name we will, is simply the enabling ourselves, whether by reading, observing, or thinking, to come as near as we can to the firm intelligible law of things, and thus to get a basis for a less confused action and a more complete perfection than we have at present.

And now, therefore, when we are accused of preaching up a spirit of cultivated inaction, of provoking the earnest lovers of action, of refusing to lend a hand at uprooting certain definite evils, of despairing to find any lasting truth to minister to the diseased spirit of our time, we shall not be so much confounded and embarrassed what to answer for ourselves. We shall say boldly that we do not at all despair of finding some lasting truth to minister to the diseased spirit of our time; but that we have discovered the best way of finding this

to be, not so much by lending a hand to our friends and countrymen in their actual operations for the removal of certain definite evils, but rather in getting our friends and countrymen to seek culture, to let their consciousness play freely round their present operations and the stock notions on which they are founded, show what these are like, and how related to the intelligible law of things, and auxiliary to true human perfection.

艾萨克·沃尔顿（1593—1683），英国作家。

Chapter VI

But an unpretending writer, without a philosophy based on inter-dependent, subordinate, and coherent principles, must not presume to indulge himself too much in generalities, but he must keep close to the level ground of common fact, the only safe ground for understandings without a scientific equipment. Therefore I am bound to take, before concluding, some of the practical operations in which my friends and countrymen are at this moment engaged, and to make these, if I can, show the truth of what I have advanced. Probably I could hardly give a greater proof of my confessed inexpertness in reasoning and arguing, than by taking, for my first example of an operation of this kind, the proceedings for the disestablishment of the Irish Church, which we are now witnessing. It seems so clear that this is surely one of those operations for the uprooting of a certain definite evil in which one's Liberal friends engage, and have a right to complain and to get impatient and to reproach one with delicate Conservative scepticism and cultivated inaction if one does not lend a hand to help them. This does, indeed, seem evident; and yet this operation comes so prominently before us just at this moment, — it so challenges everybody's regard, — that one seems cowardly in blinking it. So let us venture to try and see whether this conspicuous operation is one of those round which we need to let our consciousness play freely and reveal what manner of spirit we are of in doing it; or whether it is one which by no means admits the application of this doctrine of ours, and one to which we ought to lend a hand immediately.

Now it seems plain that the present Church establishment in Ireland is contrary to reason and justice, in so far as the Church of a very small minority of the people there takes for itself all the Church

property of the Irish people. And one would think, that property assigned for the purpose of providing for a people's religious worship when that worship was one, the State should, when that worship is split into several forms, apportion between those several forms, with due regard to circumstances, taking account only of great differences, which are likely to be lasting, and of considerable communions, which are likely to represent profound and widespread religious characteristics; and overlooking petty differences, which have no serious reason for lasting, and inconsiderable communions, which can hardly be taken to express any broad and necessary religious lineaments of our common nature. This is just in accordance with that maxim about the State which we have more than once used: *The State is of the religion of all its citizens, without the fanaticism of any of them.* Those who deny this, either think so poorly of the State that they do not like to see religion condescend to touch the State, or they think so poorly of religion that they do not like to see the State condescend to touch religion; but no good statesman will easily think thus unworthily either of the State or of religion, and our statesmen of both parties were inclined, one may say, to follow the natural line of the State's duty, and to make in Ireland some fair apportionment of Church property between large and radically divided religious communions in that country. But then it was discovered that in Great Britain the national mind, as it is called, is grown averse to endowments for religion and will make no new ones; and though this in itself looks general and solemn enough, yet there were found political philosophers, like Mr. Baxter and Mr. Charles Buxton, to give it a look of more generality and more solemnity still, and to elevate, by their dexterous command of powerful and beautiful language, this supposed edict of the British national mind into a sort of formula for expressing a great law of religious transition and progress for all the world. But we, who, having no coherent philosophy, must not let ourselves philosophise, only see that the English and Scotch Nonconformists have a great horror of establishments and

endowments for religion, which, they assert, were forbidden by Christ when he said: "My kingdom is not of this world;" and that the Nonconformists will be delighted to aid statesmen in disestablishing any church, but will suffer none to be established or endowed if they can help it. Then we see that the Nonconformists make the strength of the Liberal majority in the House of Commons, and that, therefore, the leading Liberal statesmen, to get the support of the Nonconformists, forsake the notion of fairly apportioning Church property in Ireland among the chief religious communions, declare that the national mind has decided against new endowments, and propose simply to disestablish and disendow the present establishment in Ireland without establishing or endowing any other. The actual power, in short, by virtue of which the Liberal party in the House of Commons is now trying to disestablish the Irish Church, is not the power of reason and justice, it is the power of the Nonconformists' antipathy to Church establishments. Clearly it is this; because Liberal statesmen, relying on the power of reason and justice to help them, proposed something quite different from what they now propose; and they proposed what they now propose, and talked of the decision of the national mind, because they had to rely on the English and Scotch Nonconformists. And clearly the Nonconformists are actuated by antipathy to establishments, not by antipathy to the injustice and irrationality of the present appropriation of Church property in Ireland; because Mr. Spurgeon, in his eloquent and memorable letter, expressly avowed that he would sooner leave things as they are in Ireland, that is, he would sooner let the injustice and irrationality of the present appropriation continue, than do anything to set up the Roman image, that is, than give the Catholics their fair and reasonable share of Church property. Most indisputably, therefore, we may affirm that the real moving power by which the Liberal party are now operating the overthrow of the Irish establishment is the antipathy of the Nonconformists to Church establishments, and not the sense of reason or justice, except so far as reason and justice may be contained in this

antipathy. And thus the matter stands at present.

Now surely we must all see many inconveniences in performing the operation of uprooting this evil, the Irish Church establishment, in this particular way. As was said about industry and freedom and gymnastics, we shall never awaken love and gratitude by this mode of operation; for it is pursued, not in view of reason and justice and human perfection and all that enkindles the enthusiasm of men, but it is pursued in view of a certain stock notion, or fetish, of the Nonconformists, which proscribes Church establishments. And yet, evidently, one of the main benefits to be got by operating on the Irish Church is to win the affections of the Irish people. Besides this, an operation performed in virtue of a mechanical rule, or fetish, like the supposed decision of the English national mind against new endowments, does not easily inspire respect in its adversaries, and make their opposition feeble and hardly to be persisted in, as an operation evidently done in virtue of reason and justice might. For reason and justice have in them something persuasive and irresistible; but a fetish or mechanical maxim, like this of the Nonconformists, has in it nothing at all to conciliate either the affections or the understanding; nay, it provokes the counter-employment of other fetishes or mechanical maxims on the opposite side, by which the confusion and hostility already prevalent are heightened. Only in this way can be explained the apparition of such fetishes as are beginning to be set up on the Conservative side against the fetish of the Nonconformists: — *The Constitution in danger! The bulwarks of British freedom menaced! The lamp of the Reformation put out! No Popery!* — and so on. To elevate these against an operation relying on reason and justice to back it is not so easy, or so tempting to human infirmity, as to elevate them against an operation relying on the Nonconformists' antipathy to Church establishments to back it; for after all, *No Popery!* is a rallying cry which touches the human spirit quite as vitally as *No Church establishments!* — that is to say, neither the one nor the other,

in themselves, touch the human spirit vitally at all.

Ought the believers in action, then, to be so impatient with us, if we say, that even for the sake of this operation of theirs itself and its satisfactory accomplishment, it is more important to make our consciousness play freely round the stock notion or habit on which their operation relies for aid, than to lend a hand to it straight away? Clearly they ought not; because nothing is so effectual for operating as reason and justice, and a free play of thought will either disengage the reason and justice lying hid in the Nonconformist fetish, and make them effectual, or else it will help to get this fetish out of the way, and to let statesmen go freely where reason and justice take them.

So, suppose we take this absolute rule, this mechanical maxim of Mr. Spurgeon and the Nonconformists, that Church establishments are bad things because Christ said: "My kingdom is not of this world." Suppose we try and make our consciousness bathe and float this piece of petrification, —for such it now is, —and bring it within the stream of the vital movement of our thought, and into relation with the whole intelligible law of things. An enemy and a disputant might probably say that much machinery which Nonconformists themselves employ, the Liberation Society, which exists already, and the Nonconformist Union which Mr. Spurgeon desires to see existing, come within the scope of Christ's words as well as Church establishments. This, however, is merely a negative and contentious way of dealing with the Nonconformist maxim; whereas what we desire is to bring this maxim within the positive and vital movement of our thought. We say, therefore, that Christ's words mean that his religion is a force of inward persuasion acting on the soul, and not a force of outward constraint acting on the body; and if the Nonconformist maxim against Church establishments and Church endowments has warrant given to it from what Christ thus meant, then their maxim is good, even though their own practice in the

matter of the Liberation Society may be at variance with it.

And here we cannot but remember what we have formerly said about religion, Miss Cobbe, and the British College of Health in the New Road. In religion there are two parts, the part of thought and speculation, and the part of worship and devotion. Christ certainly meant his religion, as a force of inward persuasion acting on the soul, to employ both parts as perfectly as possible. Now thought and speculation is eminently an individual matter, and worship and devotion is eminently a collective matter. It does not help me to think a thing more clearly that thousands of other people are thinking the same; but it does help me to worship with more emotion that thousands of other people are worshipping with me. The consecration of common consent, antiquity, public establishment, long-used rites, national edifices, is everything for religious worship. "Just what makes worship impressive," says Joubert, "is its publicity, its external manifestation, its sound, its splendour, its observance universally and visibly holding its way through all the details both of our outward and of our inward life." Worship, therefore, should have in it as little as possible of what divides us, and should be as much as possible a common and public act; as Joubert says again: "The best prayers are those which have nothing distinct about them, and which are thus of the nature of simple adoration." For, "The same devotion," as he says in another place, "unites men far more than the same thought and knowledge." Thought and knowledge, as we have said before, is eminently something individual, and of our own; the more we possess it as strictly of our own, the more power it has on us. Man worships best, therefore, with the community; he philosophises best alone. So it seems that whoever would truly give effect to Christ's declaration that his religion is a force of inward persuasion acting on the soul, would leave our thought on the intellectual aspects of Christianity as individual as possible, but would make Christian worship as collective as possible. Worship, then, appears to be eminently a matter for public

and national establishment; for even Mr. Bright, who, when he stands in Mr. Spurgeon's great Tabernacle is so ravished with admiration, will hardly say that the great Tabernacle and its worship are in themselves, as a temple and service of religion, so impressive and affecting as the public and national Westminster Abbey, or Notre Dame, with their worship. And when, very soon after the great Tabernacle, one comes plump down to the mass of private and individual establishments of religious worship, establishments falling, like the British College of Health in the New Road, conspicuously short of what a public and national establishment might be, then one cannot but feel that Christ's command to make his religion a force of persuasion to the soul, is, so far as one main source of persuasion is concerned, altogether set at nought.

But perhaps the Nonconformists worship so unimpressively because they philosophise so keenly; and one part of religion, the part of public national worship, they have subordinated to the other part, the part of individual thought and knowledge? This, however, their organisation in congregations forbids us to admit. They are members of congregations, not isolated thinkers; and a true play of individual thought is at least as much impeded by membership of a small congregation as by membership of a great church; thinking by batches of fifties is to the full as fatal to free thought as thinking by batches of thousands. Accordingly, we have had occasion already to notice that Nonconformity does not at all differ from the Established Church by having worthier or more philosophical ideas about God and the ordering of the world than the Established Church has; it has very much the same ideas about these as the Established Church has, but it differs from the Established Church in that its worship is a much less collective and national affair. So Mr. Spurgeon and the Nonconformists seem to have misapprehended the true meaning of Christ's words, *My kingdom is not of this world*; because, by these words, Christ meant that his religion was to work on the soul; and of

the two parts of the soul on which religion works, — the thinking and speculative part, and the feeling and imaginative part, — Nonconformity satisfies the first no better than the Established Churches, which Christ by these words is supposed to have condemned, satisfy it; and the second part it satisfies much worse than the Established Churches. And thus the balance of advantage seems to rest with the Established Churches; and they seem to have apprehended and applied Christ's words, if not with perfect adequacy, at least less inadequately than the Nonconformists.

Might it not, then, be urged with great force that the way to do good, in presence of this operation for uprooting the Church establishment in Ireland by the power of the Nonconformists' antipathy to publicly establishing or endowing religious worship, is not by lending a hand straight away to the operation, and Hebraising, — that is, in this case, taking an uncritical interpretation of certain Bible words as our absolute rule of conduct, —with the Nonconformists. It may be very well for born Hebraisers, like Mr. Spurgeon, to Hebraise; but for Liberal statesmen to Hebraise is surely unsafe, and to see poor old Liberal hacks Hebraising, whose real self belongs to a kind of negative Hellenism, —a state of moral indifferency without intellectual ardour, —is even painful. And when, by our Hebraising, we neither do what the better mind of statesmen prompted them to do, nor win the affections of the people we want to conciliate, nor yet reduce the opposition of our adversaries but rather heighten it, surely it may be not unreasonable to Hellenise a little, to let our thought and consciousness play freely about our proposed operation and its motives, dissolve these motives if they are unsound, which certainly they have some appearance, at any rate, of being, and create in their stead, if they are, a set of sounder and more persuasive motives conducting to a more solid operation. May not the man who promotes this be giving the best help towards finding some lasting truth to minister to the diseased spirit of his time, and does he

really deserve that the believers in action should grow impatient with him?

But now to take another operation which does not at this moment so excite people's feelings as the disestablishment of the Irish Church, but which, I suppose, would also be called exactly one of those operations of simple, practical, common-sense reform, aiming at the removal of some particular abuse, and rigidly restricted to that object, to which a Liberal ought to lend a hand, and deserves that other Liberals should grow impatient with him if he does not. This operation I had the great advantage of with my own ears hearing discussed in the House of Commons, and recommended by a powerful speech from that famous speaker, Mr. Bright; so that the effeminate horror which, it is alleged, I have of practical reforms of this kind, was put to a searching test; and if it survived, it must have, one would think, some reason or other to support it, and can hardly quite merit the stigma of its present name. The operation I mean was that which the Real Estate Intestacy Bill aimed at accomplishing, and the discussion on this bill I heard in the House of Commons. The bill proposed, as every one knows, to prevent the land of a man who dies intestate from going, as it goes now, to his eldest son, and was thought, by its friends and by its enemies, to be a step towards abating the now almost exclusive possession of the land of this country by the people whom we call the Barbarians. Mr. Bright, and other speakers on his side, seemed to hold that there is a kind of natural law or fitness of things which assigns to all a man's children a right to equal shares in the enjoyment of his property after his death; and that if, without depriving a man of an Englishman's prime privilege of doing what he likes by making what will he chooses, you provide that when he makes none his land shall be divided among his family, then you give the sanction of the law to the natural fitness of things, and inflict a sort of check on the present violation of this by the Barbarians. It occurred to me, when I saw Mr. Bright and his friends proceeding in this way, to ask myself a

question. If the almost exclusive possession of the land of this country by the Barbarians is a bad thing, is this practical operation of the Liberals, and the stock notion, on which it seems to rest, about the right of children to share equally in the enjoyment of their father's property after his death, the best and most effective means of dealing with it? Or is it best dealt with by letting one's thought and consciousness play freely and naturally upon the Barbarians, this Liberal operation, and the stock notion at the bottom of it, and trying to get as near as we can to the intelligible law of things as to each of them?

Now does any one, if he simply and naturally reads his consciousness, discover that he has any rights at all? For my part, the deeper I go in my own consciousness, and the more simply I abandon myself to it, the more it seems to tell me that I have no rights at all, only duties; and that men get this notion of rights from a process of abstract reasoning, inferring that the obligations they are conscious of towards others, others must be conscious of towards them, and not from any direct witness of consciousness at all. But it is obvious that the notion of a right, arrived at in this way, is likely to stand as a formal and petrified thing, deceiving and misleading us; and that the notions got directly from our consciousness ought to be brought to bear upon it, and to control it. So it is unsafe and misleading to say that our children have rights against us; what is true and safe to say is, that we have duties towards our children. But who will find among these natural duties, set forth to us by our consciousness, the obligation to leave to all our children an equal share in the enjoyment of our property? or, though consciousness tells us we ought to provide for our children's welfare, whose consciousness tells him that the enjoyment of property is in itself welfare? Whether our children's welfare is best served by their all sharing equally in our property depends on circumstances and on the state of the community in which we live. With this equal sharing, society could not, for example, have

organised itself afresh out of the chaos left by the fall of the Roman Empire, and to have an organised society to live in is more for a child's welfare than to have an equal share of his father's property. So we see how little convincing force the stock notion on which the Real Estate Intestacy Bill was based, —the notion that in the nature and fitness of things all a man's children have a right to an equal share in the enjoyment of what he leaves, —really has; and how powerless, therefore, it must of necessity be to persuade and win any one who has habits and interests which disincline him to it. On the other hand, the practical operation proposed relies entirely, if it is to be effectual in altering the present practice of the Barbarians, on the power of truth and persuasiveness in the notion which it seeks to consecrate; for it leaves to the Barbarians full liberty to continue their present practice, to which all their habits and interests incline them, unless the promulgation of a notion, which we have seen to have no vital efficacy and hold upon our consciousness, shall hinder them.

Are we really to adorn an operation of this kind, merely because it proposes to do something, with all the favourable epithets of simple, practical, common-sense, definite; to enlist on its side all the zeal of the believers in action, and to call indifference to it a really effeminate horror of useful reforms? It seems to me quite easy to show that a free disinterested play of thought on the Barbarians and their landholding is a thousand times more really practical, a thousand times more likely to lead to some effective result, than an operation such as that of which we have been now speaking. For if, casting aside the impediments of stock notions and mechanical action, we try to find the intelligible law of things respecting a great land-owning class such as we have in this country, does not our consciousness readily tell us that whether the perpetuation of such a class is for its own real welfare and for the real welfare of the community, depends on the actual circumstances of this class and of the community? Does it not readily tell us that wealth, power, and consideration are, and above all

when inherited and not earned, in themselves trying and dangerous things? as Bishop Wilson excellently says:“Riches are almost always abused without a very extraordinary grace.”But this extraordinary grace was in great measure supplied by the circumstances of the feudal epoch, out of which our landholding class, with its rules of inheritance, sprang. The labour and contentions of a rude, nascent, and struggling society supplied it; these perpetually were trying, chastising, and forming the class whose predominance was then needed by society to give it points of cohesion, and was not so harmful to themselves because they were thus sharply tried and exercised. But in a luxurious, settled, and easy society, where wealth offers the means of enjoyment a thousand times more, and the temptation to abuse them is thus made a thousand times greater, the exercising discipline is at the same time taken away, and the feudal class is left exposed to the full operation of the natural law well put by the French moralist: *Pouvoir sans savoir est fort dangereux*. And, for my part, when I regard the young people of this class, it is above all by the trial and shipwreck made of their own welfare by the circumstances in which they live that I am struck; how far better it would have been for nine out of every ten among them, if they had had their own way to make in the world, and not been tried by a condition for which they had not the extraordinary grace requisite!

This, I say, seems to be what a man's consciousness, simply consulted, would tell him about the actual welfare of our Barbarians themselves. Then, as to their actual effect upon the welfare of the community, how can this be salutary, if a class which, by the very possession of wealth, power and consideration, becomes a kind of ideal or standard for the rest of the community, is tried by ease and pleasure more than it can well bear, and almost irresistibly carried away from excellence and strenuous virtue? This must certainly be what Solomon meant when he said:“As he who putteth a stone in a sling, so is he that giveth honour to a fool.”For any one can perceive

how this honouring of a false ideal, not of intelligence and strenuous virtue, but of wealth and station, pleasure and ease, is as a stone from a sling to kill in our great middle-class, in us who are called Philistines, the desire before spoken of, which by nature for ever carries all men towards that which is lovely; and to leave instead of it only a blind deteriorating pursuit, for ourselves also, of the false ideal. And in those among us Philistines whom this desire does not wholly abandon, yet, having no excellent ideal set forth to nourish and to steady it, it meets with that natural bent for the bathos which together with this desire itself is implanted at birth in the breast of man, and is by that force twisted awry, and borne at random hither and thither, and at last flung upon those grotesque and hideous forms of popular religion which the more respectable part among us Philistines mistake for the true goal of man's desire after all that is lovely. And for the Populace this false idea is a stone which kills the desire before it can even arise; so impossible and unattainable for them do the conditions of that which is lovely appear according to this ideal to be made, so necessary to the reaching of them by the few seems the falling short of them by the many. So that, perhaps, of the actual vulgarity of our Philistines and brutality of our Populace, the Barbarians and their feudal habits of succession, enduring out of their due time and place, are involuntarily the cause in a great degree; and they hurt the welfare of the rest of the community at the same time that, as we have seen, they hurt their own.

But must not, now, the working in our minds of considerations like these, to which culture, that is, the disinterested and active use of reading, reflection, and observation, carries us, be really much more effectual to the dissolution of feudal habits and rules of succession in land than an operation like the Real Estate Intestacy Bill, and a stock notion like that of the natural right of all a man's children to an equal share in the enjoyment of his property; since we have seen that this mechanical maxim is unsound, and that, if it is unsound, the operation

relying upon it cannot possibly be effective? If truth and reason have, as we believe, any natural irresistible effect on the mind of man, it must. These considerations, when culture has called them forth and given them free course in our minds, will live and work. They will work gradually, no doubt, and will not bring us ourselves to the front to sit in high place and put them into effect; but so they will be all the more beneficial. Everything teaches us how gradually nature would have all profound changes brought about; and we can even see, too, where the absolute abrupt stoppage of feudal habits has worked harm. And appealing to the sense of truth and reason, these considerations will, without doubt, touch and move all those of even the Barbarians themselves, who are (as are some of us Philistines also, and some of the Populace) beyond their fellows quick of feeling for truth and reason. For indeed this is just one of the advantages of sweetness and light over fire and strength, that sweetness and light make a feudal class quietly and gradually drop its feudal habits because it sees them at variance with truth and reason, while fire and strength tear them passionately off it because it applauded Mr. Lowe when he called, or was supposed to call, the working-class drunken and venal.

But when once we have begun to recount the practical operations by which our Liberal friends work for the removal of definite evils, and in which if we do not join them they are apt to grow impatient with us, how can we pass over that very interesting operation of this kind, — the attempt to enable a man to marry his deceased wife's sister? This operation, too, like that for abating the feudal customs of succession in land, I have had the advantage of myself seeing and hearing my Liberal friends labour at. I was lucky enough to be present when Mr. Chambers, I think, brought forward in the House of Commons his bill for enabling a man to marry his deceased wife's sister, and I heard the speech which Mr. Chambers then made in support of his bill. His first point was that God's law, — the name he always gave to the Book of Leviticus, — did not really forbid a man

to marry his deceased wife's sister. God's law not forbidding it, the Liberal maxim that a man's prime right and happiness is to do as he likes ought at once to come into force, and to annul any such check upon the assertion of personal liberty as the prohibition to marry one's deceased wife's sister. A distinguished Liberal supporter of Mr. Chambers, in the debate which followed the introduction of the bill, produced a formula of much beauty and neatness for conveying in brief the Liberal notions on this head: "Liberty," said he, "is the law of human life." And, therefore, the moment it is ascertained that God's law, the Book of Leviticus, does not stop the way, man's law, the law of liberty, asserts its right, and makes us free to marry our deceased wife's sister.

And this exactly falls in with what Mr. Hepworth Dixon, who may almost be called the Colenso of love and marriage, —such a revolution does he make in our ideas on these matters, just as Dr. Colenso does in our ideas on religion, —tells us of the notions and proceedings of our kinsmen in America. With that affinity of genius to the Hebrew genius which we have already noticed, and with the strong belief of our race that liberty is the law of human life, so far as a fixed, perfect, and paramount rule of conscience, the Bible, does not expressly control it, our American kinsmen go again, Mr. Hepworth Dixon tells us, to their Bible, the Mormons to the patriarchs and the Old Testament, Brother Noyes to St. Paul and the New, and having never before read anything else but their Bible, they now read their Bible over again, and make all manner of great discoveries there. All these discoveries are favourable to liberty, and in this way is satisfied that double craving so characteristic of the Philistine, and so eminently exemplified in that crowned Philistine, Henry the Eighth, —the craving for forbidden fruit and the craving for legality. Mr. Hepworth Dixon's eloquent writings give currency, over here, to these important discoveries; so that now, as regards love and marriage, we seem to be entering, with all our sails spread, upon what Mr.

Hepworth Dixon, its apostle and evangelist, calls a Gothic Revival, but what one of the many newspapers that so greatly admire Mr. Hepworth Dixon's lithe and sinewy style and form their own style upon it, calls, by a yet bolder and more striking figure, "a great sexual insurrection of our Anglo-Teutonic race." For this end we have to avert our eyes from everything Hellenic and fanciful, and to keep them steadily fixed upon the two cardinal points of the Bible and liberty. And one of those practical operations in which the Liberal party engage, and in which we are summoned to join them, directs itself entirely, as we have seen, to these cardinal points, and may almost be regarded, perhaps, as a kind of first instalment or public and parliamentary pledge of the great sexual insurrection of our Anglo-Teutonic race.

But here, as elsewhere, what we seek is the Philistine's perfection, the development of his best self, not mere liberty for his ordinary self. And we no more allow absolute validity to his stock maxim, *Liberty is the law of human life*, than we allow it to the opposite maxim, which is just as true, *Renouncement is the law of human life*. For we know that the only perfect freedom is, as our religion says, a service; not a service to any stock maxim, but an elevation of our best self, and a harmonising in subordination to this, and to the idea of a perfected humanity, all the multitudinous, turbulent, and blind impulses of our ordinary selves. Now, the Philistine's great defect being a defect in delicacy of perception, to cultivate in him this delicacy, to render it independent of external and mechanical rule, and a law to itself, is what seems to make most for his perfection, his true humanity. And his true humanity, and therefore his happiness, appears to lie much more, so far as the relations of love and marriage are concerned, in becoming alive to the finer shades of feeling which arise within these relations, in being able to enter with tact and sympathy into the subtle instinctive propensions and repugnances of the person with whose life his own life is bound up, to make them his own, to direct and govern,

in harmony with them, the arbitrary range of his personal action, and thus to enlarge his spiritual and intellectual life and liberty, than in remaining insensible to these finer shades of feeling, this delicate sympathy, in giving unchecked range, so far as he can, to his mere personal action, in allowing no limits or government to this except such as a mechanical external law imposes, and in thus really narrowing, for the satisfaction of his ordinary self, his spiritual and intellectual life and liberty.

Still more must this be so when his fixed eternal rule, his God's law, is supplied to him from a source which is less fit, perhaps, to supply final and absolute instructions on this particular topic of love and marriage than on any other relation of human life. Bishop Wilson, who is full of examples of that fruitful Hellenising within the limits of Hebraism itself, of that renewing of the stiff and stark notions of Hebraism by turning upon them a stream of fresh thought and consciousness, which we have already noticed in St. Paul, — Bishop Wilson gives an admirable lesson to rigid Hebraisers, like Mr. Chambers, asking themselves: Does God's law (that is, the Book of Leviticus) forbid us to marry our wife's sister? — Does God's law (that is, again, the Book of Leviticus) allow us to marry our wife's sister? — when he says: "Christian duties are founded on reason, not on the sovereign authority of God commanding what he pleases; God cannot command us what is not fit to be believed or done, all his commands being founded in the necessities of our nature." And, immense as is our debt to the Hebrew race and its genius, incomparable as is its authority on certain profoundly important sides of our human nature, worthy as it is to be described as having uttered, for those sides, the voice of the deepest necessities of our nature, the statutes of the divine and eternal order of things, the law of God, — who, that is not manacled and hoodwinked by his Hebraism, can believe that, as to love and marriage, our reason and the necessities of our humanity have their true, sufficient, and divine law expressed for

them by the voice of any Oriental and polygamous nation like the Hebrews? Who, I say, will believe, when he really considers the matter, that where the feminine nature, the feminine ideal, and our relations to them, are brought into question, the delicate and apprehensive genius of the Indo-European race, the race which invented the Muses, and chivalry, and the Madonna, is to find its last word on this question in the institutions of a Semitic people, whose wisest king had seven hundred wives and three hundred concubines?

If here again, therefore, we seem to minister better to the diseased spirit of our time by leading it to think about the operation our Liberal friends have in hand, than by lending a hand to this operation ourselves, let us see, before we dismiss from our view the practical operations of our Liberal friends, whether the same thing does not hold good as to their celebrated industrial and economical labours also. Their great work of this kind is, of course, their free-trade policy. This policy, as having enabled the poor man to eat untaxed bread, and as having wonderfully augmented trade, we are accustomed to speak of with a kind of solemnity; it is chiefly on their having been our leaders in this policy that Mr. Bright founds for himself and his friends the claim, so often asserted by him, to be considered guides of the blind, teachers of the ignorant, benefactors slowly and laboriously developing in the Conservative party and in the country that which Mr. Bright is fond of calling *the growth of intelligence*,— the object, as is well known, of all the friends of culture also, and the great end and aim of the culture that we preach. Now, having first saluted free-trade and its doctors with all respect, let us see whether even here, too, our Liberal friends do not pursue their operations in a mechanical way, without reference to any firm intelligible law of things, to human life as a whole, and human happiness; and whether it is not more for our good, at this particular moment at any rate, if, instead of worshipping free-trade with them Hebraistically, as a kind of fetish, and helping them to pursue it as an

end in and for itself, we turn the free stream of our thought upon their treatment of it, and see how this is related to the intelligible law of human life, and to national well-being and happiness. In short, suppose we Hellenise a little with free-trade, as we Hellenised with the Real Estate Intestacy Bill, and with the disestablishment of the Irish Church by the power of the Nonconformists' antipathy to religious establishments and endowments, and see whether what our reprovers beautifully call ministering to the diseased spirit of our time is best done by the Hellenising method of proceeding, or by the other.

But first let us understand how the policy of free-trade really shapes itself for our Liberal friends, and how they practically employ it as an instrument of national happiness and salvation. For as we said that it seemed clearly right to prevent the Church property of Ireland from being all taken for the benefit of the Church of a small minority, so it seems clearly right that the poor man should eat untaxed bread, and, generally, that restrictions and regulations which, for the supposed benefit of some particular person or class of persons, make the price of things artificially high here, or artificially low there, and interfere with the natural flow of trade and commerce, should be done away with. But in the policy of our Liberal friends free-trade means more than this, and is specially valued as a stimulant to the production of wealth, as they call it, and to the increase of the trade, business, and population of the country. We have already seen how these things, — trade, business, and population, — are mechanically pursued by us as ends precious in themselves, and are worshipped as what we call fetishes; and Mr. Bright, I have already said, when he wishes to give the working-class a true sense of what makes glory and greatness, tells it to look at the cities it has built, the railroads it has made, the manufactures it has produced. So to this idea of glory and greatness the free-trade which our Liberal friends extol so solemnly and devoutly has served, — to the increase of trade, business, and population; and for this it is prized. Therefore, the

untaxing of the poor man's bread has, with this view of national happiness, been used, not so much to make the existing poor man's bread cheaper or more abundant, but rather to create more poor men to eat it; so that we cannot precisely say that we have fewer poor men than we had before free-trade, but we can say with truth that we have many more centres of industry, as they are called, and much more business, population, and manufactures. And if we are sometimes a little troubled by our multitude of poor men, yet we know the increase of manufactures and population to be such a salutary thing in itself, and our free-trade policy begets such an admirable movement, creating fresh centres of industry and fresh poor men here, while we were thinking about our poor men there, that we are quite dazzled and borne away, and more and more industrial movement is called for, and our social progress seems to become one triumphant and enjoyable course of what is sometimes called, vulgarly, outrunning the constable.

If, however, taking some other criterion of man's well-being than the cities he has built and the manufactures he has produced, we persist in thinking that our social progress would be happier if there were not so many of us so very poor, and in busying ourselves with notions of in some way or other adjusting the poor man and business one to the other, and not multiplying the one and the other mechanically and blindly, then our Liberal friends, the appointed doctors of free-trade, take us up very sharply. "Art is long," says *The Times*, "and life is short; for the most part we settle things first and understand them afterwards. Let us have as few theories as possible; what is wanted is not the light of speculation. If nothing worked well of which the theory was not perfectly understood, we should be in sad confusion. The relations of labour and capital, we are told, are not understood, yet trade and commerce, on the whole, work satisfactorily." I quote from *The Times* of only the other day. But thoughts like these, as I have often pointed out, are thoroughly British

thoughts, and we have been familiar with them for years.

Or, if we want more of a philosophy of the matter than this, our free-trade friends have two axioms for us, axioms laid down by their justly esteemed doctors, which they think ought to satisfy us entirely. One is, that, other things being equal, the more population increases, the more does production increase to keep pace with it; because men by their numbers and contact call forth all manner of activities and resources in one another and in nature, which, when men are few and sparse, are never developed. The other is, that, although population always tends to equal the means of subsistence, yet people's notions of what subsistence is enlarge as civilisation advances, and take in a number of things beyond the bare necessities of life; and thus, therefore, is supplied whatever check on population is needed. But the error of our friends is just, perhaps, that they apply axioms of this sort as if they were self-acting laws which will put themselves into operation without trouble or planning on our part, if we will only pursue free-trade, business, and population zealously and staunchly. Whereas the real truth is, that, however the case might be under other circumstances, yet in fact, as we now manage the matter, the enlarged conception of what is included in *subsistence* does not operate to prevent the bringing into the world of numbers of people who but just attain to the barest necessities of life or who even fail to attain to them; while, again, though production may increase as population increases, yet it seems that the production may be of such a kind, and so related, or rather non-related, to population, that the population may be little the better for it. For instance, with the increase of population since Queen Elizabeth's time the production of silk-stockings has wonderfully increased, and silk-stockings have become much cheaper and procurable in much greater abundance by many more people, and tend perhaps, as population and manufactures increase, to get cheaper and cheaper and at last to become, according to Bastiat's favourite image, a common free property of the human

race, like light and air. But bread and bacon have not become much cheaper with the increase of population since Queen Elizabeth's time, nor procurable in much greater abundance by many more people; neither do they seem at all to promise to become, like light and air, a common free property of the human race. And if bread and bacon have not kept pace with our population, and we have many more people in want of them now than in Queen Elizabeth's time, it seems vain to tell us that silkstockings have kept pace with our population, or even more than kept pace with it, and that we are to get our comfort out of that. In short, it turns out that our pursuit of free-trade, as of so many other things, has been too mechanical. We fix upon some object, which in this case is the production of wealth, and the increase of manufactures, population, and commerce through free-trade, as a kind of one thing needful, or end in itself, and then we pursue it staunchly and mechanically, and say that it is our duty to pursue it staunchly and mechanically, not to see how it is related to the whole intelligible law of things and to full human perfection, or to treat it as the piece of machinery, of varying value as its relations to the intelligible law of things vary, which it really is.

So it is of no use to say to *The Times*, and to our Liberal friends rejoicing in the possession of their talisman of free-trade, that about one in nineteen of our population is a pauper, and that, this being so, trade and commerce can hardly be said to prove by their satisfactory working that it matters nothing whether the relations between labour and capital are understood or not; nay, that we can hardly be said not to be in sad confusion. For here comes in our faith in the staunch mechanical pursuit of a fixed object, and covers itself with that imposing and colossal necessitarianism of *The Times* which we have before noticed. And this necessitarianism, taking for granted that an increase in trade and population is a good in itself, one of the chiefest of goods, tells us that disturbances of human happiness caused by ebbs and flows in the tide of trade and business, which, on the whole,

steadily mounts, are inevitable and not to be quarrelled with. This firm philosophy I seek to call to mind when I am in the East of London, whither my avocations often lead me; and, indeed, to fortify myself against the depressing sights which on these occasions assail us, I have transcribed from *The Times* one strain of this kind, full of the finest economical doctrine, and always carry it about with me. The passage is this: ——

“The East End is the most commercial, the most industrial, the most fluctuating region of the metropolis. It is always the first to suffer; for it is the creature of prosperity, and falls to the ground the instant there is no wind to bear it up. The whole of that region is covered with huge docks, shipyards, manufactories, and a wilderness of small houses, all full of life and happiness in brisk times, but in dull times withered and lifeless, like the deserts we read of in the East. Now their brief spring is over. There is no one to blame for this; it is the result of Nature's simplest laws!” We must all agree that it is impossible that anything can be firmer than this, or show a surer faith in the working of free-trade, as our Liberal friends understand and employ it.

But, if we still at all doubt whether the indefinite multiplication of manufactories and small houses can be such an absolute good in itself as to counter-balance the indefinite multiplication of poor people, we shall learn that this multiplication of poor people, too, is an absolute good in itself, and the result of divine and beautiful laws. This is indeed a favourite thesis with our Philistine friends, and I have already noticed the pride and gratitude with which they receive certain articles in *The Times*, dilating in thankful and solemn language on the majestic growth of our population. But I prefer to quote now, on this topic, the words of an ingenious young Scotch writer, Mr. Robert Buchanan, because he invests with so much imagination and poetry this current idea of the blessed and even divine character

which the multiplying of population is supposed in itself to have. "We move to multiplicity," says Mr. Robert Buchanan. "If there is one quality which seems God's, and his exclusively, it seems that divine philoprogenitiveness, that passionate love of distribution and expansion into living forms. Every animal added seems a new ecstasy to the Maker; every life added, a new embodiment of his love. He would *swarm* the earth with beings. There are never enough. Life, life, life, — faces gleaming, hearts beating, must fill every cranny. Not a corner is suffered to remain empty. The whole earth breeds and God glories."

It is a little unjust, perhaps, to attribute to the Divinity exclusively this philoprogenitiveness, which the British Philistine, and the poorer class of Irish, may certainly claim to share with him; yet how inspiring is here the whole strain of thought! and these beautiful words, too, I carry about with me in the East of London, and often read them there. They are quite in agreement with the popular language one is accustomed to hear about children and large families, which describes children as *sent*. And a line of poetry which Mr. Robert Buchanan throws in presently after the poetical prose I have quoted:

'Tis the old story of the fig-leaf time —

this fine line, too, naturally connects itself, when one is in the East of London, with the idea of God's desire to *swarm* the earth with beings; because the swarming of the earth with beings does indeed, in the East of London, so seem to revive

...the old story of the fig-leaf time —

such a number of the people one meets there having hardly a rag to cover them; and the more the swarming goes on, the more it promises to revive this old story. And when the story is perfectly revived, the swarming quite completed, and every cranny choke-full, then, too, no

doubt, the faces in the East of London will be gleaming faces, which Mr. Robert Buchanan says it is God's desire they should be, and which every one must perceive they are not at present, but, on the contrary, very miserable.

But to prevent all this philosophy and poetry from quite running away with us, and making us think with *The Times*, and our practical Liberal free-traders, and the British Philistines generally, that the increase of small houses and manufactories, or the increase of population, are absolute goods in themselves, to be mechanically pursued, and to be worshipped like fetishes, — to prevent this, we have got that notion of ours immoveably fixed, of which I have long ago spoken, the notion that culture, or the study of perfection, leads us to conceive of no perfection as being real which is not a *general* perfection, embracing all our fellowmen with whom we have to do. Such is the sympathy which binds humanity together, that we are indeed, as our religion says, members of one body, and if one member suffer, all the members suffer with it; individual perfection is impossible so long as the rest of mankind are not perfected along with us. “The *multitude* of the wise is the welfare of the world,” says the wise man. And to this effect that excellent and often quoted guide of ours, Bishop Wilson, has some striking words: — “It is not,” says he, “so much our neighbour's interest as our own that we love him,” And again he says: “Our salvation does in some measure depend upon that of others.” And the author of the *Imitation* puts the same thing admirably when he says: — “*Obscurior etiam via ad cœlum videbatur quando tam pauci regnum cœlorum quærere curabant,*” — the fewer there are who follow the way to perfection, the harder that way is to find. So all our fellowmen, in the East of London and elsewhere, we must take along with us in the progress towards perfection, if we ourselves really, as we profess, want to be perfect; and we must not let the worship of any fetish, any machinery, such as manufactures or population, — which are not, like perfection, absolute goods in

themselves, though we think them so, — create for us such a multitude of miserable, sunken, and ignorant human beings, that to carry them all along with us is impossible, and perforce they must for the most part be left by us in their degradation and wretchedness. But evidently the conception of free-trade, on which our Liberal friends vaunt themselves, and in which they think they have found the secret of national prosperity, — evidently, I say, the mere unfettered pursuit of the production of wealth, and the mere mechanical multiplying, for this end, of manufactures and population, threatens to create for us, if it has not created already, those vast, miserable, unmanageable masses of sunken people, — one pauper, at the present moment, for every nineteen of us, —to the existence of which we are, as we have seen, absolutely forbidden to reconcile ourselves, in spite of all that the philosophy of *The Times* and the poetry of Mr. Robert Buchanan may say to persuade us.

And though Hebraism, following its best and highest instinct, —identical, as we have seen, with that of Hellenism in its final aim, the aim of perfection, — teaches us this very clearly; and though from Hebraising counsellors, — the Bible, Bishop Wilson, the author of the *Imitation*, — I have preferred (as well I may, for from this rock of Hebraism we are all hewn!) to draw the texts which we use to bring home to our minds this teaching; yet Hebraism seems powerless, almost as powerless as our free-trading Liberal friends, to deal efficaciously with our ever-accumulating masses of pauperism, and to prevent their accumulating still more. Hebraism builds churches, indeed, for these masses, and sends missionaries among them; above all, it sets itself against the social necessitarianism of *The Times*, and refuses to accept their degradation as inevitable; but with regard to their ever-increasing accumulation, it seems to be led to the very same conclusions, though from a point of view of its own, as our free-trading Liberal friends. Hebraism, with that mechanical and misleading use of the letter of Scripture on which we have already

commented, is governed by such texts as: *Be fruitful and multiply*; — the edict of God's law, as Mr. Chambers would say; or by the declaration of what he would call God's words in the Psalms, that the man who has a great number of children is thereby made happy. And in conjunction with such texts as these it is apt to place another text: *The poor shall never cease out of the land*. Thus Hebraism is conducted to nearly the same notion as the popular mind and as Mr. Robert Buchanan, that children are *sent*, and that the divine nature takes a delight in swarming the East End of London with paupers. Only, when they are perishing in their helplessness and wretchedness, it asserts the Christian duty of succouring them, instead of saying, like *The Times*: "Now their brief spring is over; there is nobody to blame for this; it is the result of Nature's simplest laws!" But, like *The Times*, Hebraism despairs of any help from knowledge and says that "what is wanted is not the light of speculation." I remember, only the other day, a good man, looking with me upon a multitude of children who were gathered before us in one of the most miserable regions of London, — children eaten up with disease, half-sized, half-fed, half-clothed, neglected by their parents, without health, without home, without hope, — said to me: "The one thing really needful is to teach these little ones to succour one another, if only with a cup of cold water; but now, from one end of the country to the other, one hears nothing but the cry for knowledge, knowledge, knowledge!" And yet surely, so long as these children are there in these festering masses, without health, without home, without hope, and so long as their multitude is perpetually swelling, charged with misery they must still be for themselves, charged with misery they must still be for us, whether they help one another with a cup of cold water or no; and the knowledge how to prevent their accumulating is necessary, even to give their moral life and growth a fair chance!

May we not, therefore, say, that neither the true Hebraism of this good man, willing to spend and be spent for these sunken multitudes,

nor what I may call the spurious Hebraism of our free-trading Liberal friends, — mechanically worshipping their fetish of the production of wealth and of the increase of manufactures and population, and looking neither to the right nor left so long as this increase goes on, — avail us much here; and that here, again, what we want is Hellenism, the letting our consciousness play freely and simply upon the facts before us, and listening to what it tells us of the intelligible law of things as concerns them? And surely what it tells us is, that a man's children are not really *sent*, any more than the pictures upon his wall, or the horses in his stable, are *sent*; and that to bring people into the world, when one cannot afford to keep them and oneself decently and not too precariously, or to bring more of them into the world than one can afford to keep thus, is, whatever *The Times* and Mr. Robert Buchanan may say, by no means an accomplishment of the divine will or a fulfilment of Nature's simplest laws, but is just as wrong, just as contrary to reason and the will of God, as for a man to have horses, or carriages, or pictures, when he cannot afford them, or to have more of them than he can afford; and that, in the one case as in the other, the larger the scale on which the violation of reason's laws is practised, and the longer it is persisted in, the greater must be the confusion and final trouble. Surely no laudations of free-trade, no meetings of bishops and clergy in the East End of London, no reading of papers and reports, can tell us anything about our social condition which it more concerns us to know than that! and not only to know, but habitually to have the knowledge present, and to act upon it as one acts upon the knowledge that water wets and fire burns! And not only the sunken populace of our great cities are concerned to know it, and the pauper twentieth of our population; we Philistines of the middle-class, too, are concerned to know it, and all who have to set themselves to make progress in perfection.

But we all know it already! some one will say; it is the simplest law of prudence. But how little reality must there be in our knowledge

of it; how little can we be putting it in practice; how little is it likely to penetrate among the poor and struggling masses of our population, and to better our condition, so long as an unintelligent Hebraism of one sort keeps repeating as an absolute eternal word of God the psalm-verse which says that the man who has a great many children is happy, or an unintelligent Hebraism of another sort keeps assigning as an absolute proof of national prosperity the multiplying of manufactures and population! Surely, the one set of Hebraisers have to learn that their psalm-verse was composed at the resettlement of Jerusalem after the Captivity, when the Jews of Jerusalem were a handful, an under-manned garrison, and every child was a blessing; and that the word of God, or the voice of the divine order of things, declares the possession of a great many children to be a blessing only when it really is so! And the other set of Hebraisers, have they not to learn that if they call their private acquaintances imprudent and unlucky, when, with no means of support for them or with precarious means, they have a large family of children, then they ought not to call the State well managed and prosperous merely because its manufactures and its citizens multiply, if the manufactures, which bring new citizens into existence just as much as if they had actually begotten them, bring more of them into existence than they can maintain, or are too precarious to go on maintaining those whom for a while they maintained? Hellenism, surely, or the habit of fixing our mind upon the intelligible law of things, is most salutary if it makes us see that the only absolute good, the only absolute and eternal object prescribed to us by God's law, or the divine order of things, is the progress towards perfection, — our own progress towards it and the progress of humanity. And therefore, for every individual man, and for every society of men, the possession and multiplication of children, like the possession and multiplication of horses and pictures, is to be accounted good or bad, not in itself, but with reference to this object and the progress towards it. And as no man is to be excused in having horses or pictures, if his having them hinders his own or others'

progress towards perfection and makes them lead a servile and ignoble life, so is no man to be excused for having children if his having them makes him or others lead this. Plain thoughts of this kind are surely the spontaneous product of our consciousness, when it is allowed to play freely and disinterestedly upon the actual facts of our social condition, and upon our stock notions and stock habits in respect to it. Firmly grasped and simply uttered, they are more likely, one cannot but think, to better that condition, and to diminish our formidable rate of one pauper to every nineteen of us, than is the Hebraising and mechanical pursuit of free-trade by our Liberal friends.

So that, here as elsewhere, the practical operations of our Liberal friends, by which they set so much store, and in which they invite us to join them and to show what Mr. Bright calls a commendable interest, do not seem to us so practical for real good as they think; and our Liberal friends seem to us themselves to need to Hellenise, as we say, a little, — that is, to examine into the nature of real good, and to listen to what their consciousness tells them about it, — rather than to pursue with such heat and confidence their present practical operations. And it is clear that they have no just cause, so far as regards several operations of theirs which we have canvassed, to reproach us with delicate Conservative scepticism; for often by Hellenising we seem to subvert stock Conservative notions and usages more effectually than they subvert them by Hebraising. But, in truth, the free spontaneous play of consciousness with which culture tries to float our stock habits of thinking and acting, is by its very nature, as has been said, disinterested. Sometimes the result of floating them may be agreeable to this party, sometimes to that; now it may be unwelcome to our so-called Liberals, now to our so-called Conservatives; but what culture seeks is, above all, to *float* them, to prevent their being stiff and stark pieces of petrification any longer. It is mere Hebraising, if we stop short, and refuse to let our consciousness play freely, whenever we or our friends do not happen

to like what it discovers to us. This is to make the Liberal party, or the Conservative party, our one thing needful, instead of human perfection; and we have seen what mischief arises from making an even greater thing than the Liberal or the Conservative party, — the predominance of the moral side in man, — our one thing needful. But wherever the free play of our consciousness leads us, we shall follow; believing that in this way we shall tend to make good at all points what is wanting to us, and so shall be brought nearer to our complete human perfection.

Thus we may often, perhaps, praise much that a so-called Liberal thinks himself forbidden to praise, and yet blame much that a so-called Conservative thinks himself forbidden to blame, because these are both of them partisans, and no partisan can afford to be thus disinterested. But we who are not partisans can afford it; and so, after we have seen what Nonconformists lose by being locked up in their New Road forms of religious institution, we can let ourselves see, on the other hand, how their ministers, in a time of movement of ideas like our present time, are apt to be more exempt than the ministers of a great Church establishment from that self-confidence, and sense of superiority to such a movement, which are natural to a powerful hierarchy; and which in Archdeacon Denison, for instance, seem almost carried to such a pitch that they may become, one cannot but fear, his spiritual ruin. But seeing this does not dispose us, therefore, to lock up all the nation in forms of worship of the New Road type; but it points us to the quite new ideal, of combining grand and national forms of worship with an openness and movement of mind not yet found in any hierarchy. So, again, if we see what is called ritualism making conquests in our Puritan middle-class, we may rejoice that portions of this class should have become alive to the æsthetical weakness of their position, even although they have not yet become alive to the intellectual weakness of it. In Puritanism, on the other hand, we can respect that idea of dealing sincerely with oneself,

which is at once the great force of Puritanism, — Puritanism's great superiority over all products, like ritualism, of our Catholicising tendencies, — and also an idea rich in the latent seeds of intellectual promise. But we do this, without on that account hiding from ourselves that Puritanism has by Hebraising misapplied that idea, has as yet developed none or hardly one of those seeds, and that its triumph at its present stage of development would be baneful.

Everything, in short, confirms us in the doctrine, so unpalatable to the believers in action, that our main business at the present moment is not so much to work away at certain crude reforms of which we have already the scheme in our own mind, as to create, through the help of that culture which at the very outset we began by praising and recommending, a frame of mind out of which really fruitful reforms may with time grow. At any rate, we ourselves must put up with our friends' impatience, and with their reproaches against cultivated inaction, and must still decline to lend a hand to their practical operations, until we, for our own part at least, have grown a little clearer about the nature of real good, and have arrived nearer to a condition of mind out of which really fruitful and solid operations may spring.

In the meanwhile, since our Liberal friends keep loudly and resolutely assuring us that their actual operations at present are fruitful and solid, let us in each case keep testing these operations in the simple way we have indicated, by letting the natural stream of our consciousness flow over them freely; and if they stand this test successfully, then let us give them our commendable interest, but not else. For example. Our Liberal friends assure us, at the very top of their voices, that their present actual operation for the disestablishment of the Irish Church is fruitful and solid. But what if, on testing it, the truth appears to be, that the statesmen and reasonable people of both parties wished for much the same thing,

— the fair apportionment of the church property of Ireland among the principal religious bodies there; but that, behind the statesmen and reasonable people, there was, on one side, a mass of Tory prejudice, and, on the other, a mass of Nonconformist prejudice, to which such an arrangement was unpalatable? Well, the natural way, one thinks, would have been for the statesmen and reasonable people of both sides to have united, and to have allayed and dissipated, so far as they could, the resistance of their respective extremes, and where they could not, to have confronted it in concert. But we see that, instead of this, Liberal statesmen waited to trip up their rivals, if they proposed the arrangement which both knew to be reasonable, by means of the prejudice of their own Nonconformist extreme; and then, themselves proposing an arrangement to flatter this prejudice, made the other arrangement, which they themselves knew to be reasonable, out of the question; and drove their rivals in their turn to blow up with all their might, in the hope of baffling them, a great fire, among their own Tory extreme, of fierce prejudice and religious bigotry, — a fire which, once kindled, may always very easily spread further? If, I say, on testing the present operation of our Liberal friends for the disestablishment of the Irish Church, the truth about it appears to be very much this, then, I think, — even with a triumphant Liberal majority, and with our Liberal friends making impassioned appeals to us to take a commendable interest in their operation and them, and to rally round what Sir Henry Hoare (who may be described, perhaps, as a Barbarian converted to Philistinism, as I, on the other hand, seem to be a Philistine converted to culture) finely calls the conscientiousness of a Gladstone and the intellect of a Bright, — it is rather our duty to abstain, and, instead of lending a hand to the operation of our Liberal friends, to do what we can to abate and dissolve the mass of prejudice, Tory or Nonconformist, which makes so doubtfully begotten and equivocal an operation as the present, producible and possible.

查尔斯·巴克斯顿（1823—1871），英国作家、慈善家、国会议员。

Conclusion

And so we bring to an end what we had to say in praise of culture, and in evidence of its special utility for the circumstances in which we find ourselves, and the confusion which environs us. Through culture seems to lie our way, not only to perfection, but even to safety. Resolutely refusing to lend a hand to the imperfect operations of our Liberal friends, disregarding their impatience, taunts, and reproaches, firmly bent on trying to find in the intelligible law of things a firmer and sounder basis for future practice than any which we have at present, and believing this search and discovery to be, for our generation and circumstances, of yet more vital and pressing importance than practice itself, we nevertheless may do more, perhaps, we poor disparaged followers of culture, to make the actual present, and the frame of society in which we live, solid and seaworthy, than all which our bustling politicians can do. For we have seen how much of our disorders and perplexities is due to the disbelief, among the classes and combinations of men, Barbarian or Philistine, which have hitherto governed our society, in right reason, in a paramount best self; to the inevitable decay and break-up of the organisations by which, asserting and expressing in these organisations their ordinary self only, they have so long ruled us; and to their irresolution, when the society, which their conscience tells them they have made and still manage not with right reason but with their ordinary self, is rudely shaken, in offering resistance to its subverters. But for us, — who believe in right reason, in the duty and possibility of extricating and elevating our best self, in the progress of humanity towards perfection, — for us the framework of society, that theatre on which this august drama has to unroll itself, is sacred; and whoever administers it, and however we may seek to remove

them from the tenure of administration, yet, while they administer, we steadily and with undivided heart support them in repressing anarchy and disorder; because without order there can be no society, and without society there can be no human perfection.

With me, indeed, this rule of conduct is hereditary. I remember my father, in one of his unpublished letters written more than forty years ago, when the political and social state of the country was gloomy and troubled, and there were riots in many places, goes on, after strongly insisting on the badness and foolishness of the government, and on the harm and dangerousness of our feudal and aristocratical constitution of society, and ends thus: "As for rioting, the old Roman way of dealing with *that* is always the right one: flog the rank and file, and fling the ringleaders from the Tarpeian Rock!" And this opinion we can never forsake, however our Liberal friends may think a little rioting, and what they call popular demonstrations, useful sometimes to their own interests and to the interests of the valuable practical operations they have in hand, and however they may preach the right of an Englishman to be left to do as far as possible what he likes, and the duty of his government to indulge him and connive as much as possible and abstain from all harshness of repression. And even when they artfully show us operations which are undoubtedly precious, such as the abolition of the slavetrade, and ask us if, for their sake, foolish and obstinate governments may not wholesomely be frightened by a little disturbance, the good design in view and the difficulty of overcoming opposition to it being considered, — still we say no, and that monster processions in the streets and forcible irruptions into the parks, even in professed support of this good design, ought to be unflinchingly forbidden and repressed; and that far more is lost than is gained by permitting them. Because a State in which law is authoritative and sovereign, a firm and settled course of public order, is requisite if man is to bring to maturity anything precious and lasting now, or to found anything

precious and lasting for the future.

Thus, in our eyes, the very framework and exterior order of the State, whoever may administer the State, is sacred; and culture is the most resolute enemy of anarchy, because of the great hopes and designs for the State which culture teaches us to nourish. But as believing in right reason, and having faith in the progress of humanity towards perfection, and ever labouring for this end, we grow to have clearer sight of the ideas of right reason, and of the elements and helps of perfection, and come gradually to fill the framework of the State with them, to fashion its internal composition and all its laws and institutions conformably to them, and to make the State more and more the expression, as we say, of our best self, which is not manifold, and vulgar, and unstable, and contentious, and ever-varying, but one, and noble, and secure, and peaceful, and the same for all mankind, — with what aversion shall we not *then* regard anarchy, with what firmness shall we not check it, when there is so much that is so precious which it will endanger! So that, for the sake of the present, but far more for the sake of the future, the lovers of culture are unswervingly and with a good conscience the opposers of anarchy. And not as the Barbarians and Philistines, whose honesty and whose sense of humour make them shrink, as we have seen, from treating the State as too serious a thing, and from giving it too much power; — for indeed the only State they know of, and think they administer, is the expression of their ordinary self; and though the headstrong and violent extreme among them might gladly arm this with full authority, yet their virtuous mean is, as we have said, pricked in conscience at doing this, and so our Barbarian Secretaries of State let the Park railings be broken down, and our Philistine Alderman-Colonels let the London roughs rob and beat the bystanders. But we, beholding in the State no expression of our ordinary self, but even already, as it were, the appointed frame and prepared vessel of our best self, and, for the future, our best self's powerful, beneficent, and sacred expression and

organ, —we are willing and resolved, even now, to strengthen against anarchy the trembling hands of our Barbarian Home Secretaries, and the feeble knees of our Philistine Alderman-Colonels; and to tell them, that it is not really in behalf of their own ordinary self that they are called to protect the Park railings, and to suppress the London roughs, but in behalf of the best self both of themselves and of all of us in the future.

Nevertheless, though for resisting anarchy the lovers of culture may prize and employ fire and strength, yet they must, at the same time, bear constantly in mind that it is not at this moment true, what the majority of people tell us, that the world wants fire and strength more than sweetness and light, and that things are for the most part to be settled first and understood afterwards. We have seen how much of our present perplexities and confusion this untrue notion of the majority of people amongst us has caused, and tends to perpetuate. Therefore the true business of the friends of culture now is, to dissipate this false notion, to spread the belief in right reason and in a firm intelligible law of things, and to get men to allow their thought and consciousness to play on their stock notions and habits disinterestedly and freely; to get men to try, in preference to staunchly acting with imperfect knowledge, to obtain some sounder basis of knowledge on which to act. This is what the friends and lovers of culture have to do, however the believers in action may grow impatient with us for saying so, and may insist on our lending a hand to their practical operations, and showing a commendable interest in them.

To this insistence we must indeed turn a deaf ear. But neither, on the other hand, must the friends of culture expect to take the believers in action by storm, or to be visibly and speedily important, and to rule and cut a figure in the world. Aristotle says that those for whom ideas and the pursuit of the intelligible law of things can have much

attraction, are principally the young, filled with generous spirit and with a passion for perfection; but the mass of mankind, he says, follow seeming goods for real, bestowing hardly a thought upon true sweetness and light; —“and to *their* lives,”he adds mournfully,“who can give another and a better rhythm?”But, although those chiefly attracted by sweetness and light will probably always be the young and enthusiastic, and culture must not hope to take the mass of mankind by storm, yet we will not therefore, for our own day and for our own people, admit and rest in the desponding sentence of Aristotle. For is not this the right crown of the long discipline of Hebraism, and the due fruit of mankind's centuries of painful schooling in self-conquest, and the just reward, above all, of the strenuous energy of our own nation and kindred in dealing honestly with itself and walking steadfastly according to the best light it knows, — that, when in the fulness of time it has reason and beauty offered to it, and the law of things as they really are, it should at last walk by this true light with the same staunchness and zeal with which it formerly walked by its imperfect light; and thus man's two great natural forces, Hebraism and Hellenism, should no longer be dissociated and rival, but should be a joint force of right thinking and strong doing to carry him on towards perfection? This is what the lovers of culture may perhaps dare to augur for such a nation as ours. Therefore, however great the changes to be accomplished, and however dense the array of Barbarians, Philistines, and Populace, we will neither despair on the one hand, nor, on the other, threaten violent revolution and change. But we will look forward cheerfully and hopefully to“a revolution,”as the Duke of Wellington said,“by due course of law;”though not exactly such laws as our Liberal friends are now, with their actual lights, fond of offering us.

But if despondency and violence are both of them forbidden to the believer in culture, yet neither, on the other hand, is public life and direct political action much permitted to him. For it is his

business, as we have seen, to get the present believers in action, and lovers of political talking and doing, to make a return upon their own minds, scrutinise their stock notions and habits much more, value their present talking and doing much less; in order that, by learning to think more clearly, they may come at last to act less confusedly. But how shall we persuade our Barbarian to hold lightly to his feudal usages; how shall we persuade our Nonconformist that his time spent in agitating for the abolition of church-rates would have been better spent in getting worthier ideas than churchmen have of God and the ordering of the world, or his time spent in battling for voluntarism in education better spent in learning to value and found a public and national culture; how shall we persuade, finally, our Alderman-Colonel not to be content with sitting in the hall of judgment or marching at the head of his men of war, without some knowledge how to perform judgment and how to direct men of war, — how, I say, shall we persuade all these of this, if our Alderman-Colonel sees that we want to get his leading-staff and his scales of justice for our own hands; or the Nonconformist, that we want for ourselves his platform; or the Barbarian, that we want for ourselves his pre-eminency and function? Certainly they will be less slow to believe, as we want them to believe, that the intelligible law of things has in itself something desirable and precious, and that all place, function, and bustle are hollow goods without it, if they see that we can content ourselves with it, and find in it our satisfaction, without making it an instrument to give us for ourselves place, function, and bustle.

And although Mr. Sidgwick says that social usefulness really means “losing oneself in a mass of disagreeable, hard, mechanical details,” and though all the believers in action are fond of asserting the same thing, yet, as to lose ourselves is not what we want, but to find the intelligible law of things, this assertion too we shall not blindly accept, but shall sift and try it a little first. And if we see that because the believers in action, forgetting Goethe's maxim, “to act is easy, to

think is hard,"imagine there is some wonderful virtue in losing oneself in a mass of mechanical details, therefore they excuse themselves from much thought about the clear ideas which ought to govern these details, then we shall give our chief care and pains to seeking out those ideas and to setting them forth; being persuaded, that, if we have the ideas firm and clear, the mechanical details for their execution will come a great deal more simply and easily than we now suppose. And even in education, where our Liberal friends are now with much zeal, bringing out their train of practical operations and inviting all men to lend them a hand; and where, since education is the road to culture, we might gladly lend them a hand with their practical operations if we could lend them one anywhere; yet, if we see that any German or Swiss or French law for education rests on very clear ideas about the citizen's claim, in this matter, upon the State, and the State's duty towards the citizen, but has its mechanical details comparatively few and simple, while an English law for the same concern is ruled by no clear idea about the citizen's claim and the State's duty, but has, in compensation, a mass of minute mechanical details about the number of members on a school-committee, and how many shall be a quorum, and how they shall be summoned, and how often they shall meet, — then we must conclude that our nation stands in more need of clear ideas on the main matter than of laboured details about the accessories of the matter, and that we do more service by trying to help it to the ideas than by lending it a hand with the details. So while Mr. Samuel Morley and his friends talk of changing their policy on education, not for the sake of modelling it on more sound ideas, but“for fear the management of education should be taken out of their hands,”we shall not much care for taking the management out of their hands and getting it into ours; but rather we shall try and make them perceive, that to model education on sound ideas is of more importance than to have the management of it in one's own hands ever so fully.

At this exciting juncture, then, while so many of the lovers of new ideas, somewhat weary, as we too are, of the stock performances of our Liberal friends upon the political stage, are disposed to rush valiantly upon this public stage themselves, we cannot at all think that for a wise lover of new ideas this stage is the right one. Plenty of people there will be without us, —country gentlemen in search of a club, demagogues in search of a tub, lawyers in search of a place, industrialists in search of gentility, —who will come from the east and from the west, and will sit down at that Thyesteän banquet of clap-trap, which English public life for these many years past has been. Because, so long as those old organisations, of which we have seen the insufficiency, —those expressions of our ordinary self, Barbarian or Philistine, — have force anywhere, they will have force in Parliament. There, the man whom the Barbarians send, cannot but be impelled to please the Barbarians' ordinary self, and their natural taste for the bathos; and the man whom the Philistines send, cannot but be impelled to please those of the Philistines. Parliamentary Conservatism will and must long mean this, that the Barbarians should keep their heritage; and Parliamentary Liberalism, that the Barbarians should pass away, as they will pass away, and that into their heritage the Philistines should enter. This seems, indeed, to be the true and authentic promise of which our Liberal friends and Mr. Bright believe themselves the heirs, and the goal of that great man's labours. Presently, perhaps, Mr. Odger and Mr. Bradlaugh will be there with their mission to oust both Barbarians and Philistines, and to get the heritage for the Populace. We, on the other hand, are for giving the heritage neither to the Barbarians nor to the Philistines, nor yet to the Populace; but we are for the transformation of each and all of these according to the law of perfection. Through the length and breadth of our nation a sense, — vague and obscure as yet, —of weariness with the old organisations, of desire for this transformation, works and grows. In the House of Commons the old organisations must inevitably be most enduring and strongest, the transformation

must inevitably be longest in showing itself; and it may truly be averred, therefore, that at the present juncture the centre of movement is not in the House of Commons. It is in the fermenting mind of the nation; and his is for the next twenty years the real influence who can address himself to this.

Pericles was perhaps the most perfect public speaker who ever lived, for he was the man who most perfectly combined thought and wisdom with feeling and eloquence. Yet Plato brings in Alcibiades declaring, that men went away from the oratory of Pericles, saying it was very fine, it was very good, and afterwards thinking no more about it; but they went away from hearing Socrates talk, he says, with the point of what he had said sticking fast in their minds, and they could not get rid of it. Socrates is poisoned and dead; but in his own breast does not every man carry about with him a possible Socrates, in that power of a disinterested play of consciousness upon his stock notions and habits, of which this wise and admirable man gave all through his lifetime the great example, and which was the secret of his incomparable influence? And he who leads men to call forth and exercise in themselves this power, and who busily calls it forth and exercises it in himself, is at the present moment, perhaps, as Socrates was in his time, more in concert with the vital working of men's minds, and more effectually significant, than any House of Commons' orator, or practical operator in politics.

Every one is now boasting of what he has done to educate men's minds and to give things the course they are taking. Mr. Disraeli educates, Mr. Bright educates, Mr. Beales educates. We, indeed, pretend to educate no one, for we are still engaged in trying to clear and educate ourselves. But we are sure that the endeavour to reach, through culture, the firm intelligible law of things, we are sure that the detaching ourselves from our stock notions and habits, that a more free play of consciousness, an increased desire for sweetness and light,

and all the bent which we call Hellenising, is the masterimpulse now of the life of our nation and of humanity, — somewhat obscurely perhaps for this moment, but decisively for the immediate future; and that those who work for this are the sovereign educators. Docile echoes of the eternal voice, pliant organs of the infinite will, they are going along with the essential movement of the world; and this is their strength, and their happy and divine fortune. For if the believers in action, who are so impatient with us and call us effeminate, had had the same fortune, they would, no doubt, have surpassed us in this sphere of vital influence by all the superiority of their genius and energy over ours. But now we go the way the world is going, while they abolish the Irish Church by the power of the Nonconformists' antipathy to establishments, or they enable a man to marry his deceased wife's sister.

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本文库编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

导 读

强梅梅

《论自由》根据源自其时代的真实而恼人的问题中的例证来讨论社会问题；它的部分原则与结论仍然是有生命力的，因为它们首先是出自一个人生活中所遭遇的尖锐的道德危机，而后则源自这样一种生活：为着具体的事业而工作，做真实的因此有时是危险的决定。穆勒^[1]直接思考困扰着他的那些问题，而不是透过由任何教条提供的有色眼镜。他……从根本上粉碎了这些有色眼镜……成为一个有自己主见的真正思想家……穆勒所讨论的问题以及他对这些问题的洞见具有永恒性。

——以赛亚·柏林：《穆勒与生活目的》

密尔的政治思想的最大特色和持久的贡献应该是包含在1859年《论自由》的论文里。《论自由》与弥尔顿的《雅典最高法院法官》比翼成为以英文写作的捍卫自由的经典著作。

——乔治·霍兰·萨拜因

很少人像他那样精力充沛地坚持着道德标准！没有人像他那样热忱地追求着正义！与卢梭相比，他的情感之火似乎烧得苍白无力；但是卢梭的感染力深入人心之处，也正是穆勒提高人们思想境界的地方。和任何人一样，他高举着理性之灯，这盏灯由于他的存在而发出更加璀璨之光！

——哈罗德·拉斯基

在英语世界里没有其他名字能够像密尔那样持续地与自由主义联系起来，也没有某个自由主义的文本像《论自由》那样知名。以赛亚·柏林将密尔描述为“建立现代自由主义……的人”，而《论自由》则是“个人自由问题的经典表述”。这是对他一贯立场的公正表征。

——安东尼·阿巴拉斯特：《西方自由主义的兴衰》

穆勒赞同作为探求手段的自由主义制度，他期望着在人类最佳生活方式上达成共识。他又是一个原始价值多元主义者，肯定人类可以在许多不同的生活中生活得很好。穆勒《论自由》中的方案在这两种哲学之间跛足难行。

——约翰·格雷：《自由主义的两张面孔》

在他著名的《论自由》中，密尔成为永恒的争取言论和行为自由的象征，激励一代又一代世界各地的人们。

——理查德·里弗斯：《约翰·斯图尔特·密尔》

这部写于1859年维多利亚女王统治大英帝国时期的著作，其中提出的观点始终受到人们的争论，即使再进入（它诞生后的）第三个一百年，人们仍然会继续争论。

——乔治·迈尔森：《密尔与〈论自由〉》

里弗斯称为“自由主义的新约全书”的《论自由》是我在课堂上最容易使用的教材之一……任何能够让大学二年级学生兴奋不已的书很可能被职业哲学家看做幼稚肤浅又自命不凡而不屑一顾。但是难道我们不应该根据它能在多长时间里激发人们的辩论来判断政治哲学著作吗？如果按这个标准，《论自由》绝对是经典。

——阿兰·沃尔夫：《被遗忘的哲学家》

——

约翰·斯图尔特·密尔（John Stuart Mill，1806—1873），著名哲学家、经济学家和思想家，也是一位活跃的社会改良主义者，英国政治改革运动中激进民主主义的先锋，19世纪最富影响力的古典自由主义思想家。

约翰·斯图尔特·密尔

《论自由》一书起始于1854年开始写的一篇短论文。1855年1月，密尔出游意大利。在参观古罗马广场的丘比特神殿时，他决定把这篇文章扩写成一本书。1859年2月，《论自由》面世。^[2]该书出版后，反响巨大。“时人约翰·莫利勋爵就说过，《论自由》是有史以来最具有贵族气质的著作之一。不知道哪个时代能有如此薄的一本书，‘曾在当代人的思想中产生如此广泛、如此重要的影响，如同密尔的《论自由》在他那个时代对人的思维和社会所产生的震动一样’。”^[3]

1. 《论自由》的思想来源

（1）边沁功利主义思想的影响

杰里米·边沁（Jeremy Bentham，1748—1832），英国法理学家、功利主义哲学家、经济学家和社会改革者。

密尔的父亲詹姆斯·密尔^[4]是边沁最得力的弟子，因此密尔很早就接触到了边沁的功利主义思想。1821年，密尔15岁的时候开始学习边沁的《立法论》，之后完全皈依了边沁的功利主义思想。密尔自己也说，阅读这本书开启了他生活中的一个新时代，也是他思想上的一个转折点。到后期，密尔修正了边沁的快乐主义哲学，区分了快乐的质量、高尚的与低俗的快乐。密尔的本意是弥补原始学说的缺陷、解决遗留的疑难，结果却使边沁的快乐学说失去了其原来的面貌。这也是为什么学界对密尔的自由理论与功利主义关系存在较大争议的原因。但是，不可否认的是，密尔对自由的论证确实建立在功利主义的基础上，很多论证的依据都是功利主义的。正如密尔在第一章引论中的表白：“在一切道德问题上，我最后总是诉诸功利的；但是这里所谓功利必须是最广义的，必须是把人当做前进的存在而以其永久利益为根据的。”

（2）威廉·冯·洪堡的影响

密尔在卷首语引用了威廉·冯·洪堡《论国家的作用》^[5]一书中的一段话：“下面的文字所展开的全部论述均凝结为一个宏大的指导性原则，即最丰富而多样性的人的发展具有绝对而基本的重要性。”洪堡属于德国浪漫主义^[6]学派，他尤其反对政府对个人生活的控制，反对政府以积极的方式促进公民的福利。他所憧憬的政府是职责有限的政府、将强制减少

到最低程度的政府，这样的政府才可能促进个人的个性、活力和创造性。《论自由》第三章题为“论个性为人类福祉的因素之一”。在这一章里，密尔反复引用洪堡的概念“个人的自主性”、“创造性”、“活力”来作为他所追求的个性的核心价值。他引用洪堡的原话来表达个性的主旨：“人的目的……乃是要使其各种能力得到最高度和最调和的发展而达成一个完整而一贯的整体。”密尔曾经说过：“我唯一想与之交谈的作者就是洪堡。”^[7]由此可见洪堡对密尔的影响。

威廉·冯·洪堡（Wilhelm von Humboldt）（1767—1835），柏林洪堡大学的创始者，著名的教育改革者、语言学者及外交官。

（3）托克维尔的影响

托克维尔(1805—1859)，法国历史学家、社会学家。主要代表作有《论美国的民主》第一卷、《论美国的民主》第二卷、《旧制度与大革命》。

托克维尔（1805—1859），法国历史学家、社会学家。1831年至1832年间，托克维尔对美国的政治与社会状况进行了为期9个多月的实地考察。之后，他完成了被后世奉为经典的《论美国的民主》一书，该书的第一卷和第二卷分别在1835年和1840年出版。这本书不仅生动地阐述了民主制度的优点，也深刻分析了民主政治的弱点。“多数裁定”的民主原则可能带来“多数暴政”的弊端和“多数专制”的危险，对美国社会的许多现象，如缺少“思想独立与真正的讨论自由”、“已经形成了关于知识水平的某种程度的平庸化”等表示担忧。

书中的很多观点都引起了密尔的共鸣，在《论美国的民主》各卷出版的当年，密尔就分别写了详细的评论，热情地向读者推荐该著作，并与托克维尔展开书信交流。这部著作对密尔的影响很深。密尔在自传里面写道：“我的政治思想从铁杆支持者们通常支持的纯粹民主政治，转变成成为我在《代议制政府》中所论述的改良民主政治。”这一转变过程极为缓慢，“最早要从我阅读或者说研究托克维尔先生的《论美国的民主》开始……”^[8]密尔认为，自己在研究托克维尔的过程中得到了始料未及的巨大好处，这就是对中央集权问题的认识。“他（指托克维尔）对美国和法国经验入木三分的哲学分析，让他十分重视社会集体事务，认可它可

由人民自行安全地管理，而不需要政府的任何干涉，政府不需要取代人民的作用，也不要指挥他们执行该问题的方式。他把公民参与实际政治看做训练其社会情感和实际知识的有效方法之一，这不仅对公民本身非常重要，也是善政不可或缺的，他还把这个方法设为对付民主政治一些典型弱点的特殊手段，以防止民主政治退化为专制政治。”^[9]密尔认为，如果没有托克维尔的指导，自己肯定会像其他人一样不假思索地过度反对中央集权，而不是在它们中间寻找平衡，认真研究协调双方优势的方法。“在某种意义上说，密尔的《论自由》，尤其是关于个性的章节是对托克维尔所诊断的现代社会症状所开的药方。”^[10]

（4）哈莉特·泰勒（哈迪）的影响

1830年密尔认识了哈莉特·泰勒（Harriet Taylor），在做了二十年的朋友之后，哈莉特才答应密尔做他的妻子。密尔在自传里面给予哈莉特非常高的评价，说他们婚后的作品、甚至是密友时出版的作品，都是他们共同的思想结晶。“除了她的思想对我的整体影响之外，这些合作作品中最有价值的思想和特征——这些是重要成果中最有成效的部分，对作品本身的成功和声誉贡献最大，都是她创作的，是她思想的流露，其中我的作用不大……”^[11]“《论自由》是我们合作最多的作品，书中的每一句话都经过了反复的思考和认真的推敲，我们小心地排查出所有思想上或表达上不尽如人意的地方。”因此，密尔认为，“《论自由》可能比我的其他作品（或许《逻辑学体系》除外）更有生命力……”^[12]

密尔和哈莉特的交往一直受到亲人和朋友的非议，再加上他们赞成女权主义、主张男女平等，这使得他们成为众矢之的，受到了不宽容的社会舆论和公共意见的谴责。基于亲身感受，密尔对公众舆论所施加的社会暴虐深恶痛绝，渴望理解和宽容、渴望信念和道德的自由。这种想法在《论自由》一书中有不少体现，最直接的证据就是密尔在第三章中特别提到了社会习俗对个性的禁锢，认为“习俗的专制在任何地方对于人类的前进都是一个持久的障碍”。

2. 《论自由》之自由

作为一部捍卫自由之作，《论自由》不是关于自由的逻辑严密的哲学论述，并不探讨自由是否可能，如果可能，在何种意义上和何种范围

是可能的。在密尔看来，自由处于危险之中，因而需要捍卫，而不是定义性的系统论证。这种对自由丧失的担心，赋予了《论自由》独特的结构。该书共分为五章。第一章引论，总括了全文的核心要旨：“人类之所以有理有权可以分别地或集体地对其中任何分子的行动自由进行干涉，唯一的目的只是自我防卫。”第二章、第三章探讨了自由的两个领域：思想和言论自由、趣味和志趣的自由。第四章论社会驾于个人的权威的限度、第五章本文教义的应用，通过大量的实际案例再次重申了社会与个人之间的界限。各章节之间环环相扣，紧紧围绕着第一章所提出的核心问题展开讨论。

那么密尔论证的到底是什么样的自由呢？密尔在文章一开始就开宗明义：“这篇论文的主题不是所谓的意志自由，不是这个与那被误称为哲学必然性的教义不幸相反的东西。这里所要讨论的乃是公民自由或称社会自由，也就是要探讨社会所能合法施用于个人的权力的性质和限度。”接着密尔并没有直接切入主题，而是回顾了自由和权威斗争的历史：第一阶段，统治者和被统治者，政治和社会存在矛盾和冲突。在这个时期，所谓的自由就是指对于政治统治者暴虐的防御，就是政治自由。第二阶段，被统治者试图变成统治者，民主精神试图利用权力为社会服务。自由不再是被统治者反对统治者的工具，而是权力需求的一部分，争取民主成为争取自由的主要目标。在这个阶段，自由意味着获得权力，而不是防御权力。第三阶段，民主制度确立后，主要是专制统治的多数派与被压迫的少数派之间的斗争，在这个阶段，自由即是多数派对少数派或个人专制统治的限度。在密尔看来，第三个阶段并不好，因为专制统治改变了实施方法，“却使人们有更少的逃避办法，这是因为它透入生活细节更深得多，由于它奴役到灵魂本身”。

在第一章，密尔阐明了一条原则，即“人类之所以有理有权可以分别地或集体地对其中任何分子的行动自由进行干涉，唯一的目的只是自我防卫”。无论是使用法律手段还是公众意见下的道德压力来对个人进行强制和控制，都必须遵循这条原则。在最后一章里面，密尔把这一原则概括为两条格言：第一，个人的行动只要不涉及自身以外什么人的利益，个人就不必向社会负责交代。他人若为着自己的好处而认为有必要时，可以对他忠告、指教、劝说以至避而远之，这些就是社会要对他们

的行为表示不喜或非难时所能采取的正当步骤。第二，关于对他人的利益有害的行动，个人则应当负责交代，并且还应当承担或是社会的或是法律的惩罚。这条原则可以称为“伤害”原则或者“不干涉”原则。这里又有一个问题，究竟什么是“伤害”呢，什么时候采取“自我防卫”呢？这里的“伤害”不仅仅包括身体的伤害，还包括对人们的情感和心理上的伤害、对人的发展权利造成的伤害等等。但仅仅有伤害或者可能伤害并不能理所当然构成社会干涉的正当理由。密尔举例说，比如竞选中的失败者显然受到了伤害，但这并不会引起社会的干涉。密尔所提出的这条原则，并不在于为社会干涉提供依据，而在于说明，每个个体在其不干涉他人生活的情况下都拥有自己的一切自由。但这里要注意，密尔的自由原则主要涉及的是文明社会或文明群体。对于幼童，或者是在法定成年年龄以下的青年，或者尚处在需要他人加以照管状态的人以及落后的种族都不适用。密尔认为，对付野蛮人，专制政府是一个合法的形式。“自由，作为一条原则来说，在人类还未达到能够借自由的和对等的讨论而获得改善的阶段以前的任何状态中，是无所适用的。”在文中，密尔多次提到当时的印度和中国，认为英国有责任帮助这些落后的国家。这也是密尔思想局限性的体现，这大概与其长期在东印度公司任职有关。^[13]

在密尔看来，人类自由包括三个领域：思想自由和言论自由、趣味和志趣的自由以及个人之间联合的自由。在第二章里面，密尔论述了思想和言论自由。密尔的论证非常有特色，在整个讨论中，关键词不是“自由”而是“真理”。他将人类获得真理视为“最高的善”，因为获得真理可以使人类进步。而思想和言论自由有助于获得真理。不论人们要窒闭的意见是不是谬误，要窒闭它都是错误的，“最好的政府并不比最坏的政府更有资格来运用它。”密尔认为，人类的认识是有可错性的，对于个人、群体甚至整个时代的认识来说都是如此。接着密尔分析了三种情况：被迫缄默的意见有可能是正确的，否认这一点就是否认人类认识的可错性；即使被迫缄默的意见是错误的，允许公开讨论能够使人们真正领会或感知它的理性根据；大部分的情况是，被迫缄默的意见和所谓的公理对错参半，此时借助敌对意见的冲突才能使所遗真理有机会得到补足。在第三章里面，密尔论述了趣味和志趣的自由，即个性对人类福祉的重要性。托克维尔对民主社会的一个担心就是人的平凡化、平庸化，密尔非常赞同托克维尔的观点。他在给托克维尔的一封信中写道，“你的许多观

点对我或多或少均有新意，其中我发现你的一个重大一般结论和我多年来独立秉持的一个结论……完全一致——即民主的真正危险，真正需要利用人类的所有资源与之斗争的恶魔……不是无政府状态、不是追求变革，而是中国式的停滞不前。”^[14]密尔认为，保持个性的自由发展是解决这个问题的良药，个性是个人进步和社会进步的主要因素。密尔强调个性真正的重点是那些可能具有超常个性与创造性、可能造福社会与人类的少数精英。人类的发展进步就是靠这些少数精英的首创性，“没有他们，人类生活就会变成一池死水”，“这不仅靠他们来倡导前所未有的好事物，就是要保持已有事物的生命力，也要指靠他们”。但是，“天才只能在自由地空气里自由地呼吸”。虽然天才的数量很少，“但是为了要有他们，却必须保持能让他们生长的土壤”。

3. 今天再读《论自由》的意义

《论自由》发表于1859年，一百多年过去了，该书依然被世界各地的人们奉为经典，这是因为：

首先，密尔的自由主义思想是理解自由和自由主义的重要一环。自由是西方政治哲学讨论的永恒主题。自由主义是当今社会占主导地位的思潮之一。“在西方自由主义发展史上，密尔的自由主义思想是沟通传统自由主义与新自由主义的重要桥梁，密尔甚至有‘自由主义之圣’之誉，还有人把《论自由》的发表作为自由主义理论体系最后完成的标志。”^[15]因此要理解自由，理解自由主义，密尔和他的《论自由》都是不可忽视的。思想和言论自由对获得真理的重要性论断、个性对人类福祉的价值、社会权力和个人权利的界限、不涉及自由原则而反对政府干涉的论断……都有助于我们理解和把握什么是自由。《论自由》语言优美，是捍卫自由的经典之作。其中很多表述成为人们所熟知的格言，如“天才只能在自由的空气里自由地呼吸。”“凡因系习俗就照着办事的人则不作任何选择。”“自由原则不能要求一个人有不要自由的自由。”“国家的价值，从长远来看，归根结底还在组成它的全体个人的价值。”……

其次，《论自由》所讨论的很多问题在今天日益凸显。随着民主制度的不断发展，民主制度的弊端——多数暴虐、人的平凡化和平庸化、习俗的专制正在变成现实。而这些都是密尔在《论自由》中所竭力要解

决和克服的问题。尽管在密尔的时代，民主制度的这些弊端尚不明显。密尔的书是写给未来的，正如他在自传中所写：“我们担心代表社会公正和舆论的政府如果再发展下去，会阻碍人类的言论和行动。对于那些只着眼于现在而忽略未来的人来说，这种担心好像是多余的……某个特定学说体系会适时地得到周围大多数人的支持，建立与之相符的社会制度和行为方式；通过教育让新一代人牢记新的教条，而不必让他们知道得出新教条的思想过程；渐渐地，新教条完全取代旧教条，而且取得相同的压制力。这种有害的力量是否会产生危害取决于人类在那时是否意识到其危害性。只有到那时，《论自由》的教导才会发挥其最大作用，而且这种骇人的力量会保留极长的时间。”^[16]

最后，密尔的《论自由》并没有彻底解决社会权力和个人权利之间的界限问题。密尔认为自己提出的“伤害原则”是一条极其简单的原则，但是估计没有人会同意他的这一种看法。对于什么是“伤害”，如何区分“涉己行为”和“涉他行为”，密尔的支持者和反对者展开了激烈的争论，直到今天这些争论还在延续。正如乔治·迈尔森（George Myerson）在《密尔与〈论自由〉》中所写：“这部写于1859年维多利亚女王统治大英帝国时期的著作，其中提出的观点始终受到人们的争论，即使再进入（它诞生后的）第三个一百年，人们仍然会继续争论。”

第一章，引论。密尔在本章一开篇即点明了全文讨论的核心，“这里所要讨论的乃是公民自由或称社会自由，也就是要探讨社会所能合法施用于个人的权力的性质和限度”。密尔认为，这个问题很少有人用一般性的说法予以提出，更从来没有人用一般性的说法加以讨论；但它远非什么新问题，几乎从最远的年代以来就在划分着人类，只不过现在在新的情况下呈现出来，要求人们给以一种与前不同的而且较为根本的处理。

为展示这一新阶段以及新情况的特征，密尔回顾了自由与权威的斗争史，并将其划分为几个阶段。第一阶段，自由与权威的斗争表现为臣民或者某些阶级的臣民与政府之间的斗争。在这个时期，所谓自由就是指对于政治统治者暴虐的防御。“爱国者的目标就在于，对于统治者所施用于群体的权力要划定一些他所应当受到的限制；而这个限制就是他们所谓的自由。”这种自由在类型上就被视为“政治自由”。要想取得这种自由，有两种途径：第一种途径是，要取得对于某些特权即某些所谓政治自由或政治权利的承认。这些自由或权利，统治者方面若是侵犯，便算是背弃义务，那么臣民的造反就是正当的。第二种途径出现得较晚，是要在宪法上建立一些制约，使统治者的某些重要举措必须得到群体或某些团体代表的同意，民众的同意将是这种政治制度的合法性基础。第二阶段，人们不再把统治者放在对立的地位，不再强调对统治者权力的限制，而强调以民主方式选择统治者。“统治者应当与人民合一起来，统治者的利害和意志应当就是国族的利害和意志。国族无须对自己的意志有所防御。不必害怕它会肆虐于自身。”这个时期，争取民主被理解为争取自由的主要目标。第三阶段，即在已经实现了民主的美国^[17]，人们通过民主实践发现，“运用权力的‘人民’与权力所加的人民并不永是同一的；而所说的‘自治政府’亦非每人管治自己的政府，而是每人都被所有其余的人管治的政府。”于是出现的结果就是，人民会压迫人民中的一部分。因此，即使在民主国家里，限制政府的权力也是必不可少的。密尔认为，在民主社会里面，尤其要注意防止“多数的暴虐”。多数不仅运用政治的、法律的手段肆虐少数，也以非政治、非法律的社会手段运行，最为常见的就是公共舆论手段。那么如何解决这个问题呢？密尔提出一

条指导处理自由与权威问题的原则，作为全书的总纲，那就是“人类之所以有理有权可以分别地或集体地对其中任何分子的行动自由进行干涉，唯一的目的只是自我防卫”。也就是说，“任何人的行为，只有涉及他人的那部分才须对社会负责。在仅涉及本人的部分，他的独立性在权利上则是绝对的。对于本人自己，对于他自己的身和心，个人乃是最高主权者。”到底怎么区分“仅涉及本人的部分”和“涉及他人的那部分”呢？密尔提出了“伤害原则”来加以解决，即看个人的行为是否对他人产生了伤害。

第二章，论思想自由和言论自由。在密尔看来，自由的第一个领域就是思想自由和言论自由，因此在第二章里面密尔重点讨论了这种自由。但与其他人不同的是，密尔并没有从“天赋人权”等角度来论证思想自由和言论自由的正当性，而是从讨论和听取意见是获得真理的基本途径入手进行分析。密尔认为，思想自由和言论自由有助于人类获得真理，压制思想自由和言论自由则会导致扼杀真理；保障每个人的思想言论自由，符合整个社会的利益。

密尔在论证思想和言论自由时强调了人类认识的“可错性”（fallibility）。不仅单个个人的认识有可错性，而且集体的共享认识也有可错性，每个时代的认识都有可错性。“我们永远不能确信我们所力图窒闭的意见是一个谬误的意见；假如我们确信，要窒闭它也仍然是一个错误。”人类尽管在认识上有可错性，但仍能进步，根本原因在于人类有一种改正自身错误的能力。改正的途径一是靠经验，二是靠讨论。讨论和聆听不同意见是获得真理的基本途径。密尔将压制思想和言论自由的情形分为三类：第一类，被压制的言论可能是正确的意见，如此，人类就失去了一个获得真理的机会。密尔举了苏格拉底、耶稣被处死的例子，“虽然苏格拉底死了，但苏格拉底的哲学如日中天，光辉照遍整个的知识长空。基督徒是被投饲狮子了，但基督教会则长成一株堂皇繁茂的大树……”。现代社会对思想和言论自由的压制不再诉诸迫害或处死，但却以社会不宽容的方式展现出来，“这既不杀死一个人，也不拔除什么意见，但是却诱导人们把意见遮蔽起来，或者避免积极努力去传布意见”。“在这种事态之下，只能找到这样一类的人，不是滥调的应声虫，就是真理的应时货，他们在一切重大题目上的论证都是为着听众，而不

是自己真正信服的东西。”第二类，被压制的意见可能是完全错误的，但对它的压制使人类失去一个机会，即从真理和错误的冲突中产生出来的对于真理更加清楚的认识和更加生动的印象。也就是说，即使公认的意见是真理而且全部是真理，若不容许它去遭受而且实际遭受到猛烈而认真的争议，那么接受者多数抱持这个意见就像抱持一个偏见那样，对它的理性根据很少理会或感认。并且，教义的意义本身也会有丧失或减弱并且失去其对品行行为的重大作用的危险，因为教条已变成仅仅在形式上宣称的东西，对于致善是无效的；它妨碍着去寻求根据，并且还阻挡着任何真实的、有感于衷的信念从理性或亲身经验中生长出来。第三类，也是大部分的情况，即被压制的言论可能是部分真理、部分谬误，而流行的意见也是部分真理，部分谬误。此时，压制言论自由就会导致既丧失获得真理的机会，又失去在与错误冲突中完善真理的机会。密尔以卢梭的教义为例进行了分析。在18世纪，流行的意见与卢梭的教义相比更近于真理、错误较少，但是卢梭的教义中有着数量可观的恰是流行意见所缺少的真理。此时，只有借敌对意见的冲突才能使所遗真理有机会得到补足。

在本章的最后，密尔分析了意见发表应该有节制的说法。密尔认为这里“节制”的意思是谩骂、讽刺、人身攻击以及诸如此类的事，而不是是否对受攻击的人有所触犯，因为经验告诉我们，“凡攻击是有力而动听时都可算有了触犯”。

第三章，论个性为人类福祉的因素之一。这也是全书最富有激情和创新的一章。前面一章论述了人类应当有自由去形成意见并且无保留地发表意见。作为上一章的延续，这一章进一步讨论基于同样的理由也要求着人们应当有自由去依照其意见而行动。人们的思想总会反映在他们的行动上；思想不同，其性格和生活方式也不同，这就是所谓的个性。密尔认为，“生活应当有多种不同的实验；对于各式各样的性格只要对他人没有损害应当给以自由发展的余地……”这里密尔讨论的重点不在于个人的内心修养，而在于防止政治、法律与社会对个性发展的压制。因此，整整一章里面，密尔几乎没有提到追求个性发展的责任在于个人、在于个人的拼搏和努力，而是将全部文字都集中在讴歌个性的价值、争辩社会应该允许个性的发展。在密尔看来，个性是人类幸福的主要因素

之一，也是个人进步和社会进步的一个主要因素。首先，对于个人来说，个性乃是人之为人的不可或缺的要素。“作为一个人，到了能力已臻成熟的时候，要按照他自己的办法去运用和解释经验，这是人的特权，也是人的正当条件。”其次，个性不仅是个人自身发展的必要条件，而且也是社会乃至整个人类自身发展不可或缺的动力。“相应于个人个性的发展，每个人也变得对自己更有价值，因而对于他人也能够更有价值。他自己的存在上有了更大程度的生命的充实；而当单位中有了更多的生命时，由单位组成的群体自然也有了更多的生命。”

密尔与托克维尔一样，认为民主社会存在一个重要的危险就是人的平凡化、平庸化。人类发展需要两样东西：自由和境地的多样化。而后者正在日益减少，因为人们在很大程度上生活在相同的世界里，“他们在读相同的东西、听相同的东西、看相同的东西、去相同的地方，所抱有的希望和恐惧指向相同的对象、享有相同的权利和义务、握有相同的主张那些东西的手段。”而这种同化还在进行中，政治变化、教育的扩展、交通工具的改善、商业和制造业的增加都在促进同化。因此，必须给予个性以自由的空间，只有培养个性才产生出或者才能产生出发展得很好的人类。为了抵制这种平凡化、平庸化，密尔呼吁社会应该尽可能地对那些生活方式、思维方式与众不同的人抱持宽容，给他们一个宽松自由的环境。密尔说，“天才只能在自由的空气里自由地呼吸”，保持让天才生长的土壤，人类才能从其首创性中获益。密尔并非倡导精英理论，因为在他看来，天才就是比其他人有较多个性的人。为了进一步展示鼓励个性与压制个性所产生的不同后果，密尔以欧洲的成功和中国的衰落作为例证进行了分析：中国的衰落归因为习俗的静止以及对个性的禁锢，而欧洲的成功则在于鼓励个性的发展。

在这一章里面，密尔特别提到了社会习俗对个性的禁锢。他认为，习俗的专制在任何地方对于人类的前进都是一个持久的障碍。这和密尔本人的经历有关，他和妻子的爱情经历受到了诸多非议，以致他们在婚后经常去法国、意大利等拉丁文化区，呼吸那里的浪漫空气。因此，密尔特别强调不能强制他人遵从习俗，原因在于：第一点，习俗不过是他人经验的体现，可能这些经验太狭窄或者解释得不对；第二点，他们对经验的解释是对的，却并不见得适合所有人，因为习俗是由合乎习俗的

情况和性格而造成的；第三点，即使习俗是好的，也适合这个人，但如果他仅仅因为系习俗而遵从习俗的话，那并不会对他有所教育，也不会使他的作为人类专有禀赋的任何属性有所发展，因为人类的官能只有在进行选择时才会得到运用。

第四章，论社会驾于个人的权威的限度。密尔把个人生活分为两部分：“凡主要关涉在个人的那部分生活应当属于个性，凡主要关涉在社会的那部分应当属于社会”。密尔从功利角度论述了社会的存在和个人的最低义务。他说社会并非建立在一种契约上面，“但每人既然受着社会的保护，每人对于社会也就该有一种报答；每人既然生活在社会中，每人对于其余的人也就必得遵守某种行为准绳”。这种行为准则主要包括两个方面：第一是彼此互不损害利益，彼此互不损害或在法律明文中或默认应当认作权利的某些相当确定的利益；第二是每人都要在为保卫社会或其成员免于遭受损害和妨碍而付出的劳动和牺牲中担负他自己的一部分。这些条件，如果有人做不到，社会是有理由以一切代价去实行强制的。社会的强制手段包括三种：厌恶和鄙视、道德上的谴责以及法律惩罚。密尔反复强调，一个人因为在自律或个人尊严上有缺点而招致他人的观感等方面的损失，与因为对他人权利有所触犯而应当遭受的惩罚，实际上是不同的内容、不同的类型；情况到了对个人或公众有确定的损害或者有确定的损失之虞的时候，就超出了自由的范围而进入道德或法律的范围了。对于一个人的福祉来说，本人才是最关切的，其他人可以提出批评、意见和建议，但本人才是最后的裁夺者。甚至本人的行为对自己有害时，只要不牵涉到社会和其他人的利益，密尔认为就没有必要去加以干涉。即法律不应该基于“父爱主义”原则干预个人行为。密尔明确反对社会根据共享的或主导群体的道德或习俗干预个人自由。他认为，如果公众去干涉，常常是作了错的干涉、干涉错了地方。在社会道德问题上，如果牵涉到对他人的义务问题，公众的意见虽然常常会错，但更常常会是对的；因为这类问题上他们只需要判断自己的利害，判断这类行为是否会影响到自己。但如果只关乎个人自身的行为问题，则对错可能参半，因为这时公众的意见不过某些人关于他人善恶福祸的意见，甚至连这个都不是，而只是他们自己的喜好罢了。

密尔说，公众在干涉私人行为时很少想到别的什么，只不过想到凡

不同于他自己的做法或想法是怎样的罪大恶极罢了；而这个判断，经过薄薄的一道化装，又由90%的道德家和思辨家当作宗教和哲学的谕训交给人类。接下来，密尔列举了很多例子来说明公众怎样不恰当地把道德法则的性质强行赋予他自己所择取的东西，这也说明公众对私人生活的不正当干涉的祸害并非仅仅是理论中的祸害。（1）人们在看到他人的宗教意见与自己的不同、不奉行自己的宗教仪式特别是不遵守自己的宗教饮食戒律的时候怀有的反感。比如，在基督教徒的信条和行事中足以招惹伊斯兰教徒大恨的莫过于吃猪肉这件事；而伊斯兰教徒对待吃猪肉的态度，也恰恰最能引起基督教徒和欧洲人更为不加掩饰的反感。

（2）在西班牙，人们必须按照天主教的样式来崇拜上帝，否则就被多数人认为是对他们的最高的触犯。因而，在西班牙境内，没有任何其他形式的公开礼拜是合法的。在所有南欧地区的人们看来，教士如果婚配，不仅是亵渎宗教，而且是淫荡粗野、不成体统。（3）在新英格兰以及在共和时代的大不列颠，在清教徒主导的地区禁止一切公众的以及私人的娱乐，尤其是音乐、舞蹈、竞技或其他以消遣为目的的聚会、戏剧演出。今天在英国，其道德和宗教信条认为此类娱乐有害于人心而应当禁止的人，仍不在少数。（4）在美国，多数人怀有一种情绪，即讨厌铺张浪费的生活，这种厌恶使得在美国的很多地方一个拥有很多收入的人竟难想出一个花掉这笔收入而不致引起公众非难的方式。（5）在某个英属殖民地以及在美国几乎半数地区，法律以预防酗酒的名义禁止人们在医疗目的之外使用任何一种发酵酒精饮料。美国采纳禁酒令的几个州，因为该法难以执行而纷纷取消。但在英国却还有很多所谓仁爱之士以极大的热情继续推进，试图鼓动在这个国家制定同样的法令。

（6）还有一个不当干涉个人合理自由的重要事例，其成功施行已久，那就是厉行安息日制度的立法。（7）摩门教因为认可一夫多妻制而遭到迫害，甚至在他们被强行驱逐出国之后，有人还公开宣布应当组织一支远征军去对付他们。

第五章，本文教义的应用。这一章，密尔将本文的全部教义总结成两条格言：第一，个人的行动只要不涉及自身以外什么人的利害，个人就不必向社会负责交代。他人若为着自己的好处而认为有必要时，可以对他忠告、指教、劝说以至远而避之，这些就是社会要对他们的行为表示不喜或非难时所能采取的正当步骤。第二，关于对他人利益有害的行

动，个人则应当负责交代，并且还应当承受或是社会的或是法律的惩罚。但是这里要注意，不能假定对他人利益的伤害或可能伤害这一点就单独构成社会干涉的正当理由。密尔举了很多例子对此加以说明。

（1）竞聘问题；竞聘一个职位，获胜者兴高采烈，而失败者则白费了一番努力，自然会感到失望，但是不能因此而排除竞争。因为这种个人之间的利益冲突是在无论什么制度下也不可避免的，是一个人在追求自己的合法目的过程中不可避免地因而也就合法地引起他人的痛苦或损失。（2）自由贸易问题。贸易乃是一种社会行动，只要向公众出售货物，自然会对他人和社会的利益产生影响，那么有必要对自由贸易进行限制吗？密尔认为，要做到物美价廉，最有效的办法就是让生产者和销售者都完全自由，而以购买者可以随意到处选购的同等自由作为对生产者和销售者的制约。此外，密尔认为，梅恩省禁酒法、禁止对中国输入鸦片、禁止出售毒药这类问题在本质上是自由问题；反对它们的理由不在于侵犯了生产者和销售者的自由，而在于它们侵犯了购买者的自由。

（3）限制出售毒药等危险物品问题，也就是为防止犯罪或事故可以侵犯自由到什么程度而不失为合法。密尔认为，可以发出危险警告，而不应当以强力阻止，如在药品上贴上危险标签。（4）关乎个人自身的错误行为。对于这类行为也有可能通过防止或惩罚的途径而加以正当干涉。如喝醉酒通常不能成为法律干涉的问题，但是如果有人曾在酒力的影响下对他人横加强暴以致一度定有罪名，再犯罪的就要加重处罚。懒惰问题同样如此。还有许多行动，虽然其直接损害只及于本人自身，因而不应当受到法律的禁止；但是若公开做出来会破坏良好的社会风气，因而又可以划入涉及他人的范畴，予以禁止则是正当的。而对于恶果完全只落到本人自身的行为，为尊重自由起见，社会就不宜加以防止或惩罚。只关个人的事情上的个人自由，其含义中也相应地包括着若干个人在只关自己而不关他人的共同事情上经相互同意来共同规定的自由。但是，这个一般规律也有例外，如一个自己卖身为奴或者允许他人出卖己身为奴的订约在法律上是无效的、作废的，因为自由原则不能允许一个人有不要自由的自由。

密尔认为，由于缺少一种公认的普遍原则，人们往往在不应当给予自由的地方给予了自由，而在应当给予自由的地方又往往不给予自由。比如，在家庭关系里面，丈夫对妻子享有几乎可称专制的权利。要消除

这个罪恶，最需要的事情莫过于让为妻者也享有和别人相同的权利，也和别人同样受到法律的保护。而在子女问题上误用自由概念却真正成为国家履行其义务的一个障碍。以教育为例，大家都承认父亲负有义务使子女获得教育，但是对于强迫他们履行这个义务就没有人能接受。密尔认为，只要承认强行普遍教育的义务就可以解决这方面的争论，“政府只要决心要求每个儿童都受到良好教育，并不必自己操心去备办这个教育。做父母的欢喜让子女在哪里得到怎样的教育，这可以随他们的便，国家只须帮助家境比较苦难的儿童付学费，对完全无人负担的儿童代付全部入学费用，这样就足够了。”在生育子女问题上存在同样的问题。

最后，密尔谈了有关政府干涉的限度问题。他说，虽然这个问题与文章主题密切相连，但严格说来却不在它的范围之内。有一类事情，其所以不容政府干涉的理由并不涉及自由的原则问题；问题不在拘束个人行为，而在帮助他们行动，也就是政府应否为了人们的好处而替他们办事或叫他们办事。不涉及侵犯自由问题而反对政府干涉的情况可分为三种：第一，所要办的事，若由个人来办会比政府来办更好一些；第二，虽然一些个人来办未必能像政府官吏办得那样好，但是仍宜由个人来办而不是政府来办，因为这样可以加强他们主动的才能，锻炼他们的判断能力。对于陪审制度、地方自治和城市自治、自愿的联合组织来办理工业和慈善事业来说，这一点乃是主要理由。第三，也是最有力的理由，不必要地增加政府权力，会有很大的祸患。政府现有职能的每一项增加，都足以扩大散布其对人们希望和恐惧心理的影响，都足以使得活跃而富有进取心的一部分公众愈来愈变成政府的依存者。从长远来看，国家的价值还在于它的全体个人的价值，而国家代替个人去做事或者指导他们做事，不仅个人的价值将无从体现，这对国家本身的存在来说也是危险的。

2013年3月

强梅梅，中国人民大学法学理论博士。现为中国法学会法律信息部助理研究员。主要研究领域为西方法律思想史、比较法学、法社会学等。

[17] 密尔用“美国式的民主”这样的概念并不是指美国实现了民主和自由的结合，而只是指人民获得了政治权利，因为在当时的世界上只有美国实现了民主。

“The grand, leading principle, towards which every argument unfolded in these pages directly converges, is the absolute and essential importance of human development in its richest diversity.”^[1]

Wilhelm von Humboldt, *Sphere and Duties of Government*

To the beloved and deplored memory of her who was the inspirer, and in part the author, of all that is best in my writings—the friend and wife whose exalted sense of truth and right was my strongest incitement, and whose approbation was my chief reward—I dedicate this volume. Like all that I have written for many years, it belongs as much to her as to me; but the work as it stands has had, in a very insufficient degree, the inestimable advantage of her revision; some of the most important portions having been reserved for a more careful re-examination, which they are now never destined to receive. Were I but capable of interpreting to the world one half the great thoughts and noble feelings which are buried in her grave, I should be the medium of a greater benefit to it, than is ever likely to arise from anything that I can write, unprompted and unassisted by her all but unrivalled wisdom.^[2]

[1] 威廉·冯·洪堡（1767—1835）是19世纪德国重要思想家，也是德国自由主义思想的代表性人物。他在其名著《论国家的作用》中所表述的关于自由、人性、教育、国家的理念在思想史上具有标志性的意义，书中的许多观点为《论自由》所借鉴。密尔曾经说过：“我唯一想与之交谈的作者就是洪堡。”

[2] 密尔的妻子是哈莉特·哈迪。1830年二人结识的时候，哈莉特已经是泰勒夫人并育有子女。密尔与哈莉特的交往虽然得到了泰勒先生的谅解，却遭到家人及朋友的非议。密尔基于亲身感受，对社会暴虐深恶痛绝，对个人自由特别渴望与珍惜。在做了二十年朋友之后，哈莉特于丈夫去世两年后与密尔结婚。密尔在他的自传中描述道，哈莉特对于他的智识和道德发展至关重要，人们读到的在他名下的东西其实有许多是二人共同思想的结晶。《论自由》这本书更被密尔认为是他们最直接的合作的产物，书中的每一句话都经过他们多次认真思索和反复的推敲。

Chapter 1

Introductory

THE subject of this Essay is not the so-called Liberty of the Will^[1], so unfortunately opposed to the misnamed doctrine of Philosophical Necessity; but Civil, or Social Liberty: the nature and limits of the power which can be legitimately exercised by society over the individual.^[2] A question seldom stated, and hardly ever discussed, in general terms^[3], but which profoundly influences the practical controversies of the age by its latent presence, and is likely soon to make itself recognized as the vital question of the future. It is so far from being new, that, in a certain sense, it has divided mankind, almost from the remotest ages, but in the stage of progress into which the more civilized portions of the species have now entered, it presents itself under new conditions, and requires a different and more fundamental treatment.

The struggle between Liberty and Authority is the most conspicuous feature in the portions of history with which we are earliest familiar, particularly in that of Greece, Rome, and England. But in old times this contest was between subjects, or some classes of subjects, and the Government. By liberty, was meant protection against the tyranny of the political rulers. The rulers were conceived (except in some of the popular governments of Greece) as in a necessarily antagonistic position to the people whom they ruled. They consisted of a governing One, or a governing tribe or caste, who derived their authority from inheritance or conquest; who, at all events, did not hold it at the pleasure of the governed, and whose supremacy men did not venture, perhaps did not desire, to contest, whatever precautions might be taken against its oppressive exercise. Their power was regarded as necessary, but also as highly dangerous;

as a weapon which they would attempt to use against their subjects, no less than against external enemies. To prevent the weaker members of the community from being preyed upon by innumerable vultures, it was needful that there should be an animal of prey stronger than the rest, commissioned to keep them down. But as the king of the vultures would be no less bent upon preying on the flock than any of the minor harpies, it was indispensable to be in a perpetual attitude of defence against his beak and claws. The aim, therefore, of patriots, was to set limits to the power which the ruler should be suffered to exercise over the community; and this limitation was what they meant by liberty. It was attempted in two ways. First, by obtaining a recognition of certain immunities, called political liberties or rights, which it was to be regarded as a breach of duty in the ruler to infringe, and which, if he did infringe, specific resistance, or general rebellion, was held to be justifiable. A second, and generally a later expedient, was the establishment of constitutional checks; by which the consent of the community, or of a body of some sort supposed to represent its interests, was made a necessary condition to some of the more important acts of the governing power. To the first of these modes of limitation, the ruling power, in most European countries, was compelled, more or less, to submit. It was not so with the second; and to attain this, or when already in some degree possessed, to attain it more completely, became everywhere the principal object of the lovers of liberty. And so long as mankind were content to combat one enemy by another, and to be ruled by a master, on condition of being guaranteed more or less efficaciously against his tyranny, they did not carry their aspirations beyond this point.

A time, however, came in the progress of human affairs, when men ceased to think it a necessity of nature that their governors should be an independent power, opposed in interest to themselves. It appeared to them much better that the various magistrates of the State should be their tenants or delegates, revocable at their pleasure. In

that way alone, it seemed, could they have complete security that the powers of government would never be abused to their disadvantage. By degrees this new demand for elective and temporary rulers became the prominent object of the exertions of the popular party, wherever any such party existed; and superseded, to a considerable extent, the previous efforts to limit the power of rulers. As the struggle proceeded for making the ruling power emanate from the periodical choice of the ruled, some persons began to think that too much importance had been attached to the limitation of the power itself. That (it might seem) was a resource against rulers whose interests were habitually opposed to those of the people. What was now wanted was, that the rulers should be identified with the people; that their interest and will should be the interest and will of the nation. The nation did not need to be protected against its own will. There was no fear of its tyrannizing over itself. Let the rulers be effectually responsible to it, promptly removable by it, and it could afford to trust them with power of which it could itself dictate the use to be made. Their power was but the nation's own power, concentrated, and in a form convenient for exercise. This mode of thought, or rather perhaps of feeling, was common among the last generation of European liberalism, in the Continental section of which it still apparently predominates. Those who admit any limit to what a government may do, except in the case of such governments as they think ought not to exist, stand out as brilliant exceptions among the political thinkers of the Continent. A similar tone of sentiment might by this time have been prevalent in our own country, if the circumstances which for a time encouraged it had continued unaltered.

But, in political and philosophical theories, as well as in persons, success discloses faults and infirmities which failure might have concealed from observation. The notion, that the people have no need to limit their power over themselves, might seem axiomatic, when popular government was a thing only dreamed about, or read of as

having existed at some distant period of the past. Neither was that notion necessarily disturbed by such temporary aberrations as those of the French Revolution, the worst of which were the work of an usurping few, and which, in any case, belonged, not to the permanent working of popular institutions, but to a sudden and convulsive outbreak against monarchical and aristocratic despotism. In time, however, a democratic republic came to occupy a large portion of the earth's surface, and made itself felt as one of the most powerful members of the community of nations; and elective and responsible government became subject to the observations and criticisms which wait upon a great existing fact. It was now perceived that such phrases as “self-government,” and “the power of the people over themselves,” do not express the true state of the case. The “people” who exercise the power are not always the same people with those over whom it is exercised; and the “self-government” spoken of is not the government of each by himself, but of each by all the rest. The will of the people, moreover, practically means, the will of the most numerous or the most active part of the people; the majority, or those who succeed in making themselves accepted as the majority; the people, consequently, may desire to oppress a part of their number; and precautions are as much needed against this as against any other abuse of power. The limitation, therefore, of the power of government over individuals, loses none of its importance when the holders of power are regularly accountable to the community, that is, to the strongest party therein. This view of things, recommending itself equally to the intelligence of thinkers and to the inclination of those important classes in European society to whose real or supposed interests democracy is adverse, has had no difficulty in establishing itself; and in political speculations “the tyranny of the majority”^[4] is now generally included among the evils against which society requires to be on its guard.

Like other tyrannies, the tyranny of the majority was at first, and is still vulgarly, held in dread, chiefly as operating through the acts of

the public authorities. But reflecting persons perceived that when society is itself the tyrant—society collectively, over the separate individuals who compose it—its means of tyrannizing are not restricted to the acts which it may do by the hands of its political functionaries. Society can and does execute its own mandates: and if it issues wrong mandates instead of right, or any mandates at all in things with which it ought not to meddle, it practises a social tyranny more formidable than many kinds of political oppression, since, though not usually upheld by such extreme penalties, it leaves fewer means of escape, penetrating much more deeply into the details of life, and enslaving the soul itself. Protection, therefore, against the tyranny of the magistrate is not enough; there needs protection also against the tyranny of the prevailing opinion and feeling; against the tendency of society to impose, by other means than civil penalties, its own ideas and practices as rules of conduct on those who dissent from them; to fetter the development, and, if possible, prevent the formation, of any individuality not in harmony with its ways, and compel all characters to fashion themselves upon the model of its own. There is a limit to the legitimate interference of collective opinion with individual independence; and to find that limit, and maintain it against encroachment, is as indispensable to a good condition of human affairs, as protection against political despotism.

But though this proposition is not likely to be contested in general terms, the practical question, where to place the limit—how to make the fitting adjustment between individual independence and social control—is a subject on which nearly everything remains to be done. All that makes existence valuable to any one, depends on the enforcement of restraints upon the actions of other people. Some rules of conduct, therefore, must be imposed, by law in the first place, and by opinion on many things which are not fit subjects for the operation of law. What these rules should be, is the principal question in human affairs; but if we except a few of the most obvious cases, it is one of

those which least progress has been made in resolving. No two ages, and scarcely any two countries, have decided it alike; and the decision of one age or country is a wonder to another. Yet the people of any given age and country no more suspect any difficulty in it, than if it were a subject on which mankind had always been agreed. The rules which obtain among themselves appear to them self-evident and selfjustifying. This all but universal illusion is one of the examples of the magical influence of custom, which is not only, as the proverb says a second nature, but is continually mistaken for the first. The effect of custom, in preventing any misgiving respecting the rules of conduct which mankind impose on one another, is all the more complete because the subject is one on which it is not generally considered necessary that reasons should be given, either by one person to others, or by each to himself. People are accustomed to believe and have been encouraged in the belief by some who aspire to the character of philosophers, that their feelings, on subjects of this nature, are better than reasons, and render reasons unnecessary. The practical principle which guides them to their opinions on the regulation of human conduct, is the feeling in each person's mind that everybody should be required to act as he, and those with whom he sympathizes, would like them to act. No one, indeed, acknowledges to himself that his standard of judgment is his own liking; but an opinion on a point of conduct, not supported by reasons, can only count as one person's preference; and if the reasons, when given, are a mere appeal to a similar preference felt by other people, it is still only many people's liking instead of one. To an ordinary man, however, his own preference, thus supported, is not only a perfectly satisfactory reason, but the only one he generally has for any of his notions of morality, taste, or propriety, which are not expressly written in his religious creed; and his chief guide in the interpretation even of that. Men's opinions, accordingly, on what is laudable or blamable, are affected by all the multifarious causes which influence their wishes in regard to the conduct of others, and which are as numerous as those which

determine their wishes on any other subject. Sometimes their reason—at other times their prejudices or superstitions: often their social affections, not seldom their antisocial ones, their envy or jealousy, their arrogance or contemptuousness: but most commonly, their desires or fears for themselves—their legitimate or illegitimate self-interest. Wherever there is an ascendant class, a large portion of the morality of the country emanates from its class interests, and its feelings of class superiority. The morality between Spartans and Helots, between planters and negroes, between princes and subjects, between nobles and roturiers, between men and women, has been for the most part the creation of these class interests and feelings: and the sentiments thus generated, react in turn upon the moral feelings of the members of the ascendant class, in their relations among themselves. Where, on the other hand, a class, formerly ascendant, has lost its ascendancy, or where its ascendancy is unpopular, the prevailing moral sentiments frequently bear the impress of an impatient dislike of superiority. Another grand determining principle of the rules of conduct, both in act and forbearance, which have been enforced by law or opinion, has been the servility of mankind towards the supposed preferences or aversions of their temporal masters, or of their gods. This servility though essentially selfish, is not hypocrisy; it gives rise to perfectly genuine sentiments of abhorrence; it made men burn magicians and heretics. Among so many baser influences, the general and obvious interests of society have of course had a share, and a large one, in the direction of the moral sentiments: less, however, as a matter of reason, and on their own account, than as a consequence of the sympathies and antipathies which grew out of them: and sympathies and antipathies which had little or nothing to do with the interests of society, have made themselves felt in the establishment of moralities with quite as great force.

The likings and dislikings of society, or of some powerful portion of it, are thus the main thing which has practically determined the

rules laid down for general observance, under the penalties of law or opinion. And in general, those who have been in advance of society in thought and feeling, have left this condition of things unassailed in principle, however they may have come into conflict with it in some of its details. They have occupied themselves rather in inquiring what things society ought to like or dislike, than in questioning whether its likings or dislikings should be a law to individuals. They preferred endeavouring to alter the feelings of mankind on the particular points on which they were themselves heretical, rather than make common cause in defence of freedom, with heretics generally. The only case in which the higher ground has been taken on principle and maintained with consistency, by any but an individual here and there, is that of religious belief: a case instructive in many ways, and not least so as forming a most striking instance of the fallibility of what is called the moral sense: for the *odium theologicum*, in a sincere bigot, is one of the most unequivocal cases of moral feeling. Those who first broke the yoke of what called itself the Universal Church, were in general as little willing to permit difference of religious opinion as that church itself. But when the heat of the conflict was over, without giving a complete victory to any party, and each church or sect was reduced to limit its hopes to retaining possession of the ground it already occupied; minorities, seeing that they had no chance of becoming majorities, were under the necessity of pleading to those whom they could not convert, for permission to differ. It is accordingly on this battle—field, almost solely, that the rights of the individual against society have been asserted on broad grounds of principle, and the claim of society to exercise authority over dissentients openly controverted. The great writers to whom the world owes what religious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realized,

except where religious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale. In the minds of almost all religious persons, even in the most tolerant countries, the duty of toleration is admitted with tacit reserves. One person will bear with dissent in matters of church government, but not of dogma; another can tolerate everybody, short of a Papist or an Unitarian; another, every one who believes in revealed religion; a few extend their charity a little further, but stop at the belief in a God and in a future state. Wherever the sentiment of the majority is still genuine and intense, it is found to have abated little of its claim to be obeyed.

In England, from the peculiar circumstances of our political history, though the yoke of opinion is perhaps heavier, that of law is lighter, than in most other countries of Europe; and there is considerable jealousy of direct interference, by the legislative or the executive power with private conduct; not so much from any just regard for the independence of the individual, as from the still subsisting habit of looking on the government as representing an opposite interest to the public. The majority have not yet learnt to feel the power of the government their power, or its opinions their opinions. When they do so, individual liberty will probably be as much exposed to invasion from the government, as it already is from public opinion. But, as yet, there is a considerable amount of feeling ready to be called forth against any attempt of the law to control individuals in things in which they have not hitherto been accustomed to be controlled by it; and this with very little discrimination as to whether the matter is, or is not, within the legitimate sphere of legal control; insomuch that the feeling, highly salutary on the whole, is perhaps quite as often misplaced as well grounded in the particular instances of its application. There is, in fact, no recognized principle by which the propriety or impropriety of government interference is customarily tested. People decide according to their personal

preferences. Some, whenever they see any good to be done, or evil to be remedied, would willingly instigate the government to undertake the business; while others prefer to bear almost any amount of social evil, rather than add one to the departments of human interests amenable to governmental control. And men range themselves on one or the other side in any particular case, according to this general direction of their sentiments; or according to the degree of interest which they feel in the particular thing which it is proposed that the government should do; or according to the belief they entertain that the government would, or would not, do it in the manner they prefer; but very rarely on account of any opinion to which they consistently adhere, as to what things are fit to be done by a government. And it seems to me that in consequence of this absence of rule or principle, one side is at present as often wrong as the other; the interference of government is, with about equal frequency, improperly invoked and improperly condemned.

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community^[5], against his will, is to prevent harm^[6] to others. His own good, either physical or moral, is not a sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinions of others, to do so would be wise, or even right. These are good reasons for remonstrating with him, or reasoning with him, or persuading him, or entreating him, but not for compelling him, or visiting him with any

evil in case he do otherwise. To justify that, the conduct from which it is desired to deter him, must be calculated to produce evil to some one else. The only part of the conduct of any one, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign. [7]

It is, perhaps, hardly necessary to say that this doctrine is meant to apply only to human beings in the maturity of their faculties. We are not speaking of children, or of young persons below the age which the law may fix as that of manhood or womanhood. Those who are still in a state to require being taken care of by others, must be protected against their own actions as well as against external injury. For the same reason, we may leave out of consideration those backward states of society in which the race itself may be considered as in its nonage. The early difficulties in the way of spontaneous progress are so great, that there is seldom any choice of means for overcoming them; and a ruler full of the spirit of improvement is warranted in the use of any expedients that will attain an end, perhaps otherwise unattainable. Despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement, and the means justified by actually effecting that end. Liberty, as a principle, has no application to any state of things anterior to the time when mankind have become capable of being improved by free and equal discussion. Until then, there is nothing for them but implicit obedience to an Akbar or a Charlemagne, if they are so fortunate as to find one. But as soon as mankind have attained the capacity of being guided to their own improvement by conviction or persuasion (a period long since reached in all nations with whom we need here concern ourselves), compulsion, either in the direct form or in that of pains and penalties for non-compliance, is no longer admissible as a means to their own good, and justifiable only for the security of others.

It is proper to state that I forgo any advantage which could be derived to my argument from the idea of abstract right, as a thing independent of utility. I regard utility as the ultimate appeal on all ethical questions; but it must be utility in the largest sense, grounded on the permanent interests of man as a progressive being. Those interests, I contend, authorize the subjection of individual spontaneity to external control, only in respect to those actions of each, which concern the interest of other people. If any one does an act hurtful to others, there is a *prima facie* case for punishing him, by law, or, where legal penalties are not safely applicable, by general disapprobation. There are also many positive acts for the benefit of others, which he may rightfully be compelled to perform; such as, to give evidence in a court of justice; to bear his fair share in the common defence, or in any other joint work necessary to the interest of the society of which he enjoys the protection; and to perform certain acts of individual beneficence, such as saving a fellow-creature's life, or interposing to protect the defenceless against ill-usage, things which whenever it is obviously a man's duty to do, he may rightfully be made responsible to society for not doing. A person may cause evil to others not only by his actions but by his inaction, and in either case he is justly accountable to them for the injury. The latter case, it is true, requires a much more cautious exercise of compulsion than the former. To make any one answerable for doing evil to others, is the rule; to make him answerable for not preventing evil, is, comparatively speaking, the exception. Yet there are many cases clear enough and grave enough to justify that exception. In all things which regard the external relations of the individual, he is *de jure* amenable to those whose interests are concerned, and if need be, to society as their protector. There are often good reasons for not holding him to the responsibility; but these reasons must arise from the special expediencies of the case: either because it is a kind of case in which he is on the whole likely to act better, when left to his own discretion, than when controlled in any way in which society have it in their

power to control him; or because the attempt to exercise control would produce other evils, greater than those which it would prevent. When such reasons as these preclude the enforcement of responsibility, the conscience of the agent himself should step into the vacant judgmentseat, and protect those interests of others which have no external protection; judging himself all the more rigidly, because the case does not admit of his being made accountable to the judgment of his fellow-creatures.

But there is a sphere of action in which society, as distinguished from the individual, has, if any, only an indirect interest; comprehending all that portion of a person's life and conduct which affects only himself, or if it also affects others, only with their free, voluntary, and undeceived consent and participation. When I say only himself, I mean directly, and in the first instance: for whatever affects himself, may affect others through himself; and the objection which may be grounded on this contingency, will receive consideration in the sequel. This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience, in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological. The liberty of expressing and publishing opinions may seem to fall under a different principle, since it belongs to that part of the conduct of an individual which concerns other people; but, being almost of as much importance as the liberty of thought itself, and resting in great part on the same reasons, is practically inseparable from it. Secondly, the principle requires liberty of tastes and pursuits; of framing the plan of our life to suit our own character; of doing as we like, subject to such consequences as may follow; without impediment from our fellow-creatures, so long as what we do does not harm them even though they should think our conduct foolish, perverse, or wrong. Thirdly, from this liberty of each individual, follows the liberty, within the

same limits, of combination among individuals; freedom to unite, for any purpose not involving harm to others: the persons combining being supposed to be of full age, and not forced or deceived.

No society in which these liberties are not, on the whole, respected, is free, whatever may be its form of government; and none is completely free in which they do not exist absolute and unqualified. The only freedom which deserves the name, is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs, or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily, or mental and spiritual. Mankind are greater gainers by suffering each other to live as seems good to themselves, than by compelling each to live as seems good to the rest.

Though this doctrine is anything but new, and, to some persons, may have the air of a truism, there is no doctrine which stands more directly opposed to the general tendency of existing opinion and practice. Society has expended fully as much effort in the attempt (according to its lights) to compel people to conform to its notions of personal, as of social excellence. The ancient common-wealths thought themselves entitled to practise, and the ancient philosophers countenanced, the regulation of every part of private conduct by public authority, on the ground that the State had a deep interest in the whole bodily and mental discipline of every one of its citizens, a mode of thinking which may have been admissible in small republics surrounded by powerful enemies, in constant peril of being subverted by foreign attack or internal commotion, and to which even a short interval of relaxed energy and self-command might so easily be fatal, that they could not afford to wait for the salutary permanent effects of freedom. In the modern world, the greater size of political communities, and above all, the separation between spiritual and temporal authority (which placed the direction of men's consciences in

other hands than those which controlled their worldly affairs), prevented so great an interference by law in the details of private life; but the engines of moral repression have been wielded more strenuously against divergence from the reigning opinion in self-regarding, than even in social matters; religion, the most powerful of the elements which have entered into the formation of moral feeling, having almost always been governed either by the ambition of a hierarchy, seeking control over every department of human conduct, or by the spirit of Puritanism. And some of those modern reformers who have placed themselves in strongest opposition to the religions of the past, have been noway behind either churches or sects in their assertion of the right of spiritual domination: M. Comte, in particular, whose social system, as unfolded in his *Système de Politique Positive*, aims at establishing (though by moral more than by legal appliances) a despotism of society over the individual, surpassing anything contemplated in the political ideal of the most rigid disciplinarian among the ancient philosophers.

Apart from the peculiar tenets of individual thinkers, there is also in the world at large an increasing inclination to stretch unduly the powers of society over the individual, both by the force of opinion and even by that of legislation: and as the tendency of all the changes taking place in the world is to strengthen society, and diminish the power of the individual, this encroachment is not one of the evils which tend spontaneously to disappear, but, on the contrary, to grow more and more formidable. The disposition of mankind, whether as rulers or as fellow-citizens, to impose their own opinions and inclinations as a rule of conduct on others, is so energetically supported by some of the best and by some of the worst feelings incident to human nature, that it is hardly ever kept under restraint by anything but want of power; and as the power is not declining, but growing, unless a strong barrier of moral conviction can be raised against the mischief, we must expect, in the present circumstances of

the world, to see it increase.

It will be convenient for the argument, if, instead of at once entering upon the general thesis, we confine ourselves in the first instance to a single branch of it, on which the principle here stated is, if not fully, yet to a certain point, recognized by the current opinions. This one branch is the Liberty of Thought: from which it is impossible to separate the cognate liberty of speaking and of writing. Although these liberties, to some considerable amount, form part of the political morality of all countries which profess religious toleration and free institutions, the grounds, both philosophical and practical, on which they rest, are perhaps not so familiar to the general mind, nor so thoroughly appreciated by many even of the leaders of opinion, as might have been expected. Those grounds, when rightly understood, are of much wider application than to only one division of the subject, and a thorough consideration of this part of the question will be found the best introduction to the remainder. Those to whom nothing which I am about to say will be new, may therefore, I hope, excuse me, if on a subject which for now three centuries has been so often discussed, I venture on one discussion more.

[1] 孟德斯鸠把自由分为两类：一类为哲学上的自由，一类为政治上的自由。他在《论法的精神》一文中认为：“哲学上的自由，是要能够行使自己的意志，或者至少（如果应从所有的体系来说的话）自己相信是在行使自己的意志；政治的自由是有安全，或者至少自己相信有安全。”

[2] 这里所要探讨的乃是公民自由或称社会自由，也就是要探讨社会所能合法施用于个人的权力的限制和限度。这句话是全书的核心，点出了该书的主旨。所以，严复在1903年首次将《论自由》翻译成中文的时候并没有直译书名，而是将其翻译成《群己权界论》。这句话中要注意power和legitimately这两个词。Power一般来说是个政治意义上的概念，而这里所指的是“社会性的权力”，即由社会所控制和在社会中所形成的权力。社会权力在什么情况下干涉个人是合法的？什么时候是不合法的？合法与不合法的界限何在？这就是这部著作所要探讨的问题。

[3] 密尔连着用了两个一般性：“很少有人用一般性的说法予以提出，更从来没有

人用一般性的说法加以讨论，”是希望提出一套关于自由与权威的一般性原则。

[4] 多数暴政的概念来自于托克维尔。托克维尔于1831年至1932年间对美国进行了长达9个月的实地考察，并根据这次旅美经历写出了《论美国的民主》一书。该书的第一卷和第二卷分别在1835年和1840年出版。在各卷出版的当年，密尔就分别写了一篇详细的评论，热情地向读者推荐这本著作。密尔十分欣赏托克维尔对现代社会民主趋势不可阻挡的分析，认同托克维尔关于民主可能产生多数暴政的观点。

[5] 这里注意，密尔所讲的自由原则的适用范围是有限制的，仅适用于文明社会。在密尔看来，对于野蛮民族和野蛮社会，只能实行专制。那么什么样的社会是文明社会？密尔认为，有理性的个人和民族是文明的，还不具有理性的则是不文明和野蛮的。当时的印度和中国在密尔眼里就是不文明的。密尔在1836年发表了长篇论文《文明——时代的征兆》对文明的内涵给予了详细的分析。

[6] 怎样判断伤害呢？密尔认为，可以将其概括为侵害了他人的权利和利益，这也是社会和个人之间的分界。但是，显然这种解释并不能让我们清晰地判断什么是伤害。这点也正是密尔的批判者所激烈批判的地方。

[7] 这句话可译为：“对于本人自己，对于他自己的身和心，个人乃是最高主权者。”这即是密尔所说的“个人主权”，此概念与“人民主权”相对应。此概念的提出是密尔最为重要的思想贡献，既反映了密尔的智慧，也是一个在思想史上值得我们高度重视和深入思考的新概念。参见李宏图著，《密尔〈论自由〉精读》，上海，复旦大学出版社，2009年4月第1版，第101页。

Chapter 2

Of the Liberty of Thought and Discussion

THE time, it is to be hoped, is gone by, when any defence would be necessary of the “liberty of the press” as one of the securities against corrupt or tyrannical government. No argument, we may suppose, can now be needed, against permitting a legislature or an executive, not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or what arguments they shall be allowed to hear. This aspect of the question, besides, has been so often and so triumphantly enforced by preceding writers, that it needs not be specially insisted on in this place. Though the law of England, on the subject of the press, is as servile to this day as it was in the time of the Tudors, there is little danger of its being actually put in force against political discussion, except during some temporary panic, when fear of insurrection drives ministers and judges from their propriety;^[1] and, speaking generally, it is not, in constitutional countries, to be apprehended, that the government, whether completely responsible to the people or not, will often attempt to control the expression of opinion, except when in doing so it makes itself the organ of the general intolerance of the public. Let us suppose, therefore, that the government is entirely at one with the people, and never thinks of exerting any power of coercion unless in agreement with what it conceives to be their voice. But I deny the right of the people to exercise such coercion, either by themselves or by their government. The power itself is illegitimate. The best government has no more title to it than the worst. It is as noxious, or more noxious, when exerted in accordance with public opinion, than when in opposition to it. If all mankind minus one, were of one opinion, and only one person were of the contrary opinion, mankind

would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind. Were an opinion a personal possession of no value except to the owner; if to be obstructed in the enjoyment of it were simply a private injury, it would make some difference whether the injury was inflicted only on a few persons or on many. But the peculiar evil of silencing the expression of an opinion is, that it is robbing the human race; posterity as well as the existing generation; those who dissent from the opinion, still more than those who hold it. If the opinion is right, they are deprived of the opportunity of exchanging error for truth: if wrong, they lose, what is almost as great a benefit, the clearer perception and livelier impression of truth^[2], produced by its collision with error.

It is necessary to consider separately these two hypotheses, each of which has a distinct branch of the argument corresponding to it. We can never be sure that the opinion we are endeavouring to stifle is a false opinion; and if we were sure, stifling it would be an evil still.

First: the opinion which it is attempted to suppress by authority may possibly be true. Those who desire to suppress it, of course deny its truth; but they are not infallible. They have no authority to decide the question for all mankind, and exclude every other person from the means of judging. To refuse a hearing to an opinion, because they are sure that it is false, is to assume that *their* certainty is the same thing as *absolute* certainty. All silencing of discussion is an assumption of infallibility. Its condemnation may be allowed to rest on this common argument, not the worse for being common.

Unfortunately for the good sense of mankind, the fact of their fallibility^[3] is far from carrying the weight in their practical judgment, which is always allowed to it in theory; for while every one well knows himself to be fallible, few think it necessary to take any precautions against their own fallibility, or admit the supposition that

any opinion, of which they feel very certain, may be one of the examples of the error to which they acknowledge themselves to be liable. Absolute princes, or others who are accustomed to unlimited deference, usually feel this complete confidence in their own opinions on nearly all subjects. People more happily situated, who sometimes hear their opinions disputed, and are not wholly unused to be set right when they are wrong, place the same unbounded reliance only on such of their opinions as are shared by all who surround them, or to whom they habitually defer: for in proportion to a man's want of confidence in his own solitary judgment, does he usually repose, with implicit trust, on the infallibility of "the world" in general. And the world, to each individual, means the part of it with which he comes in contact; his party, his sect, his church, his class of society: the man may be called, by comparison, almost liberal and large-minded to whom it means anything so comprehensive as his own country or his own age. Nor is his faith in this collective authority at all shaken by his being aware that other ages, countries, sects, churches, classes, and parties have thought, and even now think, the exact reverse. He devolves upon his own world the responsibility of being in the right against the dissentient worlds of other people; and it never troubles him that mere accident has decided which of these numerous worlds is the object of his reliance, and that the same causes which make him a Churchman in London, would have made him a Buddhist or a Confucian in Pekin. Yet it is as evident in itself, as any amount of argument can make it, that ages are no more infallible than individuals; every age having held many opinions which subsequent ages have deemed not only false but absurd; and it is as certain that many opinions, now general, will be rejected by future ages, as it is that many, once general, are rejected by the present.

The objection likely to be made to this argument, would probably take some such form as the following. There is no greater assumption of infallibility in forbidding the propagation of error, than in any other

thing which is done by public authority on its own judgment and responsibility. Judgment is given to men that they may use it. Because it may be used erroneously, are men to be told that they ought not to use it at all? To prohibit what they think pernicious, is not claiming exemption from error, but fulfilling the duty incumbent on them, although fallible, of acting on their conscientious conviction. If we were never to act on our opinions, because those opinions may be wrong, we should leave all our interests uncared for, and all our duties unperformed. An objection which applies to all conduct can be no valid objection to any conduct in particular. It is the duty of governments, and of individuals, to form the truest opinions they can; to form them carefully, and never impose them upon others unless they are quite sure of being right. But when they are sure (such reasoners may say), it is not conscientiousness but cowardice to shrink from acting on their opinions, and allow doctrines which they honestly think dangerous to the welfare of mankind, either in this life or in another, to be scattered abroad without restraint, because other people, in less enlightened times, have persecuted opinions now believed to be true. Let us take care, it may be said, not to make the same mistake: but governments and nations have made mistakes in other things, which are not denied to be fit subjects for the exercise of authority: they have laid on bad taxes, made unjust wars. Ought we therefore to lay on no taxes, and, under whatever provocation, make no wars? Men, and governments, must act to the best of their ability. There is no such thing as absolute certainty, but there is assurance sufficient for the purposes of human life. We may, and must, assume our opinion to be true for the guidance of our own conduct: and it is assuming no more when we forbid bad men to pervert society by the propagation of opinions which we regard as false and pernicious.

I answer, that it is assuming very much more. There is the greatest difference between presuming an opinion to be true, because, with every opportunity for contesting it, it has not been refuted, and

assuming its truth for the purpose of not permitting its refutation. Complete liberty of contradicting and disproving our opinion, is the very condition which justifies us in assuming its truth for purposes of action; and on no other terms can a being with human faculties have any rational assurance of being right.

When we consider either the history of opinion, or the ordinary conduct of human life, to what is it to be ascribed that the one and the other are no worse than they are? Not certainly to the inherent force of the human understanding; for, on any matter not self-evident, there are ninety-nine persons totally incapable of judging of it, for one who is capable; and the capacity of the hundredth person is only comparative; for the majority of the eminent men of every past generation held many opinions now known to be erroneous, and did or approved numerous things which no one will now justify. Why is it, then, that there is on the whole a preponderance among mankind of rational opinions and rational conduct? If there really is this preponderance—which there must be unless human affairs are, and have always been, in an almost desperate state—it is owing to a quality of the human mind, the source of everything respectable in man either as an intellectual or as a moral being, namely, that his errors are corrigible. He is capable of rectifying his mistakes, by discussion and experience. Not by experience alone. There must be discussion, to show how experience is to be interpreted. Wrong opinions and practices gradually yield to fact and argument: but facts and arguments, to produce any effect on the mind, must be brought before it. Very few facts are able to tell their own story, without comments to bring out their meaning. The whole strength and value, then, of human judgment, depending on the one property, that it can be set right when it is wrong, reliance can be placed on it only when the means of setting it right are kept constantly at hand. In the case of any person whose judgment is really deserving of confidence, how has it become so? Because he has kept his mind open to criticism of his

opinions and conduct. Because it has been his practice to listen to all that could be said against him; to profit by as much of it as was just, and expound to himself, and upon occasion to others, the fallacy of what was fallacious. Because he has felt, that the only way in which a human being can make some approach to knowing the whole of a subject, is by hearing what can be said about it by persons of every variety of opinion, and studying all modes in which it can be looked at by every character of mind. No wise man ever acquired his wisdom in any mode but this; nor is it in the nature of human intellect to become wise in any other manner. The steady habit of correcting and completing his own opinion by collating it with those of others, so far from causing doubt and hesitation in carrying it into practice, is the only stable foundation for a just reliance on it: for, being cognizant of all that can, at least obviously, be said against him, and having taken up his position against all gainsayers—knowing that he has sought for objections and difficulties, instead of avoiding them, and has shut out no light which can be thrown upon the subject from any quarter—he has a right to think his judgment better than that of any person, or any multitude, who have not gone through a similar process.

It is not too much to require that what the wisest of mankind, those who are best entitled to trust their own judgment, find necessary to warrant their relying on it, should be submitted to by that miscellaneous collection of a few wise and many foolish individuals, called the public. The most intolerant of churches, the Roman Catholic Church, even at the canonization of a saint, admits, and listens patiently to, a “devil’s advocate.” The holiest of men, it appears, cannot be admitted to posthumous honors, until all that the devil could say against him is known and weighed. If even the Newtonian philosophy were not permitted to be questioned, mankind could not feel as complete assurance of its truth as they now do. The beliefs which we have most warrant for, have no safeguard to rest on, but a standing invitation to the whole world to prove them unfounded. If

the challenge is not accepted, or is accepted and the attempt fails, we are far enough from certainty still; but we have done the best that the existing state of human reason admits of; we have neglected nothing that could give the truth a chance of reaching us: if the lists are kept open, we may hope that if there be a better truth, it will be found when the human mind is capable of receiving it; and in the meantime we may rely on having attained such approach to truth, as is possible in our own day. This is the amount of certainty attainable by a fallible being, and this the sole way of attaining it.

Strange it is, that men should admit the validity of the arguments for free discussion, but object to their being “pushed to an extreme;” not seeing that unless the reasons are good for an extreme case, they are not good for any case. Strange that they should imagine that they are not assuming infallibility, when they acknowledge that there should be free discussion on all subjects which can possibly be *doubtful*, but think that some particular principle or doctrine should be forbidden to be questioned because it is so *certain*, that is, because *they are certain* that it is certain. To call any proposition certain, while there is any one who would deny its certainty if permitted, but who is not permitted, is to assume that we ourselves, and those who agree with us, are the judges of certainty, and judges without hearing the other side.

In the present age—which has been described as “destitute of faith, but terrified at scepticism,”—in which people feel sure, not so much that their opinions are true, as that they should not know what to do without them—the claims of an opinion to be protected from public attack are rested not so much on its truth, as on its importance to society. There are, it is alleged, certain beliefs, so useful, not to say indispensable to well-being, that it is as much the duty of governments to uphold those beliefs, as to protect any other of the interests of society. In a case of such necessity, and so directly in the

line of their duty, something less than infallibility may, it is maintained, warrant, and even bind, governments, to act on their own opinion, confirmed by the general opinion of mankind. It is also often argued, and still oftener thought, that none but bad men would desire to weaken these salutary beliefs; and there can be nothing wrong, it is thought, in restraining bad men, and prohibiting what only such men would wish to practise. This mode of thinking makes the justification of restraints on discussion not a question of the truth of doctrines, but of their usefulness; and flatters itself by that means to escape the responsibility of claiming to be an infallible judge of opinions. But those who thus satisfy themselves, do not perceive that the assumption of infallibility is merely shifted from one point to another. The usefulness of an opinion is itself matter of opinion: as disputable, as open to discussion, and requiring discussion as much, as the opinion itself. There is the same need of an infallible judge of opinions to decide an opinion to be noxious, as to decide it to be false, unless the opinion condemned has full opportunity of defending itself. And it will not do to say that the heretic may be allowed to maintain the utility or harmlessness of his opinion, though forbidden to maintain its truth. The truth of an opinion is part of its utility. If we would know whether or not it is desirable that a proposition should be believed, is it possible to exclude the consideration of whether or not it is true? In the opinion, not of bad men, but of the best men, no belief which is contrary to truth can be really useful: and can you prevent such men from urging that plea, when they are charged with culpability for denying some doctrine which they are told is useful, but which they believe to be false? Those who are on the side of received opinions, never fail to take all possible advantage of this plea; you do not find *them* handling the question of utility as if it could be completely abstracted from that of truth: on the contrary, it is, above all, because their doctrine is "the truth," that the knowledge or the belief of it is held to be so indispensable. There can be no fair discussion of the question of usefulness, when an argument so vital may be employed

on one side, but not on the other. And in point of fact, when law or public feeling do not permit the truth of an opinion to be disputed, they are just as little tolerant of a denial of its usefulness. The utmost they allow is an extenuation of its absolute necessity, or of the positive guilt of rejecting it.

In order more fully to illustrate the mischief of denying a hearing to opinions because we, in our own judgment, have condemned them, it will be desirable to fix down the discussion to a concrete case; and I choose, by preference, the cases which are least favourable to me—in which the argument against freedom of opinion, both on the score of truth and on that of utility, is considered the strongest. Let the opinions impugned be the belief in a God and in a future state, or any of the commonly received doctrines of morality. To fight the battle on such ground, gives a great advantage to an unfair antagonist; since he will be sure to say (and many who have no desire to be unfair will say it internally), Are these the doctrines which you do not deem sufficiently certain to be taken under the protection of law? Is the belief in a God one of the opinions, to feel sure of which, you hold to be assuming infallibility? But I must be permitted to observe, that it is not the feeling sure of a doctrine (be it what it may) which I call an assumption of infallibility. It is the undertaking to decide that question for *others*, without allowing them to hear what can be said on the contrary side. And I denounce and reprobate this pretension not the less, if put forth on the side of my most solemn convictions. However positive any one's persuasion may be, not only of the falsity but of the pernicious consequences—not only of the pernicious consequences, but (to adopt expressions which I altogether condemn) the immorality and impiety of an opinion; yet if, in pursuance of that private judgment, though backed by the public judgment of his country or his cotemporaries, he prevents the opinion from being heard in its defence, he assumes infallibility. And so far from the assumption being less objectionable or less dangerous because the

opinion is called immoral or impious, this is the case of all others in which it is most fatal. These are exactly the occasions on which the men of one generation commit those dreadful mistakes which excite the astonishment and horror of posterity. It is among such that we find the instances memorable in history, when the arm of the law has been employed to root out the best men and the noblest doctrines; with deplorable success as to the men, though some of the doctrines have survived to be (as if in mockery) invoked, in defence of similar conduct towards those who dissent from *them*, or from their received interpretation.

Mankind can hardly be too often reminded, that there was once a man named Socrates, between whom and the legal authorities and public opinion of his time, there took place a memorable collision. Born in an age and country abounding in individual greatness, this man has been handed down to us by those who best knew both him and the age, as the most virtuous man in it; while we know him as the head and prototype of all subsequent teachers of virtue, the source equally of the lofty inspiration of Plato and the judicious utilitarianism of Aristotle, "*i maestri di color che sanno*," the two headsprings of ethical as of all other philosophy. This acknowledged master of all the eminent thinkers who have since lived—whose fame, still growing after more than two thousand years, all but outweighs the whole remainder of the names which make his native city illustrious —was put to death by his countrymen, after a judicial conviction, for impiety and immorality. Impiety, in denying the gods recognized by the State; indeed his accuser asserted (see the "*Apologia*") that he believed in no gods at all. Immorality, in being, by his doctrines and instructions, a "corrupter of youth." Of these charges the tribunal, there is every ground for believing, honestly found him guilty, and condemned the man who probably of all then born had deserved best of mankind, to be put to death as a criminal.

苏格拉底之死

To pass from this to the only other instance of judicial iniquity, the mention of which, after the condemnation of Socrates, would not be an anti-climax: the event which took place on Calvary rather more than eighteen hundred years ago. The man who left on the memory of those who witnessed his life and conversation, such an impression of his moral grandeur, that eighteen subsequent centuries have done homage to him as the Almighty in person, was ignominiously put to death, as what? As a blasphemer. Men did not merely mistake their benefactor; they mistook him for the exact contrary of what he was, and treated him as that prodigy of impiety, which they themselves are now held to be, for their treatment of him. The feelings with which mankind now regard these lamentable transactions, especially the latter of the two, render them extremely unjust in their judgment of the unhappy actors. These were, to all appearance, not bad men—not worse than men most commonly are, but rather the contrary; men who possessed in a full, or somewhat more than a full measure, the religious, moral, and patriotic feelings of their time and people: the very kind of men who, in all times, our own included, have every chance of passing through life blameless and respected. The high-priest who rent his garments when the words were pronounced, which, according to all the ideas of his country, constituted the

blackest guilt, was in all probability quite as sincere in his horror and indignation, as the generality of respectable and pious men now are in the religious and moral sentiments they profess; and most of those who now shudder at his conduct, if they had lived in his time, and been born Jews, would have acted precisely as he did. Orthodox Christians who are tempted to think that those who stoned to death the first martyrs must have been worse men than they themselves are, ought to remember that one of those persecutors was Saint Paul.

耶稣被处死

Let us add one more example, the most striking of all, if the impressiveness of an error is measured by the wisdom and virtue of him who falls into it. If ever any one, possessed of power, had grounds for thinking himself the best and most enlightened among his cotemporaries, it was the Emperor Marcus Aurelius. Absolute monarch of the whole civilized world, he preserved through life not only the most unblemished justice, but what was less to be expected from his Stoical breeding, the tenderest heart. The few failings which are attributed to him, were all on the side of indulgence: while his writings, the highest ethical product of the ancient mind, differ scarcely perceptibly, if they differ at all, from the most characteristic teachings of Christ. This man, a better Christian in all but the dogmatic sense of the word, than almost any of the ostensibly Christian sovereigns who have since reigned, persecuted Christianity.

Placed at the summit of all the previous attainments of humanity, with an open, unfettered intellect, and a character which led him of himself to embody in his moral writings the Christian ideal, he yet failed to see that Christianity was to be a good and not an evil to the world, with his duties to which he was so deeply penetrated. Existing society he knew to be in a deplorable state. But such as it was, he saw or thought he saw, that it was held together and prevented from being worse, by belief and reverence of the received divinities. As a ruler of mankind, he deemed it his duty not to suffer society to fall in pieces; and saw not how, if its existing ties were removed, any others could be formed which could again knit it together. The new religion openly aimed at dissolving these ties: unless, therefore, it was his duty to adopt that religion, it seemed to be his duty to put it down. Inasmuch then as the theology of Christianity did not appear to him true or of divine origin; inasmuch as this strange history of a crucified God was not credible to him, and a system which purported to rest entirely upon a foundation to him so wholly unbelievable, could not be foreseen by him to be that renovating agency which, after all abatements, it has in fact proved to be; the gentlest and most amiable of philosophers and rulers, under a solemn sense of duty, authorized the persecution of Christianity. To my mind this is one of the most tragical facts in all history. It is a bitter thought, how different a thing the Christianity of the world might have been, if the Christian faith had been adopted as the religion of the empire under the auspices of Marcus Aurelius instead of those of Constantine. But it would be equally unjust to him and false to truth, to deny, that no one plea which can be urged for punishing anti-Christian teaching, was wanting to Marcus Aurelius for punishing, as he did, the propagation of Christianity. No Christian more firmly believes that Atheism is false, and tends to the dissolution of society, than Marcus Aurelius believed the same things of Christianity; he who, of all men then living, might have been thought the most capable of appreciating it. Unless any one who approves of punishment for the promulgation of

opinions, flatters himself that he is a wiser and better man than Marcus Aurelius—more deeply versed in the wisdom of his time, more elevated in his intellect above it—more earnest in his search for truth, or more single-minded in his devotion to it when found;—let him abstain from that assumption of the joint infallibility of himself and the multitude, which the great Antoninus made with so unfortunate a result.

Aware of the impossibility of defending the use of punishment for restraining irreligious opinions, by any argument which will not justify Marcus Antoninus, the enemies of religious freedom, when hard pressed, occasionally accept this consequence, and say, with Dr. Johnson, that the persecutors of Christianity were in the right; that persecution is an ordeal through which truth ought to pass, and always passes successfully, legal penalties being, in the end, powerless against truth, though sometimes beneficially effective against mischievous errors. This is a form of the argument for religious intolerance, sufficiently remarkable not to be passed without notice.

A theory which maintains that truth may justifiably be persecuted because persecution cannot possibly do it any harm, cannot be charged with being intentionally hostile to the reception of new truths; but we cannot commend the generosity of its dealing with the persons to whom mankind are indebted for them. To discover to the world something which deeply concerns it, and of which it was previously ignorant; to prove to it that it had been mistaken on some vital point of temporal or spiritual interest, is as important a service as a human being can render to his fellow-creatures, and in certain cases, as in those of the early Christians and of the Reformers, those who think with Dr. Johnson believe it to have been the most precious gift which could be bestowed on mankind. That the authors of such splendid benefits should be requited by martyrdom; that their reward should be to be dealt with as the vilest of criminals, is not, upon this

theory, a deplorable error and misfortune, for which humanity should mourn in sackcloth and ashes, but the normal and justifiable state of things. The propounder of a new truth, according to this doctrine, should stand, as stood, in the legislation of the Locrians, the proposer of a new law, with a halter round his neck, to be instantly tightened if the public assembly did not, on hearing his reasons, then and there adopt his proposition. People who defend this mode of treating benefactors, can not be supposed to set much value on the benefit; and I believe this view of the subject is mostly confined to the sort of persons who think that new truths may have been desirable once, but that we have had enough of them now.

But, indeed, the dictum that truth always triumphs over persecution, is one of those pleasant falsehoods which men repeat after one another till they pass into commonplaces, but which all experience refutes. History teems with instances of truth put down by persecution. If not suppressed for ever, it may be thrown back for centuries. To speak only of religious opinions: the Reformation broke out at least twenty times before Luther, and was put down. Arnold of Brescia was put down. Fra Dolcino was put down. Savonarola was put down. The Albigeois were put down. The Vaudois were put down. The Lollards were put down. The Hussites were put down. Even after the era of Luther, wherever persecution was persisted in, it was successful. In Spain, Italy, Flanders, the Austrian empire, Protestantism was rooted out; and, most likely, would have been so in England, had Queen Mary lived, or Queen Elizabeth died. Persecution has always succeeded, save where the heretics were too strong a party to be effectually persecuted. No reasonable person can doubt that Christianity might have been extirpated in the Roman empire. It spread, and became predominant, because the persecutions were only occasional, lasting but a short time, and separated by long intervals of almost undisturbed propagandism. It is a piece of idle sentimentality that truth, merely as truth, has any inherent power denied to error, of

prevailing against the dungeon and the stake. Men are not more zealous for truth than they often are for error, and a sufficient application of legal or even of social penalties will generally succeed in stopping the propagation of either. The real advantage which truth has, consists in this, that when an opinion is true, it may be extinguished once, twice, or many times, but in the course of ages there will generally be found persons to rediscover it, until some one of its reappearances falls on a time when from favourable circumstances it escapes persecution until it has made such head as to withstand all subsequent attempts to suppress it.

It will be said, that we do not now put to death the introducers of new opinions: we are not like our fathers who slew the prophets, we even build sepulchres to them. It is true we no longer put heretics to death; and the amount of penal infliction which modern feeling would probably tolerate, even against the most obnoxious opinions, is not sufficient to extirpate them. But let us not flatter ourselves that we are yet free from the stain even of legal persecution. Penalties for opinion, or at least for its expression, still exist by law; and their enforcement is not, even in these times, so unexampled as to make it at all incredible that they may some day be revived in full force. In the year 1857, at the summer assizes of the county of Cornwall, an unfortunate man,^[4] said to be of unexceptionable conduct in all relations of life, was sentenced to twenty-one months' imprisonment, for uttering, and writing on a gate, some offensive words concerning Christianity. Within a month of the same time, at the Old Bailey, two persons, on two separate occasions,^[5] were rejected as jurymen, and one of them grossly insulted by the judge and by one of the counsel, because they honestly declared that they had no theological belief; and a third, a foreigner,^[6] for the same reason, was denied justice against a thief. This refusal of redress took place in virtue of the legal doctrine, that no person can be allowed to give evidence in a court of justice, who does not profess belief in a God (any god is sufficient) and in a future

state; which is equivalent to declaring such persons to be outlaws, excluded from the protection of the tribunals; who may not only be robbed or assaulted with impunity, if no one but themselves, or persons of similar opinions, be present, but any one else may be robbed or assaulted with impunity, if the proof of the fact depends on their evidence. The assumption on which this is grounded, is that the oath is worthless, of a person who does not believe in a future state; a proposition which betokens much ignorance of history in those who assent to it (since it is historically true that a large proportion of infidels in all ages have been persons of distinguished integrity and honor); and would be maintained by no one who had the smallest conception how many of the persons in greatest repute with the world, both for virtues and for attainments, are well known, at least to their intimates, to be unbelievers. The rule, besides, is suicidal, and cuts away its own foundation. Under pretence that atheists must be liars, it admits the testimony of all atheists who are willing to lie, and rejects only those who brave the obloquy of publicly confessing a detested creed rather than affirm a falsehood. A rule thus self-convicted of absurdity so far as regards its professed purpose, can be kept in force only as a badge of hatred, a relic of persecution; a persecution, too, having the peculiarity, that the qualification for undergoing it, is the being clearly proved not to deserve it. The rule, and the theory it implies, are hardly less insulting to believers than to infidels. For if he who does not believe in a future state necessarily lies, it follows that they who do believe are only prevented from lying, if prevented they are, by the fear of hell. We will not do the authors and abettors of the rule the injury of supposing, that the conception which they have formed of Christian virtue is drawn from their own consciousness.

These, indeed, are but rags and remnants of persecution, and may be thought to be not so much an indication of the wish to persecute, as an example of that very frequent infirmity of English minds, which

makes them take a preposterous pleasure in the assertion of a bad principle, when they are no longer bad enough to desire to carry it really into practice. But unhappily there is no security in the state of the public mind, that the suspension of worse forms of legal persecution, which has lasted for about the space of a generation, will continue. In this age the quiet surface of routine is as often ruffled by attempts to resuscitate past evils, as to introduce new benefits. What is boasted of at the present time as the revival of religion, is always, in narrow and uncultivated minds, at least as much the revival of bigotry; and where there is the strong permanent leaven of intolerance in the feelings of a people, which at all times abides in the middle classes of this country, it needs but little to provoke them into actively persecuting those whom they have never ceased to think proper objects of persecution.^[7] For it is this—it is the opinions men entertain, and the feelings they cherish, respecting those who disown the beliefs they deem important, which makes this country not a place of mental freedom. For a long time past, the chief mischief of the legal penalties is that they strengthen the social stigma. It is that stigma which is really effective, and so effective is it, that the profession of opinions which are under the ban of society is much less common in England, than is, in many other countries, the avowal of those which incur risk of judicial punishment. In respect to all persons but those whose pecuniary circumstances make them independent of the good will of other people, opinion, on this subject, is as efficacious as law; men might as well be imprisoned, as excluded from the means of earning their bread. Those whose bread is already secured, and who desire no favors from men in power, or from bodies of men, or from the public, have nothing to fear from the open avowal of any opinions, but to be ill-thought of and ill-spoken of, and this it ought not to require a very heroic mould to enable them to bear. There is no room for any appeal *ad misericordiam* in behalf of such persons. But though we do not now inflict so much evil on those who think differently from us, as it was formerly our custom to do, it may be that

we do ourselves as much evil as ever by our treatment of them. Socrates was put to death, but the Socratic philosophy rose like the sun in heaven, and spread its illumination over the whole intellectual firmament. Christians were cast to the lions, but the Christian church grew up a stately and spreading tree, overtopping the older and less vigorous growths, and stifling them by its shade. Our merely social intolerance, kills no one, roots out no opinions, but induces men to disguise them, or to abstain from any active effort for their diffusion. With us, heretical opinions do not perceptibly gain or even lose, ground in each decade or generation; they never blaze out far and wide, but continue to smoulder in the narrow circles of thinking and studious persons among whom they originate, without ever lighting up the general affairs of mankind with either a true or a deceptive light. And thus is kept up a state of things very satisfactory to some minds, because, without the unpleasant process of fining or imprisoning anybody, it maintains all prevailing opinions outwardly undisturbed, while it does not absolutely interdict the exercise of reason by dissentients afflicted with the malady of thought. A convenient plan for having peace in the intellectual world, and keeping all things going on therein very much as they do already. But the price paid for this sort of intellectual pacification, is the sacrifice of the entire moral courage of the human mind. A state of things in which a large portion of the most active and inquiring intellects find it advisable to keep the genuine principles and grounds of their convictions within their own breasts, and attempt, in what they address to the public, to fit as much as they can of their own conclusions to premises which they have internally renounced, cannot send forth the open, fearless characters, and logical, consistent intellects who once adorned the thinking world. The sort of men who can be looked for under it, are either mere conformers to commonplace, or time-servers for truth, whose arguments on all great subjects are meant for their hearers, and are not those which have convinced themselves. Those who avoid this alternative, do so by

narrowing their thoughts and interests to things which can be spoken of without venturing within the region of principles, that is, to small practical matters, which would come right of themselves, if but the minds of mankind were strengthened and enlarged, and which will never be made effectually right until then; while that which would strengthen and enlarge men's minds, free and daring speculation on the highest subjects, is abandoned.

Those in whose eyes this reticence on the part of heretics is no evil, should consider in the first place, that in consequence of it there is never any fair and thorough discussion of heretical opinions; and that such of them as could not stand such a discussion, though they may be prevented from spreading, do not disappear. But it is not the minds of heretics that are deteriorated most, by the ban placed on all inquiry which does not end in the orthodox conclusions. The greatest harm done is to those who are not heretics, and whose whole mental development is cramped, and their reason cowed, by the fear of heresy. Who can compute what the world loses in the multitude of promising intellects combined with timid characters, who dare not follow out any bold, vigorous, independent train of thought, lest it should land them in something which would admit of being considered irreligious or immoral? Among them we may occasionally see some man of deep conscientiousness, and subtile and refined understanding, who spends a life in sophisticating with an intellect which he cannot silence, and exhausts the resources of ingenuity in attempting to reconcile the promptings of his conscience and reason with orthodoxy, which yet he does not, perhaps, to the end succeed in doing. No one can be a great thinker who does not recognize, that as a thinker it is his first duty to follow his intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for himself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great

thinkers, that freedom of thinking is required. On the contrary, it is as much and even more indispensable, to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers, in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere, an intellectually active people. Where any people has made a temporary approach to such a character, it has been because the dread of heterodox speculation was for a time suspended. Where there is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm, was the mind of a people stirred up from its foundations, and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings. Of such we have had an example in the condition of Europe during the times immediately following the Reformation; another, though limited to the Continent and to a more cultivated class, in the speculative movement of the latter half of the eighteenth century; and a third, of still briefer duration, in the intellectual fermentation of Germany during the Goethian and Fichtean period. These periods differed widely in the particular opinions which they developed; but were alike in this, that during all three the yoke of authority was broken. In each, an old mental despotism had been thrown off, and no new one had yet taken its place. The impulse given at these three periods has made Europe what it now is. Every single improvement which has taken place either in the human mind or in institutions, may be traced distinctly to one or other of them. Appearances have for some time indicated that all three impulses are well nigh spent; and we can expect no fresh start, until we again assert our mental freedom.

Let us now pass to the second division of the argument, and dismissing the Supposition that any of the received opinions may be false, let us assume them to be true, and examine into the worth of the manner in which they are likely to be held, when their truth is not freely and openly canvassed. However unwillingly a person who has a strong opinion may admit the possibility that his opinion may be false, he ought to be moved by the consideration that however true it may be, if it is not fully, frequently, and fearlessly discussed, it will be held as a dead dogma, not a living truth.

There is a class of persons (happily not quite so numerous as formerly) who think it enough if a person assents undoubtingly to what they think true, though he has no knowledge whatever of the grounds of the opinion, and could not make a tenable defence of it against the most superficial objections. Such persons, if they can once get their creed taught from authority, naturally think that no good, and some harm, comes of its being allowed to be questioned. Where their influence prevails, they make it nearly impossible for the received opinion to be rejected wisely and considerately, though it may still be rejected rashly and ignorantly; for to shut out discussion entirely is seldom possible, and when it once gets in, beliefs not grounded on conviction are apt to give way before the slightest semblance of an argument. Waiving, however, this possibility—assuming that the true opinion abides in the mind, but abides as a prejudice, a belief independent of, and proof against, argument—this is not the way in which truth ought to be held by a rational being. This is not knowing the truth. Truth, thus held, is but one superstition the more, accidentally clinging to the words which enunciate a truth.

If the intellect and judgment of mankind ought to be cultivated, a thing which Protestants at least do not deny, on what can these faculties be more appropriately exercised by any one, than on the things which concern him so much that it is considered necessary for

him to hold opinions on them? If the cultivation of the understanding consists in one thing more than in another, it is surely in learning the grounds of one's own opinions. Whatever people believe, on subjects on which it is of the first importance to believe rightly, they ought to be able to defend against at least the common objections. But, some one may say, "Let them be *taught* the grounds of their opinions. It does not follow that opinions must be merely parroted because they are never heard controverted. Persons who learn geometry do not simply commit the theorems to memory, but understand and learn likewise the demonstrations; and it would be absurd to say that they remain ignorant of the grounds of geometrical truths, because they never hear any one deny, and attempt to disprove them." Undoubtedly: and such teaching suffices on a subject like mathematics, where there is nothing at all to be said on the wrong side of the question. The peculiarity of the evidence of mathematical truths is, that all the argument is on one side. There are no objections, and no answers to objections. But on every subject on which difference of opinion is possible, the truth depends on a balance to be struck between two sets of conflicting reasons. Even in natural philosophy, there is always some other explanation possible of the same facts; some geocentric theory instead of heliocentric, some phlogiston instead of oxygen; and it has to be shown why that other theory cannot be the true one: and until this is shown, and until we know how it is shown, we do not understand the grounds of our opinion. But when we turn to subjects infinitely more complicated, to morals, religion, politics, social relations, and the business of life, three-fourths of the arguments for every disputed opinion consist in dispelling the appearances which favor some opinion different from it. The greatest orator, save one, of antiquity, has left it on record that he always studied his adversary's case with as great, if not with still greater, intensity than even his own. What Cicero practised as the means of forensic success, requires to be imitated by all who study any subject in order to arrive at the truth. He who knows only his own side of the case, knows little of that. His

reasons may be good, and no one may have been able to refute them. But if he is equally unable to refute the reasons on the opposite side; if he does not so much as know what they are, he has no ground for preferring either opinion. The rational position for him would be suspension of judgment, and unless he contents himself with that, he is either led by authority, or adopts, like the generality of the world, the side to which he feels most inclination. Nor is it enough that he should hear the arguments of adversaries from his own teachers, presented as they state them, and accompanied by what they offer as refutations. This is not the way to do justice to the arguments, or bring them into real contact with his own mind. He must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. He must know them in their most plausible and persuasive form; he must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else he will never really possess himself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated men are in this condition, even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them, and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrine which they themselves profess. They do not know those parts of it which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred. All that part of the truth which turns the scale, and decides the judgment of a completely informed mind, they are strangers to; nor is it ever really known, but to those who have attended equally and impartially to both sides, and endeavored to see the reasons of both in the strongest light. So essential is this discipline to a real understanding of moral

and human subjects, that if opponents of all important truths do not exist, it is indispensable to imagine them, and supply them with the strongest arguments which the most skilful devil's advocate can conjure up.

To abate the force of these considerations, an enemy of free discussion may be supposed to say, that there is no necessity for mankind in general to know and understand all that can be said against or for their opinions by philosophers and theologians. That it is not needful for common men to be able to expose all the misstatements or fallacies of an ingenious opponent. That it is enough if there is always somebody capable of answering them, so that nothing likely to mislead uninstructed persons remains unrefuted. That simple minds, having been taught the obvious grounds of the truths inculcated on them, may trust to authority for the rest, and being aware that they have neither knowledge nor talent to resolve every difficulty which can be raised, may repose in the assurance that all those which have been raised have been or can be answered, by those who are specially trained to the task.

Conceding to this view of the subject the utmost that can be claimed for it by those most easily satisfied with the amount of understanding of truth which ought to accompany the belief of it; even so, the argument for free discussion is no way weakened. For even this doctrine acknowledges that mankind ought to have a rational assurance that all objections have been satisfactorily answered; and how are they to be answered if that which requires to be answered is not spoken? Or how can the answer be known to be satisfactory, if the objectors have no opportunity of showing that it is unsatisfactory? If not the public, at least the philosophers and theologians who are to resolve the difficulties, must make themselves familiar with those difficulties in their most puzzling form; and this cannot be accomplished unless they are freely stated, and placed in

the most advantageous light which they admit of. The Catholic Church has its own way of dealing with this embarrassing problem. It makes a broad separation between those who can be permitted to receive its doctrines on conviction, and those who must accept them on trust. Neither, indeed, are allowed any choice as to what they will accept; but the clergy, such at least as can be fully confided in, may admissibly and meritoriously make themselves acquainted with the arguments of opponents, in order to answer them, and may, therefore, read heretical books; the laity, not unless by special permission, hard to be obtained. This discipline recognizes a knowledge of the enemy's case as beneficial to the teachers, but finds means, consistent with this, of denying it to the rest of the world: thus giving to the *élite* more mental culture, though not more mental freedom, than it allows to the mass. By this device it succeeds in obtaining the kind of mental superiority which its purposes require; for though culture without freedom never made a large and liberal mind, it can make a clever *nisi prius* advocate of a cause. But in countries professing Protestantism, this resource is denied; since Protestants hold, at least in theory, that the responsibility for the choice of a religion must be borne by each for himself, and *cannot* be thrown off upon teachers. Besides, in the present state of the world, it is practically impossible that writings which are read by the instructed can be kept from the uninstructed. If the teachers of mankind are to be cognizant of all that they ought to know, everything must be free to be written and published without restraint.

If, however, the mischievous operation of the absence of free discussion, when the received opinions are true, were confined to leaving men ignorant of the grounds of those opinions, it might be thought that this, if an intellectual, is no moral evil, and does not affect the worth of the opinions, regarded in their influence on the character. The fact, however, is, that not only the grounds of the opinion are forgotten in the absence of discussion, but too often the

meaning of the opinion itself. The words which convey it, cease to suggest ideas, or suggest only a small portion of those they were originally employed to communicate. Instead of a vivid conception and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost. The great chapter in human history which this fact occupies and fills, cannot be too earnestly studied and meditated on.

It is illustrated in the experience of almost all ethical doctrines and religious creeds. They are all full of meaning and vitality to those who originate them, and to the direct disciples of the originators. Their meaning continues to be felt in undiminished strength, and is perhaps brought out into even fuller consciousness, so long as the struggle lasts to give the doctrine or creed an ascendancy over other creeds. At last it either prevails, and becomes the general opinion, or its progress stops; it keeps possession of the ground it has gained, but ceases to spread further. When either of these results has become apparent, controversy on the subject flags, and gradually dies away. The doctrine has taken its place, if not as a received opinion, as one of the admitted sects or divisions of opinion: those who hold it have generally inherited, not adopted it; and conversion from one of these doctrines to another, being now an exceptional fact, occupies little place in the thoughts of their professors. Instead of being, as at first, constantly on the alert either to defend themselves against the world, or to bring the world over to them, they have subsided into acquiescence, and neither listen, when they can help it, to arguments against their creed, nor trouble dissentients (if there be such) with arguments in its favor. From this time may usually be dated the decline in the living power of the doctrine. We often hear the teachers of all creeds lamenting the difficulty of keeping up in the minds of believers a lively apprehension of the truth which they nominally recognize, so that it may penetrate the feelings, and acquire a real

mastery over the conduct. No such difficulty is complained of while the creed is still fighting for its existence: even the weaker combatants then know and feel what they are fighting for, and the difference between it and other doctrines; and in that period of every creed's existence, not a few persons may be found, who have realized its fundamental principles in all the forms of thought, have weighed and considered them in all their important bearings, and have experienced the full effect on the character, which belief in that creed ought to produce in a mind thoroughly imbued with it. But when it has come to be an hereditary creed, and to be received passively, not actively—when the mind is no longer compelled, in the same degree as at first, to exercise its vital powers on the questions which its belief presents to it, there is a progressive tendency to forget all of the belief except the formularies, or to give it a dull and torpid assent, as if accepting it on trust dispensed with the necessity of realizing it in consciousness, or testing it by personal experience; until it almost ceases to connect itself at all with the inner life of the human being. Then are seen the cases, so frequent in this age of the world as almost to form the majority, in which the creed remains as it were outside the mind, encrusting and petrifying it against all other influences addressed to the higher parts of our nature; manifesting its power by not suffering any fresh and living conviction to get in, but itself doing nothing for the mind or heart, except standing sentinel over them to keep them vacant.

To what an extent doctrines intrinsically fitted to make the deepest impression upon the mind may remain in it as dead beliefs, without being ever realized in the imagination, the feelings, or the understanding, is exemplified by the manner in which the majority of believers hold the doctrines of Christianity. By Christianity I here mean what is accounted such by all churches and sects—the maxims and precepts contained in the New Testament. These are considered sacred, and accepted as laws, by all professing Christians. Yet it is

scarcely too much to say that not one Christian in a thousand guides or tests his individual conduct by reference to those laws. The standard to which he does refer it, is the custom of his nation, his class, or his religious profession. He has thus, on the one hand, a collection of ethical maxims, which he believes to have been vouchsafed to him by infallible wisdom as rules for his government; and on the other, a set of every-day judgments and practices, which go a certain length with some of those maxims, not so great a length with others, stand in direct opposition to some, and are, on the whole, a compromise between the Christian creed and the interests and suggestions of worldly life. To the first of these standards he gives his homage; to the other his real allegiance. All Christians believe that the blessed are the poor and humble, and those who are illused by the world; that it is easier for a camel to pass through the eye of a needle than for a rich man to enter the kingdom of heaven; that they should judge not, lest they be judged; that they should swear not at all; that they should love their neighbor as themselves; that if one take their cloak, they should give him their coat also; that they should take no thought for the morrow; that if they would be perfect, they should sell all that they have and give it to the poor. They are not insincere when they say that they believe these things. They do believe them, as people believe what they have always heard lauded and never discussed. But in the sense of that living belief which regulates conduct, they believe these doctrines just up to the point to which it is usual to act upon them. The doctrines in their integrity are serviceable to pelt adversaries with; and it is understood that they are to be put forward (when possible) as the reasons for whatever people do that they think laudable. But any one who reminded them that the maxims require an infinity of things which they never even think of doing, would gain nothing but to be classed among those very unpopular characters who affect to be better than other people. The doctrines have no hold on ordinary believers—are not a power in their minds. They have an habitual respect for the sound of them, but no feeling

which spreads from the words to the things signified, and forces the mind to take them in, and make them conform to the formula. Whenever conduct is concerned, they look round for Mr. A and B to direct them how far to go in obeying Christ.

Now we may be well assured that the case was not thus, but far otherwise, with the early Christians. Had it been thus, Christianity never would have expanded from an obscure sect of the despised Hebrews into the religion of the Roman empire. When their enemies said, "See how these Christians love one another" (a remark not likely to be made by anybody now), they assuredly had a much livelier feeling of the meaning of their creed than they have ever had since. And to this cause, probably, it is chiefly owing that Christianity now makes so little progress in extending its domain, and after eighteen centuries, is still nearly confined to Europeans and the descendants of Europeans. Even with the strictly religious, who are much in earnest about their doctrines, and attach a greater amount of meaning to many of them than people in general, it commonly happens that the part which is thus comparatively active in their minds is that which was made by Calvin, or Knox, or some such person much nearer in character to themselves. The sayings of Christ coexist passively in their minds, producing hardly any effect beyond what is caused by mere listening to words so amiable and bland. There are many reasons, doubtless, why doctrines which are the badge of a sect retain more of their vitality than those common to all recognized sects, and why more pains are taken by teachers to keep their meaning alive; but one reason certainly is, that the peculiar doctrines are more questioned, and have to be oftener defended against open gainsayers. Both teachers and learners go to sleep at their post, as soon as there is no enemy in the field.

The same thing holds true, generally speaking, of all traditional doctrines—those of prudence and knowledge of life, as well as of

morals or religion. All languages and literatures are full of general observations on life, both as to what it is, and how to conduct oneself in it; observations which everybody knows, which everybody repeats, or hears with acquiescence, which are received as truisms, yet of which most people first truly learn the meaning, when experience, generally of a painful kind, has made it a reality to them. How often, when smarting under some unforeseen misfortune or disappointment, does a person call to mind some proverb or common saying, familiar to him all his life, the meaning of which, if he had ever before felt it as he does now, would have saved him from the calamity. There are indeed reasons for this, other than the absence of discussion: there are many truths of which the full meaning *cannot* be realized, until personal experience has brought it home. But much more of the meaning even of these would have been understood, and what was understood would have been far more deeply impressed on the mind, if the man had been accustomed to hear it argued *pro* and *con* by people who did understand it. The fatal tendency of mankind to leave off thinking about a thing when it is no longer doubtful, is the cause of half their errors. A contemporary author has well spoken of “the deep slumber of a decided opinion.”

But what! (it may be asked) Is the absence of unanimity an indispensable condition of true knowledge? Is it necessary that some part of mankind should persist in error, to enable any to realize the truth? Does a belief cease to be real and vital as soon as it is generally received—and is a proposition never thoroughly understood and felt unless some doubt of it remains? As soon as mankind have unanimously accepted a truth, does the truth perish within them? The highest aim and best result of improved intelligence, it has hitherto been thought, is to unite mankind more and more in the acknowledgment of all important truths: and does the intelligence only last as long as it has not achieved its object? Do the fruits of conquest perish by the very completeness of the victory?

I affirm no such thing. As mankind improve, the number of doctrines which are no longer disputed or doubted will be constantly on the increase: and the well-being of mankind may almost be measured by the number and gravity of the truths which have reached the point of being uncontested. The cessation, on one question after another, of serious controversy, is one of the necessary incidents of the consolidation of opinion; a consolidation as salutary in the case of true opinions, as it is dangerous and noxious when the opinions are erroneous. But though this gradual narrowing of the bounds of diversity of opinion is necessary in both senses of the term, being at once inevitable and indispensable, we are not therefore obliged to conclude that all its consequences must be beneficial. The loss of so important an aid to the intelligent and living apprehension of a truth, as is afforded by the necessity of explaining it to, or defending it against, opponents, though not sufficient to outweigh, is no trifling drawback from, the benefit of its universal recognition. Where this advantage can no longer be had, I confess I should like to see the teachers of mankind endeavoring to provide a substitute for it; some contrivance for making the difficulties of the question as present to the learner's consciousness, as if they were pressed upon him by a dissentient champion, eager for his conversion.

But instead of seeking contrivances for this purpose, they have lost those they formerly had. The Socratic dialectics, so magnificently exemplified in the dialogues of Plato, were a contrivance of this description. They were essentially a negative discussion of the great questions of philosophy and life, directed with consummate skill to the purpose of convincing any one who had merely adopted the commonplaces of received opinion, that he did not understand the subject—that he as yet attached no definite meaning to the doctrines he professed; in order that, becoming aware of his ignorance, he might be put in the way to attain a stable belief, resting on a clear apprehension both of the meaning of doctrines and of their evidence.

The school disputations of the Middle Ages had a somewhat similar object. They were intended to make sure that the pupil understood his own opinion, and (by necessary correlation) the opinion opposed to it, and could enforce the grounds of the one and confute those of the other. These last-mentioned contests had indeed the incurable defect, that the premises appealed to were taken from authority, not from reason; and, as a discipline to the mind, they were in every respect inferior to the powerful dialectics which formed the intellects of the "Socratici viri:" but the modern mind owes far more to both than it is generally willing to admit, and the present modes of education contain nothing which in the smallest degree supplies the place either of the one or of the other. A person who derives all his instruction from teachers or books, even if he escape the besetting temptation of contenting himself with cram, is under no compulsion to hear both sides; accordingly it is far from a frequent accomplishment, even among thinkers, to know both sides; and the weakest part of what everybody says in defence of his opinion, is what he intends as a reply to antagonists. It is the fashion of the present time to disparage negative logic—that which points out weaknesses in theory or errors in practice, without establishing positive truths. Such negative criticism would indeed be poor enough as an ultimate result; but as a means to attaining any positive knowledge or conviction worthy the name, it cannot be valued too highly; and until people are again systematically trained to it, there will be few great thinkers, and a low general average of intellect, in any but the mathematical and physical departments of speculation. On any other subject no one's opinions deserve the name of knowledge, except so far as he has either had forced upon him by others, or gone through of himself, the same mental process which would have been required of him in carrying on an active controversy with opponents. That, therefore, which when absent, it is so indispensable, but so difficult, to create, how worse than absurd is it to forego, when spontaneously offering itself! If there are any persons who contest a received opinion, or who will do so if

law or opinion will let them, let us thank them for it, open our minds to listen to them, and rejoice that there is some one to do for us what we otherwise ought, if we have any regard for either the certainty or the vitality of our convictions, to do with much greater labor for ourselves.

It still remains to speak of one of the principal causes which make diversity of opinion advantageous, and will continue to do so until mankind shall have entered a stage of intellectual advancement which at present seems at an incalculable distance. We have hitherto considered only two possibilities: that the received opinion may be false, and some other opinion, consequently, true; or that, the received opinion being true, a conflict with the opposite error is essential to a clear apprehension and deep feeling of its truth. But there is a commoner case than either of these; when the conflicting doctrines, instead of being one true and the other false, share the truth between them; and the nonconforming opinion is needed to supply the remainder of the truth, of which the received doctrine embodies only a part. Popular opinions, on subjects not palpable to sense, are often true, but seldom or never the whole truth. They are a part of the truth; sometimes a greater, sometimes a smaller part, but exaggerated, distorted, and disjoined from the truths by which they ought to be accompanied and limited. Heretical opinions, on the other hand, are generally some of these suppressed and neglected truths, bursting the bonds which kept them down, and either seeking reconciliation with the truth contained in the common opinion, or fronting it as enemies, and setting themselves up, with similar exclusiveness, as the whole truth. The latter case is hitherto the most frequent, as, in the human mind, one-sidedness has always been the rule, and many-sidedness the exception. Hence, even in revolutions of opinion, one part of the truth usually sets while another rises. Even progress, which ought to superadd, for the most part only substitutes, one partial and incomplete truth for another; improvement consisting chiefly in this,

that the new fragment of truth is more wanted, more adapted to the needs of the time, than that which it displaces. Such being the partial character of prevailing opinions, even when resting on a true foundation; every opinion which embodies somewhat of the portion of truth which the common opinion omits, ought to be considered precious, with whatever amount of error and confusion that truth may be blended. No sober judge of human affairs will feel bound to be indignant because those who force on our notice truths which we should otherwise have overlooked, overlook some of those which we see. Rather, he will think that so long as popular truth is one-sided, it is more desirable than otherwise that unpopular truth should have one-sided asserters too; such being usually the most energetic, and the most likely to compel reluctant attention to the fragment of wisdom which they proclaim as if it were the whole.

Thus, in the eighteenth century, when nearly all the instructed, and all those of the uninstructed who were led by them, were lost in admiration of what is called civilization, and of the marvels of modern science, literature, and philosophy, and while greatly overrating the amount of unlikeness between the men of modern and those of ancient times, indulged the belief that the whole of the difference was in their own favor; with what a salutary shock did the paradoxes of Rousseau explode like bombshells in the midst, dislocating the compact mass of one-sided opinion, and forcing its elements to recombine in a better form and with additional ingredients. Not that the current opinions were on the whole farther from the truth than Rousseau's were; on the contrary, they were nearer to it; they contained more of positive truth, and very much less of error. Nevertheless there lay in Rousseau's doctrine, and has floated down the stream of opinion along with it, a considerable amount of exactly those truths which the popular opinion wanted; and these are the deposit which was left behind when the flood subsided. The superior worth of simplicity of life, the enervating and demoralizing effect of

the trammels and hypocrisies of artificial society, are ideas which have never been entirely absent from cultivated minds since Rousseau wrote; and they will in time produce their due effect, though at present needing to be asserted as much as ever, and to be asserted by deeds, for words, on this subject, have nearly exhausted their power.

卢梭

In politics, again, it is almost a commonplace, that a party of order or stability, and a party of progress or reform, are both necessary elements of a healthy state of political life; until the one or the other shall have so enlarged its mental grasp as to be a party equally of order and of progress, knowing and distinguishing what is fit to be preserved from what ought to be swept away. Each of these modes of thinking derives its utility from the deficiencies of the other;

but it is in a great measure the opposition of the other that keeps each within the limits of reason and sanity. Unless opinions favorable to democracy and to aristocracy, to property and to equality, to co-operation and to competition, to luxury and to abstinence, to sociality and individuality, to liberty and discipline, and all the other standing antagonisms of practical life, are expressed with equal freedom, and enforced and defended with equal talent and energy, there is no chance of both elements obtaining their due; one scale is sure to go up, and the other down. Truth, in the great practical concerns of life, is so much a question of the reconciling and combining of opposites, that very few have minds sufficiently capacious and impartial to make the adjustment with an approach to correctness, and it has to be made by the rough process of a struggle between combatants fighting under hostile banners. On any of the great open questions just enumerated, if either of the two opinions has a better claim than the other, not merely to be tolerated, but to be encouraged and countenanced, it is the one which happens at the particular time and place to be in a minority. That is the opinion which, for the time being, represents the neglected interests, the side of human well-being which is in danger of obtaining less than its share. I am aware that there is not, in this country, any intolerance of differences of opinion on most of these topics. They are adduced to show, by admitted and multiplied examples, the universality of the fact, that only through diversity of opinion is there, in the existing state of human intellect, a chance of fair play to all sides of the truth. When there are persons to be found, who form an exception to the apparent unanimity of the world on any subject, even if the world is in the right, it is always probable that dissentients have something worth hearing to say for themselves, and that truth would lose something by their silence.

It may be objected, "But *some* received principles, especially on the highest and most vital subjects, are more than half-truths. The Christian morality, for instance, is the whole truth on that subject and

if any one teaches a morality which varies from it, he is wholly in error." As this is of all cases the most important in practice, none can be fitter to test the general maxim. But before pronouncing what Christian morality is or is not, it would be desirable to decide what is meant by Christian morality. If it means the morality of the New Testament, I wonder that any one who derives his knowledge of this from the book itself, can suppose that it was announced, or intended, as a complete doctrine of morals. The Gospel always refers to a preexisting morality, and confines its precepts to the particulars in which that morality was to be corrected, or superseded by a wider and higher; expressing itself, moreover, in terms most general, often impossible to be interpreted literally, and possessing rather the impressiveness of poetry or eloquence than the precision of legislation. To extract from it a body of ethical doctrine, has never been possible without eking it out from the Old Testament, that is, from a system elaborate indeed, but in many respects barbarous, and intended only for a barbarous people. St. Paul, a declared enemy to this Judaical mode of interpreting the doctrine and filling up the scheme of his Master, equally assumes a preexisting morality, namely, that of the Greeks and Romans; and his advice to Christians is in a great measure a system of accommodation to that; even to the extent of giving an apparent sanction to slavery. What is called Christian, but should rather be termed theological, morality, was not the work of Christ or the Apostles, but is of much later origin, having been gradually built up by the Catholic Church of the first five centuries, and though not implicitly adopted by moderns and Protestants, has been much less modified by them than might have been expected. For the most part, indeed, they have contented themselves with cutting off the additions which had been made to it in the middle ages, each sect supplying the place by fresh additions, adapted to its own character and tendencies. That mankind owe a great debt to this morality, and to its early teachers, I should be the last person to deny; but I do not scruple to say of it, that it is, in many important points, incomplete

and one-sided, and that unless ideas and feelings, not sanctioned by it, had contributed to the formation of European life and character, human affairs would have been in a worse condition than they now are. Christian morality (so called) has all the characters of a reaction; it is, in great part, a protest against Paganism. Its ideal is negative rather than positive; passive rather than active; Innocence rather than Nobleness; Abstinence from Evil, rather than energetic Pursuit of Good: in its precepts (as has been well said) “thou shalt not” predominates unduly over “thou shalt.” In its horror of sensuality, it made an idol of asceticism, which has been gradually compromised away into one of legality. It holds out the hope of heaven and the threat of hell, as the appointed and appropriate motives to a virtuous life: in this falling far below the best of the ancients, and doing what lies in it to give to human morality an essentially selfish character, by disconnecting each man's feelings of duty from the interests of his fellow-creatures, except so far as a self-interested inducement is offered to him for consulting them. It is essentially a doctrine of passive obedience; it inculcates submission to all authorities found established; who indeed are not to be actively obeyed when they command what religion forbids, but who are not to be resisted, far less rebelled against, for any amount of wrong to ourselves. And while, in the morality of the best Pagan nations, duty to the State holds even a disproportionate place, infringing on the just liberty of the individual; in purely Christian ethics that grand department of duty is scarcely noticed or acknowledged. It is in the Koran, not the New Testament, that we read the maxim—“A ruler who appoints any man to an office, when there is in his dominions another man better qualified for it, sins against God and against the State.” What little recognition the idea of obligation to the public obtains in modern morality, is derived from Greek and Roman sources, not from Christian; as, even in the morality of private life, whatever exists of magnanimity, highmindedness, personal dignity, even the sense of honor, is derived from the purely human, not the religious part of our education, and never could have

grown out of a standard of ethics in which the only worth, professedly recognized, is that of obedience.

I am as far as any one from pretending that these defects are necessarily inherent in the Christian ethics, in every manner in which it can be conceived, or that the many requisites of a complete moral doctrine which it does not contain, do not admit of being reconciled with it. Far less would I insinuate this of the doctrines and precepts of Christ himself. I believe that the sayings of Christ are all, that I can see any evidence of their having been intended to be; that they are irreconcilable with nothing which a comprehensive morality requires; that everything which is excellent in ethics may be brought within them, with no greater violence to their language than has been done to it by all who have attempted to deduce from them any practical system of conduct whatever. But it is quite consistent with this, to believe that they contain and were meant to contain, only a part of the truth; that many essential elements of the highest morality are among the things which are not provided for, nor intended to be provided for, in the recorded deliverances of the Founder of Christianity, and which have been entirely thrown aside in the system of ethics erected on the basis of those deliverances by the Christian Church. And this being so, I think it a great error to persist in attempting to find in the Christian doctrine that complete rule for our guidance, which its author intended it to sanction and enforce, but only partially to provide. I believe, too, that this narrow theory is becoming a grave practical evil, detracting greatly from the value of the moral training and instruction, which so many wellmeaning persons are now at length exerting themselves to promote. I much fear that by attempting to form the mind and feelings on an exclusively religious type, and discarding those secular standards (as for want of a better name they may be called) which heretofore co-existed with and supplemented the Christian ethics, receiving some of its spirit, and infusing into it some of theirs, there will result, and is even now

resulting, a low, abject, servile type of character, which, submit itself as it may to what it deems the Supreme Will, is incapable of rising to or sympathizing in the conception of Supreme Goodness. I believe that other ethics than any one which can be evolved from exclusively Christian sources, must exist side by side with Christian ethics to produce the moral regeneration of mankind; and that the Christian system is no exception to the rule that in an imperfect state of the human mind, the interests of truth require a diversity of opinions. It is not necessary that in ceasing to ignore the moral truths not contained in Christianity, men should ignore any of those which it does contain. Such prejudice, or oversight, when it occurs, is altogether an evil; but it is one from which we cannot hope to be always exempt, and must be regarded as the price paid for an inestimable good. The exclusive pretension made by a part of the truth to be the whole, must and ought to be protested against; and if a reactionary impulse should make the protestors unjust in their turn, this one-sidedness, like the other, may be lamented, but must be tolerated. If Christians would teach infidels to be just to Christianity, they should themselves be just to infidelity. It can do truth no service to blink the fact, known to all who have the most ordinary acquaintance with literary history, that a large portion of the noblest and most valuable moral teaching has been the work, not only of men who did not know, but of men who knew and rejected, the Christian faith.

I do not pretend that the most unlimited use of the freedom of enunciating all possible opinions would put an end to the evils of religious or philosophical sectarianism. Every truth which men of narrow capacity are in earnest about, is sure to be asserted, inculcated, and in many ways even acted on, as if no other truth existed in the world, or at all events none that could limit or qualify the first. I acknowledge that the tendency of all opinions to become sectarian is not cured by the freest discussion, but is often heightened and exacerbated thereby; the truth which ought to have been, but was

not, seen, being rejected all the more violently because proclaimed by persons regarded as opponents. But it is not on the impassioned partisan, it is on the calmer and more disinterested bystander, that this collision of opinions works its salutary effect. Not the violent conflict between parts of the truth, but the quiet suppression of half of it, is the formidable evil: there is always hope when people are forced to listen to both sides; it is when they attend only to one that errors harden into prejudices, and truth itself ceases to have the effect of truth, by being exaggerated into falsehood. And since there are few mental attributes more rare than that judicial faculty which can sit in intelligent judgment between two sides of a question, of which only one is represented by an advocate before it, truth has no chance but in proportion as every side of it, every opinion which embodies any fraction of the truth, not only finds advocates, but is so advocated as to be listened to.

We have now recognized the necessity to the mental wellbeing of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, it may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in

the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Before quitting the subject of freedom of opinion, it is fit to take notice of those who say, that the free expression of all opinions should be permitted, on condition that the manner be temperate, and do not pass the bounds of fair discussion. Much might be said on the impossibility of fixing where these supposed bounds are to be placed; for if the test be offence to those whose opinion is attacked, I think experience testifies that this offence is given whenever the attack is telling and powerful, and that every opponent who pushes them hard, and whom they find it difficult to answer, appears to them, if he shows any strong feeling on the subject, an intemperate opponent. But this, though an important consideration in a practical point of view, merges in a more fundamental objection. Undoubtedly the manner of asserting an opinion, even though it be a true one, may be very objectionable, and may justly incur severe censure. But the principal offences of the kind are such as it is mostly impossible, unless by accidental self-betrayal, to bring home to conviction. The gravest of them is, to argue sophistically, to suppress facts or arguments, to misstate the elements of the case, or misrepresent the opposite opinion. But all this, even to the most aggravated degree, is so continually done in perfect good faith, by persons who are not considered, and in many other respects may not deserve to be considered, ignorant or incompetent, that it is rarely possible on adequate grounds conscientiously to stamp the misrepresentation as morally culpable; and still less could law presume to interfere with this kind of controversial misconduct. With regard to what is

commonly meant by intemperate discussion, namely, invective, sarcasm, personality, and the like, the denunciation of these weapons would deserve more sympathy if it were ever proposed to interdict them equally to both sides; but it is only desired to restrain the employment of them against the prevailing opinion: against the unprevailing they may not only be used without general disapproval, but will be likely to obtain for him who uses them the praise of honest zeal and righteous indignation. Yet whatever mischief arises from their use, is greatest when they are employed against the comparatively defenceless; and whatever unfair advantage can be derived by any opinion from this mode of asserting it, accrues almost exclusively to received opinions. The worst offence of this kind which can be committed by a polemic, is to stigmatize those who hold the contrary opinion as bad and immoral men. To calumny of this sort, those who hold any unpopular opinion are peculiarly exposed, because they are in general few and uninfluential, and nobody but themselves feels much interest in seeing justice done them; but this weapon is, from the nature of the case, denied to those who attack a prevailing opinion: they can neither use it with safety to themselves, nor if they could, would it do anything but recoil on their own cause. In general, opinions contrary to those commonly received can only obtain a hearing by studied moderation of language, and the most cautious avoidance of unnecessary offence, from which they hardly ever deviate even in a slight degree without losing ground: while unmeasured vituperation employed on the side of the prevailing opinion, really does deter people from professing contrary opinions, and from listening to those who profess them. For the interest, therefore, of truth and justice, it is far more important to restrain this employment of vituperative language than the other; and, for example, if it were necessary to choose, there would be much more need to discourage offensive attacks on infidelity, than on religion. It is, however, obvious that law and authority have no business with restraining either, while opinion ought, in every instance, to

determine its verdict by the circumstances of the individual case; condemning every one, on whichever side of the argument he places himself, in whose mode of advocacy either want of candor, or malignity, bigotry or intolerance of feeling manifest themselves, but not inferring these vices from the side which a person takes, though it be the contrary side of the question to our own; and giving merited honor to every one, whatever opinion he may hold, who has calmness to see and honesty to state what his opponents and their opinions really are, exaggerating nothing to their discredit, keeping nothing back which tells, or can be supposed to tell, in their favor. This is the real morality of public discussion; and if often violated, I am happy to think that there are many controversialists who to a great extent observe it, and a still greater number who conscientiously strive towards it.

[1] These words had scarcely been written, when, as if to give them an emphatic contradiction, occurred the Government Press Prosecutions of 1858. That ill-judged interference with the liberty of public discussion has not, however, induced me to alter a single word in the text, nor has it at all weakened my conviction that, moments of panic excepted, the era of pains and penalties for political discussion has, in our own country, passed away. For, in the first place, the prosecutions were not persisted in; and in the second, they were never, properly speaking, political prosecutions. The offence charged was not that of criticizing institutions, or the acts or persons of rulers, but of circulating what was deemed an immoral doctrine, the lawfulness of Tyrannicide.

If the arguments of the present chapter are of any validity, there ought to exist the fullest liberty of professing and discussing, as a matter of ethical conviction, any doctrine, however immoral it may be considered. It would, therefore, be irrelevant and out of place to examine here, whether the doctrine of Tyrannicide deserves that title. I shall content myself with saying that the subject has been at all times one of the open questions of morals; that the act of a private citizen in striking down a criminal, who, by raising himself above the law, has placed himself beyond the reach of legal punishment or control, has been accounted by whole nations, and by some of the best and wisest of men, not a crime, but an act of exalted virtue; and

that, right or wrong, it is not of the nature of assassination, but of civil war. As such, I hold that the instigation to it, in a specific case, may be a proper subject of punishment, but only if an overt act has followed, and at least a probable connexion can be established between the act and the instigation. Even then, it is not a foreign government, but the very government assailed, which alone, in the exercise of self-defence, can legitimately punish attacks directed against its own existence. [Mill's note.]

[2] Truth是本章的关键词。虽然本文讨论的核心是自由，但是这章却从真理入手进行分析。密尔将人类获得真理视为绝对的善，因为获得真理可以使人类“进步”。思想自由和言论自由的价值并不在于它们是人的天赋权利，而是因为它们有助于人类获得真理。

[3] Fallibility，可错性，也是一个至关重要的概念。密尔在论证思想自由和言论自由时的关键是强调人类认识的可错性。不仅单个个人的认识有可错性，而且集体的共享认识也有可错性，甚至整个时代的认识也有可错性。

[5] George Jacob Holyoake, August 17, 1857; Edward Truelove, July, 1857. [Mill's note.]

[6] Baron de Gleichen, Marlborough-street Police Court, August 4, 1857. [Mill's note.]

[7] Ample warning may be drawn from the large infusion of the passions of a persecutor, which mingled with the general display of the worst parts of our national character on the occasion of the Sepoy insurrection. The ravings of fanatics or charlatans from the pulpit may be unworthy of notice; but the heads of the Evangelical party have announced as their principle for the government of Hindoos and Mahomedans, that no schools be supported by public money in which the Bible is not taught, and by necessary consequence that no public employment be given to any but real or pretended Christians. An Under-Secretary of State [William N. Massey], in a speech delivered to his constituents on the 12th of November, 1857, is reported to have said: "Toleration of their faith" (the faith of a hundred millions of British subjects), "the superstition which they called religion, by the British Government, had had the effect of retarding the ascendancy of the British name, and preventing the salutary growth of Christianity... Toleration was the great cornerstone of the religious liberties of this country; but do not let them abuse that precious word toleration. As he understood it, it meant the complete liberty to all, freedom of worship, *among Christians, who worshipped upon the same foundation*. It meant toleration of all sects and denominations of *Christians who believed in the one mediation*." I desire to call attention to the fact, that a man who has been deemed fit to fill a high office in the government of this country, under a liberal Ministry, maintains the doctrine that all who do not believe in the divinity of Christ are

beyond the pale of toleration. Who, after this imbecile display, can indulge the illusion that religious persecution has passed away, never to return? [Mill's note.]

Chapter 3

Of Individuality^[1], as One of the Elements of Well-being

SUCH being the reasons which make it imperative that human beings should be free to form opinions, and to express their opinions without reserve; and such the baneful consequences to the intellectual, and through that to the moral nature of man, unless this liberty is either conceded, or asserted in spite of prohibition; let us next examine whether the same reasons do not require that men should be free to act upon their opinions—to carry these out in their lives, without hindrance, either physical or moral, from their fellow-men, so long as it is at their own risk and peril. This last proviso is of course indispensable. No one pretends that actions should be as free as opinions. On the contrary, even opinions lose their immunity, when the circumstances in which they are expressed are such as to constitute their expression a positive instigation to some mischievous act. An opinion that corndealers are starvers of the poor, or that private property is robbery, ought to be unmolested when simply circulated through the press, but may justly incur punishment when delivered orally to an excited mob assembled before the house of a corn-dealer, or when handed about among the same mob in the form of a placard. Acts of whatever kind, which, without justifiable cause, do harm to others, may be, and in the more important cases absolutely require to be, controlled by the unfavorable sentiments, and, when needful, by the active interference of mankind. The liberty of the individual must be thus far limited; he must not make himself a nuisance to other people. But if he refrains from molesting others in what concerns them, and merely acts according to his own inclination and judgment in things which concern himself, the same reasons which show that opinion should be free, prove also that he should be

allowed, without molestation, to carry his opinions into practice at his own cost. That mankind are not infallible; that their truths, for the most part, are only half-truths; that unity of opinion, unless resulting from the fullest and freest comparison of opposite opinions, is not desirable, and diversity not an evil, but a good, until mankind are much more capable than at present of recognizing all sides of the truth, are principles applicable to men's modes of action, not less than to their opinions. As it is useful that while mankind are imperfect there should be different opinions, so is it that there should be different experiments of living; that free scope should be given to varieties of character, short of injury to others; and that the worth of different modes of life should be proved practically, when any one thinks fit to try them. It is desirable, in short, that in things which do not primarily concern others, individuality should assert itself. Where, not the person's own character, but the traditions of customs of other people are the rule of conduct, there is wanting one of the principal ingredients of human happiness, and quite the chief ingredient of individual and social progress.^[2]

In maintaining this principle, the greatest difficulty to be encountered does not lie in the appreciation of means towards an acknowledged end, but in the indifference of persons in general to the end itself. If it were felt that the free development of individuality is one of the leading essentials of well-being; that it is not only a coordinate element with all that is designated by the terms civilization, instruction, education, culture, but is itself a necessary part and condition of all those things; there would be no danger that liberty should be undervalued, and the adjustment of the boundaries between it and social control would present no extraordinary difficulty. But the evil is, that individual spontaneity is hardly recognized by the common modes of thinking, as having any intrinsic worth, or deserving any regard on its own account. The majority, being satisfied with the ways of mankind as they now are (for it is

they who make them what they are), cannot comprehend why those ways should not be good enough for everybody; and what is more, spontaneity forms no part of the ideal of the majority of moral and social reformers, but is rather looked on with jealousy, as a troublesome and perhaps rebellious obstruction to the general acceptance of what these reformers, in their own judgment, think would be best for mankind. Few persons, out of Germany, even comprehend the meaning of the doctrine which Wilhelm von Humboldt, so eminent both as a *savant* and as a politician, made the text of a treatise— that “the end of man, or that which is prescribed by the eternal or immutable dictates of reason, and not suggested by vague and transient desires, is the highest and most harmonious development of his powers to a complete and consistent whole;” that, therefore, the object “towards which every human being must ceaselessly direct his efforts, and on which especially those who design to influence their fellow-men must ever keep their eyes, is the individuality of power and development;” that for this there are two requisites, “freedom, and a variety of situations;” and that from the union of these arise “individual vigor and manifold diversity,” which combine themselves in “ originality.”

Little, however, as people are accustomed to a doctrine like that of Von Humboldt, and surprising as it may be to them to find so high a value attached to individuality, the question, one must nevertheless think, can only be one of degree. No one's idea of excellence in conduct is that people should do absolutely nothing but copy one another. No one would assert that people ought not to put into their mode of life, and into the conduct of their concerns, any impress whatever of their own judgment, or of their own individual character. On the other hand, it would be absurd to pretend that people ought to live as if nothing whatever had been known in the world before they came into it; as if experience had as yet done nothing towards showing that one mode of existence, or of conduct, is preferable to

another. Nobody denies that people should be so taught and trained in youth, as to know and benefit by the ascertained results of human experience. But it is the privilege and proper condition of a human being, arrived at the maturity of his faculties, to use and interpret experience in his own way. It is for him to find out what part of recorded experience is properly applicable to his own circumstances and character. The traditions and customs of other people are, to a certain extent, evidence of what their experience has taught *them*; presumptive evidence, and as such, have a claim to this deference: but, in the first place, their experience may be too narrow; or they may not have interpreted it rightly. Secondly, their interpretation of experience may be correct but unsuitable to him. Customs are made for customary circumstances, and customary characters: and his circumstances or his character may be uncustomary. Thirdly, though the customs be both good as customs, and suitable to him, yet to conform to custom, merely as custom, does not educate or develop in him any of the qualities which are the distinctive endowment of a human being. The human faculties of perception, judgment, discriminative feeling, mental activity, and even moral preference, are exercised only in making a choice. He who does anything because it is the custom, makes no choice. He gains no practice either in discerning or in desiring what is best. The mental and moral, like the muscular powers, are improved only by being used. The faculties are called into no exercise by doing a thing merely because others do it, no more than by believing a thing only because others believe it. If the grounds of an opinion are not conclusive to the person's own reason, his reason cannot be strengthened, but is likely to be weakened by his adopting it: and if the inducements to an act are not such as are consentaneous to his own feelings and character (where affection, or the rights of others are not concerned), it is so much done towards rendering his feelings and character inert and torpid, instead of active and energetic.

He who lets the world, or his own portion of it, choose his plan of life for him, has no need of any other faculty than the ape-like one of imitation. He who chooses his plan for himself, employs all his faculties. He must use observation to see, reasoning and judgment to foresee, activity to gather materials for decision, discrimination to decide, and when he has decided, firmness and self-control to hold to his deliberate decision. And these qualities he requires and exercises exactly in proportion as the part of his conduct which he determines according to his own judgment and feelings is a large one. It is possible that he might be guided in some good path, and kept out of harm's way, without any of these things. But what will be his comparative worth as a human being? It really is of importance, not only what men do, but also what manner of men they are that do it. Among the works of man, which human life is rightly employed in perfecting and beautifying, the first in importance surely is man himself. Supposing it were possible to get houses built, corn grown, battles fought, causes tried, and even churches erected and prayers said, by machinery—by automatons in human form—it would be a considerable loss to exchange for these automatons even the men and women who at present inhabit the more civilized parts of the world, and who assuredly are but starved specimens of what nature can and will produce. Human nature is not a machine to be built after a model, and set to do exactly the work prescribed for it, but a tree, which requires to grow and develop itself on all sides, according to the tendency of the inward forces which make it a living thing.

It will probably be conceded that it is desirable people should exercise their understandings, and that an intelligent following of custom, or even occasionally an intelligent deviation from custom, is better than a blind and simply mechanical adherence to it. To a certain extent it is admitted, that our understanding should be our own: but there is not the same willingness to admit that our desires and impulses should be our own likewise; or that to possess impulses of

our own, and of any strength, is anything but a peril and a snare. Yet desires and impulses are as much a part of a perfect human being, as beliefs and restraints: and strong impulses are only perilous when not properly balanced; when one set of aims and inclinations is developed into strength, while others, which ought to coexist with them, remain weak and inactive. It is not because men's desires are strong that they act ill; it is because their consciences are weak. There is no natural connection between strong impulses and a weak conscience. The natural connection is the other way. To say that one person's desires and feelings are stronger and more various than those of another, is merely to say that he has more of the raw material of human nature, and is therefore capable, perhaps of more evil, but certainly of more good. Strong impulses are but another name for energy. Energy may be turned to bad uses; but more good may always be made of an energetic nature, than of an indolent and impassive one. Those who have most natural feeling, are always those whose cultivated feelings may be made the strongest. The same strong susceptibilities which make the personal impulses vivid and powerful, are also the source from whence are generated the most passionate love of virtue, and the sternest selfcontrol. It is through the cultivation of these, that society both does its duty and protects its interests: not by rejecting the stuff of which heroes are made, because it knows not how to make them. A person whose desires and impulses are his own—are the expression of his own nature, as it has been developed and modified by his own culture—is said to have a character. One whose desires and impulses are not his own, has no character, no more than a steam-engine has a character. If, in addition to being his own, his impulses are strong, and are under the government of a strong will, he has an energetic character. Whoever thinks that individuality of desires and impulses should not be encouraged to unfold itself, must maintain that society has no need of strong natures—is not the better for containing many persons who have much character—and that a high general average of energy is not desirable.

In some early states of society, these forces might be, and were, too much ahead of the power which society then possessed of disciplining and controlling them. There has been a time when the element of spontaneity and individuality was in excess, and the social principle had a hard struggle with it. The difficulty then was, to induce men of strong bodies or minds to pay obedience to any rules which required them to control their impulses. To overcome this difficulty, law and discipline, like the Popes struggling against the Emperors, asserted a power over the whole man, claiming to control all his life in order to control his character—which society had not found any other sufficient means of binding. But society has now fairly got the better of individuality; and the danger which threatens human nature is not the excess, but the deficiency, of personal impulses and preferences. Things are vastly changed, since the passions of those who were strong by station or by personal endowment were in a state of habitual rebellion against laws and ordinances, and required to be rigorously chained up to enable the persons within their reach to enjoy any particle of security. In our times, from the highest class of society down to the lowest every one lives as under the eye of a hostile and dreaded censorship. Not only in what concerns others, but in what concerns only themselves, the individual, or the family, do not ask themselves—what do I prefer? or, what would suit my character and disposition? or, what would allow the best and highest in me to have fair play, and enable it to grow and thrive? They ask themselves, what is suitable to my position? what is usually done by persons of my station and pecuniary circumstances? or (worse still) what is usually done by persons of a station and circumstances superior to mine? I do not mean that they choose what is customary, in preference to what suits their own inclination. It does not occur to them to have any inclination, except for what is customary. Thus the mind itself is bowed to the yoke: even in what people do for pleasure, conformity is the first thing thought of; they like in crowds; they exercise choice only among things commonly

done: peculiarity of taste, eccentricity of conduct, are shunned equally with crimes: until by dint of not following their own nature, they have no nature to follow: their human capacities are withered and starved: they become incapable of any strong wishes or native pleasures, and are generally without either opinions or feelings of home growth, or properly their own. Now is this, or is it not, the desirable condition of human nature?

It is so, on the Calvinistic theory. According to that, the one great offence of man is Self-will. All the good of which humanity is capable, is comprised in Obedience. You have no choice; thus you must do, and no otherwise; “whatever is not a duty is a sin.” Human nature being radically corrupt, there is no redemption for any one until human nature is killed within him. To one holding this theory of life, crushing out any of the human faculties, capacities, and susceptibilities, is no evil: man needs no capacity, but that of surrendering himself to the will of God: and if he uses any of his faculties for any other purpose but to do that supposed will more effectually, he is better without them. That is the theory of Calvinism; and it is held, in a mitigated form, by many who do not consider themselves Calvinists; the mitigation consisting in giving a less ascetic interpretation to the alleged will of God; asserting it to be his will that mankind should gratify some of their inclinations; of course not in the manner they themselves prefer, but in the way of obedience, that is, in a way prescribed to them by authority; and, therefore, by the necessary conditions of the case, the same for all.

In some such insidious form there is at present a strong tendency to this narrow theory of life, and to the pinched and hidebound type of human character which it patronizes. Many persons, no doubt, sincerely think that human beings thus cramped and dwarfed, are as their Maker designed them to be; just as many have thought that trees are a much finer thing when clipped into pollards, or cut out into

figures of animals, than as nature made them. But if it be any part of religion to believe that man was made by a good Being, it is more consistent with that faith to believe, that this Being gave all human faculties that they might be cultivated and unfolded, not rooted out and consumed, and that he takes delight in every nearer approach made by his creatures to the ideal conception embodied in them, every increase in any of their capabilities of comprehension, of action, or of enjoyment. There is a different type of human excellence from the Calvinistic; a conception of humanity as having its nature bestowed on it for other purposes than merely to be abnegated. "Pagan selfassertion" is one of the elements of human worth, as well as "Christian self-denial." There is a Greek ideal of self-development, which the Platonic and Christian ideal of self-government blends with, but does not supersede. It may be better to be a John Knox than an Alcibiades, but it is better to be a Pericles than either; nor would a Pericles, if we had one in these days, be without anything good which belonged to John Knox.^[3]

It is not by wearing down into uniformity all that is individual in themselves, but by cultivating it and calling it forth, within the limits imposed by the rights and interests of others, that human beings become a noble and beautiful object of contemplation; and as the works partake the character of those who do them, by the same process human life also becomes rich, diversified, and animating, furnishing more abundant aliment to high thoughts and elevating feelings, and strengthening the tie which binds every individual to the race, by making the race infinitely better worth belonging to. In proportion to the development of his individuality, each person becomes more valuable to himself, and is therefore capable of being more valuable to others. There is a greater fulness of life about his own existence, and when there is more life in the units there is more in the mass which is composed of them.^[4] As much compression as is necessary to prevent the stronger specimens of human nature from

encroaching on the rights of others, cannot be dispensed with; but for this there is ample compensation even in the point of view of human development. The means of development which the individual loses by being prevented from gratifying his inclinations to the injury of others, are chiefly obtained at the expense of the development of other people. And even to himself there is a full equivalent in the better development of the social part of his nature, rendered possible by the restraint put upon the selfish part. To be held to rigid rules of justice for the sake of others, develops the feelings and capacities which have the good of others for their object. But to be restrained in things not affecting their good, by their mere displeasure, develops nothing valuable, except such force of character as may unfold itself in resisting the restraint. If acquiesced in, it dulls and blunts the whole nature. To give any fair play to the nature of each, it is essential that different persons should be allowed to lead different lives. In proportion as this latitude has been exercised in any age, has that age been noteworthy to posterity. Even despotism does not produce its worst effects, so long as Individuality exists under it; and whatever crushes individuality is despotism, by whatever name it may be called, and whether it professes to be enforcing the will of God or the injunctions of men.

Having said that Individuality is the same thing with development, and that it is only the cultivation of individuality which produces, or can produce, well-developed human beings, I might here close the argument: for what more or better can be said of any condition of human affairs, than that it brings human beings themselves nearer to the best thing they can be? or what worse can be said of any obstruction to good, than that it prevents this? Doubtless, however, these considerations will not suffice to convince those who most need convincing; and it is necessary further to show, that these developed human beings are of some use to the undeveloped—to point out to those who do not desire liberty, and would not avail

themselves of it, that they may be in some intelligible manner rewarded for allowing other people to make use of it without hindrance.

In the first place, then, I would suggest that they might possibly learn something from them. It will not be denied by anybody, that originality is a valuable element in human affairs. There is always need of persons not only to discover new truths, and point out when what were once truths are true no longer, but also to commence new practices, and set the example of more enlightened conduct, and better taste and sense in human life. This cannot well be gainsaid by anybody who does not believe that the world has already attained perfection in all its ways and practices. It is true that this benefit is not capable of being rendered by everybody alike: there are but few persons, in comparison with the whole of mankind, whose experiments, if adopted by others, would be likely to be any improvement on established practice. But these few are the salt of the earth; without them, human life would become a stagnant pool. Not only is it they who introduce good things which did not before exist; it is they who keep the life in those which already existed. If there were nothing new to be done, would human intellect cease to be necessary? Would it be a reason why those who do the old things should forget why they are done, and do them like cattle, not like human beings? There is only too great a tendency in the best beliefs and practices to degenerate into the mechanical; and unless there were a succession of persons whose ever-recurring originality prevents the grounds of those beliefs and practices from becoming merely traditional, such dead matter would not resist the smallest shock from anything really alive, and there would be no reason why civilization should not die out, as in the Byzantine Empire. Persons of genius, it is true, are, and are always likely to be, a small minority; but in order to have them, it is necessary to preserve the soil in which they grow. Genius can only breathe freely in an *atmosphere* of freedom.^[5] Persons of genius are, ex

vi termini, more individual than any other people—less capable, consequently, of fitting themselves, without hurtful compression, into any of the small number of moulds which society provides in order to save its members the trouble of forming their own character. If from timidity they consent to be forced into one of these moulds, and to let all that part of themselves which cannot expand under the pressure remain unexpanded, society will be little the better for their genius. If they are of a strong character, and break their fetters they become a mark for the society which has not succeeded in reducing them to common-place, to point at with solemn warning as “wild,” “erratic,” and the like; much as if one should complain of the Niagara river for not flowing smoothly between its banks like a Dutch canal.

I insist thus emphatically on the importance of genius, and the necessity of allowing it to unfold itself freely both in thought and in practice, being well aware that no one will deny the position in theory, but knowing also that almost every one, in reality, is totally indifferent to it. People think genius a fine thing if it enables a man to write an exciting poem, or paint a picture. But in its true sense, that of originality in thought and action, though no one says that it is not a thing to be admired, nearly all, at heart, think they can do very well without it. Unhappily this is too natural to be wondered at. Originality is the one thing which unoriginal minds cannot feel the use of. They cannot see what it is to do for them: how should they? If they could see what it would do for them, it would not be originality. The first service which originality has to render them, is that of opening their eyes: which being once fully done, they would have a chance of being themselves original. Meanwhile, recollecting that nothing was ever yet done which some one was not the first to do, and that all good things which exist are the fruits of originality, let them be modest enough to believe that there is something still left for it to accomplish, and assure themselves that they are more in need of originality, the less they are conscious of the want.

In sober truth, whatever homage may be professed, or even paid, to real or supposed mental superiority, the general tendency of things throughout the world is to render mediocrity the ascendant power among mankind. In ancient history, in the Middle Ages, and in a diminishing degree through the long transition from feudality to the present time, the individual was a power in himself; and If he had either great talents or a high social position, he was a considerable power. At present individuals are lost in the crowd. In politics it is almost a triviality to say that public opinion now rules the world. The only power deserving the name is that of masses, and of governments while they make themselves the organ of the tendencies and instincts of masses. This is as true in the moral and social relations of private life as in public transactions. Those whose opinions go by the name of public opinion, are not always the same sort of public: in America, they are the whole white population; in England, chiefly the middle class. But they are always a mass, that is to say, collective mediocrity. And what is still greater novelty, the mass do not now take their opinions from dignitaries in Church or State, from ostensible leaders, or from books. Their thinking is done for them by men much like themselves, addressing them or speaking in their name, on the spur of the moment, through the newspapers. I am not complaining of all this. I do not assert that anything better is compatible, as a general rule, with the present low state of the human mind. But that does not hinder the government of mediocrity from being mediocre government. No government by a democracy or a numerous aristocracy, either in its political acts or in the opinions, qualities, and tone of mind which it fosters, ever did or could rise above mediocrity, except in so far as the sovereign Many have let themselves be guided (which in their best times they always have done) by the counsels and influence of a more highly gifted and instructed One or Few. The initiation of all wise or noble things, comes and must come from individuals; generally at first from some one individual. The honor and glory of the average man is that he is capable of following that

initiative; that he can respond internally to wise and noble things, and be led to them with his eyes open. I am not countenancing the sort of "hero-worship" which applauds the strong man of genius for forcibly seizing on the government of the world and making it do his bidding in spite of itself. All he can claim is, freedom to point out the way. The power of compelling others into it, is not only inconsistent with the freedom and development of all the rest, but corrupting to the strong man himself. It does seem, however, that when the opinions of masses of merely average men are everywhere become or becoming the dominant power, the counterpoise and corrective to that tendency would be, the more and more pronounced individuality of those who stand on the higher eminences of thought. It is in these circumstances most especially, that exceptional individuals, instead of being deterred, should be encouraged in acting differently from the mass. In other times there was no advantage in their doing so, unless they acted not only differently, but better. In this age the mere example of nonconformity, the mere refusal to bend the knee to custom, is itself a service. Precisely because the tyranny of opinion is such as to make eccentricity a reproach, it is desirable, in order to break through that tyranny, that people should be eccentric. Eccentricity has always abounded when and where strength of character has abounded; and the amount of eccentricity in a society has generally been proportional to the amount of genius, mental vigor, and moral courage which it contained. That so few now dare to be eccentric, marks the chief danger of the time.

I have said that it is important to give the freest scope possible to uncustomary things, in order that it may in time appear which of these are fit to be converted into customs. But independence of action, and disregard of custom are not solely deserving of encouragement for the chance they afford that better modes of action, and customs more worthy of general adoption, may be struck out; nor is it only persons of decided mental superiority who have a just claim to carry on their

lives in their own way. There is no reason that all human existences should be constructed on some one, or some small number of patterns. If a person possesses any tolerable amount of common sense and experience, his own mode of laying out his existence is the best, not because it is the best in itself, but because it is his own mode. Human beings are not like sheep; and even sheep are not undistinguishably alike. A man cannot get a coat or a pair of boots to fit him, unless they are either made to his measure, or he has a whole warehouseful to choose from: and is it easier to fit him with a life than with a coat, or are human beings more like one another in their whole physical and spiritual conformation than in the shape of their feet? If it were only that people have diversities of taste that is reason enough for not attempting to shape them all after one model. But different persons also require different conditions for their spiritual development; and can no more exist healthily in the same moral, than all the variety of plants can in the same physical atmosphere and climate. The same things which are helps to one person towards the cultivation of his higher nature, are hindrances to another. The same mode of life is a healthy excitement to one, keeping all his faculties of action and enjoyment in their best order, while to another it is a distracting burden, which suspends or crushes all internal life. Such are the differences among human beings in their sources of pleasure, their susceptibilities of pain, and the operation on them of different physical and moral agencies, that unless there is a corresponding diversity in their modes of life, they neither obtain their fair share of happiness, nor grow up to the mental, moral, and aesthetic stature of which their nature is capable. Why then should tolerance, as far as the public sentiment is concerned, extend only to tastes and modes of life which extort acquiescence by the multitude of their adherents? Nowhere (except in some monastic institutions) is diversity of taste entirely unrecognized; a person may without blame, either like or dislike rowing, or smoking, or music, or athletic exercises, or chess, or cards, or study, because both those who like each of these things, and

those who dislike them, are too numerous to be put down. But the man, and still more the woman, who can be accused either of doing “what nobody does,” or of not doing “what everybody does,” is the subject of as much depreciatory remark as if he or she had committed some grave moral delinquency. Persons require to possess a title, or some other badge of rank, or the consideration of people of rank, to be able to indulge somewhat in the luxury of doing as they like without detriment to their estimation. To indulge somewhat, I repeat: for whoever allow themselves much of that in dulgence, incur the risk of something worse than disparaging speeches—they are in peril of a commission de *lunatico*, and of having their property taken from them and given to their relations.^[6]

There is one characteristic of the present direction of public opinion, peculiarly calculated to make it intolerant of any marked demonstration of individuality. The general average of mankind are not only moderate in intellect, but also moderate in inclinations: they have no tastes or wishes strong enough to incline them to do anything unusual, and they consequently do not understand those who have, and class all such with the wild and intemperate whom they are accustomed to look down upon. Now, in addition to this fact which is general, we have only to suppose that a strong movement has set in towards the improvement of morals, and it is evident what we have to expect. In these days such a movement has set in; much has actually been effected in the way of increased regularity of conduct, and discouragement of excesses; and there is a philanthropic spirit abroad, for the exercise of which there is no more inviting field than the moral and prudential improvement of our fellowcreatures. These tendencies of the times cause the public to be more disposed than at most former periods to prescribe general rules of conduct, and endeavor to make every one conform to the approved standard. And that standard, express or tacit, is to desire nothing strongly. Its ideal of character is to be without any marked character; to maim by compression, like a

Chinese lady's foot, every part of human nature which stands out prominently, and tends to make the person markedly dissimilar in outline to commonplace humanity.

As is usually the case with ideals which exclude one half of what is desirable, the present standard of approbation produces only an inferior imitation of the other half. Instead of great energies guided by vigorous reason, and strong feelings strongly controlled by a conscientious will, its result is weak feelings and weak energies, which therefore can be kept in outward conformity to rule without any strength either of will or of reason. Already energetic characters on any large scale are becoming merely traditional. There is now scarcely any outlet for energy in this country except business. The energy expended in that may still be regarded as considerable. What little is left from that employment, is expended on some hobby; which may be a useful, even a philanthropic hobby, but is always some one thing, and generally a thing of small dimensions. The greatness of England is now all collective: individually small, we only appear capable of anything great by our habit of combining; and with this our moral and religious philanthropists are perfectly contented. But it was men of another stamp than this that made England what it has been; and men of another stamp will be needed to prevent its decline.

The despotism of custom is everywhere the standing hindrance to human advancement, being in unceasing antagonism to that disposition to aim at something better than customary, which is called, according to circumstances, the spirit of liberty, or that of progress or improvement. The spirit of improvement is not always a spirit of liberty, for it may aim at forcing improvements on an unwilling people; and the spirit of liberty, in so far as it resists such attempts, may ally itself locally and temporarily with the opponents of improvement; but the only unfailing and permanent source of improvement is liberty, since by it there are as many possible

independent centres of improvement as there are individuals. The progressive principle, however, in either shape, whether as the love of liberty or of improvement, is antagonistic to the sway of Custom, involving at least emancipation from that yoke; and the contest between the two constitutes the chief interest of the history of mankind. The greater part of the world has, properly speaking, no history, because the despotism of Custom is complete. This is the case over the whole East. Custom is there, in all things, the final appeal; Justice and right mean conformity to custom; the argument of custom no one, unless some tyrant intoxicated with power, thinks of resisting. And we see the result. Those nations must once have had originality; they did not start out of the ground populous, lettered, and versed in many of the arts of life; they made themselves all this, and were then the greatest and most powerful nations in the world. What are they now? The subjects or dependents of tribes whose forefathers wandered in the forests when theirs had magnificent palaces and gorgeous temples, but over whom custom exercised only a divided rule with liberty and progress. A people, it appears, may be progressive for a certain length of time, and then stop: when does it stop? When it ceases to possess individuality. If a similar change should befall the nations of Europe, it will not be in exactly the same shape: the despotism of custom with which these nations are threatened is not precisely stationariness. It proscribes singularity, but it does not preclude change, provided all change together. We have discarded the fixed costumes of our forefathers; every one must still dress like other people, but the fashion may change once or twice a year. We thus take care that when there is change, it shall be for change's sake, and not from any idea of beauty or convenience; for the same idea of beauty or convenience would not strike all the world at the same moment, and be simultaneously thrown aside by all at another moment. But we are progressive as well as changeable: we continually make new inventions in mechanical things, and keep them until they are again superseded by better; we are eager for improvement in politics, in

education, even in morals, though in this last our idea of improvement chiefly consists in persuading or forcing other people to be as good as ourselves. It is not progress that we object to; on the contrary, we flatter ourselves that we are the most progressive people who ever lived. It is individuality that we war against: we should think we had done wonders if we had made ourselves all alike; forgetting that the unlikeness of one person to another is generally the first thing which draws the attention of either to the imperfection of his own type, and the superiority of another, or the possibility, by combining the advantages of both, of producing something better than either. We have a warning example in China—a nation of much talent, and, in some respects, even wisdom, owing to the rare good fortune of having been provided at an early period with a particularly good set of customs, the work, in some measure, of men to whom even the most enlightened European must accord, under certain limitations, the title of sages and philosophers. They are remarkable, too, in the excellence of their apparatus for impressing, as far as possible, the best wisdom they possess upon every mind in the community, and securing that those who have appropriated most of it shall occupy the posts of honor and power. Surely the people who did this have discovered the secret of human progressiveness, and must have kept themselves steadily at the head of the movement of the world. On the contrary, they have become stationary—have remained so for thousands of years; and if they are ever to be farther improved, it must be by foreigners. They have succeeded beyond all hope in what English philanthropists are so industriously working at—in making a people all alike, all governing their thoughts and conduct by the same maxims and rules; and these are the fruits. The modern *régime* of public opinion is, in an unorganized form, what the Chinese educational and political systems are in an organized; and unless individuality shall be able successfully to assert itself against this yoke, Europe, notwithstanding its noble antecedents and its professed Christianity, will tend to become another China.

What is it that has hitherto preserved Europe from this lot? What has made the European family of nations an improving, instead of a stationary portion of mankind? Not any superior excellence in them, which when it exists, exists as the effect, not as the cause; but their remarkable diversity of character and culture. Individuals, classes, nations, have been extremely unlike one another: they have struck out a great variety of paths, each leading to something valuable; and although at every period those who travelled in different paths have been intolerant of one another, and each would have thought it an excellent thing if all the rest could have been compelled to travel his road, their attempts to thwart each other's development have rarely had any permanent success, and each has in time endured to receive the good which the others have offered. Europe is, in my judgment, wholly indebted to this plurality of paths for its progressive and many-sided development. But it already begins to possess this benefit in a considerably less degree. It is decidedly advancing towards the Chinese ideal of making all people alike. M. de Tocqueville, in his last important work, remarks how much more the Frenchmen of the present day resemble one another, than did those even of the last generation. The same remark might be made of Englishmen in a far greater degree. In a passage already quoted from Wilhelm von Humboldt, he points out two things as necessary conditions of human development, because necessary to render people unlike one another; namely, freedom, and variety of situations. The second of these two conditions is in this country every day diminishing. The circumstances which surround different classes and individuals, and shape their characters, are daily becoming more assimilated. Formerly, different ranks, different neighborhoods, different trades and professions lived in what might be called different worlds; at present, to a great degree, in the same. Comparatively speaking, they now read the same things, listen to the same things, see the same things, go to the same places, have their hopes and fears directed to the same objects, have the same rights and liberties, and the same means of asserting them. Great as

are the differences of position which remain, they are nothing to those which have ceased. And the assimilation is still proceeding. All the political changes of the age promote it, since they all tend to raise the low and to lower the high. Every extension of education promotes it, because education brings people under common influences, and gives them access to the general stock of facts and sentiments. Improvements in the means of communication promote it, by bringing the inhabitants of distant places into personal contact, and keeping up a rapid flow of changes of residence between one place and another. The increase of commerce and manufactures promotes it, by diffusing more widely the advantages of easy circumstances, and opening all objects of ambition, even the highest, to general competition, whereby the desire of rising becomes no longer the character of a particular class, but of all classes. A more powerful agency than even all these, in bringing about a general similarity among mankind, is the complete establishment, in this and other free countries, of the ascendancy of public opinion in the State. As the various social eminences which enabled persons entrenched on them to disregard the opinion of the multitude, gradually became levelled; as the very idea of resisting the will of the public, when it is positively known that they have a will, disappears more and more from the minds of practical politicians; there ceases to be any social support for nonconformity—any substantive power in society, which, itself opposed to the ascendancy of numbers, is interested in taking under its protection opinions and tendencies at variance with those of the public.

The combination of all these causes forms so great a mass of influences hostile to Individuality, that it is not easy to see how it can stand its ground. It will do so with increasing difficulty, unless the intelligent part of the public can be made to feel its value—to see that it is good there should be differences, even though not for the better, even though, as it may appear to them, some should be for the worse. If the claims of Individuality are ever to be asserted, the time is now,

while much is still wanting to complete the enforced assimilation. It is only in the earlier stages that any stand can be successfully made against the encroachment. The demand that all other people shall resemble ourselves, grows by what it feeds on. If resistance waits till life is reduced *nearly* to one uniform type, all deviations from that type will come to be considered impious, immoral, even monstrous and contrary to nature. Mankind speedily become unable to conceive diversity, when they have been for some time unaccustomed to see it.

[1] 本章论述的核心是个性问题。严格来讲，个性和自由是两个不同的概念。个性可以属于积极自由的范畴，它并不简单地意味着个人有权去做自己喜欢做的事情而不受其他人的阻挠，还意味着个人能够真正按照自己的个性去追求自己的自主性。这里密尔对个性的强调是和他的自由原则紧密结合的，密尔讨论个性的重点不在于个人的内心修养，而在于防止政治、法律与社会对个性发展的压制。密尔在后文中说，“假若大家都已感到个性的自由发展乃是福祉的首要因素之一；假若大家都已感到这不只是和所称文明、教化、教育、文化等一切东西并列的一个因素，而且自身又是所有那些东西的一个必要部分和必要条件；那么自由就不会有被低估的危险，而要调整个人自由与社会控制二者之间的界限也就不会呈现特别的困难……”（见本章第二段的论述）密尔在强调个性的同时，还隐含着另一层涵义，即不能将人性看成是同一的，或者说一定要把每一个人的本性改造和规训得一致与相同。

[2] 这句话点出了个性的价值。凡在不以本人自己的性格却以他人的传统或习俗为行为准则的地方，那里就缺少着人类幸福的主要因素之一，而所缺少的这个因素同时也是个人进步和社会进步中一个颇为主要的因素。密尔这里强调习俗，主要是和其亲身经历有关，因为他在和哈莉特二十年的“柏拉图式”交往中受到了很多非议。

[3] John Knox（约翰·诺克斯，1505—1572），著名宗教改革领袖，创办了苏格兰长老会，身列日内瓦“宗教改革纪念碑”的四巨人之一。1540年改信新教。他曾被法国人俘虏，沦为划船的奴隶，之后回到英格兰担任新教牧师。“血腥玛丽”上台后逃亡欧陆，在日内瓦加尔文门下受教。1559年重返苏格兰，致力于传播新教教义、将他的同胞从当时的宗教腐败中拯救出来。他在信仰之战中历经多次流亡，曾与苏格兰女王对垒，带领苏格兰教会进行宗教改革，被誉为“清教主义的创始人”。Alcibiades（阿尔希比亚德斯），与苏格拉底关系密切的一位将军，他的母亲来自于著名的贵族世家阿克美尼达家族。Pericles（伯里克利，约公元前495—公元前429），古希腊奴隶主民主政治的杰出代表者，古代世界最著名的政治家之一，也是阿尔希比亚德斯的表叔。

[4] 这句话可以译为：他在自己的存在上有了更大程度的生命的充实；而当单位中

有了更多的生命时，由单位组成的群体中自然有了更多的生命。这里要注意密尔用了两个词“单位”（units）和“群体”（mass），个人是组成群体的单位。

[5] 这句话已经成为经典：天才只能在自由的空气里自由地呼吸。密尔强调天才、少数人对人类进步的贡献，但是密尔并非鼓吹少数精英统治世界、支配大众。因为在密尔那里，精英身份是不固定的；每个人都可以成为精英，对社会与人类有更大的贡献。

[6] There is something both contemptible and frightful in the sort of evidence on which, of late years, any person can be judicially declared unfit for the management of his affairs; and after his death, his disposal of his property can be set aside, if there is enough of it to pay the expenses of litigation—which are charged on the property itself. All of the minute details of his daily life are pried into, and whatever is found which, seen through the medium of the perceiving and describing faculties of the lowest of the low, bears an appearance unlike absolute commonplace, is laid before the jury as evidence of insanity, and often with success; the jurors being little, if at all, less vulgar and ignorant than the witnesses; while the judges, with that extraordinary want of knowledge of human nature and life which continually astonishes us in English lawyers, often help to mislead them. These trials speak volumes as to the state of feeling and opinion among the vulgar with regard to human liberty. So far from setting any value on individuality—so far from respecting the rights of each individual to act, in things indifferent, as seems good to his own judgment and inclinations, judges and juries cannot even conceive that a person in a state of sanity can desire such freedom. In former days, when it was proposed to burn atheists, charitable people used to suggest putting them in a madhouse instead: it would be nothing surprising now-a-days were we to see this done, and the doers applauding themselves, because, instead of persecuting for religion, they had adopted so humane and Christian a mode of treating these unfortunates, not without a silent satisfaction at their having thereby obtained their deserts. [Mill's note.]

Chapter 4

Of the Limits to the Authority of Society over the Individual

WHAT, then, is the rightful limit to the sovereignty of the individual over himself? Where does the authority of society begin? How much of human life should be assigned to individuality, and how much to society?

Each will receive its proper share, if each has that which more particularly concerns it. To individuality should belong the part of life in which it is chiefly the individual that is interested; to society, the part which chiefly interests society.

Though society is not founded on a contract, and though no good purpose is answered by inventing a contract in order to deduce social obligations from it, every one who receives the protection of society owes a return for the benefit, and the fact of living in society renders it indispensable that each should be bound to observe a certain line of conduct towards the rest. This conduct consists, first, in not injuring the interests of one another; or rather certain interests, which, either by express legal provision or by tacit understanding, ought to be considered as rights; and secondly, in each person's bearing his share (to be fixed on some equitable principle) of the labors and sacrifices incurred for defending the society or its members from injury and molestation. These conditions society is justified in enforcing, at all costs to those who endeavor to withhold fulfilment. Nor is this all that society may do. The acts of an individual may be hurtful to others, or wanting in due consideration for their welfare, without going the length of violating any of their constituted rights. The offender may then be justly punished by opinion, though not by law. As soon as any

part of a person's conduct affects prejudicially the interests of others, society has jurisdiction over it, and the question whether the general welfare will or will not be promoted by interfering with it, becomes open to discussion. But there is no room for entertaining any such question when a person's conduct affects the interests of no persons besides himself, or needs not affect them unless they like (all the persons concerned being of full age, and the ordinary amount of understanding). In all such cases there should be perfect freedom, legal and social, to do the action and stand the consequences.

It would be a great misunderstanding of this doctrine, to suppose that it is one of selfish indifference, which pretends that human beings have no business with each other's conduct in life, and that they should not concern themselves about the well-doing or well-being of one another, unless their own interest is involved. Instead of any diminution, there is need of a great increase of disinterested exertion to promote the good of others. But disinterested benevolence can find other instruments to persuade people to their good, than whips and scourges, either of the literal or the metaphorical sort. I am the last person to undervalue the self-regarding virtues; they are only second in importance, if even second, to the social. It is equally the business of education to cultivate both. But even education works by conviction and persuasion as well as by compulsion, and it is by the former only that, when the period of education is past, the self-regarding virtues should be inculcated. Human beings owe to each other help to distinguish the better from the worse, and encouragement to choose the former and avoid the latter. They should be forever stimulating each other to increased exercise of their higher faculties, and increased direction of their feelings and aims towards wise instead of foolish, elevating instead of degrading, objects and contemplations. But neither one person, nor any number of persons, is warranted in saying to another human creature of ripe years, that he shall not do with his life for his own benefit what he chooses to do

with it. He is the person most interested in his own well-being: the interest which any other person, except in cases of strong personal attachment, can have in it, is trifling, compared with that which he himself has; the interest which society has in him individually (except as to his conduct to others) is fractional, and altogether indirect: while, with respect to his own feelings and circumstances, the most ordinary man or woman has means of knowledge immeasurably surpassing those that can be possessed by any one else. The interference of society to overrule his judgment and purposes in what only regards himself, must be grounded on general presumptions; which may be altogether wrong, and even if right, are as likely as not to be misapplied to individual cases, by persons no better acquainted with the circumstances of such cases than those are who look at them merely from without. In this department, therefore, of human affairs, Individuality has its proper field of action. In the conduct of human beings towards one another, it is necessary that general rules should for the most part be observed, in order that people may know what they have to expect; but in each person's own concerns, his individual spontaneity is entitled to free exercise. Considerations to aid his judgment, exhortations to strengthen his will, may be offered to him, even obtruded on him, by others; but he, himself, is the final judge. All errors which he is likely to commit against advice and warning, are far outweighed by the evil of allowing others to constrain him to what they deem his good.

I do not mean that the feelings with which a person is regarded by others, ought not to be in any way affected by his self-regarding qualities or deficiencies. This is neither possible nor desirable. If he is eminent in any of the qualities which conduce to his own good, he is, so far, a proper object of admiration. He is so much the nearer to the ideal perfection of human nature. If he is grossly deficient in those qualities, a sentiment the opposite of admiration will follow. There is a degree of folly, and a degree of what may be called (though the

phrase is not unobjectionable) lowness or depravation of taste, which, though it cannot justify doing harm to the person who manifests it, renders him necessarily and properly a subject of distaste, or, in extreme cases, even of contempt: a person could not have the opposite qualities in due strength without entertaining these feelings. Though doing no wrong to any one, a person may so act as to compel us to judge him, and feel to him, as a fool, or as a being of an inferior order: and since this judgment and feeling are a fact which he would prefer to avoid, it is doing him a service to warn him of it beforehand, as of any other disagreeable consequence to which he exposes himself. It would be well, indeed, if this good office were much more freely rendered than the common notions of politeness at present permit, and if one person could honestly point out to another that he thinks him in fault, without being considered unmannerly or presuming. We have a right, also, in various ways, to act upon our unfavorable opinion of any one, not to the oppression of his individuality, but in the exercise of ours. We are not bound, for example, to seek his society; we have a right to avoid it (though not to parade the avoidance), for we have a right to choose the society most acceptable to us. We have a right, and it may be our duty, to caution others against him, if we think his example or conversation likely to have a pernicious effect on those with whom he associates. We may give others a preference over him in optional good offices, except those which tend to his improvement. In these various modes a person may suffer very severe penalties at the hands of others, for faults which directly concern only himself; but he suffers these penalties only in so far as they are the natural, and, as it were, the spontaneous consequences of the faults themselves, not because they are purposely inflicted on him for the sake of punishment. A person who shows rashness, obstinacy, self-conceit—who cannot live within moderate means—who cannot restrain himself from hurtful indulgences—who pursues animal pleasures at the expense of those of feeling and intellect—must expect to be lowered in the opinion of others, and to

have a less share of their favorable sentiments; but of this he has no right to complain, unless he has merited their favor by special excellence in his social relations, and has thus established a title to their good offices, which is not affected by his demerits towards himself.

What I contend for is, that the inconveniences which are strictly inseparable from the unfavorable judgment of others, are the only ones to which a person should ever be subjected for that portion of his conduct and character which concerns his own good, but which does not affect the interests of others in their relations with him. Acts injurious to others require a totally different treatment. Encroachment on their rights; infliction on them of any loss or damage not justified by his own rights; falsehood or duplicity in dealing with them; unfair or ungenerous use of advantages over them; even selfish abstinence from defending them against injury—these are fit objects of moral reprobation, and, in grave cases, of moral retribution and punishment. And not only these acts, but the dispositions which lead to them, are properly immoral, and fit subjects of disapprobation which may rise to abhorrence. Cruelty of disposition; malice and ill-nature; that most anti-social and odious of all passions, envy; dissimulation and insincerity; irascibility on insufficient cause, and resentment disproportioned to the provocation; the love of domineering over others; the desire to engross more than one's share of advantages (the *πλεονεξία* of the Greeks); the pride which derives gratification from the abasement of others; the egotism which thinks self and its concerns more important than everything else, and decides all doubtful questions in his own favor;—these are moral vices, and constitute a bad and odious moral character: unlike the self-regarding faults previously mentioned, which are not properly immoralities, and to whatever pitch they may be carried, do not constitute wickedness. They may be proofs of any amount of folly, or want of personal dignity and self-respect; but they are only a subject of moral

reprobation when they involve a breach of duty to others, for whose sake the individual is bound to have care for himself. What are called duties to ourselves are not socially obligatory, unless circumstances render them at the same time duties to others. The term duty to oneself, when it means anything more than prudence, means self-respect or self-development; and for none of these is any one accountable to his fellow-creatures, because for none of them is it for the good of mankind that he be held accountable to them.

The distinction between the loss of consideration which a person may rightly incur by defect of prudence or of personal dignity, and the reprobation which is due to him for an offence against the rights of others, is not a merely nominal distinction. It makes a vast difference both in our feelings and in our conduct towards him, whether he displeases us in things in which we think we have a right to control him, or in things in which we know that we have not. If he displeases us, we may express our distaste, and we may stand aloof from a person as well as from a thing that displeases us; but we shall not therefore feel called on to make his life uncomfortable. We shall reflect that he already bears, or will bear, the whole penalty of his error; if he spoils his life by mismanagement, we shall not, for that reason, desire to spoil it still further: instead of wishing to punish him, we shall rather endeavor to alleviate his punishment, by showing him how he may avoid or cure the evils his conduct tends to bring upon him. He may be to us an object of pity, perhaps of dislike, but not of anger or resentment; we shall not treat him like an enemy of society: the worst we shall think ourselves justified in doing is leaving him to himself, if we do not interfere benevolently by showing interest or concern for him. It is far otherwise if he has infringed the rules necessary for the protection of his fellow-creatures, individually or collectively. The evil consequences of his acts do not then fall on himself, but on others; and society, as the protector of all its members, must retaliate on him; must inflict pain on him for the express purpose

of punishment, and must take care that it be sufficiently severe. In the one case, he is an offender at our bar, and we are called on not only to sit in judgment on him, but, in one shape or another, to execute our own sentence: in the other case, it is not our part to inflict any suffering on him, except what may incidentally follow from our using the same liberty in the regulation of our own affairs, which we allow to him in his.

The distinction here pointed out between the part of a person's life which concerns only himself, and that which concerns others, many persons will refuse to admit. How (it may be asked) can any part of the conduct of a member of society be a matter of indifference to the other members? No person is an entirely isolated being; it is impossible for a person to do anything seriously or permanently hurtful to himself, without mischief reaching at least to his near connections, and often far beyond them. If he injures his property, he does harm to those who directly or indirectly derived support from it, and usually diminishes, by a greater or less amount, the general resources of the community. If he deteriorates his bodily or mental faculties, he not only brings evil upon all who depended on him for any portion of their happiness, but disqualifies himself for rendering the services which he owes to his fellow-creatures generally; perhaps becomes a burden on their affection or benevolence; and if such conduct were very frequent, hardly any offence that is committed would detract more from the general sum of good. Finally, if by his vices or follies a person does no direct harm to others, he is nevertheless (it may be said) injurious by his example; and ought to be compelled to control himself, for the sake of those whom the sight or knowledge of his conduct might corrupt or mislead.

And even (it will be added) if the consequences of misconduct could be confined to the vicious or thoughtless individual, ought society to abandon to their own guidance those who are manifestly

unfit for it? If protection against themselves is confessedly due to children and persons under age, is not society equally bound to afford it to persons of mature years who are equally incapable of self-government? If gambling, or drunkenness, or incontinence, or idleness, or uncleanness, are as injurious to happiness, and as great a hindrance to improvement, as many or most of the acts prohibited by law, why (it may be asked) should not law, so far as is consistent with practicability and social convenience, endeavor to repress these also? And as a supplement to the unavoidable imperfections of law, ought not opinion at least to organize a powerful police against these vices, and visit rigidly with social penalties those who are known to practise them? There is no question here (it may be said) about restricting individuality, or impeding the trial of new and original experiments in living. The only things it is sought to prevent are things which have been tried and condemned from the beginning of the world until now; things which experience has shown not to be useful or suitable to any person's individuality. There must be some length of time and amount of experience, after which a moral or prudential truth may be regarded as established: and it is merely desired to prevent generation after generation from falling over the same precipice which has been fatal to their predecessors.

I fully admit that the mischief which a person does to himself may seriously affect, both through their sympathies and their interests, those nearly connected with him, and in a minor degree, society at large. When, by conduct of this sort, a person is led to violate a distinct and assignable obligation to any other person or persons, the case is taken out of the self-regarding class, and becomes amenable to moral disapprobation in the proper sense of the term. If, for example, a man, through intemperance or extravagance, becomes unable to pay his debts, or, having undertaken the moral responsibility of a family, becomes from the same cause incapable of supporting or educating them, he is deservedly reprobated, and might

be justly punished; but it is for the breach of duty to his family or creditors, not for the extravagance. If the resources which ought to have been devoted to them, had been diverted from them for the most prudent investment, the moral culpability would have been the same. George Barnwell murdered his uncle to get money for his mistress, but if he had done it to set himself up in business, he would equally have been hanged. Again, in the frequent case of a man who causes grief to his family by addiction to bad habits, he deserves reproach for his unkindness or ingratitude; but so he may for cultivating habits not in themselves vicious, if they are painful to those with whom he passes his life, or who from personal ties are dependent on him for their comfort. Whoever fails in the consideration generally due to the interests and feelings of others, not being compelled by some more imperative duty, or justified by allowable self-preference, is a subject of moral disapprobation for that failure, but not for the cause of it, nor for the errors, merely personal to himself, which may have remotely led to it. In like manner, when a person disables himself, by conduct purely self-regarding, from the performance of some definite duty incumbent on him to the public, he is guilty of a social offence. No person ought to be punished simply for being drunk; but a soldier or a policeman should be punished for being drunk on duty. Whenever, in short, there is a definite damage, or a definite risk of damage, either to an individual or to the public, the case is taken out of the province of liberty, and placed in that of morality or law.

But with regard to the merely contingent or, as it may be called, constructive injury which a person causes to society, by conduct which neither violates any specific duty to the public, nor occasions perceptible hurt to any assignable individual except himself; the inconvenience is one which society can afford to bear, for the sake of the greater good of human freedom. If grown persons are to be punished for not taking proper care of themselves, I would rather it were for their own sake, than under pretence of preventing them from

impairing their capacity of rendering to society benefits which society does not pretend it has a right to exact. But I cannot consent to argue the point as if society had no means of bringing its weaker members up to its ordinary standard of rational conduct, except waiting till they do something irrational, and then punishing them, legally or morally, for it. Society has had absolute power over them during all the early portion of their existence: it has had the whole period of childhood and nonage in which to try whether it could make them capable of rational conduct in life. The existing generation is master both of the training and the entire circumstances of the generation to come; it cannot indeed make them perfectly wise and good, because it is itself so lamentably deficient in goodness and wisdom; and its best efforts are not always, in individual cases, its most successful ones; but it is perfectly well able to make the rising generation, as a whole, as good as, and a little better than, itself. If society lets any considerable number of its members grow up mere children, incapable of being acted on by rational consideration of distant motives, society has itself to blame for the consequences. Armed not only with all the powers of education, but with the ascendancy which the authority of a received opinion always exercises over the minds who are least fitted to judge for themselves; and aided by the *natural* penalties which cannot be prevented from falling on those who incur the distaste or the contempt of those who know them; let not society pretend that it needs, besides all this, the power to issue commands and enforce obedience in the personal concerns of individuals, in which, on all principles of justice and policy, the decision ought to rest with those who are to abide the consequences. Nor is there anything which tends more to discredit and frustrate the better means of influencing conduct, than a resort to the worse. If there be among those whom it is attempted to coerce into prudence or temperance, any of the material of which vigorous and independent characters are made, they will infallibly rebel against the yoke. No such person will ever feel that others have a right to control him in his concerns, such as they

have to prevent him from injuring them in theirs; and it easily comes to be considered a mark of spirit and courage to fly in the face of such usurped authority, and do with ostentation the exact opposite of what it enjoins; as in the fashion of grossness which succeeded, in the time of Charles II, to the fanatical moral intolerance of the Puritans. With respect to what is said of the necessity of protecting society from the bad example set to others by the vicious or the self-indulgent; it is true that bad example may have a pernicious effect, especially the example of doing wrong to others with impunity to the wrong-doer. But we are now speaking of conduct which, while it does no wrong to others, is supposed to do great harm to the agent himself: and I do not see how those who believe this, can think otherwise than that the example, on the whole, must be more salutary than hurtful, since, if it displays the misconduct, it displays also the painful or degrading consequences which, if the conduct is justly censured, must be supposed to be in all or most cases attendant on it.

But the strongest of all the arguments against the interference of the public with purely personal conduct, is that when it does interfere, the odds are that it interferes wrongly, and in the wrong place. On questions of social morality, of duty to others, the opinion of the public, that is, of an overruling majority, though often wrong, is likely to be still oftener right; because on such questions they are only required to judge of their own interests; of the manner in which some mode of conduct, if allowed to be practised, would affect themselves. But the opinion of a similar majority, imposed as a law on the minority, on questions of self-regarding conduct, is quite as likely to be wrong as right; for in these cases public opinion means, at the best, some people's opinion of what is good or bad for other people; while very often it does not even mean that; the public, with the most perfect indifference, passing over the pleasure or convenience of those whose conduct they censure, and considering only their own preference. There are many who consider as an injury to themselves

any conduct which they have a distaste for, and resent it as an outrage to their feelings; as a religious bigot, when charged with disregarding the religious feelings of others, has been known to retort that they disregard his feelings, by persisting in their abominable worship or creed. But there is no parity between the feeling of a person for his own opinion, and the feeling of another who is offended at his holding it; no more than between the desire of a thief to take a purse, and the desire of the right owner to keep it. And a person's taste is as much his own peculiar concern as his opinion or his purse. It is easy for any one to imagine an ideal public, which leaves the freedom and choice of individuals in all uncertain matters undisturbed, and only requires them to abstain from modes of conduct which universal experience has condemned. But where has there been seen a public which set any such limit to its censorship? or when does the public trouble itself about universal experience? In its interferences with personal conduct it is seldom thinking of anything but the enormity of acting or feeling differently from itself; and this standard of judgment, thinly disguised, is held up to mankind as the dictate of religion and philosophy, by nine tenths of all moralists and speculative writers. These teach that things are right because they are right; because we feel them to be so. They tell us to search in our own minds and hearts for laws of conduct binding on ourselves and on all others. What can the poor public do but apply these instructions, and make their own personal feelings of good and evil, if they are tolerably unanimous in them, obligatory on all the world?

The evil here pointed out is not one which exists only in theory; and it may perhaps be expected that I should specify the instances in which the public of this age and country improperly invests its own preferences with the character of moral laws. I am not writing an essay on the aberrations of existing moral feeling. That is too weighty a subject to be discussed parenthetically, and by way of illustration. Yet examples are necessary, to show that the principle I maintain is of

serious and practical moment, and that I am not endeavoring to erect a barrier against imaginary evils. And it is not difficult to show, by abundant instances, that to extend the bounds of what may be called moral police, until it encroaches on the most unquestionably legitimate liberty of the individual, is one of the most universal of all human propensities.

As a first instance, consider the antipathies which men cherish on no better grounds than that persons whose religious opinions are different from theirs, do not practise their religious observances, especially their religious abstinences. To cite a rather trivial example, nothing in the creed or practice of Christians does more to envenom the hatred of Mahomedans against them, than the fact of their eating pork. There are few acts which Christians and Europeans regard with more unaffected disgust, than Mussulmans regard this particular mode of satisfying hunger. It is, in the first place, an offence against their religion; but this circumstance by no means explains either the degree or the kind of their repugnance; for wine also is forbidden by their religion, and to partake of it is by all Mussulmans accounted wrong, but not disgusting. Their aversion to the flesh of the “unclean beast” is, on the contrary, of that peculiar character, resembling an instinctive antipathy, which the idea of uncleanness, when once it thoroughly sinks into the feelings, seems always to excite even in those whose personal habits are anything but scrupulously cleanly and of which the sentiment of religious impurity, so intense in the Hindoos, is a remarkable example. Suppose now that in a people, of whom the majority were Mussulmans, that majority should insist upon not permitting pork to be eaten within the limits of the country. This would be nothing new in Mahomedan countries.^[1] Would it be a legitimate exercise of the moral authority of public opinion? and if not, why not? The practice is really revolting to such a public. They also sincerely think that it is forbidden and abhorred by the Deity. Neither could the prohibition be censured as religious persecution. It

might be religious in its origin, but it would not be persecution for religion, since nobody's religion makes it a duty to eat pork. The only tenable ground of condemnation would be, that with the personal tastes and self-regarding concerns of individuals the public has no business to interfere.

To come somewhat nearer home: the majority of Spaniards consider it a gross impiety, offensive in the highest degree to the Supreme Being, to worship him in any other manner than the Roman Catholic; and no other public worship is lawful on Spanish soil. The people of all Southern Europe look upon a married clergy as not only irreligious, but unchaste, indecent, gross, disgusting. What do Protestants think of these perfectly sincere feelings, and of the attempt to enforce them against non-Catholics? Yet, if mankind are justified in interfering with each other's liberty in things which do not concern the interests of others, on what principle is it possible consistently to exclude these cases? or who can blame people for desiring to suppress what they regard as a scandal in the sight of God and man? No stronger case can be shown for prohibiting anything which is regarded as a personal immorality, than is made out for suppressing these practices in the eyes of those who regard them as impieties; and unless we are willing to adopt the logic of persecutors, and to say that we may persecute others because we are right, and that they must not persecute us because they are wrong, we must beware of admitting a principle of which we should resent as a gross injustice the application to ourselves.

The preceding instances may be objected to, although unreasonably, as drawn from contingencies impossible among us: opinion, in this country, not being likely to enforce abstinence from meats, or to interfere with people for worshipping, and for either marrying or not marrying, according to their creed or inclination. The next example, however, shall be taken from an interference with

liberty which we have by no means passed all danger of. Wherever the Puritans have been sufficiently powerful, as in New England, and in Great Britain at the time of the Commonwealth, they have endeavored, with considerable success, to put down all public, and nearly all private, amusements: especially music, dancing, public games, or other assemblages for purposes of diversion, and the theatre. There are still in this country large bodies of persons by whose notions of morality and religion these recreations are condemned; and those persons belonging chiefly to the middle class, who are the ascendant power in the present social and political condition of the kingdom, it is by no means impossible that persons of these sentiments may at some time or other command a majority in Parliament. How will the remaining portion of the community like to have the amusements that shall be permitted to them regulated by the religious and moral sentiments of the stricter Calvinists and Methodists? Would they not, with considerable peremptoriness, desire these intrusively pious members of society to mind their own business? This is precisely what should be said to every government and every public, who have the pretension that no person shall enjoy any pleasure which they think wrong. But if the principle of the pretension be admitted, no one can reasonably object to its being acted on in the sense of the majority, or other preponderating power in the country; and all persons must be ready to conform to the idea of a Christian commonwealth, as understood by the early settlers in New England, if a religious profession similar to theirs should ever succeed in regaining its lost ground, as religions supposed to be declining have so often been known to do.

To imagine another contingency, perhaps more likely to be realized than the one last mentioned. There is confessedly a strong tendency in the modern world towards a democratic constitution of society, accompanied or not by popular political institutions. It is affirmed that in the country where this tendency is most completely

realized—where both society and the government are most democratic—the United States—the feeling of the majority, to whom any appearance of a more showy or costly style of living than they can hope to rival is disagreeable, operates as a tolerably effectual sumptuary law, and that in many parts of the Union it is really difficult for a person possessing a very large income, to find any mode of spending it, which will not incur popular disapprobation. Though such statements as these are doubtless much exaggerated as a representation of existing facts, the state of things they describe is not only a conceivable and possible, but a probable result of democratic feeling, combined with the notion that the public has a right to a veto on the manner in which individuals shall spend their incomes. We have only further to suppose a considerable diffusion of Socialist opinions, and it may become infamous in the eyes of the majority to possess more property than some very small amount, or any income not earned by manual labor. Opinions similar in principle to these, already prevail widely among the artisan class, and weigh oppressively on those who are amenable to the opinion chiefly of that class, namely, its own members. It is known that the bad workmen who form the majority of the operatives in many branches of industry, are decidedly of opinion that bad workmen ought to receive the same wages as good, and that no one ought to be allowed, through piecework or otherwise, to earn by superior skill or industry more than others can without it. And they employ a moral police, which occasionally becomes a physical one, to deter skilful workmen from receiving, and employers from giving, a larger remuneration for a more useful service. If the public have any jurisdiction over private concerns, I cannot see that these people are in fault, or that any individual's particular public can be blamed for asserting the same authority over his individual conduct, which the general public asserts over people in general.

But, without dwelling upon supposititious cases, there are, in our

own day, gross usurpations upon the liberty of private life actually practised, and still greater ones threatened with some expectation of success, and opinions proposed which assert an unlimited right in the public not only to prohibit by law everything which it thinks wrong, but in order to get at what it thinks wrong, to prohibit any number of things which it admits to be innocent.

Under the name of preventing intemperance the people of one English colony, and of nearly half the United States, have been interdicted by law from making any use whatever of fermented drinks, except for medical purposes: for prohibition of their sale is in fact, as it is intended to be, prohibition of their use. And though the impracticability of executing the law has caused its repeal in several of the States which had adopted it, including the one from which it derives its name, an attempt has notwithstanding been commenced, and is prosecuted with considerable zeal by many of the professed philanthropists, to agitate for a similar law in this country. The association, or "Alliance" as it terms itself, which has been formed for this purpose, has acquired some notoriety through the publicity given to a correspondence between its Secretary and one of the very few English public men who hold that a politician's opinions ought to be founded on principles. Lord Stanley's share in this correspondence is calculated to strengthen the hopes already built on him, by those who know how rare such qualities as are manifested in some of his public appearances, unhappily are among those who figure in political life. The organ of the Alliance, who would "deeply deplore the recognition of any principle which could be wrested to justify bigotry and persecution," undertakes to point out the "broad and impassable barrier" which divides such principles from those of the association. "All matters relating to thought, opinion, conscience, appear to me," he says, "to be without the sphere of legislation; all pertaining to social act, habit, relation, subject only to a discretionary power vested in the State itself, and not in the individual, to be within it." No

mention is made of a third class, different from either of these, viz. acts and habits which are not social, but individual; although it is to this class, surely, that the act of drinking fermented liquors belongs. Selling fermented liquors, however, is trading, and trading is a social act. But the infringement complained of is not on the liberty of the seller, but on that of the buyer and consumer; since the State might just as well forbid him to drink wine, as purposely make it impossible for him to obtain it. The Secretary, however, says, "I claim, as a citizen, a right to legislate whenever my social rights are invaded by the social act of another." And now for the definition of these "social rights." "If anything invades my social rights, certainly the traffic in strong drink does. It destroys my primary right of security, by constantly creating and stimulating social disorder. It invades my right of equality, by deriving a profit from the creation of a misery, I am taxed to support. It impedes my right to free moral and intellectual development, by surrounding my path with dangers, and by weakening and demoralizing society, from which I have a right to claim mutual aid and intercourse." A theory of "social rights," the like of which probably never before found its way into distinct language—being nothing short of this—that it is the absolute social right of every individual, that every other individual shall act in every respect exactly as he ought; that whosoever fails thereof in the smallest particular, violates my social right, and entitles me to demand from the legislature the removal of the grievance. So monstrous a principle is far more dangerous than any single interference with liberty; there is no violation of liberty which it would not justify; it acknowledges no right to any freedom whatever, except perhaps to that of holding opinions in secret, without ever disclosing them; for the moment an opinion which I consider noxious, passes any one's lips, it invades all the "social rights" attributed to me by the Alliance. The doctrine ascribes to all mankind a vested interest in each other's moral, intellectual, and even physical perfection, to be defined by each claimant according to his own standard.

美国禁酒令

Another important example of illegitimate interference with the rightful liberty of the individual, not simply threatened, but long since carried into triumphant effect, is Sabbatarian legislation. Without doubt, abstinence on one day in the week, so far as the exigencies of life permit, from the usual daily occupation, though in no respect religiously binding on any except Jews, is a highly beneficial custom. And inasmuch as this custom cannot be observed without a general consent to that effect among the industrious classes, therefore, in so far as some persons by working may impose the same necessity on others, it may be allowable and right that the law should guarantee to each, the observance by others of the custom, by suspending the greater operations of industry on a particular day. But this justification, grounded on the direct interest which others have in each individual's observance of the practice, does not apply to the self-chosen occupations in which a person may think fit to employ his leisure; nor does it hold good, in the smallest degree, for legal restrictions on amusements. It is true that the amusement of some is the day's work of others; but the pleasure, not to say the useful recreation, of many, is worth the labor of a few, provided the occupation is freely chosen, and can be freely resigned. The operatives are perfectly right in thinking that if all worked on Sunday, seven

days' work would have to be given for six days' wages: but so long as the great mass of employments are suspended, the small number who for the enjoyment of others must still work, obtain a proportional increase of earnings; and they are not obliged to follow those occupations, if they prefer leisure to emolument. If a further remedy is sought, it might be found in the establishment by custom of a holiday on some other day of the week for those particular classes of persons. The only ground, therefore, on which restrictions on Sunday amusements can be defended, must be that they are religiously wrong; a motive of legislation which never can be too earnestly protested against. "Deorum injuriæ Diis curæ." It remains to be proved that society or any of its officers holds a commission from on high to avenge any supposed offence to Omnipotence, which is not also a wrong to our fellow-creatures. The notion that it is one man's duty that another should be religious, was the foundation of all the religious persecutions ever perpetrated, and if admitted, would fully justify them. Though the feeling which breaks out in the repeated attempts to stop railway travelling on Sunday, in the resistance to the opening of Museums, and the like, has not the cruelty of the old persecutors, the state of mind indicated by it is fundamentally the same. It is a determination not to tolerate others in doing what is permitted by their religion, because it is not permitted by the persecutor's religion. It is a belief that God not only abominates the act of the misbeliever, but will not hold us guiltless if we leave him unmolested.

I cannot refrain from adding to these examples of the little account commonly made of human liberty, the language of downright persecution which breaks out from the press of this country, whenever it feels called on to notice the remarkable phenomenon of Mormonism. Much might be said on the unexpected and instructive fact, that an alleged new revelation, and a religion, founded on it, the product of palpable imposture, not even supported by the *prestige* of

extraordinary qualities in its founder, is believed by hundreds of thousands, and has been made the foundation of a society, in the age of newspapers, railways, and the electric telegraph. What here concerns us is, that this religion, like other and better religions, has its martyrs; that its prophet and founder was, for his teaching, put to death by a mob; that others of its adherents lost their lives by the same lawless violence; that they were forcibly expelled, in a body, from the country in which they first grew up; while, now that they have been chased into a solitary recess in the midst of a desert, many in this country openly declare that it would be right (only that it is not convenient) to send an expedition against them, and compel them by force to conform to the opinions of other people. The article of the Mormonite doctrine which is the chief provocative to the antipathy which thus breaks through the ordinary restraints of religious tolerance, is its sanction of polygamy; which, though permitted to Mahomedans, and Hindoos, and Chinese, seems to excite unquenchable animosity when practised by persons who speak English, and profess to be a kind of Christians. No one has a deeper disapprobation than I have of this Mormon institution; both for other reasons, and because, far from being in any way countenanced by the principle of liberty, it is a direct infraction of that principle, being a mere riveting of the chains of one half of the community, and an emancipation of the other from reciprocity of obligation towards them. Still, it must be remembered that this relation is as much voluntary on the part of the women concerned in it, and who may be deemed the sufferers by it, as is the case with any other form of the marriage institution; and however surprising this fact may appear, it has its explanation in the common ideas and customs of the world, which teaching women to think marriage the one thing needful, make it intelligible that many a woman should prefer being one of several wives, to not being a wife at all. Other countries are not asked to recognize such unions, or release any portion of their inhabitants from their own laws on the score of Mormonite opinions. But when the

dissentients have conceded to the hostile sentiments of others, far more than could justly be demanded; when they have left the countries to which their doctrines were unacceptable, and established themselves in a remote corner of the earth, which they have been the first to render habitable to human beings; it is difficult to see on what principles but those of tyranny they can be prevented from living there under what laws they please, provided they commit no aggression on other nations, and allow perfect freedom of departure to those who are dissatisfied with their ways. A recent writer, in some respects of considerable merit, proposes (to use his own words,) not a crusade, but a *civilizade*, against this polygamous community, to put an end to what seems to him a retrograde step in civilization. It also appears so to me, but I am not aware that any community has a right to force another to be civilized. So long as the sufferers by the bad law do not invoke assistance from other communities, I cannot admit that persons entirely unconnected with them ought to step in and require that a condition of things with which all who are directly interested appear to be satisfied, should be put an end to because it is a scandal to persons some thousands of miles distant, who have no part or concern in it. Let them send missionaries, if they please, to preach against it; and let them, by any fair means, (of which silencing the teachers is not one) oppose the progress of similar doctrines among their own people. If civilization has got the better of barbarism when barbarism had the world to itself, it is too much to profess to be afraid lest barbarism, after having been fairly got under, should revive and conquer civilization. A civilization that can thus succumb to its vanquished enemy must first have become so degenerate, that neither its appointed priests and teachers, nor anybody else, has the capacity, or will take the trouble, to stand up for it. If this be so, the sooner such a civilization receives notice to quit, the better. It can only go on from bad to worse, until destroyed and regenerated (like the Western Empire) by energetic barbarians.

[1] The case of the Bombay Parsees is a curious instance in point. When this industrious and enterprising tribe, the descendants of the Persian fire-worshippers, flying from their native country before the Caliphs, arrived in Western India, they were admitted to toleration by the Hindoo sovereigns, on condition of not eating beef. When those regions afterwards fell under the dominion of Mahomedan conquerors, the Parsees obtained from them a continuance of indulgence, on condition of refraining from pork. What was at first obedience to authority became a second nature, and the Parsees to this day abstain both from beef and pork. Though not required by their religion, the double abstinence has had time to grow into a custom of their tribe; and custom, in the East, is a religion. [Mill's note.]

Chapter 5

Applications

THE principles asserted in these pages must be more generally admitted as the basis for discussion of details, before a consistent application of them to all the various departments of government and morals can be attempted with any prospect of advantage. The few observations I propose to make on questions of detail, are designed to illustrate the principles, rather than to follow them out to their consequences. I offer, not so much applications, as specimens of application; which may serve to bring into greater clearness the meaning and limits of the two maxims which together form the entire doctrine of this Essay, and to assist the judgment in holding the balance between them, in the cases where it appears doubtful which of them is applicable to the case.

The maxims are, first, that the individual is not accountable to society for his actions, in so far as these concern the interests of no person but himself. Advice, instruction, persuasion, and avoidance by other people if thought necessary by them for their own good, are the only measures by which society can justifiably express its dislike or disapprobation of his conduct. Secondly, that for such actions as are prejudicial to the interests of others, the individual is accountable, and may be subjected either to social or to legal punishments, if society is of opinion that the one or the other is requisite for its protection.

In the first place, it must by no means be supposed, because damage, or probability of damage, to the interests of others, can alone justify the interference of society, that therefore it always does justify such interference. In many cases, an individual, in pursuing a legitimate object, necessarily and therefore legitimately causes pain or loss to others, or intercepts a good which they had a reasonable hope

of obtaining. Such oppositions of interest between individuals often arise from bad social institutions, but are unavoidable while those institutions last; and some would be unavoidable under any institutions. Whoever succeeds in an overcrowded profession, or in a competitive examination; whoever is preferred to another in any contest for an object which both desire, reaps benefit from the loss of others, from their wasted exertion and their disappointment. But it is, by common admission, better for the general interest of mankind, that persons should pursue their objects undeterred by this sort of consequences. In other words, society admits no right, either legal or moral, in the disappointed competitors, to immunity from this kind of suffering; and feels called on to interfere, only when means of success have been employed which it is contrary to the general interest to permit—namely, fraud or treachery, and force.

Again, trade is a social act. Whoever undertakes to sell any description of goods to the public, does what affects the interest of other persons, and of society in general; and thus his conduct, in principle, comes within the jurisdiction of society: accordingly, it was once held to be the duty of governments, in all cases which were considered of importance, to fix prices, and regulate the processes of manufacture. But it is now recognized, though not till after a long struggle, that both the cheapness and the good quality of commodities are most effectually provided for by leaving the producers and sellers perfectly free, under the sole check of equal freedom to the buyers for supplying themselves elsewhere. This is the so-called doctrine of Free Trade, which rests on grounds different from, though equally solid with, the principle of individual liberty asserted in this Essay. Restrictions on trade, or on production for purposes of trade, are indeed restraints; and all restraint, *quâ* restraint, is an evil: but the restraints in question affect only that part of conduct which society is competent to restrain, and are wrong solely because they do not really produce the results which it is desired to produce by them. As the

principle of individual liberty is not involved in the doctrine of Free Trade, so neither is it in most of the questions which arise respecting the limits of that doctrine; as for example, what amount of public control is admissible for the prevention of fraud by adulteration; how far sanitary precautions, or arrangements to protect workpeople employed in dangerous occupations, should be enforced on employers. Such questions involve considerations of liberty, only in so far as leaving people to themselves is always better, *cæteris paribus*, than controlling them: but that they may be legitimately controlled for these ends, is in principle undeniable. On the other hand, there are questions relating to interference with trade, which are essentially questions of liberty; such as the Maine Law, already touched upon; the prohibition of the importation of opium into China; the restriction of the sale of poisons; all cases, in short, where the object of the interference is to make it impossible or difficult to obtain a particular commodity. These interferences are objectionable, not as infringements on the liberty of the producer or seller, but on that of the buyer.

One of these examples, that of the sale of poisons, opens a new question; the proper limits of what may be called the functions of police; how far liberty may legitimately be invaded for the prevention of crime, or of accident. It is one of the undisputed functions of government to take precautions against crime before it has been committed, as well as to detect and punish it afterwards. The preventive function of government, however, is far more liable to be abused, to the prejudice of liberty, than the punitive function; for there is hardly any part of the legitimate freedom of action of a human being which would not admit of being represented, and fairly too, as increasing the facilities for some form or other of delinquency. Nevertheless, if a public authority, or even a private person, sees any one evidently preparing to commit a crime, they are not bound to look on inactive until the crime is committed, but may interfere to prevent

it. If poisons were never bought or used for any purpose except the commission of murder, it would be right to prohibit their manufacture and sale. They may, however, be wanted not only for innocent but for useful purposes, and restrictions cannot be imposed in the one case without operating in the other. Again, it is a proper office of public authority to guard against accidents. If either a public officer or any one else saw a person attempting to cross a bridge which had been ascertained to be unsafe, and there were no time to warn him of his danger, they might seize him and turn him back without any real infringement of his liberty; for liberty consists in doing what one desires, and he does not desire to fall into the river. Nevertheless, when there is not a certainty, but only a danger of mischief, no one but the person himself can judge of the sufficiency of the motive which may prompt him to incur the risk: in this case, therefore, (unless he is a child, or delirious, or in some state of excitement or absorption incompatible with the full use of the reflecting faculty) he ought, I conceive, to be only warned of the danger; not forcibly prevented from exposing himself to it. Similar considerations, applied to such a question as the sale of poisons, may enable us to decide which among the possible modes of regulation are or are not contrary to principle. Such a precaution, for example, as that of labelling the drug with some word expressive of its dangerous character, may be enforced without violation of liberty: the buyer cannot wish not to know that the thing he possesses has poisonous qualities. But to require in all cases the certificate of a medical practitioner, would make it sometimes impossible, always expensive, to obtain the article for legitimate uses. The only mode apparent to me, in which difficulties may be thrown in the way of crime committed through this means, without any infringement, worth taking into account, upon the liberty of those who desire the poisonous substance for other purposes, consists in providing what, in the apt language of Bentham, is called "preappointed evidence." This provision is familiar to every one in the case of contracts. It is usual and right that the law, when a

contract is entered into, should require as the condition of its enforcing performance, that certain formalities should be observed, such as signatures, attestation of witnesses, and the like, in order that in case of subsequent dispute, there may be evidence to prove that the contract was really entered into, and that there was nothing in the circumstances to render it legally invalid: the effect being, to throw great obstacles in the way of fictitious contracts, or contracts made in circumstances which, if known, would destroy their validity. Precautions of a similar nature might be enforced in the sale of articles adapted to be instruments of crime. The seller, for example, might be required to enter in a register the exact time of the transaction, the name and address of the buyer, the precise quality and quantity sold; to ask the purpose for which it was wanted, and record the answer he received. When there was no medical prescription, the presence of some third person might be required, to bring home the fact to the purchaser, in case there should afterwards be reason to believe that the article had been applied to criminal purposes. Such regulations would in general be no material impediment to obtaining the article, but a very considerable one to making an improper use of it without detection.

The right inherent in society, to ward off crimes against itself by antecedent precautions, suggests the obvious limitations to the maxim, that purely self-regarding misconduct cannot properly be meddled with in the way of prevention or punishment. Drunkennesses, for example, in ordinary cases, is not a fit subject for legislative interference; but I should deem it perfectly legitimate that a person, who had once been convicted of any act of violence to others under the influence of drink, should be placed under a special legal restriction, personal to himself; that if he were afterwards found drunk, he should be liable to a penalty, and that if when in that state he committed another offence, the punishment to which he would be liable for that other offence should be increased in severity. The

making himself drunk, in a person whom drunkenness excites to do harm to others, is a crime against others. So, again, idleness, except in a person receiving support from the public, or except when it constitutes a breach of contract, cannot without tyranny be made a subject of legal punishment; but if either from idleness or from any other avoidable cause, a man fails to perform his legal duties to others, as for instance to support his children, it is no tyranny to force him to fulfil that obligation, by compulsory labor, if no other means are available.

Again, there are many acts which, being directly injurious only to the agents themselves, ought not to be legally interdicted, but which, if done publicly, are a violation of good manners, and coming thus within the category of offences against others, may rightfully be prohibited. Of this kind are offences against decency; on which it is unnecessary to dwell, the rather as they are only connected indirectly with our subject, the objection to publicity being equally strong in the case of many actions not in themselves condemnable, nor supposed to be so.

There is another question to which an answer must be found, consistent with the principles which have been laid down. In cases of personal conduct supposed to be blameable, but which respect for liberty precludes society from preventing or punishing, because the evil directly resulting falls wholly on the agent; what the agent is free to do, ought other persons to be equally free to counsel or instigate? This question is not free from difficulty. The case of a person who solicits another to do an act, is not strictly a case of self-regarding conduct. To give advice or offer inducements to any one, is a social act, and may, therefore, like actions in general which affect others, be supposed amenable to social control. But a little reflection corrects the first impression, by showing that if the case is not strictly within the definition of individual liberty, yet the reasons on which the principle

of individual liberty is grounded, are applicable to it. If people must be allowed, in whatever concerns only themselves, to act as seems best to themselves at their own peril, they must equally be free to consult with one another about what is fit to be so done; to exchange opinions, and give and receive suggestions. Whatever it is permitted to do, it must be permitted to advise to do. The question is doubtful, only when the instigator derives a personal benefit from his advice; when he makes it his occupation, for subsistence or pecuniary gain, to promote what society and the State consider to be an evil. Then, indeed, a new element of complication is introduced; namely, the existence of classes of persons with an interest opposed to what is considered as the public weal, and whose mode of living is grounded on the counteraction of it. Ought this to be interfered with, or not? Fornication, for example, must be tolerated, and so must gambling; but should a person be free to be a pimp, or to keep a gambling-house? The case is one of those which lie on the exact boundary line between two principles, and it is not at once apparent to which of the two it properly belongs. There are arguments on both sides. On the side of toleration it may be said, that the fact of following anything as an occupation, and living or profiting by the practice of it, cannot make that criminal which would otherwise be admissible; that the act should either be consistently permitted or consistently prohibited; that if the principles which we have hitherto defended are true, society has no business, *as* society, to decide anything to be wrong which concerns only the individual; that it cannot go beyond dissuasion, and that one person should be as free to persuade, as another to dissuade. In opposition to this it may be contended, that although the public, or the State, are not warranted in authoritatively deciding, for purposes of repression or punishment, that such or such conduct affecting only the interests of the individual is good or bad, they are fully justified in assuming, if they regard it as bad, that its being so or not is at least a disputable question: That, this being supposed, they cannot be acting wrongly in endeavoring to exclude the influence of solicitations which

are not disinterested, of instigators who cannot possibly be impartial—who have a direct personal interest on one side, and that side the one which the State believes to be wrong, and who confessedly promote it for personal objects only. There can surely, it may be urged, be nothing lost, no sacrifice of good, by so ordering matters that persons shall make their election, either wisely or foolishly, on their own prompting, as free as possible from the arts of persons who stimulate their inclinations for interested purposes of their own. Thus (it may be said) though the statutes respecting unlawful games are utterly indefensible—though all persons should be free to gamble in their own or each other's houses, or in any place of meeting established by their own subscriptions, and open only to the members and their visitors—yet public gambling-houses should not be permitted. It is true that the prohibition is never effectual, and that whatever amount of tyrannical power is given to the police, gamblinghouses can always be maintained under other pretences; but they may be compelled to conduct their operations with a certain degree of secrecy and mystery, so that nobody knows anything about them but those who seek them; and more than this society ought not to aim at. There is considerable force in these arguments. I will not venture to decide whether they are sufficient to justify the moral anomaly of punishing the accessory, when the principal is (and must be) allowed to go free; of fining or imprisoning the procurer, but not the fornicator, the gambling-house keeper, but not the gambler. Still less ought the common operations of buying and selling to be interfered with on analogous grounds. Almost every article which is bought and sold may be used in excess, and the sellers have a pecuniary interest in encouraging that excess; but no argument can be founded on this, in favor, for instance, of the Maine Law; because the class of dealers in strong drinks, though interested in their abuse, are indispensably required for the sake of their legitimate use. The interest, however, of these dealers in promoting intemperance is a real evil, and justifies the State in imposing restrictions and requiring

guarantees which, but for that justification would be infringements of legitimate liberty.

A further question is, whether the State while it permits, should nevertheless indirectly discourage conduct which it deems contrary to the best interests of the agent; whether, for example, it should take measures to render the means of drunkenness more costly, or add to the difficulty of procuring them, by limiting the number of the places of sale. On this as on most other practical questions, many distinctions require to be made. To tax stimulants for the sole purpose of making them more difficult to be obtained, is a measure differing only in degree from their entire prohibition; and would be justifiable only if that were justifiable. Every increase of cost is a prohibition, to those whose means do not come up to the augmented price; and to those who do, it is a penalty laid on them for gratifying a particular taste. Their choice of pleasures, and their mode of expending their income, after satisfying their legal and moral obligations to the State and to individuals, are their own concern, and must rest with their own judgment. These considerations may seem at first sight to condemn the selection of stimulants as special subjects of taxation for purposes of revenue. But it must be remembered that taxation for fiscal purposes is absolutely inevitable; that in most countries it is necessary that a considerable part of that taxation should be indirect; that the State, therefore, cannot help imposing penalties, which to some persons may be prohibitory, on the use of some articles of consumption. It is hence the duty of the State to consider, in the imposition of taxes, what commodities the consumers can best spare; and *a fortiori*, to select in preference those of which it deems the use, beyond a very moderate quantity, to be positively injurious. Taxation, therefore, of stimulants, up to the point which produces the largest amount of revenue (supposing that the State needs all the revenue which it yields) is not only admissible, but to be approved of.

The question of making the sale of these commodities a more or less exclusive privilege, must be answered differently, according to the purposes to which the restriction is intended to be subservient. All places of public resort require the restraint of a police, and places of this kind peculiarly, because offences against society are especially apt to originate there. It is, therefore, fit to confine the power of selling these commodities (at least for consumption on the spot) to persons of known or vouched-for respectability of conduct; to make such regulations respecting hours of opening and closing as may be requisite for public surveillance, and to withdraw the license if breaches of the peace repeatedly take place through the connivance or incapacity of the keeper of the house, or if it becomes a rendezvous for concocting and preparing offences against the law. Any further restriction I do not conceive to be, in principle, justifiable. The limitation in number, for instance, of beer and spirit houses, for the express purpose of rendering them more difficult of access, and diminishing the occasions of temptation, not only exposes all to an inconvenience because there are some by whom the facility would be abused, but is suited only to a state of society in which the laboring classes are avowedly treated as children or savages, and placed under an education of restraint, to fit them for future admission to the privileges of freedom. This is not the principle on which the laboring classes are professedly governed in any free country; and no person who sets due value on freedom will give his adhesion to their being so governed, unless after all efforts have been exhausted to educate them for freedom and govern them as freemen, and it has been definitively proved that they can only be governed as children. The bare statement of the alternative shows the absurdity of supposing that such efforts have been made in any case which needs be considered here. It is only because the institutions of this country are a mass of inconsistencies, that things find admittance into our practice which belong to the system of despotic, or what is called paternal, government, while the general freedom of our institutions precludes the exercise of the

amount of control necessary to render the restraint of any real efficacy as a moral education.

It was pointed out in an early part of this Essay, that the liberty of the individual, in things wherein the individual is alone concerned, implies a corresponding liberty in any number of individuals to regulate by mutual agreement such things as regard them jointly, and regard no persons but themselves. This question presents no difficulty, so long as the will of all the persons implicated remains unaltered; but since that will may change, it is often necessary, even in things in which they alone are concerned, that they should enter into engagements with one another; and when they do, it is fit, as a general rule, that those engagements should be kept. Yet, in the laws probably, of every country, this general rule has some exceptions. Not only persons are not held to engagements which violate the rights of third parties, but it is sometimes considered a sufficient reason for releasing them from an engagement, that it is injurious to themselves. In this and most other civilized countries, for example, an engagement by which a person should sell himself, or allow himself to be sold, as a slave, would be null and void; neither enforced by law nor by opinion. The ground for thus limiting his power of voluntarily disposing of his own lot in life, is apparent, and is very clearly seen in this extreme case. The reason for not interfering, unless for the sake of others, with a person's voluntary acts, is consideration for his liberty. His voluntary choice is evidence that what he so chooses is desirable, or at the least endurable, to him, and his good is on the whole best provided for by allowing him to take his own means of pursuing it. But by selling himself for a slave, he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. He is no longer free; but is thenceforth in a position which has no longer the presumption in its favor, that would be afforded by his voluntarily remaining in it. The principle of freedom cannot

require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom. These reasons, the force of which is so conspicuous in this peculiar case, are evidently of far wider application; yet a limit is everywhere set to them by the necessities of life, which continually require, not indeed that we should resign our freedom, but that we should consent to this and the other limitation of it. The principle, however, which demands uncontrolled freedom of action in all that concerns only the agents themselves, requires that those who have become bound to one another, in things which concern no third party, should be able to release one another from the engagement: and even without such voluntary release, there are perhaps no contracts or engagements, except those that relate to money or money's worth, of which one can venture to say that there ought to be no liberty whatever of retraction. Baron Wilhelm von Humboldt, in the excellent essay from which I have already quoted, states it as his conviction, that engagements which involve personal relations or services, should never be legally binding beyond a limited duration of time; and that the most important of these engagements, marriage, having the peculiarity that its objects are frustrated unless the feelings of both the parties are in harmony with it, should require nothing more than the declared will of either party to dissolve it. This subject is too important, and too complicated, to be discussed in a parenthesis, and I touch on it only so far as is necessary for purposes of illustration. If the conciseness and generality of Baron Humboldt's dissertation had not obliged him in this instance to content himself with enunciating his conclusion without discussing the premises, he would doubtless have recognized that the question cannot be decided on grounds so simple as those to which he confines himself. When a person, either by express promise or by conduct, has encouraged another to rely upon his continuing to act in a certain way—to build expectations and calculations, and stake any part of his plan of life upon that supposition—a new series of moral obligations arises on his part towards that person, which may possibly be overruled, but

cannot be ignored. And again, if the relation between two contracting parties has been followed by consequences to others; if it has placed third parties in any peculiar position, or, as in the case of marriage, has even called third parties into existence, obligations arise on the part of both the contracting parties towards those third persons, the fulfilment of which, or at all events the mode of fulfilment, must be greatly affected by the continuance or disruption of the relation between the original parties to the contract. It does not follow, nor can I admit, that these obligations extend to requiring the fulfilment of the contract at all costs to the happiness of the reluctant party; but they are a necessary element in the question; and even if, as Von Humboldt maintains, they ought to make no difference in the *legal* freedom of the parties to release themselves from the engagement (and I also hold that they ought not to make *much* difference), they necessarily make a great difference in the *moral* freedom. A person is bound to take all these circumstances into account, before resolving on a step which may affect such important interests of others; and if he does not allow proper weight to those interests, he is morally responsible for the wrong. I have made these obvious remarks for the better illustration of the general principle of liberty, and not because they are at all needed on the particular question, which, on the contrary, is usually discussed as if the interest of children was everything, and that of grown persons nothing.

I have already observed that, owing to the absence of any recognized general principles, liberty is often granted where it should be withheld, as well as withheld where it should be granted; and one of the cases in which, in the modern European world, the sentiment of liberty is the strongest, is a case where, in my view, it is altogether misplaced. A person should be free to do as he likes in his own concerns; but he ought not to be free to do as he likes in acting for another, under the pretext that the affairs of the other are his own affairs. The State, while it respects the liberty of each in what

specially regards himself, is bound to maintain a vigilant control over his exercise of any power which it allows him to possess over others. This obligation is almost entirely disregarded in the case of the family relations, a case, in its direct influence on human happiness, more important than all others taken together. The almost despotic power of husbands over wives needs not be enlarged upon here, because nothing more is needed for the complete removal of the evil, than that wives should have the same rights, and should receive the protection of law in the same manner, as all other persons; and because, on this subject, the defenders of established injustice do not avail themselves of the plea of liberty, but stand forth openly as the champions of power. It is in the case of children, that misapplied notions of liberty are a real obstacle to the fulfilment by the State of its duties. One would almost think that a man's children were supposed to be literally, and not metaphorically, a part of himself, so jealous is opinion of the smallest interference of law with his absolute and exclusive control over them; more jealous than of almost any interference with his own freedom of action: so much less do the generality of mankind value liberty than power. Consider, for example, the case of education. Is it not almost a selfevident axiom, that the State should require and compel the education, up to a certain standard, of every human being who is born its citizen? Yet who is there that is not afraid to recognize and assert this truth? Hardly any one indeed will deny that it is one of the most sacred duties of the parents (or, as law and usage now stand, the father), after summoning a human being into the world, to give to that being an education fitting him to perform his part well in life towards others and towards himself. But while this is unanimously declared to be the father's duty, scarcely anybody, in this country, will bear to hear of obliging him to perform it. Instead of his being required to make any exertion or sacrifice for securing education to the child, it is left to his choice to accept it or not when it is provided gratis! It still remains unrecognized, that to bring a child into existence without a fair

prospect of being able, not only to provide food for its body, but instruction and training for its mind, is a moral crime, both against the unfortunate offspring and against society; and that if the parent does not fulfil this obligation, the State ought to see it fulfilled, at the charge, as far as possible, of the parent.

Were the duty of enforcing universal education once admitted, there would be an end to the difficulties about what the State should teach, and how it should teach, which now convert the subject into a mere battle-field for sects and parties, causing the time and labor which should have been spent in educating, to be wasted in quarrelling about education. If the government would make up its mind to *require* for every child a good education, it might save itself the trouble of *providing* one. It might leave to parents to obtain the education where and how they pleased, and content itself with helping to pay the school fees of the poorer classes of children, and defraying the entire school expenses of those who have no one else to pay for them. The objections which are urged with reason against State education, do not apply to the enforcement of education by the State, but to the State's taking upon itself to direct that education: which is a totally different thing. That the whole or any large part of the education of the people should be in State hands, I go as far as any one in deprecating. All that has been said of the importance of individuality of character, and diversity in opinions and modes of conduct, involves, as of the same unspeakable importance, diversity of education. A general State education is a mere contrivance for moulding people to be exactly like one another: and as the mould in which it casts them is that which pleases the predominant power in the government, whether this be a monarch, a priesthood, an aristocracy, or the majority of the existing generation, in proportion as it is efficient and successful, it establishes a despotism over the mind, leading by natural tendency to one over the body. An education established and controlled by the State should only exist, if it exist at

all, as one among many competing experiments, carried on for the purpose of example and stimulus, to keep the others up to a certain standard of excellence. Unless, indeed, when society in general is in so backward a state that it could not or would not provide for itself any proper institutions of education, unless the government undertook the task: then, indeed, the government may, as the less of two great evils, take upon itself the business of schools and universities, as it may that of jointstock companies, when private enterprise, in a shape fitted for undertaking great works of industry, does not exist in the country. But in general, if the country contains a sufficient number of persons qualified to provide education under government auspices, the same persons would be able and willing to give an equally good education on the voluntary principle, under the assurance of remuneration afforded by a law rendering education compulsory, combined with State aid to those unable to defray the expense.

The instrument for enforcing the law could be no other than public examinations, extending to all children, and beginning at an early age. An age might be fixed at which every child must be examined, to ascertain if he (or she) is able to read. If a child proves unable, the father, unless he has some sufficient ground of excuse, might be subjected to a moderate fine, to be worked out, if necessary, by his labor, and the child might be put to school at his expense. Once in every year the examination should be renewed, with a gradually extending range of subjects, so as to make the universal acquisition, and what is more, retention, of a certain minimum of general knowledge, virtually compulsory. Beyond that minimum, there should be voluntary examinations on all subjects, at which all who come up to a certain standard of proficiency might claim a certificate. To prevent the State from exercising through these arrangements, an improper influence over opinion, the knowledge required for passing an examination (beyond the merely instrumental parts of knowledge, such as languages and their use) should, even in the higher class of

examinations, be confined to facts and positive science exclusively. The examinations on religion, politics, or other disputed topics, should not turn on the truth or falsehood of opinions, but on the matter of fact that such and such an opinion is held, on such grounds, by such authors, or schools, or churches. Under this system, the rising generation would be no worse off in regard to all disputed truths, than they are at present; they would be brought up either churchmen or dissenters as they now are, the State merely taking care that they should be instructed churchmen, or instructed dissenters. There would be nothing to hinder them from being taught religion, if their parents chose, at the same schools where they were taught other things. All attempts by the State to bias the conclusions of its citizens on disputed subjects, are evil; but it may very properly offer to ascertain and certify that a person possesses the knowledge requisite to make his conclusions, on any given subject, worth attending to. A student of philosophy would be the better for being able to stand an examination both in Locke and in Kant, whichever of the two he takes up with, or even if with neither: and there is no reasonable objection to examining an atheist in the evidences of Christianity, provided he is not required to profess a belief in them. The examinations, however, in the higher branches of knowledge should, I conceive, be entirely voluntary. It would be giving too dangerous a power to governments, were they allowed to exclude any one from professions, even from the profession of teacher, for alleged deficiency of qualifications: and I think, with Wilhelm von Humboldt, that degrees, or other public certificates of scientific or professional acquirements, should be given to all who present themselves for examination, and stand the test; but that such certificates should confer no advantage over competitors, other than the weight which may be attached to their testimony by public opinion.

It is not in the matter of education only, that misplaced notions of liberty prevent moral obligations on the part of parents from being

recognized, and legal obligations from being imposed, where there are the strongest grounds for the former always, and in many cases for the latter also. The fact itself, of causing the existence of a human being, is one of the most responsible actions in the range of human life. To undertake this responsibility—to bestow a life which may be either a curse or a blessing—unless the being on whom it is to be bestowed will have at least the ordinary chances of a desirable existence, is a crime against that being. And in a country either over-peopled or threatened with being so, to produce children, beyond a very small number, with the effect of reducing the reward of labor by their competition, is a serious offence against all who live by the remuneration of their labor. The laws which, in many countries on the Continent, forbid marriage unless the parties can show that they have the means of supporting a family, do not exceed the legitimate powers of the State: and whether such laws be expedient or not (a question mainly dependent on local circumstances and feelings), they are not objectionable as violations of liberty. Such laws are interferences of the State to prohibit a mischievous act—an act injurious to others, which ought to be a subject of reprobation, and social stigma, even when it is not deemed expedient to superadd legal punishment. Yet the current ideas of liberty, which bend so easily to real infringements of the freedom of the individual in things which concern only himself, would repel the attempt to put any restraint upon his inclinations when the consequence of their indulgence is a life or lives of wretchedness and depravity to the offspring, with manifold evils to those sufficiently within reach to be in any way affected by their actions. When we compare the strange respect of mankind for liberty, with their strange want of respect for it, we might imagine that a man had an indispensable right to do harm to others, and no right at all to please himself without giving pain to any one.

I have reserved for the last place a large class of questions respecting the limits of government interference, which, though

closely connected with the subject of this Essay, do not, in strictness, belong to it. These are cases in which the reasons against interference do not turn upon the principle of liberty: the question is not about restraining the actions of individuals, but about helping them: it is asked whether the government should do, or cause to be done, something for their benefit, instead of leaving it to be done by themselves, individually, or in voluntary combination.

The objections to government interference, when it is not such as to involve infringement of liberty, may be of three kinds.

The first is, when the thing to be done is likely to be better done by individuals than by the government. Speaking generally, there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it. This principle condemns the interferences, once so common, of the legislature, or the officers of government, with the ordinary processes of industry. But this part of the subject has been sufficiently enlarged upon by political economists, and is not particularly related to the principles of this Essay.

The second objection is more nearly allied to our subject. In many cases, though individuals may not do the particular thing so well, on the average, as the officers of government, it is nevertheless desirable that it should be done by them, rather than by the government, as a means to their own mental education—a mode of strengthening their active faculties, exercising their judgment, and giving them a familiar knowledge of the subjects with which they are thus left to deal. This is a principal, though not the sole, recommendation of jury trial (in cases not political); of free and popular local and municipal institutions; of the conduct of industrial and philanthropic enterprises by voluntary associations. These are not questions of liberty, and are connected with that subject only by remote tendencies; but they are questions of development. It belongs to a different occasion from the present to

dwell on these things as parts of national education; as being, in truth, the peculiar training of a citizen, the practical part of the political education of a free people, taking them out of the narrow circle of personal and family selfishness, and accustoming them to the comprehension of joint interests, the management of joint concerns—habituating them to act from public or semi-public motives, and guide their conduct by aims which unite instead of isolating them from one another. Without these habits and powers, a free constitution can neither be worked nor preserved, as is exemplified by the too-often transitory nature of political freedom in countries where it does not rest upon a sufficient basis of local liberties. The management of purely local business by the localities, and of the great enterprises of industry by the union of those who voluntarily supply the pecuniary means, is further recommended by all the advantages which have been set forth in this Essay as belonging to individuality of development, and diversity of modes of action. Government operations tend to be everywhere alike. With individuals and voluntary associations, on the contrary, there are varied experiments, and endless diversity of experience. What the State can usefully do, is to make itself a central depository, and active circulator and diffuser, of the experience resulting from many trials. Its business is to enable each experimentalist to benefit by the experiments of others, instead of tolerating no experiments but its own.

The third, and most cogent reason for restricting the interference of government, is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government, causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them

branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration; if the employés of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed—the more skilful the arrangements for obtaining the best qualified hands and heads with which to work it. In England it has of late been proposed that all the members of the civil service of government should be selected by competitive examination, to obtain for those employments the most intelligent and instructed persons procurable; and much has been said and written for and against this proposal. One of the arguments most insisted on by its opponents is that the occupation of a permanent official servant of the State does not hold out sufficient prospects of emolument and importance to attract the highest talents, which will always be able to find a more inviting career in the professions, or in the service of companies and other public bodies. One would not have been surprised if this argument had been used by the friends of the proposition, as an answer to its principal difficulty. Coming from the opponents it is strange enough. What is urged as an objection is the safety-valve of the proposed system. If indeed all the high talent of the country *could* be drawn into the service of the government, a proposal tending to bring about that result might well inspire uneasiness. If every part of the business of society which required organized concert, or large and comprehensive views, were in the hands of the government, and if government offices were universally filled by the ablest men, all the enlarged culture and practised intelligence in the country, except the purely speculative, would be concentrated in a numerous bureaucracy, to whom alone the rest of the community would look for all things: the multitude for direction and dictation in

all they had to do; the able and aspiring for personal advancement. To be admitted into the ranks of this bureaucracy, and when admitted, to rise therein, would be the sole objects of ambition. Under this régime, not only is the outside public ill-qualified, for want of practical experience, to criticize or check the mode of operation of the bureaucracy, but even if the accidents of despotic or the natural working of popular institutions occasionally raise to the summit a ruler or rulers of reforming inclinations, no reform can be effected which is contrary to the interest of the bureaucracy. Such is the melancholy condition of the Russian empire, as is shown in the accounts of those who have had sufficient opportunity of observation. The Czar himself is powerless against the bureaucratic body; he can send any one of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect. In countries of more advanced civilization and of a more insurrectionary spirit the public, accustomed to expect everything to be done for them by the State, or at least to do nothing for themselves without asking from the State not only leave to do it, but even how it is to be done, naturally hold the State responsible for all evil which befalls them, and when the evil exceeds their amount of patience, they rise against the government and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and everything goes on much as it did before; the bureaucracy being unchanged, and nobody else being capable of taking their place.

A very different spectacle is exhibited among a people accustomed to transact their own business. In France, a large part of the people having been engaged in military service, many of whom have held at least the rank of noncommissioned officers, there are in every popular insurrection several persons competent to take the lead, and improvise some tolerable plan of action. What the French are in

military affairs, the Americans are in every kind of civil business; let them be left without a government, every body of Americans is able to improvise one, and to carry on that or any other public business with a sufficient amount of intelligence, order, and decision. This is what every free people ought to be: and a people capable of this is certain to be free; it will never let itself be enslaved by any man or body of men because these are able to seize and pull the reins of the central administration. No bureaucracy can hope to make such a people as this do or undergo anything that they do not like. But where everything is done through the bureaucracy, nothing to which the bureaucracy is really adverse can be done at all. The constitution of such countries is an organization of the experience and practical ability of the nation, into a disciplined body for the purpose of governing the rest; and the more perfect that organization is in itself, the more successful in drawing to itself and educating for itself the persons of greatest capacity from all ranks of the community, the more complete is the bondage of all, the members of the bureaucracy included. For the governors are as much the slaves of their organization and discipline, as the governed are of the governors. A Chinese mandarin is as much the tool and creature of a despotism as the humblest cultivator. An individual Jesuit is to the utmost degree of abasement the slave of his order, though the order itself exists for the collective power and importance of its members.

It is not, also, to be forgotten, that the absorption of all the principal ability of the country into the governing body is fatal, sooner or later, to the mental activity and progressiveness of the body itself. Banded together as they are—working a system which, like all systems, necessarily proceeds in a great measure by fixed rules—the official body are under the constant temptation of sinking into indolent routine, or, if they now and then desert that mill-horse round, of rushing into some half-examined crudity which has struck the fancy of some leading member of the corps: and the sole check to

these closely allied, though seemingly opposite, tendencies, the only stimulus which can keep the ability of the body itself up to a high standard, is liability to the watchful criticism of equal ability outside the body. It is indispensable, therefore, that the means should exist, independently of the government, of forming such ability, and furnishing it with the opportunities and experience necessary for a correct judgment of great practical affairs. If we would possess permanently a skilful and efficient body of functionaries—above all, a body able to originate and willing to adopt improvements; if we would not have our bureaucracy degenerate into a pedantocracy, this body must not engross all the occupations which form and cultivate the faculties required for the government of mankind.

To determine the point at which evils, so formidable to human freedom and advancement begin, or rather at which they begin to predominate over the benefits attending the collective application of the force of society, under its recognized chiefs, for the removal of the obstacles which stand in the way of its well-being; to secure as much of the advantages of centralized power and intelligence, as can be had without turning into governmental channels too great a proportion of the general activity—is one of the most difficult and complicated questions in the art of government. It is, in a great measure, a question of detail, in which many and various considerations must be kept in view, and no absolute rule can be laid down. But I believe that the practical principle in which safety resides, the ideal to be kept in view, the standard by which to test all arrangements intended for overcoming the difficulty, may be conveyed in these words: the greatest dissemination of power consistent with efficiency; but the greatest possible centralization of information, and diffusion of it from the centre. Thus, in municipal administration, there would be, as in the New England States, a very minute division among separate officers, chosen by the localities, of all business which is not better left to the persons directly interested; but besides this, there would be, in

each department of local affairs, a central superintendence, forming a branch of the general government. The organ of this superintendence would concentrate, as in a focus, the variety of information and experience derived from the conduct of that branch of public business in all the localities, from everything analogous which is done in foreign countries, and from the general principles of political science. This central organ should have a right to know all that is done, and its special duty should be that of making the knowledge acquired in one place available for others. Emancipated from the petty prejudices and narrow views of a locality by its elevated position and comprehensive sphere of observation, its advice would naturally carry much authority; but its actual power, as a permanent institution, should, I conceive, be limited to compelling the local officers to obey the laws laid down for their guidance. In all things not provided for by general rules, those officers should be left to their own judgment, under responsibility to their constituents. For the violation of rules, they should be responsible to law, and the rules themselves should be laid down by the legislature; the central administrative authority only watching over their execution, and if they were not properly carried into effect, appealing, according to the nature of the case, to the tribunal to enforce the law, or to the constituencies to dismiss the functionaries who had not executed it according to its spirit. Such, in its general conception, is the central superintendence which the Poor Law Board is intended to exercise over the administrators of the Poor Rate throughout the country. Whatever powers the Board exercises beyond this limit, were right and necessary in that peculiar case, for the cure of rooted habits of maladministration in matters deeply affecting not the localities merely, but the whole community; since no locality has a moral right to make itself by mismanagement a nest of pauperism, necessarily overflowing into other localities, and impairing the moral and physical condition of the whole laboring community. The powers of administrative coercion and subordinate legislation possessed by the Poor Law Board (but which, owing to the state of

opinion on the subject, are very scantily exercised by them), though perfectly justifiable in a case of a first-rate national interest, would be wholly out of place in the superintendence of interests purely local. But a central organ of information and instruction for all the localities, would be equally valuable in all departments of administration. A government cannot have too much of the kind of activity which does not impede, but aids and stimulates, individual exertion and development. The mischief begins when, instead of calling forth the activity and powers of individuals and bodies, it substitutes its own activity for theirs; when, instead of informing, advising, and, upon occasion denouncing, it makes them work in fetters, or bids them stand aside and does their work instead of them. The worth of a State, in the long run, is the worth of the individuals composing it; and a State which postpones the interests of *their* mental expansion and elevation, to a little more of administrative skill or that semblance of it which practice gives, in the details of business; a State which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes—will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything, will in the end avail it nothing, for want of the vital power which, in order that the machine might work more smoothly, it has preferred to banish.

出版说明

对于古今学问、中西思想的会通之难，王国维先生的感悟最为深切：“如执近世之哲学，以述古人之说，谓之弥缝古人之说则可，谓之忠于古人则恐未也……欲求其贯串统一，势不能不用语意更广之语；然语意愈广者，其语愈虚，于是古人之说之特质渐不可见，所存者其肤廓耳。译古书之难，全在于是。”今人之于古人的“以意逆志”尚且如此，又遑论国人之于西人？于是王国维先生认为“外国语中之无我国‘天’字之相当字，与我国语中之无God之相当字无以异”；经典之妙，“无论何人，不能精密译之”。^[1]

译事之难如是，中国人研读西学经典却不能不借助译本。译本或如业师，指点迷津、功不可没，然入门之后能否一窥堂奥，阡陌纵横如何辨知虚实，则不能不溯本求源。因而阅读原典、溯本求源、汲取学养为会通中西之要素之一。

在本书编委会专家、学者们的指导下，我们精选了西方历代名家经典著作的权威版本，辅之以中文导读，配以精美插图，分批推出“世界大师原典文库（中文导读插图版）”，供读者对比、品味、研读。

本文库内容涵盖哲学、文学、历史学、法学、政治学、经济学、社会学、心理学、人类学等，力求满足相关领域专家、学者的学术需求，力求帮助学生开阔视野、涵养通识，同时也特别为外语教师、外语类大学生、外语学习者和外语爱好者提供便捷实用的参考资料。

世界之大，在于和而不同；学问之大，在于海纳百川；心灵之大，在于兼容并蓄。我们相信，“世界大师原典文库（中文导读插图版）”会成为各界读者阅读、研究和收藏的精神大餐。

导读

编委会

本书作者弗朗西斯·培根（Francis Bacon, 1561 ~ 1626），是文艺复兴时期英国唯物主义哲学家、思想家、科学家和语言文字学者。黑格尔认为培根是经验主义的奠基人，罗素认为培根的哲学思想具有永恒的价值，马克思称培根为“英国唯物主义和整个现代实验科学的真正始祖”。

培根是一位典型的“born with a silver spoon in the mouth”（生来嘴里就含着一只银匙：意为出身高贵）人。他生于贵族之家，长于优裕环境，受教于剑桥大学三一学院。其父古拉斯·培根爵士是掌玺大臣和大法官（王国最高法律官职）。其母安妮·培根精通希腊文和拉丁文，是加尔文教派的信徒。

在政治上，培根宦海浮沉，盘桓跌宕，先后作过国会议员、女王的法律顾问、检察长、掌玺大臣和大法官兼上议院议长（1618年），可谓位高禄厚，风光一时；但好景不长，三年之后培根因受贿而永远退出政坛（1621年），从此专心于学问著述，直至去世。

培根首先是一位哲学家和思想家。他反对君权神授，反对中世纪的经院哲学，提出必须清除它给人们造成的错误认识和偏见（他称之为假相），以便给认识和科学扫清道路。培根继承了古代唯物主义传统，认为自然界是物质的，运动是物质固有的最重要特性，运动是有规律的，其形式是多样的。他提出“知识就是力量”的口号。他称事物运动的规律和规定性为形式。科学的任务就是发现形式，从而获得行动上的自由，以便认识自然，征服自然，同时又服从自然的形式（规律）。他提出唯物主义经验论的基本原则，认为感觉是认识的开端，它是完全可靠的，是一切知识的源泉。基于此他重视科学实验在认识中的作用，认为必须借助于实验，才能弥补感官的不足，揭示自然的奥秘。但他的哲学具有神学的基本特征，他主张双重真理，承认上帝存在。培根的“知识就是力量”的论断，以及关于经验论、感觉是认识的开端的主张等，对后世哲学家如约翰·洛克（John Locke, 1632~1704）等都有重要的影响。洛

克提出人类心智在本源上是“一张白纸”，后天的思想和观念要凭经验获得。这一结论可以说是培根思想的发展和深化。

培根的哲学思想对后来的启蒙运动有很大影响，对近代哲学发展有重要贡献。培根最早表达了近代科学观，阐述了科学的目的、性质，发展科学的正确途径，首次总结出科学实验的经验方法——归纳法，对近代科学发展起到指导作用。培根是除旧立新的思想革新者，他对经院哲学的科学观和传统逻辑思维方式的批判为自然科学的发展扫清了道路。

培根一生的主要著述有：《新工具》、《学术的进步》、《新大西岛》、《亨利七世本纪》和《培根论说文集》等。

《培根论说文集》的成书过程如下：

1597年初版。该版作品是小八开本，卷首有题辞，书中共有文章十篇——(1)论学问，(2)论辞令，(3)论礼仪，(4)论从者与奉人，(5)论请托者，(6)论消费，(7)论养生，(8)论荣誉与名声，(9)论党派，(10)论交涉。

1607年和1612年，《培根论说文集》又各出版一次。1612版叫做修正版，文章总数为38篇；1625年，《培根论说文集》的最后修正本出版，内容增添不少，共包括58篇文章。

自第一版出版以来，培根总是把这本文集放在身边，不断地增删修改。随着他人生阅历的丰富和改变，他的思想也不断完善修正，于是也就需要修改他文章的结构、用词、观点和结论。

综览整卷论说文集，培根的论说文主要涉及三大主题的：(1)人与世界及人群的关系，(2)人自身的问题，(3)人与上帝的关系。这三个题目彼此相互关联，全面反映培根的阅历、观点和思想；或者说，培根的阅历、观点和思想指导他完成并不断完善这些文章。

《培根论说文集》的主要价值，我们认为体现在以下三大方面：

第一，学术思想价值。

《培根论说文集》是培根的阅历、观点和思想的集中体现和浓缩。

培根生活在欧洲文艺复兴之后，启蒙运动之前，在思想界是承上启下的人物。他的唯物主义思想、经验主义的理念，使他更多地关注现实、研究现实；他在论说文集里更多关注的是人间，而不是天上，虽然他相信上帝（但培根同时也承认无神论的价值：“无神论把人类交给理性，交给哲学，交给自然的亲子之情，交给法律，交给好名之心。”——“Of Superstition”）；除了关注人与人、人与自然之外，他还十分重视对人自身的研究，包括修身、励志、善恶、学问、兴趣、性情、审美、婚姻等等，这说明培根是把人作为自然的人而不是当作神的附庸来对待和研究；培根一生宦海浮沉多年，甚至对官位孜孜以求，说明他更多地具有入世精神。这种入世精神，使他注重实践，注重科学实验并身体力行并由此染疾而逝。他身处官场宦途，并不影响他“至少在理论方面是一个对于道德有极深崇敬的人”、“一个对正义公道有甚深的爱慕和崇敬的人”和“永远是一个坚持真理神圣的人”（见“Introduction”）。

第二，语言文学价值。

没有人说培根是文学家、也没有人说培根是语言学家。但一部《培根论说文集》，足以给培根在文学和语言学领域一席之地。“其论说文集，稿凡三易，乃精心结构之作。不但对英国文学曾起开辟新园地、创立新风格的作用，同时也很精彩地表现了作者对人生、对社会的种种现象、种种问题的独到的见解与鞭辟入里的议论。”^[1]从初次问世之日起，《培根论说文集》就大受欢迎，风靡各界尤其是知识界。这些简短简洁的文章使余暇无多的读者喜读。他们的思想之精密与语句之简洁是一种非常难得的长处，培根的文章中实含有当时的文章的各种特性——如辞藻之富丽，思想之繁复，趣味之隽永，机锋之警锐皆是也。在早期的论说中，词句干脆而对比，所以含义饱满而措辞警策，往往一语破的。后来的文章里却又有典雅从容，着色鲜明之作。差不多每篇文章都自有其优点，可以说是融会众长，六家之美，各有其分。培根所表现的那种确凿不惑的了解，精密思想的“筋骨”，对学问全体的广泛认识，在比拟事物道理方面的几乎非人间的敏锐，以及对当时各种学问的渊博、直达事物之灵魂的那种卓识和极高的推理天才，在当时几乎无人出其

右（见“Introduction”）。唯其如此，《培根论说文集》出版并传入我国之后，早已是大学英语课堂的必读之书，文学研究者和英语语言研究者的必要材料。论说文中俯拾皆是的珠圆玉润、朗朗上口、鞭辟入里、意味隽永、一语中的的名言警句，是一代又一代人学习、体味、背诵、模仿和引用的来源。对《培根论说文集》英语原版文章的文学、语言文字价值的探究，远没有结束，也没有穷尽。

第三，修辞逻辑学价值。

培根优越的家学（英语为母语外，还精通拉丁文）、丰富的阅历、加上聪明的大脑和不断的探究思考，成就了他的思想体系。体现在修辞逻辑学方面，就是他文章的缜密的结构、严谨的条理、论证的周密、铿锵的对仗和行文的流畅，最终达到力量、知识和思想的完美结合，因为培根主张：知识就是力量。这种效果，非一般历练所能造就，非大家老手不能达成。因而，《培根论说文集》修辞逻辑学的价值，有待于进一步挖掘探究。

此次出版过程中，我们对《培根论说文集》的各种版本进行了对照比较，对全书原文内容由专家进行了必要的处理，使之易读易懂又不失原著风貌，我们相信本书是一个权威的版本。

最后，我们以Oliphant Smeaton先生对《培根论说文集》的评价作结尾：“培根的《论说文集》可说是少数的“世界书”的一部，这种书不是为一国而作，乃是为万国而作的；不是为一个时代，而是为一切时代的（见“Introduction”）。 ”

培根（1561—1626）

INTRODUCTION

By Oliphant Smeaton^[1]

FRANCIS BACON—Baron Verulam and Viscount St. Albans—was born at York House, Strand, January 22, 1561, the younger son, by his second wife, of Sir Nicholas Bacon, Lord Keeper of the Great, Seal.

Almost from birth Francis was a delicate child, and suffered from prolonged ill-health, a circumstance to which some biographers have attributed the gravity of manner, even in youth characteristic of him. Probably it was due rather to his intense absorption, even in early childhood, in studies commonly assigned to youths considerably his seniors. Though his earlier boyhood is almost a blank to us, save that he spent it between the family residence in London, situated near the present Strand and the Thames, and the country seat at Gorhambury in Hertfordshire, yet we obtain interesting light upon the facts of his career, when he emerges from the domestic seclusion of home to proceed in his thirteenth year with his brother Anthony, two years his senior, to Trinity College, Cambridge.

At Cambridge he remained three years, and as Macaulay, says, “departed, carrying with him a profound contempt for the course of study pursued there, a fixed conviction that the system of academic education in England was radically vicious, a just scorn for the trifles on which the followers of Aristotle had wasted their powers, and no great reverence for Aristotle himself.”

Already he had been introduced to Court life. The high station occupied by his father and the influential family connections of the had rendered this easy. Besides, the facts are matter of history, that Elizabeth on more than one occasion visited her Lord keeper in his stately home at Gornamoury, and amidst the immemorial oaks and

elms of the beautiful Hertfordshire demesne the scene may have occurred in which the flattery loving Queen, in response to a graceful compliment on the part of the youth, styled him, with reference to his grave demeanour, "Her young Lord Keeper." That he was early familiar with the etiquette and customs of Court is manifest from the first draft of the "Essays," "On Ceremonies and Respects," and "On Honour and Reputation." His advice regarding conduct in high station towards superiors, inferios, and equals is characterized not only by sound reason but by a wise expediency, which looks upon the rendering of respect to superiors not as an act of Servility but of practical demanded from us by our relative station in the social hierarchy, If we do not render respect to superiors, can we expect inferiors to render respect to us?

As both Anthony and Francis looked forward to a diplomatic career, to be prepared for it they were admitted "ancients" at Gray's Inn in June 1576 where they shortly afterwards erected the lodging which the latter continued at frequent intervals throughout his life to occupy. Three months later Francis crossed over to Paris in the suite of Sir Amyas Paulet, the English ambassador, to begin his practical training in diplomacy. The studies he pursued in Continental politics and diplomacy supplied material for those "Notes on the State of Europe" which are printed in most editions of his works. France at that time was in the throes, and Catholic and Huguenot were arrayed against each other in civil strife, by whose cruel scenes some of the most pertinent reflections in the Essay on "Faction" were suggested; "Kings had need beware how they side themselves, and make themselves as of a faction or party; for leagues within the State are ever pernicious to monarchies; for they raise an obligation paramount to obligation of sovereignty, and make the king *tanquam unus ex nobis*: as was to be seen in the League of France."

But Bacon's stay in the French capital was not destined to be long,

though doubtless long enough to enable him to acquire that ready facility in the use of the language he, in after life, displayed. He was suddenly recalled by his father's death, and hurried home to find his prospects decidedly overcast. To him the loss was to prove irreparable in more senses than a parental one. In vain he applied to the government, represented by his uncle, Lord Burghley for employment in some official capacity—a claim not unreasonable in view of the late Lord Keeper's services. The jealousy of the Cecils barred the way. To the study of law Bacon therefore devoted himself anew, and with such industry, that he was called to the bar in 1582, and became a Bencher of Gray's Inn in 1586.

For some years he drudged on in obscurity, aided by no one, and eating his heart out in unavailing regrets, as the years passed by, to others bringing promotion, to him only empty promises. In the meantime, hoping to better his circumstances through other channels than the Cecils, he entered Parliament in 1584, as representative of Melcombe Regis, and sat successively for Taunton in 1586, Liverpool, 1588, and Middlesex in 1593. His political creed can be stated very briefly, consisting as it did in a persistent advocacy of a *via media* in all things, a middle course between popular privilege and royal prerogative, or, to express it more definitely, moderation in secular reform with toleration in religion alike to Puritan and Papist. This policy he supported in two pamphlets. The first, entitled “The Greatest Birth of Time,” published in 1585, was chiefly devoted to advocating mildness of treatment towards the recusants; the second, in 1589, dealt with the divisions in the Anglican Church over the Marprelate and other controversies, he pleaded for greater elasticity in matters of doctrine and of discipline.

Two pieces of preferment, if such they can be called, came to him at this time—he was admitted a Queen's Counsel Extra-ordinary, while the Cecils, wearied by his continual importunity, were at last shamed

into procuring for him the reversion of the Registrarship of the Star Chamber on the death of the occupant. As this event did not take place for many years, Bacon, like Waiter Scott with his Clerkship, experienced all the humiliation of waiting to fill dead men's shoes. Surprise has been expressed that, considering the reputation of the late Sir Nicholas Bacon, his son, even in spite of the apathy of the Cecils, should not have received some marks of favour from the Queen. The young politician, however, in his zeal for the defence of popular privileges, had attacked, in the House, the attempt to force on the Commons a conference with the Lords, on a question of Supply; while he also had opposed the demand for large subsidies. Such offences were unpardonable without apologies the humblest, which do not appear to have been offered. Burghley and his son—Sir Robert Cecil—made the most of this “insubordination”. They fanned the spark of irritation in the Queen's mind into the flame of indignation. Any solicitations on Bacon's part for promotion, therefore, were met with chilling silence or polite refusal.

Bacon now resolved to be the suitor for his kinsmen's good offices no longer. He therefore transferred his allegiance to the party of the Earl of Essex, that brilliant but impetuous young nobleman, who, after climbing so high into the favour of the Queen, fell so disastrously through conduct that had not even the merit to opportunism to palliate it. But at this time was the rising star in English politics, and the rival of the great Burghley himself. For Bacon, the young Earl conceived an affection both warm and sincere. With the advancement of his friend's fortunes Essex specially charged himself, making request so persistently to the Queen, first for the Attorney-Generalship, next for the Solicitor-Generalship, and finally for the post of “Master of the Rolls,” that her Majesty begged him to speak on some other topic! When all these offices were put past Bacon, greatly to his chagrin, his patron consoled him with the gift of an estate at Twickenham, valued at £2000. They appear to have lived on terms of the closest intimacy,

Bacon sharing in the social pleasures of Essex House, to aid which he wrote the Masque "The Conference of Pleasure"—a line of work for which Bacon evinced special aptitude, as witness his "Palace of Leading" and contributions to the "Gesta Grayorum," written at the request of the Benchers of Gray's inn. How profoundly he had studied even the art of amusing people is evident from his Essay on "Masques and Triumphs," published in the 1625 edition of the work.

The question of the degree of Bacon's culpability in undertaking a part at least of the prosecution of Essex, when, upon the failure of the latter in 1599 to suppress Tyrone's rebellion in Ireland, and after his absurd attempt to raise an insurrection, he was impeached on a charge of high treason, is too vexed a problem to be discussed here. While on the one hand Bacon had certainly been placed in possession of the facts of Essex's treasonable negotiations with the King of Scots, on the other he exhibited unnecessary rancour against his former benefactor, twice interposing to keep the Court in view of the main facts of the case, which Coke's confusion had allowed the examination to wander. Professor Gardiner's opinion is perhaps the fairest summary of both sides of the matter: "That the course Bacon took indicates poverty of moral feeling cannot be denied. Yet our sentiment on the precedence of personal over political ties is based on our increased sense of political security, and is hardly applicable to a state of things in which anarchy, with its attendant miseries, would inevitably have followed on the violent overthrow of the Queen's fight to select her Ministers."

Essex was convicted, condemned, and executed. So threatening, however, was the attitude of the people, to whom he appeared a national hero by his capture of Cadiz, that Elizabeth quailed before it, and insisted on an official "declaration" of Essex's treason being prepared, which was entrusted to Bacon. In it he persistently takes the blacker view of his late friend's conduct, refusing to admit any palliation of the crimes with which he was accused. Whether pricked

in conscience over his conduct, or stung into irritation by the taunts of the friends of Essex, he issued immediately thereafter a justification of his action, with savours not a little of Jesuitical casuistry. *Quis'excusec s'accuse!* There is reason to believe that the passage in the Essay on "Friendship," written in 1607, and beginning, "There be some whose lives are, as if they perpetually played upon stage, disguised to all others, open only to themselves. But perpetual dissimulation is painful, and he that is all fortune and no nature is an exquisite Hirelinge, etc.," which was omitted in the 1625 edition, had direct reference to Essex.

In 1597 the first edition of his "Essays" was published. The volume, which was of small octavo size, and dedicated to his brother Anthony, contained the following ten papers: (1) Of Studies. (2) Of Discourse. (3) Of Ceremonies and Respect. (4) Of Followers and Friends. (5) Of Sutors (suitors). (6) Of Expense. (7) Of Regiment of Health. (8) Of Honour and Reputation. (9) Of Faction. (10) Of Negotiating. The pregnancy of the thought and the pithiness of the style rendered the book an epoch-making one. Its popularity was great, almost from the day of issue.

Elizabeth was now come to the end of her memorable reign. All her older Ministers had predeceased her. Burghley, the greatest of all, had died in 1598, and was succeeded by his Son.

Scarcely had the King of Scots had time to seat himself on the throne of England, than, with all a supple courtier's adaptability, Bacon sought to win the new monarch's goodwill by every wile he could employ. He received the honour of knighthood in 1603, followed by a pension of £60 a year, in consideration of James's respect for his late brother Anthony's (who had died in 1601) staunch championship of the Scottish succession. He was also appointed a "King's Counsel," with an annual gratuity of £40. The means whereby he flattered the King's Caledonian sympathies, in largest measure,

however, were by advocating, both in Parliament and with his pen, a scheme for the Union of the Kingdoms as well as the Crowns of England and Scotland. His “Article's touching the Union a skilful collection of all historical and scientific analogies bearing on the conclusion he sought to prove, viz., that “there is a consent between the rules of nature and the true rules of policy; the one being nothing else but an order in the government of the world, the other an order in the government of an estate.” The germs of his essay on “The True Greatness of Kingdoms and Estates,” in the form it assumed in the edition of 1612, are undoubtedly to be found in his “Articles Touching the Union.” The fact may also be of interest that, when in October 1604 James adopted the title of “King of Great Britany” —abbreviated into “Great Britain”—he assumed the name suggested by Bacon. The arguments of the latter, moreover, were so cogent that the join Committee, which met to discuss the terms of Union, came to an almost unanimous agreement. The majority of the Commons were also won over. and had not the King obstinately stood out for vesting the right of conferring letters of naturalisation in the Crown. The Union might have been consummated 100 years prior to the date of its actual accomplishment.

In 1605 Bacon issued the first of his great philosophical treatises, the *Advancement of Learning*—afterwards translated and expanded into the Latin dissertation, *De Augmentis scientiarum*—a noble review of the state of learning in his age, its defects, the emptiness of many of the studies chosen, and the means to be adopted to secure improvement. His essays “On Seeming Wise,” “On Custom and Education,” and “On Studies,” are all concerned with topics indicated rather than treated of in the, *Advancement of Learning*, but which are nevertheless to be found there.

At the mature age of forty-five, Bacon took to wife an alder- man's daughter, named Alice Barnham, and his marriage brought him a

moderate fortune, acceptable to a man as deeply in debt as he was. The ceremony was celebrated with great pomp, the bridegroom being “clad from top to toe in purple, and hath made himself and his wife such store of fine raiments of cloth of silver and gold that it draws deep into her portion.” For fifteen years Bacon's married life appears to have flowed along placidly, until after his fall. when an estrangement took place between him and his wife which was never healed.

Thirteen months after his marriage Bacon at last obtained legal office, when he became Solicitor-General (June 25, 1607). For the next two or three years he was employed in adjusting differences between the two great parties in the land, the High Anglicans, who urged the enforcement of the whole doctrine and discipline of the Church of England, and the Puritans, who, where not Nonconformists, were so Low Church as to approximate nearer to them than to any other party within or without its pale. Bacon urged toleration on both parties as well as upon the King. The irreconcilability of Cartwright and his followers tended to change Bacon's views somewhat, causing him to lean in the future rather to the Erastian than the Nonconformist side. His opinions on this topic may be read in his Essay “On Unity in Religion.” It is significant that as the paper originally appeared in 1612 it was entitled “On Religion,” and dealt more with doctrine than divisions. His experiences at this stage and later in the reign led him to rank “unity” as one of the cardinal doctrines in religion, so much so that in the 1625 draft of the Essay in question he felt compelled to add the following sentences: “Religion being, the chief band at human society, it is a nappy thing when itself is well contained within the true band of unity...nothing doth so much keep men out of the Church and drive men out of the Church as breach of unity.” Also in the Essays “On Atheism” and “On Superstition” he refers to religious divisions, their causes and their effects, in terms that show how correctly he gauged the extent of the

mischievous they wrought.

Bacon also advocated at first the adoption of a *via media* with reference to the great controversy regarding the *ius divinum*, otherwise the respective limits of the royal prerogative and of popular privilege—a controversy which, commencing in the reign of James, culminated in the Civil War and the execution of Charles I. The dispute, however, started so many side issues, that insensibly Bacon was led to modify his tolerant liberalism until he could actually affirm from his place in Parliament: “The King holdeth not his prerogative of any kind from the law, but immediately from God as he holdeth his Crown.” In his Essay “On Empire” he makes an observation somewhat analogous: “Princes are like to heavenly bodies, which cause good or evil times, and which have much veneration but no rest. All precepts concerning kings are in effect comprehended in those two remembrances: ‘*Memento quod es homo*’ and ‘*Memento, quod es Deus,*’ or ‘*vice Dei*’; the one bridleth their power and the other their will.”

Despite all these engrossments his literary activity was not allowed to slacken. Every moment of his time that could be spared from Parliament and the Law Courts was devoted to the pursuit of letters. In 1609 the “Wisdom of the Ancients” appeared, in which he explains the classic fables and mythology on allegorical principles; while new editions of his “Essays” were published in 1607 and 1612. The latter was designated a *revised* edition, many of the papers being rewritten. Several new Essays also were added, bringing the total number up to thirty-eight.

Sir Robert Cecil. Bacon's cousin, who had recently been created Earl of Salisbury, died somewhat suddenly in 1612. Among the Essays recently added to his collection had been one on “Deformity,” in which he was supposed to have sketched his relative's character to the life. Bacon made a bold bid to the King for the dead man's place, offering, as he said, “to manage parliaments and to obtain supplies

without concerting undignified bargains as Salisbury had done.” James did not accept the offer: perhaps, a little apprehensive as to what lengths the applicant's ideas on toleration might lead him, In his desire to secure the office of “Master of the Wards” also, Bacon was fated to suffer disappointment. In 1613, however, he was consoled with the long-sighed-for Attorney-Generalship. The Essay “on Great Place” is certainly Written out of the fulness of his own weary experience, especially the sentence: “The rising into Place is laborious, and by pains men come to greater pains, and it is sometimes base; and by indignities men come to dignities, etc..”

Previous to this, he had been appointed president of a new Court called “The Verge,” instituted to deal directly with offences committed within a range of twelve miles around the Hinges residence in London. His opening charge is remarkable for the earnestness wherewith he condemns “Duelling” as a national crime—“Life is grown too cheap in these times.” He cries indignantly. When he became Attorney-General he went further, and proposed that the offender—whether by sending or accepting a challenge, or even acting as second—should be permanently banished from the Court. The “Addled Parliament” saw the extinction of Bacon's political influence. Its dissolution in 1614 and the estranged relations ensuing between. King and Commons, during the time when Parliament was unconvoked, entailed the destruction of that feeling of mutual sympathy arising from identity of interests, which Bacon had long striven to foster between the “first” and the “third” Estates of the realm. The Essay on “Seditious and Troubles” deals characteristically with this question among others.

At this time Bacon showed his keen prevision and skill in reading the signs of the times, by severing the ties of friendship binding him to the King's “reigning” favourite—Robert Carr. Earl of Somerset—and espousing the cause of the rising one—George Viliers, afterwards Duke of Buckingham. His foresight was justified. Somerset fell along with

his Countess, both steeped in the infamy of the Overbury murder; Villiers rose like a rocket over the ruined splendour of his predecessor, being materially assisted by Bacon in the early stages of his upward course. Bacon's allusion to royal "favourites" in his Essay on "Ambition" is esteemed to refer to James's partiality for them. With characteristic servility he so far palliates the practice with the words: "It is counted by some a weakness in princes to have favourites; but it is of all others the best remedy against ambitious great ones."

Whatever services Bacon rendered, Buckingham amply repaid them, in exerting his influence to procure rapid promotion for him. In June 1616 Bacon was sworn in of the Privy Council, and in March 1617, on the retirement of Lord Brackley, he was appointed Keeper of the Great Seal. The address delivered by him before his Court on taking his seat was characterized by lofty nobility of sentiment and dignified oratory. On the official ladder only one step now remained for him to mount, and that one he was not long in ascending. In January 1618 he was appointed Lord Chancellor of England. Other honours were showered on him. In July of the same year he was raised to the peerage as Lord Verulam, the designation being taken from the Latin name of St. Albans, near which town his estate of Gorhambury was situated.

Possessed now of a very large income, he maintained great power and state in his household arrangements. January 1620 saw him entering his 60th year, and he celebrated the occasion at York House by a gathering of his friends, whose congratulations he received with manifest pleasure. Ben Jonson was of the party, and commemorated the scene in lines at once flattering and felicitous. In October 1620 he published the *Novum Organum*, or the New Instrument for the Interpretation of Nature and the Discovery of Truth—a volume which, in the words of Macaulay, drew forth the warmest expressions of admiration from the ablest men in Europe; while a further honour was

conferred on him in January of the succeeding year, when he was created Viscount St. Albans.

This brought him to the pinnacle of his career. Honours. dignities, wealth, praise, public esteem, all were his. But, alas, with his sense of these, there must have been the humiliating consciousness of shameful acts of tyranny committed at instigation of James and Buckingham. He consented to the death of Raleigh—the greatest Englishman of his age next to Shakespeare and himself; he deserted his own friend, Attorney-General Yelverton, when the latter was tried for inserting unauthorised clauses in the charter of the City of London; he supported the Spanish alliance, when he had already advocated a treaty, offensive and defensive, with the Netherlands, and although he knew the heart of the nation loathed everything associated with Spain; he approved of oppressive “Monopolies” by which the people were unjustly taxed, and he permitted Buckingham to influence the course of justice in the Chancery Courts. There is a passage in his Essay “On Negotiating” beginning: “It is better dealing with men in appetite than with those that are where they would be. If a man deal with another upon conditions, the start or first performance is all,” *et seq.*, which seems to be written with designed obscurity, yet which is undoubtedly a protest against the degrading servility he had been obliged all his life to display, first towards the Cecils and then towards James and his favourites.

But the day of reckoning, if long delayed, came at last. Parliament, after being unsummoned from 1614 to 1621, had at length to be convoked, and among the first acts of the Commons was to table a demand for reform in connection with the oppressive Monopoly-patents, under cover of which Buckingham and his creatures had pillaged the nation. From these, instigated by Bacon's enemy, Coke, whose dismissal from the Chief-Justiceship of the Queen's Bench he had effected during his Attorney-Generalship, the

Commons passed on to criticise the state of the Courts of Justice, and direct charges of accepting bribes were tabulated against the Chancellor. Bacon, scenting mischief in Coke's attitude, tried to urge the King to resistance with words that read strangely prophetic of the fate of Charles I, eight and twenty years thereafter: "Those that will strike at your Chancellor, it is much to be feared will strike at your Crown."

But all was in vain. The King could do nothing beyond imprisoning Coke, for Bacon had practically no defence to offer. The evidence against him was overwhelming. Yet this was the man who in his Essay "On Judicature" had expressed such lofty sentiments on the necessity for unbiassed justice. The whole paper is his condemnation, but more especially these sentences: Above all things integrity is their (judges') portion and proper virtue... one foul sentence doth more hurt than many foul examples, for these do but corrupt the stream, the other corrupteth the fountain... The place of justice is a hallowed place, and therefore not only the bench but the footpace and precincts and purprise thereof ought to be preserved without scandal and corruption."

The Chancellor at last came to recognise his case as hopeless, and probably under the influence of feelings such as he describes in his Essay "On Wisdom for a Man's Self," which contains obvious references to the relations formerly existing between the King, Buckingham, and himself—for the practice of bribe-taking was general, from the King on the throne to the lowest lackey in his service—he wrote a letter throwing himself on the mercy of his peers, evidently hoping that James and Buckingham would save him to save themselves. The epistle manifests a strange mingling of pathos and petulance, of noble aspirations after greater purity in "the fount of justice" with ignoble aspersions on those who assailed him.

But what he had caused Yelverton to suffer he was now to suffer

himself. He was left to his fate, although it is hard to see how James could have moved in the matter. The sentence pronounced upon the Lord Chancellor was that he be fined 40,000, imprisoned in the Tower during the King's pleasure, declared incapable of holding office in the State or of sitting in Parliament, and that he should not come within the verge of the Court. No sooner, however, was the sentence pronounced than it was mitigated by royal order; he was released from the Tower and retired to Gorhambury. Thereafter the fine was remitted and the prohibition against his presence at Court revoked, but the bar against sitting in Parliament was never removed.

From a literary and philosophical point of view the last period of Bacon's life was the most glorious. "The virtue of Prosperity is temperance; the virtue of Adversity fortitude, which in morals is the more heroical virtue. Prosperity is the blessing of the Old Testament; adversity is the blessing of the New, which carrieth, the greater benediction and the clearer revelation of God's favour." These sentences, written after his fall, show the effect it had produced upon him. By no student of Bacon's works can this Essay "On Adversity" be read without emotion. Smarting under his disgrace, Bacon turned with eagerness to the intellectual pursuits his official duties had interrupted. In profound study he found an anodyne, and his delight in such labours is finely reflected in his Essay "Of Nature in Men."

His activity was phenomenal. Five months after his fall he completed his *History of Henry VII.*, which received the praise of Grotius and Locke as a model of philosophical history-writing; he began his *History of Henry VIII.*, sketched the outline of his *History of Great Britain*, made notes for his *Digest of the Laws of England and Scotland*, and prepared his *Dialogue on the Sacred War*. In 1623 appeared the *De Augmentis*, the Latin translation with expansion of the *Advancement of Learning*, and his unfinished philosophical romance "New Atlantis," designed as a half-practical, half-poetical suggestion

of a College of Thinkers, partially realised afterwards in the Royal Society. Not the least important work was the final revision of his famous *Essays*, with as many new papers added as raised the total number to fifty-eight. This was his last literary undertaking, and was published a few months before his death.

For some time he had been growing increasingly feeble; yet he did not remit his labours. He died indeed a singular martyr to science. On a bitterly cold day he descended from his carriage, purchased a fowl, killed it, and with his own hands stuffed it with snow, to see if cold would prove an agent in arresting putrefaction. Scarcely was this done, than he felt a chill striking through his system. Too ill to return home, he was carried to the house of Lord Arundel, where, exactly a week later, on April 9, 1626, he passed peacefully away. He was buried, as he desired, near his mother, in the Church of St Michael, St. Albans.

Bacon was intellectually great, but morally weak. His marvellous versatility renders it difficult to present a critical estimate which embraces all the varied aspects of his personality, as lawyer, politician, scientist, philosopher, historian and essayist. In theology and in church politics he was a curious investigator too, while the ambiguous phrase, “be kind to concealed poets”—a phrase on which the Bacon-Shakespeare theory has laid stress—raises the suspicion that he wooed the muse in more ways than that shown in the two or three masques he wrote. In a word, he took all knowledge for his province.

Bacon's philosophical “system,” which is to be studied in his *Advancement of Learning*, the *De Augmentis*, and the *Novum Organum*, may be said to aim primarily at a review, classification, and methodisation of all knowledge. To speak of him as formulating a system, or as founding a “school,” is erroneous. He who only builds the porch cannot be said to have erected a mansion. Comprehensive though his intellect was, he had diffused his energies over so many

fields that in his own half-sad, half-humorous saying, “he had done nothing more than to ring the bell to call the wits together.”

Now about the “Essays.” No one can study them with care without discovering that every paper is the fruit of his own experience, distilled through the alembic of his marvellous mind. There is scarcely a single Essay which, in some sentence or another, does not point its affirmations and conclusions by some subtle reference, expressed or understood, to his own life. It is one of the few volumes that may be designated “world-books”—books that are more cosmopolitan than patriotic, adapted not to an age but to all time. In it, supreme intellectual force is united to Protean variety of interests and sympathies. All types and temperaments of humanity may find some affinity to themselves therein. Easy would it have been for Bacon to make his volume merely a study of English traits, of local men and manners, like Hall's *Characterismes*, or Overbury's *Characters*, or Earle's *Microcos-mographie*. In that case, however, none but Englishmen could have adequately entered into its spirit and sentiments. But now, its sphere of influence is well-nigh coterminous with the world's boundaries, since none can fall to enjoy where all are able to understand.

The *Essays of Francis Bacon*, in the form or text now presented to our readers, may be said to have passed through *three* distinct stages of evolution, represented by the editions of 1597, 1612, and 1625. Numbering at first only ten papers, as we have seen (the volume being eked ont with “Religious Meditations”),^[2] they were increased to thirty-eight in 1612. The original Essays having been thoroughly revised and in many cases rewritten. From then until the year before his death, when they were issued in their final form and number—fifty-eight—Bacon kept the book constantly beside him, adding, altering, compressing, or expanding as he saw fit. Some of the early Essays passed through many drafts. As his opinions suffered

modification through the incidents and accidents of life, so the sentiments expressed in the Essays had to be changed. The papers "On Suitors," "On Faction," and "On Friendship" were altered very materially during the course of the editions, the last-named one being entirely rewritten in view of the issue of 1625.

From the first, their popularity was great. Their brevity was a recommendation to readers with limited leisure, their compactness of thought and conciseness of expression a virtue, passing meritorious, in an age when looseness alike in thought and language was the rule rather than the exception. While the *Essays* may not, as a whole, display the stately music of Donne or of Hooker. the florid ornateness of Burton or of Browne, the sustained grandeur of Johnson—a grandeur at times verging on or of Hooker. the florid ornateness of Burton or of Browne, the sustained grandeur of Johnson—a grandeur at times verging on grandiloquence—or the sinewy flexibility of Selden, they unite in themselves a portion of the excellences of all the six. The qualities of his age—the word-painting of Jacobean diction, the involution of thought even beyond the border line of conceits, the quaint humour and the sparkling wit, all have their place in the *Essays*. The sharp, antithetic form in which he elected to present his thoughts in the earlier essays necessarily contributed as much to the pregnancy of their matter as to the epigrammatic precision of their manner. While some of the earlier Essays read, in places, like extracts from the *Book of Proverbs*, others among the later ones exhibit all the brightness, the colour, and the vivid word-painting of Sidney's *Arcadia* or Jeremy Taylor's *Holy Living*. As an example of the first-named type, we select at random from the Essay "On Studies" the following sentences: "To spend too much time on studies is sloth; to use them too much for ornament is affectation... Crafty men contemn studies, simple men admire them, and wise men use them;" and from the Essay "On Suitors" the following: "To be ignorant of the value of a suit is simplicity; as well as to be ignorant of the right thereof, is want of

conscience.” Now contrast with the antithetic compactness, almost reaching baldness, characteristic of both the aforementioned papers, the wealth of diction and felicitous power of description displayed in the Essays “On Building” and “On Gardens.” A passage like this comes to one like the breath of a cool mountain breeze amid the sultry stillness of a midsummer's afternoon: “Because the breath of flowers is far sweeter in the air (where it comes and goes like the warbling of music) than in the hand, therefore nothing is more fit for that delight than to know what be the flowers and plants that do best perfume the air... Of bean flowers I speak not, because they are field flowers; but those which perfume the air most delightfully, not passed by as the rest, but being trodden upon and crushed, are three; that is, burnet, wild thyme, and water-mints; therefore, you are to set whole alleys of them, to have the pleasure when you walk or tread.”

As one of the world's epoch-making books, Bacon's Essays have done much to mould and direct the character of many individuals. With Montaigne's Essays they almost inevitably challenged comparison, inasmuch as only some seventeen years separated the publication of their first editions. Montaigne's *Essays* appeal to broader social sympathies and cover a larger area of human action, as the sphere of their observation and criticism. But we miss the firm intellectual grip, the bone and sinew of compact thought, the comprehensive survey over the entire domain of knowledge, the almost preternatural acumen displayed in detecting far-reaching analogies, and the polymathic acquaintance with the entire range of the learning of his age, evinced by Bacon. He lacked Montaigne's lightness of touch and piquant picturesqueness in stating obvious truths so as to make them look like new; while Montaigne in turn was entirely destitute of the great English Essayist's marvellous penetration into the very soul of things, and of his superb ratiocinative faculty. If Montaigne were the greater literary artist, Bacon was the pro- founder moral and intellectual force.

That Bacon had read Montaigne when the first book of the latter's *Essays* was published in 1580 is strongly probable, though he does not personally mention him until 1625. Both Essayist have treated several topics in common. Bacon has an Essay "On Ceremonies and Respects," Montaigne one "On Ceremonies in the Interview of Kings"; both writers have an Essay "On Friendship"; Bacon writes on "Vain Glory," Montaigne on "Glory" and on "Vanity"; Bacon treats of "Studies," and Montaigne of "Books," but the subject under discussion in both is, much the same. Bacon in his Essay on "Friendship" says, "It is a strange thing to observe how high a rate great kings and monarchs do set upon this fruit of friendship whereof we speak: so great as they purchase it many times at the hazard of their own safety and greatness, for princes in regard of the distance of their fortune from that of their subjects and servants, cannot gather this fruit except (to make themselves capable thereof) they raise some persons to be, as it were, companions and almost equals to themselves, which many times sorteth to inconvenience." On the same question Montaigne says to us, through the translation of John Florio: "There is nothing to which Nature hath more addressed us than to Societie. And Aristotle saith that perfect Lawgivers have had more regardful care of friendship than of justice. And the utmost drift of its perfection is this. For generally all those amities which are forged and nourished by voluptuousness or profit, publike or private need, are thereby so much the less faire and generous, and so much the lesse true amities, in that they intermeddle other causes, scope and fruit with friendship, than itself alone."

Further, Bacon's *Essays*, viewed in their entirety, may be said to group themselves round three great principles. These are: (1) Man in his relations to the World and Society; (2) Man in his relations to himself; (3) Man in his relations to his Maker. These divisions cannot be said to be altogether mutually exclusive. Some of the *Essays*, therefore, may be ranked under more than one of the headings. But

this basis of division enables us to attempt some sort of classification, in accordance with which the Essays may be methodically studied in closely allied groups.

The first-named class is of course the largest, including as it does the relations of mankind to the physical world and also those mutual relations constituting Society as a whole. As representative of the papers that would fall under this category may be named those on "Seditions and Troubles," "Great Place," "Empire," "Friendship," "Plantations," "Parents and Children," "Building," "Gardens," "Suitors," "Judicature," "Discourse," "Faction," etc.

Under the second group would be ranked the papers dealing with Man the individual, in his intellectual and moral relations. The Essays regarded as representative of this class would be such as: "Regiment of Health," "Studies," "Ambition," "Wisdom for Man's Self," "Seeming Wise," "Adversity," "Revenge," "Honour and Reputation," "Deformity." etc.

Under the third heading, Man's relation to his Maker and the Unseen World, such papers as these would be ranked: "Death," "Unity in Religion," "Atheism," "Superstition," "Prophecies," "Nature in Men," "Goodness," etc.

Finally, Bacon's *Essays* are the work of a man who, in precept, at least, had a deep reverence for moral principle. None other than one entertaining such sentiments could have said as he has done: "A man that hath no virtue in himself ever envieth virtue in others." "Power to do good is the true and lawful end of aspiring. for good thoughts (though God accept them) yet towards men are little better than good dreams, except they be put in act;" and "The desire of power in excess caused the angels to fall; the desire of knowledge in excess caused man to fall; but in charity (goodness) there is no excess, neither can angel or man come in danger by it." The writer of these *Essays* was

also a man who theoretically cherished a profound love and respect for justice: "The principal duty of a judge is to suppress force and fraud;" "Let no man weakly conceive that just laws and true policy have any antipathy, for they are like the spirits and sinews that one moves with the other;" "Suspensions amongst thoughts are like bats amongst birds; they ever fly by twilight. They dispose kings to tyranny, husbands to jealousy, wise men to irresolution and melancholy."

Bacon, moreover, always maintains the Sanctity of Truth alike in scientific investigation and the intercourse of life: "Truth which only doth judge itself, teacheth that the enquiry of truth which is the love-making or wooing of it, the knowledge, of truth which is the presence of it, and the belief of truth which is the enjoying of it, is the sovereign good of human nature;" or in truth which is the love-making or wooing of it, the knowledge of truth which is the presence of it, and the belief of truth which is the enjoying of it, is the sovereign good of human nature;" or in moral conduct: "It is heaven upon earth to have a man's mind move in charity, rest in providence, and turn upon the poles of truth."

And so we leave Francis Bacon! Had he left us no other literary legacy than those wonderful *Essays*, he would have established claim upon the gratitude, not alone of his fellow-countrymen, but of his fellow-men—a claim the years will ever strengthen and time will aye confirm!

The following list gives the chief editions of Bacon's works:—

Essays, 1597; 2nd Edition, 1598; 3rd Edition, 1606; 5th Edition, newly written, 1625.

Advancement of Learning, 1605, 1629, 1633.

De Sapientia Veterum, 1609, 1617, 1633, 1634.

The Wisdome of the Ancients, done into English by Sir A. G. Knight, 1619. 1658.

(The) New Atlantis, 1660.

Novum Organum, 1620, 1645.

Life of Henry VII., 1622, 1629.

De Augmentis Scientiarum, 1623, 1638, 1645, expanded from *the Advancement of Learning*, translated in Latin under the supervision of Bacon.

Apophthegmes, New and Old, 1624 [B.M. 1625].

Sylva Sylvarum, published after the author's death by W. Rawley, 1627, 1635.

COLLECTED WORKS

Opera omnia quae extant. Philosophica, Moralia Politica, Historica, 1665.

Opera Omnia. Life of Francis Bacon, by Dr. Rawley. Edited by J. Blackbourne, 1730.

Bacon's works, with Life, Mallet's, 1740 and 1753. Montagu's, 17 vols., 1825–1826.

Works, originally collected and revised by R. Stephens and J. Locker, published after their deaths by T. Birch, 5 vols., 1765.

Works, collected and edited by J. Spedding, R. L. Ellis and D. D. Heath, 14 vols., 1857–1874.

[1] Oliphant Smeaton (1856—1914), 英格兰著名作家、历史学家和教育家。本文是有关培根研究的最权威论文, 为历来专家学者所推崇。

[2] Written in Latin, but translated into English in 1598.

To the Right Honourable my very good lord the Duke of Buckingham his Grace, Lord High Admiral of England

EXCELLENT LORD—Solomon says: a good name is as a precious ointment; and I assure my self, such will your Grace's name be, with posterity. For your fortune, and merit both, have been eminent. And you have planted things, that are like to last I do now publish my essays; which, of all my other works, have been most current: for that, as it seems, they come home, to men's business, and bosoms. I have enlarged them, both in number, and weight; so that they are indeed a new work. I thought it therefore agreeable, to my affection, and obligation to your Grace, to prefix your name before them, both in English, and in Latin. For I do conceive, that the Latin volume of them (being in the universal language) may last, as long as books last My *Instaration*, I dedicated to the King: my *History of Henry the Seventh* (which I have now also translated into Latin) and my portions of *Natural History*, to the Prince: and these I dedicate to your Grace; being of the best fruits, that by the good increase, which God gives to my pen and labours, I could yield. God lead your Grace by the hand.

Your Grace's most obliged and faithful servant

FRANCIS ST ALBAN

1 Of Studies

Studies serve for delight, for ornament, and for ability. Their chief use for delight, is in privateness and retiring; for ornament, is in discourse; and for ability, is in the judgement and disposition of business. For expert men can execute, and perhaps judge of particulars, one by one; but the general counsels, and the plots, and marshalling of affairs, come best from those that are learned. To spend too much time in studies, is sloth; to use them too much for ornament, is affectation; to make judgement wholly by their rules is the humour of a scholar. They perfect nature, and are perfected by experience: for natural abilities are like natural plants, that need pruning by study: and studies themselves do give forth directions too much at large, except they be bounded in by experience. Crafty men condemn studies; simple men admire them; and wise men use them: for they teach not their own use; but that is a wisdom without them, and above them, won by observation. Read not to contradict, and confute; nor to believe and take for granted; nor to find talk and discourse; but to weigh and consider. Some books are to be tasted, others to be swallowed, and some few to be chewed and digested: that is, some books are to be read only in parts; others to be read but not curiously; and some few to be read wholly, and with diligence and attention. Some books also may be read by deputy, and extracts made of them by others: but that would be, only in the less important arguments, and the meaner sort of book: else distilled books are like common distilled waters, flashy things. Reading maketh a full man; conference a ready man; and writing an exact man. And therefore, if a man write little, he had need have a great memory; if he confer little, he had need have a present wit; and if he read little, he had need have much cunning, to seem to know that he doth not. Histories make men wise; poets witty; the mathematics subtle; natural philosophy deep; moral grave; logic and rhetoric able to contend. *Abeunt studia in mores.*^[1]

Nay, there is no stond or impediment in the wit, but may be wrought out by fit studies: like as diseases of the body may have appropriate exercises. Bowling is good for the stone and reins; shooting for the lungs and breast; gentle walking for the stomach; riding for the head; and the like. So if a man's wit be wandering, let him study the mathematics; for in demonstrations, if his wit be called away never so little, he must begin again: if his wit be not apt to distinguish or find differences, let him study the schoolmen; for they are *cymini sectores*. [2] If he be not apt to beat over matters, and to call up one thing, to prove and illustrate another, let him study the lawyers' cases: so every defect of the mind may have a special receipt.

[1] Studies pass into [i.e. go to form] character.

[2] dividers of cummin seed, 'hair-splitters'

2 Of Truth

What is truth; said jesting Pilate; and would not stay for an answer. Certainly there be, that delight in giddiness; and count it a bondage, to fix a belief, affecting free-will in thinking, as well as in acting. And though the sects of philosophers of that kind be gone, yet there remain certain discoursing wits, which are of the same veins, though there be not so much blood in them, as was in those of the ancients. But it is not only the difficulty, and labour, which men take in finding out of truth; nor again, that when it is found, it imposeth upon men's thoughts; that doth bring lies in favour: but a natural, though corrupt love, of the lie itself. One of the later school of the Grecians, examineth the matter, and is at a stand, to think what should be in it, that men should love lies; where neither they make for pleasure, as with poets; nor for advantage, as with me merchant; but for the lie's sake. But I cannot tell: this same truth, is a naked, and open day light, that doth not show, the masques, and mummeries, and triumphs of the world, half so stately, and daintily, as candlelights. Truth may perhaps come to the price of a pearl, that showeth best by day: but it will not rise, to me price of a diamond, or carbuncle, that showeth best in varied lights. A mixture of a lie doth ever add pleasure. Doth any man doubt, that if there were taken out of men's minds, vain opinions, nattering hopes, false valuations, imaginations as one would, and the like; but it would leave the minds, of a number of men, poor shrunken things; full of melancholy, and indisposition, and unpleasing to themselves? One of the fathers, in great severity, called poesy, *vinum daemonum*;^[1] because it filleth the imagination, and yet it is, but with the shadow of a lie. But it is not the lie, that passeth through the mind, but the lie that sinketh in, and setteth in it, that doth the hurt, such as we spoke of before. But howsoever these things are thus, in men's depraved judgements, and affections, yet truth, which only doth judge itself, teacheth, that the inquiry of truth,

which is the love-making, or wooing of it; the knowledge of truth, which is the presence of it; and the belief of truth, which is the enjoying of it; is the sovereign good of human nature. The first creature of God, in the works of the days, was the light of the sense; the last, was the light of reason; and his Sabbath work, ever since, is the illumination of his spirit. First he breathed light, upon the face, of the matter or chaos; then he breathed light, into the face of man; and still he breatheth and inspireth light, into the face of his chosen. The poet, that beautified the sect, that was otherwise inferior to the rest, saith yet excellently well: 'It is a pleasure to stand upon the shore, and to see ships tossed upon the sea: a pleasure to stand in the window of a castle, and to see a battle, and the adventures thereof, below: but no pleasure is comparable, to the standing, upon the vantage ground of truth.' (a hill not to be commanded, and where the air is always clear and serene;) 'and to see the errors, and wanderings, and mists, and tempests, in the vale below.' So always, that this prospect, be with pity, and not with swelling, or pride. Certainly, it is heaven upon earth, to have a man's mind move in charity, rest in providence, and turn upon the poles of truth.

To pass from theological, and philosophical truth, to the truth of civil business; it will be acknowledged, even by those that practise it not, that clear and round dealing is the honour of man's nature; and that mixture of falsehood, is like allay in coin of gold and silver, which may make the metal work the better, but it embaseth it. For these winding and crooked courses, are the goings of the serpent; which goeth basely upon the belly, and not upon the feet There is no vice, that doth so cover a man with shame, as to be found false, and perfidious. And therefore Mountaigny saith prettily, when he enquired the reason, why the word of the lie should be such a disgrace, and such an odious charge? saith he, 'If it be well weighed, to lay that a man lieth, is as much to say, as that he is brave towards God, and a coward towards men.' For a lie faces God, and shrinks from man.

Surely the wickedness of falsehoods, and breach of faith, cannot possibly be so highly expressed, as in that it shall be the last peal, to call the judgements of God upon the generations of men, it being foretold, that when Christ cometh. He shall not find faith upon the earth.

[\[1\]](#) wine of devils

3 Of Death

Men fear death, as children fear to go in the dark: and as that natural fear in children is increased with tales, so is the other. Certainly, the contemplation of death, as the wages of sin, and passage to another world, is holy and religious; but the fear of it, as a tribute due unto nature, is weak. Yet in religious meditations, there is sometimes mixture of vanity, and of superstition. You shall read, in some of the friars' books of mortifications, that a man should think with himself, what the pain is, if he have but his finger's end pressed, or tortured; and thereby imagine, what the pains of death are, when the whole body is corrupted and dissolved; when many times, death passeth with less pain, then the torture of a limb: for the most vital parts are not the quickest of sense. And by him, that spoke only as a philosopher and natural man, it was well said; *pompa mortis magis terret, quam mars ipsa*.^[1] Groans and convulsions, and a discoloured face, and friends weeping, and blacks, and obsequies, and the like, show death terrible. It is worthy the observing, that there is no passion in the mind of man so weak, but it mates, and masters, the fear of death: and therefore death is no such terrible enemy, when a man hath so many attendants about him that can win the combat of him. Revenge triumphs over death; love slights it; honour aspireth to it; grief flieth to it; fear preoccupieth it; nay we read, after Otho the Emperor had slain himself, pity (which is the tenderest of affections) provoked many to die, out of mere compassion to their sovereign, and as the truest sort of followers. Nay, Seneca adds niceness and satiety; *cogita quarn diu. eadem feceris; mori velle, non tantum fortis, out miser, sed etiam fastidiosus potest*.^[2] A man would die, though he were neither valiant, nor miserable, only upon a weariness to do the same thing, so oft over and over. It is no less worthy to observe, how little alteration, in good spirits, die approaches of death make; for they appear to be the same men, till the last instant Augustus Caesar died in a

compliment; *Livia, coniugii nostri memor, vive et vale.*^[3] Tiberius in dissimulation; as Tacitus saith of him; *iam Tiberium vires, et corpus, non dissimulatio, deserebant.*^[4] Vespasian in a jest; sitting upon the stool, *ut puto deus fio.*^[5] Galba with a sentence; *feri, si ex re sit populi Romani,*^[6] holding forth his neck. Septimius Severus in dispatch; *adeste, si quid mihi restat agendum.* And the like. Certainly, the Stoics bestowed too much cost upon death, and by their great preparations, made it appear more fearful. Better saith he, *qui finem vitae extremism inter munera ponat naturae.*^[7] It is as natural to die, as to be born; and to a little infant, perhaps, the one is as painful as the other. He that dies in an earnest pursuit, is like one that is wounded in hot blood; who, for the time, scarce feels the hurt; and therefore, a mind fixed, and bent upon somewhat that is good, doth avert me dolours of death: but above all, believe it, the sweetest canticle is, *nunc dimittis*^[8]; when a man hath obtained worthy ends, and expectations. Death hath this also; that it openeth the gate to good fame, and extinguisheth envy.

—*extinctus amabitur idem.*^[9]

[1] It is the trappings of death that terrify, rather than death itself.

[2] Consider how long you have been doing the same things: death may be desired not only by the valiant or the miserable, but also by the victim of ennui.

[3] Farewell, livia, keep after me the memory of our marriage.

[4] Tiberius was fast losing his bodily strength, but not his gift of dissimulation.

[5] Me seems I am becoming a God.

[6] Strike, if it be for the good of the Roman people.

[7] [A mind] that reckons the close of life one of Nature's boons.

[8] Now lettest thou [thy servant depart in peace] (Luke ii: 29).

[9] The same man [an object of ill-will while alive] shall be loved when his light is out.

4 Of Unity in Religion

Religion being the chief band of human society, it is a happy thing, when itself is well contained within the true band of unity. The quarrels, and divisions about religion, were evils unknown to the heathen. The reason was, because the religion of the heathen consisted rather in rites and ceremonies than in any constant belief. For you may imagine, what kind of faith theirs was, when the chief doctors, and fathers of their church, were the poets. But the true God haul this attribute, that he is a jealous God; and therefore, his worship and religion will endure no mixture, nor partner. We shall therefore speak a few words, concerning the unity of the church; what are the fruits thereof; what the bounds; and what means?

The fruits of unity (next unto the well pleasing of God, which is all in all) are two; me one, towards those that are without the church; the other, towards those that are within. For the former, it is certain, that heresies, and schisms are of all others the greatest scandals; yea more than corruption of manners. For as in the natural body, a wound or solution of continuity is worse than a corrupt humour, so in the spiritual. So that nothing, doth so much keep men out of the church, and drive men out of the church, as breach of unity: and therefore, whensoever it cometh to that pass, that one saith, *ecce in deserto*; another saith, *ecce in penetralibus*;^[1] that is, when some men seek Christ in the conventicles of heretics, and others in an outward face of a church, that voice had need continually to sound in men's ears, *nolite exire*, go not out. The doctor of the gentiles (the propriety of whose vocation drew him to have a special care of those without) saith: If an heathen come in and hear you speak with several tongues will he not say that you are mad? And certainly, it is little better when atheists, and profane persons, do hear of so many discordant and contrary opinions in religion; it doth avert them from the church, and maketh

them to sit down in the chair of the scorers. It is but a light thing, to be vouched in so serious a matter, but yet it expresseth well the deformity. There is a master of scoffing, that in his catalogue of books, of a feigned library, sets down this title of a book: the moms dance of heretics. For indeed, every sect of them hath a diverse posture, or cringe by themselves, which cannot but move derision in worldlings, and depraved politics, who are apt to condemn holy things.

As for the fruit towards those that are within; it is peace; which containe infinite blessings: it establisheth faith; it kindleth charity; the outward peace of the church distilleth into peace of conscience; and it turneth the labours of writing, and reading of controversies, into treaties of mortification, and devotion.

Concerning the bounds of unity; the true placing of them importeth exceedingly. There appear to be two extremes. For to certain zealants all speech of pacification is odious. Is it peace, Jehu? What hast thou to do with peace? Turn thee behind me. Peace is not the matter, but following and party. Contrariwise, certain Laodiceans, and lukewarm persons, think they may accommodate points of religion by middle ways, and taking part of both; and witty reconcilements; as if they would make an arbitrement, between God and man. Both these extremes are to be avoided; which will be done, if the league of Christians, penned by our saviour himself, were in the two cross clauses thereof soundly and plainly expounded; he that is not with us, is against us; and again, he that is not against us is with us: that is, if the points fundamental and of substance in religion were truly discerned and distinguished from points not merely of faith, but of opinion, order, or good intention. This is a thing may seem to many a matter trivial, and done already: but if it were done less partially, it would be embraced more generally.

Of this I may give only this advice, according to my small model. Men ought to take heed, of rending God's church, by two kinds of

controversies. The one is, when the matter of the point controverted is too small and light, not worth the heat and strife about it, kindled only by contradiction. For, as it is noted by one of the fathers; 'Christ's coat, indeed, had no seam: but the church's vesture was of divers colours;' whereupon he saith, *in veste varietas sit, scissura non sit*;^[2] they be two things, unity, and uniformity. The other is, when the matter of the point controverted is great, but it is driven to an over-great subtlety, and obscurity; so that it becometh a thing, rather ingenious, then substantial. A man that is of judgement and understanding, shall sometimes hear ignorant men differ and know well within himself, that those which so differ, mean one thing, and yet they themselves would never agree. And if it come so to pass, in that distance of judgement which is between man and man, shall we not think, that God above, that knows the heart, doth not discern that frail men, in some of their contradictions, intend the same thing, and accepteth of both? The nature of such controversies is excellently expressed by St Paul, in the warning and precept that he giveth concerning the same, *devita profanas vocum novitates, et oppositiones falsi nominis scientiae*.^[3] Men create oppositions, which are not; and put them into new terms, so fixed, as whereas the meaning ought to govern the term, the term in effect governeth the meaning. There be also two false peaces, or unities; the one, when the peace is grounded, but upon an implicit ignorance; for all colours will agree in the dark: the other, when it is pieced up, upon a direct admission of contraries, in fundamental points. For truth and falsehood, in such things, are like the iron and clay in the toes of Nebuchadnezzar's image; they may cleave, but they will not incorporate.

Concerning the means of procuring unity; men must beware that in the procuring, or muniting, of religious unity, they do not dissolve and deface the laws of charity, and of human society. There be two swords amongst Christians, the spiritual, and temporal; and both have their due office, and place, in the maintenance of religion. But we may

not take up the third sword, which is Mohammed's sword, or like unto it; that is, to propagate religion by wars, or by sanguinary prosecutions, to force consciences; except it be in cases of overt scandal, blasphemy, or intermixture of practice against the state; much less to nourish seditions; to authorise conspiracies and rebellions; to put the sword into the people's hands; and the like; tending to the subversion of all government, which is the ordinance of God. For this is but to dash the first table against the second; and so to consider men as Christians, as we forget that they are men. Lucretius the poet, when he beheld the act of Agamemnon, that could endure the sacrificing of his own daughter, exclaimed:

tantum religio potuit suadere malorum.^[4]

What would he have said, if he had known of the massacre in France, or the powder treason of England? he would have been seven times more epicure and atheist, than he was. For as the temporal sword is to be drawn with great circumspection, in cases of religion; so it is a thing monstrous, to put it into the hands of the common people. Let that be left unto the Anabaptists, and other furies. It was great blasphemy, when the devil said; I will ascend, and be like the highest; but it is greater blasphemy, to personate God, and bring him in saying; I will descend, and be like the Prince of Darkness; and what, is it better, to make the cause of religion to descend to the cruel and execrable actions of murdering princes, butchery of people, and subversion of states, and governments? Surely, this is to bring down the holy ghost, in stead of the likeness of a dove, in the shape of a vulture, or raven: and to set, out of the bark of a Christian church, a flag of a barque of pirates, and assassins. Therefore it is most necessary, that the church by doctrine and decree; princes by their sword; and all learnings, both Christian and moral, as by their mercury rod; do damn and send to Hell, for ever, those facts and opinions, tending to the support of me same; as hath been already in

good part done. Surely in counsels concerning religion, that counsel of the apostle would be prefixed; *ira hominis non implet justitiam dei*.^[5] And it was a notable observation, of a wise father, and no less ingenuously confessed; that those, which held and persuaded pressure of consciences were commonly interested therein, themselves, for their own ends.

[1] Behold, he is in the desert ...behold, he is in the secret chambers (Matthew xxiv: 26).

[2] Let there be variety in the garment, but no rent or cut.

[3] Avoid profane novelties of words and oppositions of science falsely so called (I Timothy vi: 20).

[4] So great the evils to which religion could prompt.

[5] The wrath of man doth not fulfil the justice of God (James i: 20).

5 Of Revenge

Revenge is a kind of wild justice; which the more man's nature runs to, the more ought law to weed it out. For as for the first wrong, it doth but offend the law; but the revenge of that wrong, putteth the law out of office. Certainly, in taking revenge, a man is but even with his enemy; but in passing it over, he is superior: for it is a prince's part to pardon. And Solomon, I am sure, saith, It is the glory of a man to pass by an offence. That which is past, is gone, and irrevocable; and wise men have enough to do, with things present, and to come: therefore, they do but trifle with themselves, that labour in past matters. There is no man doth a wrong, for the wrong's sake; but thereby to purchase himself profit, or pleasure, or honour, or the like. Therefore why should I be angry with a man, for loving himself better than me? And if any man should do wrong, merely out of ill nature, why, yet it is but like the thorn, or briar, which prick, and scratch, because they can do no other. The most tolerable sort of revenge, is for those wrongs which there is no law to remedy: but then, let a man take heed the revenge be such as there is no law to punish: else, a man's enemy is still before hand, and it is two for one. Some, when they take revenge, are desirous the party should know whence it cometh: this is the more generous. For the delight seemeth to be, not so much in doing the hurt, as in making the party repent: but base and crafty cowards are like the arrow that flieth in the dark. Cosmus, Duke of Florence, had a desperate saying, against perfidious or neglecting friends, as if those wrongs were unpardonable: You shall read (saith he) that we are commanded to forgive our enemies; but you never read, that we are commanded to forgive our friends. But yet the spirit of Job, was in a better tune; Shall we (saith he) take good at God's hands, and not be content to take evil also? And so of friends in a proportion. This is certain; that a man that studieth revenge, keeps his own wounds green, which otherwise would heal, and do well. Public

revenges, are, for the most part, fortunate; as that for the death of Caesar, for the death of Pertinax; for the death of Henry the Third of France; and many more. But in private revenges it is not so. Nay rather, vindictive persons live the life of witches; who as they are mischievous, so end they unfortunate.

6 Of Adversity

It was an high speech of Seneca (after the manner of the Stoics) that the good things which belong to prosperity are to be wished; but the good things that belong to adversity are to be admired. *Bona rerum secundarum optabilia; adversarum mirabilia*. Certainly if miracles be the command over nature, they appear most in adversity. It is yet a higher speech of his than the other (much too high for a heathen): It is true greatness to have in one the fragility of a man and the security of a God. *Vere magnum habere fragilitatem hominis securitatem dei*. This would have done better in poesy; where transcendencies are more allowed. And the poets indeed, have been busy with it; for it is, in effect, the thing which is figured in that strange fiction of the ancient poets, which seemeth not to be without mystery; nay, and to have some approach to the state of a Christian: that Hercules when he went to unbind Prometheus (by whom human nature is represented) sailed the length of the great ocean in an earthen pot or pitcher: lively describing Christian resolution; that saileth, in the frail barque of the flesh, through the waves of the world. But to speak in a mean. The virtue of prosperity is temperance; the virtue of adversity is fortitude: which in morals is the more heroical virtue. Prosperity is the blessing of the Old Testament; adversity is the blessing of the New; which carrieth the greater benediction, and the clearer revelation of God's favour. Yet, even in the Old Testament, if you listen to David's harp, you shall hear as many hearselike airs, as carols: and the pencil of the Holy Ghost hath laboured more, in describing the afflictions of Job, than the felicities of Solomon. Prosperity is not without many fears and distastes; and adversity is not without comforts and hopes. We see in needlework, and embroideries, it is more pleasing to have a lively work upon a sad and solemn ground, than to have a dark and melancholy work, upon a lightsome ground: judge therefore, of the pleasure of the heart, by the pleasure of the eye. Certainly, virtue is

like precious odours, most fragrant when they are incensed, or crushed: for prosperity doth best discover vice; but adversity doth best discover virtue.

7 Of Simulation & Dissimulation

Dissimulation is but a faint kind of policy, or wisdom; for it asketh a strong wit, and a strong heart, to know when to tell truth, and to do it Therefore it is the weaker sort of politics, that are the great dissemblers.

Tacitus saith; Livia sorted well, with the arts of her husband, and dissimulation of her son: attributing arts or policy to Augustus, and dissimulation to Tiberius. And again, when Lucianus encourageth Vespasian, to take arms against Vitellius, he saith; We rise not, against the piercing judgment of Augustus, nor the extreme caution or closeness of Tiberius. These properties of arts or policy, and dissimulation or closeness, are indeed habits and faculties, several, and to be distinguished. For if a man have that penetration of judgment, as he can discern, what things are to be laid open, and what to be secreted, and what to be showed at half lights, and to whom, and when (which indeed are arts of state, and arts of life, as Tacitus well calleth them), to him, a habit of dissimulation is a hindrance, and a poorneess. But if a man cannot obtain to that judgment, then it is left to him, generally, to be close, and a dissembler. For where a man cannot choose, or vary in particulars, there it is good to take the safest and wariest way in general; like the going softly by one that cannot well see. Certainly the ablest men that ever were, have had all an openness, and frankness of dealing; and a name of certainty, and veracity; but then they were like horses, well managed; for they could tell passing well when to stop, or turn: and at such times, when they thought the case indeed required dissimulation, if then they used it, it came to pass, that the former opinion, spread abroad of their good faith, and clearness of dealing, made them almost invisible.

There be three degrees, of this hiding and veiling of a man's self. The first closeness, reservation, and secrecy; when a man leaveth himself without observation, or without hold to be taken, what he is. The second dissimulation, in the negative; when a man lets fall signs, and arguments, that he is not, that he is. And the third simulation, in the affirmative; when a man industriously, and expressly, feigns and pretends to be that he is not.

For the first of these, secrecy: it is indeed, the virtue of a confessor, and assuredly, the secret man heareth many confessions; for who will open himself to a blab or a babbler? But if a man be thought secret, it inviteth discovery; as the more close air, sucketh in the more open: and as in confession, the revealing is not for worldly use, but for the ease of a man's heart, so secret men come to the knowledge of many things, in that kind; while men rather discharge their minds, than impart their minds. In few words, mysteries are due to secrecy. Besides (to say truth) nakedness is uncomely, as well in mind, as body; and it addeth no small reverence, to men's manners, and actions, if they be not altogether open. As for talkers and futile persons, they are commonly vain, and credulous withal. For he that talketh what he knoweth, will also talk what he knoweth not. Therefore set it down; that an habit of secrecy is both politic and moral. And in this part, it is good, that a man's face give his tongue leave to speak. For the discovery of a man's self by the tracts of his countenance, is a great weakness, and betraying; by how much, it is many times more marked and believed, than a man's words.

For the second, which is dissimulation. It followeth many times upon secrecy, by a necessity: so that, he that will be secret, must be a dissembler, in some degree. For men are too cunning, to suffer a man to keep an indifferent carriage between both, and to be secret, without swaying the balance, on either side. They will so beset a man with questions, and draw him on, and pick it out of him, that without an

absurd silence, he must show an inclination, one way; or if he do not, they will gather as much by his silence, as by his speech. As for equivocations, or oraculous speeches, they cannot hold out long. So that no man can be secret, except he give himself a little scope of dissimulation; which is, as it were, but the skirts or train of secrecy.

But for the third degree, which is simulation, and false profession; that I hold more culpable, and less politic; except it be in great and rare matters. And therefore a general custom of simulation (which is this last degree) is a vice, rising either of a natural falseness, or fearfulness; or of a mind, that hath some main faults; which because a man must needs disguise, it maketh him practise simulation in other things, lest his hand should be out of use.

The great advantages of simulation and dissimulation are three. First to lay asleep opposition, and to surprise. For where a man's intentions are published, it is an alarum, to call up all that are against them. The second is, to reserve to a man's self a fair retreat: for if a man engage himself, by a manifest declaration, he must go through, or take a fall. The third is, the better to discover the mind of another. For to him that opens himself, men will hardly show themselves adverse; but will (fair) let him go on, and turn their freedom of speech, to freedom of thought. And therefore, it is a good shrewd proverb of the Spaniard; tell a lie, and find a troth. As if there were no way of discovery, but by simulation. There be also three disadvantages, to set it even. The first, that simulation and dissimulation commonly cany with them a show of fearfulness, which in any business doth spoil the feathers, of round flying up to the mark. The second, that it puzzleth and perplexeth the conceits of many that perhaps would otherwise cooperate with him; and makes a man walk, almost alone, to his own ends. The third, and greatest is, that it depriveth a man of one of the most principal instruments for action; which is trust and belief. The best composition and temperature is to have openness in fame and

opinion; secrecy in habit; dissimulation in seasonable use; and a power to feign, if there be no remedy.

掌玺大臣男爵尼古拉·培根（1510—1579），弗朗西斯·培根的父亲。

8 Of Parents & Children

The joys of parents are secret; and so are their griefs, and fears: they cannot utter the one; nor they will not utter the other. Children sweeten labours; but they make misfortunes more bitter: they increase the cares of life; but they mitigate the remembrance of death. The perpetuity by generation is common to beasts; but memory, merit, and noble works, are proper to men: and surely a man shall see the noblest works and foundations have proceeded from childless men; which have sought to express the images of their minds where those of their bodies have failed: so the care of posterity is most in them that have no posterity. They that are the first raisers of their houses, are most indulgent towards their children; beholding them, as the continuance, not only of their kind, but of their work; and so both children and creatures.

The difference in affection of parents towards their several children is many times unequal; and sometimes unworthy; especially in the mother, as Solomon saith; A wise son rejoiceth the father, but an ungracious son shames the mother. A man shall see, where there is a house full of children, one or two of the eldest respected, and the youngest made wantons; but in the midst, some that are, as it were forgotten, who many times, nevertheless, prove the best. The illiberality of parents, in allowance towards their children, is an harmful error, makes them base; acquaints them with shifts; makes them sort with mean company; and makes them surfeit more, when they come to plenty: and therefore, the proof is best, when men keep their authority towards their children, but not their purse. Men have a foolish manner (both parents, and schoolmasters, and servants) in creating and breeding an emulation between brothers, during childhood, which many times sorted to discord, when they are men; and disturbeth families. The Italians make little difference between

children, and nephews, or near kinsfolk; but so they be of the lump, they care not, though they passe not through their own body. And, to say truth, in nature it is much a like matter, in so much, that we see a nephew sometimes resembleth an uncle, or a kinsman, more than his own parent; as the blood happens. Let parents choose betimes the vocations and courses they mean their children should take; for then they are most flexible; and let them not too much apply themselves to the disposition of their children, as thinking they will take best to that, which they have most mind to. It is true, that if the affection or aptness of the children be extraordinary, then it is good not to cross it; but generally, the precept is good; *optimum elige, suave et facile illud faciet consuetudo*.^[1] Younger brothers are commonly fortunate, but seldom or never where the elder are disinherited.

爱丽丝·巴南。培根在45岁时娶市参事会参政员的女儿爱丽丝·巴南为妻。

[1] Choose the best, and custom will make it pleasant and easy.

9 Of Marriage & Single Life

He that hath wife and children, hath given hostages to fortune; for they are impediment to great enterprises, either of virtue, or mischief. Certainly, the best works, and of greatest merit for the public, have proceeded from the unmarried or childless men; which both in affection, and means, have married and endowed the public. Yet it were great reason, that those that have children, should have greatest care of future times; unto which, they know, they must transmit their dearest pledges. Some there are, who though they lead a single life, yet their thoughts do end with themselves, and account future times impertinences. Nay, there are some other, that account wife and children but as bills of charges. Nay more, there are some foolish rich covetous men, that take a pride in having no children, because they may be thought so much the richer. For perhaps, they have heard some talk; such a one is a great rich man; and another except to it; Yea, but he hath a great charge of children: as if it were an abatement to his riches. But the most ordinary cause of a single life is liberty; especially in certain self-pleasing and humorous minds, which are so sensible of every restraint, as they will go near to think their girdles and garters to be bonds and shackles. Unmarried men are best friends; best masters; best servants; but not always best subjects; for they are light to run away; and almost all fugitives are of that condition. A single life doth well with church men: for charity will hardly water the ground, where it must first fill a pool. It is indifferent for judges and magistrates: for if they be facile, and corrupt, you shall have a servant five times worse than a wife. For soldiers, I find the generals commonly in their hortatives, put men in mind of their wives and children: and I think the despising of marriage amongst the Turks, maketh the vulgar soldier more base. Certainly, wife and children are a kind of discipline of humanity: and single men though they be many times more charitable, because their means are less exhaust; yet, on

the other side, they are more cruel, and hard hearted (good to make severe inquisitors), because their tenderness is not so oft called upon. Grave natures, led by custom, and therefore constant, are commonly loving husbands; as was said of Ulysses; *vetulam suam*^[1] *praetulit immortalitati*. Chaste women are often proud and forward, as presuming upon the merit of their chastity. It is one of the best bonds, both of chastity and obedience, in the wife, if she think her husband wise; which she will never do, if she find him jealous. Wives are young men's mistresses; companions for middle age; and old men's nurses. So as a man may have a quarrel to many, when he will. But yet, he was reputed one of the wise men, that made answer to the question, when a man should marry? A young man not yet, an elder man not at all. It is often seen, that bad husbands have very good wives; whether it be, that it raiseth the price of their husband's kindness, when it comes; or that the wives take a pride in their patience. But this never fails, if the bad husbands were of their own choosing, against their friends' consent; for then, they will be sure to make good their own folly.

[1] He preferred his old wife to immortality [i.e. Penelope to Calypso].

10 Of Envy

There be none of the affections, which have been noted to fascinate or bewitch, but love, and envy. They both have vehement wishes; they frame themselves readily into imaginations, and suggestions; and they come easily into the eye; especially upon the presence of the objects; which are the points that conduce to fascination, if any such thing there be. We see likewise, the scripture calleth envy an evil eye: and the astrologers call the evil influences of the stars, evil aspects; so that still, there seemeth to be acknowledged, in the act of envy, an ejaculation or irradiation of the eye. Nay, some have been so curious as to note, that the times, when the stroke, or percussion of an envious eye doth most hurt, are when the party envied is beheld in glory, or triumph; for that sets an edge upon envy; and besides, at such times, the spirit of the person envied do come forth most into the outward parts, and so meet the blow.

But leaving these curiosities (though not unworthy, to be thought on, in fit place), we will handle, what persons are apt to envy others; what persons are most subject to be envied themselves; and, what is the difference between public and private envy.

A man that hath no virtue in himself, ever envieth virtue in others. For men's minds will either feed upon their own good, or upon others' evil; and who wanteth the one, will prey upon the other, and who so is out of hope to attain to another's virtue, will seek to come at even hand, by depressing another's fortune.

A man that is busy, and inquisitive, is commonly envious: for to know much of other men's matters, cannot be, because all that ado may concern his own estate: therefore it must needs be, that he taketh a kind of play-pleasure, in looking upon the fortunes of others; neither can he, that mindeth but his own business, find much matter for envy.

For envy is a gadding passion, and walketh the streets, and doth not keep home; *non est curiosus, quin idem malevolus*.^[1]

Men of noble birth are noted to be envious towards new men, when they rise. For the distance is altered; and it is like a deceit of the eye, that when others come on, they think themselves go back.

Deformed persons, and eunuchs, and old men, and bastards, are envious: for he that cannot possibly mend his own case, will do what he can to impair another's; except these defects light upon a very brave and heroical nature; which thinketh to make his natural wants, part of his honour: in that it should be said, that an eunuch, or a lame man, did such great matters; affecting the honour of a miracle; as it was in Narses the eunuch, and Agesilaus, and Tamberlanes, that were lame men.

The same is the case of men that rise after calamities, and misfortunes; for they are, as men fallen out with the times; and think other men's harms a redemption of their own sufferings.

They that desire to excel in too many matters, out of levity and vain glory, are ever envious; for they cannot want work; it being impossible, but many, in some one of those things, should surpass them. Which was the character of Hadrian the Emperor, that mortally envied poets, and painters, and artificers, in works wherein he had a vein to excel.

Lastly, near kinsfolk, and fellows in office, and those that have been bred together, are more apt to envy their equals, when they are raised. For it doth upbraid unto them their own fortunes; and pointeth at them, and cometh oftener into their remembrance, and incurreth likewise more into the note of others: and envy ever redoubleth from speech and fame. Cain's envy was the more vile and malignant towards his brother Abel, because, when his sacrifice was better accepted, there was nobody to look on. Thus much for those that are

apt to envy.

Concerning those that are more or less subject to envy: first, persons of eminent virtue, when they are advanced, are less envied. For their fortune seemeth but due unto them; and no man envieth me payment of a debt, but rewards and liberality rather. Again, envy is ever joined with the comparing of a man's self; and where there is no comparison, no envy; and therefore kings are not envied but by kings. Nevertheless, it is to be noted, that unworthy persons are most envied at their first coming in, and afterwards overcome it better; whereas contrariwise, persons of worth and merit are most envied when their fortune continueth long. For by that time, though their virtue be the same, yet it hath not the same lustre; for fresh men grow up, that darken it.

Persons of noble blood are less envied in their rising: for it seemeth but right, done to their birth. Besides, there seemeth not much added to their fortune; and envy is as the sunbeams, that beat hotter upon a bank or steep rising ground than upon a flat. And for the same reason, those that are advanced by degrees are less envied than those that are advanced suddenly, and *per saltum*.^[2]

Those that have joined with their honour, great travels, cares, or perils, are less subject to envy. For men think, that they earn their honours hardly, and pity them sometimes; and pity ever healeth envy: wherefore, you shall observe that the more deep and sober sort of politic persons, in their greatness, are ever bemoaning themselves, what a life they lead; chanting a *quanta patimur*.^[3] Not that they feel it so, but only to abate the edge of envy. But this is to be understood, of business that is laid upon men, and not such as they call unto themselves. For nothing increaseth envy more, than an unnecessary and ambitious engrossing of business. And nothing doth extinguish envy more, than for a great person to preserve all other inferior officers, in their full rights, and pre-eminence of their places. For by

that means, there be so many screens between him and envy.

Above all, those are most subject to envy, which carry the greatness of their fortunes in an insolent and proud manner: being never well, but while they are showing how great they are, either by outward pomp, or by triumphing over all opposition, or competition; whereas wise men will rather do sacrifice to envy; in suffering themselves, sometimes of purpose to be crossed, and overborne in things, that do not much concern them. Notwithstanding, so much is true; that the carriage of greatness, in a plain and open manner (so it be without arrogance, and vain glory) doth draw less envy, than if it be in a more crafty and cunning fashion. For in that course, a man doth but disavow fortune; and seemeth to be conscious of his own want in worth; and doth but teach others to envy him.

Lastly, to conclude this part; as we said in the beginning, that the act of envy, had somewhat in it, of witchcraft; so there is no other cure of envy, but the cure of witchcraft: and that is, to remove the lot (as they call it) and to lay it upon another. For which purpose, the wiser sort of great persons bring in ever upon the stage somebody, upon whom to derive the envy, that would come upon themselves; sometimes upon ministers, and servants; sometimes upon colleagues and associates; and the like; and for that turn, there are never wanting, some persons of violent and undertaking natures, who so they may have power, and business, will take it at any cost.

Now to speak of public envy. There is yet some good in public envy; whereas in private, there is none. For public envy is as an ostracism, that eclipseth men, when they grow too great. And therefore it is a bridle also to great ones, to keep them within bounds.

This envy, being in the Latin word *invidia*, goeth in the modem languages, by the name of discontentment: of which we shall speak in handling sedition. It is a disease, in a stale, like to infection. For as

infection spreadeth upon that which is sound, and tainteth it; so when envy is gotten once into a state, it traduceth even the best actions thereof, and turneth them into an ill odour. And therefore, there is little won by intermingling of plausible actions. For that doth argue but a weakness, and fear of envy, which hurteth so much the more, as it is likewise usual in infections; which if you fear them, you call them upon you.

This public envy seemeth to beat chiefly upon principal officers, or ministers, rather than upon kings, and estates themselves. But this is a sure rule, that if the envy upon the minister be great, when the cause of it in him is small; or if the envy be general, in a manner, upon all the ministers of an estate; then the envy (though hidden) is truly upon the estate itself. And so much of public envy or discontentment, and the difference thereof from private envy, which was handled in the first place.

We will add this, in general, touching the affection of envy; that of all other affections, it is the most importune, and continual. For of other affections, mere is occasion given, but now and then: and therefore, it was well said, *invidia festos dies non agit*.^[1] For it is ever working upon some or other. And it is also noted, that love and envy do make a man pine. Which other affections do not; because they are not so continual. It is also the vilest affection, and the most depraved; for which cause, it is the proper attribute of the devil, who is called:the envious man, that soweth tares amongst the wheat by night. As it always cometh to pass, that envy worketh subtly, and in the dark; and to the prejudice of good things, such as is the wheat.

[1] An inquisitive man is sure to be malevolent also.

[2] at a bound

[3] How great are our sufferings!

[4] Envy keeps no holidays.

11 Of Love

The stage is more beholding to love, than the life of man. For as to the stage, love is ever matter of comedies, and now and then of tragedies: but in life, it doth much mischief: sometimes like a siren; sometimes like a fury. You may observe, that amongst all the great and worthy persons (whereof the memory remaineth, either ancient or recent) there is not one, that hath been transported to the mad degree of love: which shows, that great spirits, and great business, do keep out this weak passion. You must except, nevertheless, Marcus Antonius the half partner of the empire of Rome; and Appius Claudius the *decemvir*, and lawgiver: whereof the former was indeed a voluptuous man, and inordinate; but the latter was an austere and wise man: and therefore it seems (though rarely) that love can find entrance, not only into an open heart; but also into a heart well fortified, if watch be not well kept. It is a poor saying of Epicurus, *satis magnum alter alteri theatrum sumus*:^[1] as if man, made for the contemplation of heaven and all noble objects, should do nothing, but kneel before a little idol, and make himself subject, though not of the mouth (as beasts are) yet of the eye; which was given him for higher purposes. It is a strange thing, to note the excess of this passion; and how it braves the nature and value of things; by this, that the speaking in a perpetual hyperbole is comely in nothing but in love. Neither is it merely in the phrase; for whereas it hath been well said, that the arch-flatterer, with whom all the petty flatterers have intelligence, is a man's self; certainly, the lover is more. For there was never proud man thought so absurdly well of himself, as the lover doth of me person loved: and therefore, it was well said; that it is impossible to love, and to be wise. Neither doth this weakness appear to others only, and not to the party loved; but to the loved, most of all: except the love be reciproque. For it is a true rule, that love is ever rewarded, either with the reciproque, or with an inward and secret contempt. By how much

the more, men ought to beware of this passion, which loseth not only other things, but itself. As for the other losses, the poet's relation doth well figure them; that he that preferred Helena, quitted the gifts of Juno, and Pallas. For whosoever esteemeth too much of amorous affection, quitteth both riches, and wisdom. This passion hath his floods in the very times of weakness; which are, great prosperity; and great adversity; though this latter hath been less observed. Both which times kindle love, and make it more fervent, and therefore show it to be the child of folly. They do best, who, if they cannot but admit love, yet make it keep quarter: and sever it wholly from their serious affairs, and actions of life: for if it check once with business, it troubleth men's fortunes, and maketh men, that they can no ways be true to their own ends. I know not how, but martial men are given to love: I think it is, but as they are given to wine; for perils commonly ask to be paid in pleasures. There is in man's nature, a secret inclination, and motion, towards love of others; which, if it be not spent upon some one, or a few, doth naturally spread itself towards many; and maketh men become humane, and charitable; as it is seen sometime in friars. Nuptial love maketh mankind; friendly love perfecteth it; but wanton love corrupteth and embaseth it.

[1] We are, one to another, a theatre (or spectacle) ample enough.

12 Of Great Place

Men in great place, are thrice servants: servants of the sovereign or state; servants of fame; and servants of business. So as they have no freedom; neither in their persons; nor in their actions; nor in their times. It is a strange desire, to seek power, and to lose liberty; or to seek power over others, and to lose power over a man's self. The rising unto place is laborious; and by pains men come to greater pains; and it is sometimes base; and by indignities, men come to dignities. The standing is slippery, and the regress is either a downfall, or at least an eclipse, which is a melancholy thing. *Cum non sis, qui fueris, non esse, curvelis vivere.*^[1] Nay, retire men cannot, when they would; neither will they, when it were reason: but are impatient of privateness, even in age, and sickness, which require the shadow: like old townsmen, that will be still sitting at their street door, though thereby they offer age to scorn. Certainly great persons had need to borrow other men's opinions, to think themselves happy; for if they judge by their own feeling, they cannot find it: but if they think with themselves, what other men think of them, and that other men would fain be as they are, then they are happy, as it were by report; when perhaps they find the contrary within. For they are the first that find their own griefs; though they be the last that find their own faults. Certainly, men in great fortunes are strangers to themselves, and while they are in the pulse of business, they have no time to tend their health, either of body, or mind. *Illi mors gravis incubat, qui notus nimis omnibus, ignotus moritur sibi.*^[2] In place, there is licence to do good, and evil; whereof the latter is a curse; for in evil, the best condition is, not to will; the second, not to can. But power to do good, is the true and lawful end of aspiring. For good thoughts (though God accept them), yet towards men, are little better than good dreams; except they be put in act; and that cannot be without power, and place; as the vantage, and commanding ground. Merit, and good works, is the

end of man's motion; and conscience of the same is the accomplishment of man's rest. For if a man can be partaker of God's theatre, he shall likewise be partaker of God's rest *Et conversus Deus, ut aspiceret opera quae fecerunt manus suae, vidit quod omnia essent bona nimis*;^[3] and then the Sabbath. In the discharge of thy place, set before thee the best examples; for imitation is a globe of precepts. And after a time, set before thee thine own example; and examine thy self strictly, whether thou didst not best at first. Neglect not also the examples of those that have carried themselves ill in the same place: not to set off thy self, by taxing their memory; but to direct thy self, what to avoid. Reform therefore, without bravery, or scandal, of former times, and persons; but yet set it down to thyself, as well to create good precedents, as to follow them. Reduce things to the first institution, and observe wherein, and how, they have degenerate; but yet ask counsel of both times; of the ancient time, what is best; and of the latter time, what is fittest. Seek to make thy course regular; that men may know beforehand what they may expect: but be not too positive, and peremptory; and express thyself well, when thou digresses from thy rule. Preserve the right of thy place; but stir not questions of jurisdiction: and rather assume thy right in silence and *de facto*,^[4] than voice it with claims and challenges. Preserve likewise, the rights of inferior places; and think it more honour to direct in chief, than to be busy in all. Embrace and invite helps, and advices, touching the execution of thy place; and do not drive away such as bring thee information, as meddlers; but accept of them in good part. The vices of authority are chiefly four: delays; corruption; roughness; and facility. For delays; give easy access; keep times appointed; go through with that which is in hand; and interlace not business, but of necessity. For corruption; do not only bind thine own hands, or thy servants' hands, from taking; but bind the hands of suitors also from offering. For integrity used doth the one; but integrity professed, and with a manifest detestation of bribery, doth the other. And avoid not only the fault, but the suspicion. Whosoever is found variable, and

changeth manifestly, without manifest cause, giveth suspicion of corruption. Therefore, always, when thou changes thine opinion, or course, profess it plainly, and declare it, together with the reasons that move thee to change; and do not think to steal it. A servant, or a favourite, if he be inward, and no other apparent cause of esteem, is commonly thought but a by-way, to close corruption. For roughness; it is a needless cause of discontent: severity breedeth fear, but roughness breedeth hate. Even reproofs from authority ought to be grave, and not taunting. As for facility; it is worse than bribery. For bribes come but now and then; but if importunity or idle respects lead a man, he shall never be without. As Solomon saith; to respect persons is not good; for such a man will transgress for a piece of bread. It is most true, that was anciently spoken; A place sheweth the man: and it showeth some to the better, and some to the worse: *omnium consensu, capax imperii, nisi imperasset*;^[5] saith Tacitus of Galba: but of Vespasian he saith; *solus imperantium Vespasianus mutatus in melius*.^[6] Though the one was meant of sufficiency, the other of manners, and affection. It is an assured sign of a worthy and generous spirit, whom honour amends. For honour is, or should be, the place of virtue: and as in nature things move violently to their place, and calmly in their place: so virtue in ambition is violent, in authority settled and calm. All rising to great place is by a winding stair: and if there be factions, it is good to side a man's self, whilst he is in the rising; and to balance himself, when he is placed. Use the memory of thy predecessor fairly, and tenderly; for if thou dost not, it is a debt will sure be paid, when thou art gone. If thou have colleagues, respect them, and rather call them, when they look not for it, than exclude them, when they have reason to look to be called. Be not too sensible, or too remembering, of my place in conversation and private answers to suitors; but let it rather be said; When he sits in place, he is another man.

[1] When you are no longer the man you have been, there is no reason why you should wish to live.

[2] Death falls heavy on him who, too well known to all others, dies to himself unknown.

[3] And God turned to behold the works which his hands had made, and saw that all were very good (Genesis i: 31).

[4] as a fact, as an actual possession

[5] All men deemed him fit for empire—had he never become emperor.

[6] Vespasian, alone among the emperors, was changed for the better [by empire].

13 Of Boldness

It is a trivial grammar school text, but yet worthy a wise man's consideration. Question was asked of Demosthenes: what was the chief part of an orator? He answered, Action; what next? Action; what next again? Action. He said it, that knew it best; and had by nature, himself, no advantage in that he commended. A strange thing, that that part of an orator, which is but superficial, and rather the virtue of a player, should be placed so high, above those other noble parts, of invention, elocution, and the rest: nay almost alone, as if it were all in all. But the reason is plain. There is in human nature, generally, more of the fool than of the wise, and therefore those faculties, by which the foolish part of men's minds is taken, are most potent. Wonderful like is the case of boldness in civil business; what first? Boldness; what second, and third? Boldness. And yet boldness is a child of ignorance and baseness, far inferior to other parts. But nevertheless, it doth fascinate, and bind hand and foot, those that are either shallow in judgment, or weak in courage, which are the greatest part; yea, and prevaieth with wise men, at weak times. Therefore, we see it hath done wonders, in popular states; but with senates and princes less; and more ever upon the first entrance of bold persons into action, man soon after, for boldness is an ill keeper of promise. Surely, as there are mountebanks for the natural body, so are there mountebanks for the political body: men that undertake great cures; and perhaps have been lucky, in two or three experiments, but want the grounds of science; and therefore cannot hold out. Nay you shall see a bold fellow, many times, do Mohammed's miracle. Mohammed made the people believe, that he would call an hill to him; and from the top of it, offer up his prayers, for me observers of his law. The people assembled; Mohammed called the hill to come to him, again, and again; and when the hill stood still, he was never a whit abashed, but said; if the hill will not come to Mohammed, Mohammed must go to the hill. So

these men, when they have promised great matters, and failed most shamefully, (yet if they have the perfection of boldness) they will but slight it over, and make a turn, and no more ado. Certainly, to men of great judgment, bold persons are a sport to behold; nay, and to the vulgar also, boldness hath somewhat of the ridiculous. For if absurdity be the subject of laughter, doubt you not, but great boldness is seldom without some absurdity. Especially, it is a sport to see, when a bold fellow is out of countenance; for that puts his face into a most shrunken and wooden posture; as needs it must; for in bashfulness, the spirits do a little go and come; but with bold men, upon like occasion, they stand at a stay; like a stale at chess, where it is no mate, but yet the game cannot stir. But this last, were fitter for a satire, than for a serious observation. This is well to be weighed; that boldness is ever blind: for it seeth not dangers and inconveniences. Therefore, it is ill in counsel, good in execution: so that the right use of bold persons is, that they never command in chief, but be seconds, and under the direction of others. For in counsel, it is good to see dangers; and in execution, not to see them, except they be very great.

14 Of Goodness, & Goodness of Nature

I take goodness in this sense, the affecting of the weal of men, which is that the Grecians call philanthropia; and the word humanity (as it is used) is a little too light, to express it. Goodness I call the habit, and goodness of nature the inclination. This of all virtues, and dignities of the mind, is the greatest; being the character of the deity: and without it, man is a busy, mischievous, wretched thing; no better than a kind of vermin. Goodness answers to the theological virtue charity, and admits no excess, but error. The desire of power in excess, caused the angels to fall; the desire of knowledge in excess, caused man to fall; but in charity, there is no excess; neither can angel, or man, come in danger by it. The inclination to goodness is imprinted deeply in the nature of man: in so much, that if it issue not towards men, it will take unto other living creatures: as it is seen in the Turks, a cruel people, who nevertheless are kind to beasts, and give alms to dogs, and birds: in so much, as Busbechius reporteth; a Christian boy in Constantingple had like to have been stoned, for gagging, in a waggishness, a long billed fowl. Errors, indeed, in this virtue of goodness, or charity, may be committed. The Italians have an ungracious proverb; *tanto buon che val niente*: so good, that he is good for nothing. And one of the doctors of Italy, Nicholas Machiavelli, had the confidence to put in writing, almost in plain terms: That the Christian faith had given up good men, in prey, to those that are tyrannical, and unjust Which he spoke, because indeed there was never law, or sect, or opinion, did so much magnify goodness, as the Christian religion doth. Therefore to avoid the scandal, and the danger both, it is good to take knowledge of the errors of an habit so excellent. Seek the good of other men, but be not in bondage to their faces, or fancies; for that is but facility, or softness; which taketh an

honest mind prisoner. Neither give thou Aesop's cock a gem, who would be better pleased, and happier, if he had had a barley corn. The example of God teacheth the lesson truly: he sendeth his rain, and maketh his sun to shine, upon the just, and unjust; but he doth not rain wealth, nor shine honour, and virtues, upon men equally. Common benefits are to be communicate with all; but peculiar benefits, with choice. And beware, how in making the portraiture, thou breakest the pattern: for divinity maketh the love of ourselves the pattern; the love of our neighbours but the portraiture. Sell all thou hast, and give it to me poor, and follow me: but sell not all thou hast, except thou come, and follow me; that is, except thou have a vocation, wherein thou may do as much good with little means as with great: for otherwise, in feeding the streams, thou driest the fountain. Neither is there only a habit of goodness, directed by right reason; but there is, in some men, even in nature, a disposition towards it: as on the other side, there is a natural malignity. For there be, that in their nature do not affect the good of others. The lighter sort of malignity, turneth but to a crossness, or forwardness, or aptness to oppose, or difficultness, or the like; but the deeper sort, to envy, and mere mischief. Such men, in other men's calamities, are, as it were, in season, and are ever on the loading part; not so good as the dogs that licked Lazarus's sores; but like flies, that are still buzzing upon anything that is raw; *misanthropi*, that make it their practice, to bring men to the bough; and yet have never a tree for the purpose, in their gardens, as Timon had. Such dispositions are the very errors of human nature: and yet they are the fittest timber, to make great politics of: like to knee timber, that is good for ships that are ordained to be tossed; but not for building houses, that shall stand firm. The parts and signs of goodness are many. If a man be gracious, and courteous to strangers, it shows he is a citizen of the world; and that his heart is no island, cut off from other lands; but a continent, that joins to them. If he be compassionate towards the afflictions of others, it shows that his heart is like the noble tree, that is wounded itself,

when it gives the balm. If he easily pardons and remits offences, it shows that his mind is planted above injuries; so that he cannot be shot. If he be thankful for small benefits, it shows that he weighs men's minds, and not their trash. But above all, if he have St Paul's perfection, that he would wish to be an anathema from Christ, for the salvation of his brethren, it shows much of a divine nature, and a kind of conformity with Christ himself.

包莱男爵，英国驻法大使，培根追随其至巴黎学习外交事务。

15 Of Nobility

We will speak of nobility, first as a portion of an estate; then as a condition of particular persons. A monarchy, where there is no nobility at all, is ever a pure and absolute tyranny; as that of the Turks. For nobility attempts sovereignty, and draws the eyes of the people somewhat aside from the line royal. But for democracies, they need it not; and they are commonly more quiet, and less subject to sedition, then where there are stirps of nobles. For men's eyes are upon the business, and not upon the persons: or if upon the persons, it is for the business's sake, as fittest, and not for flags and pedigree. We see the Switzers last well, notwithstanding their diversity of religion, and of cantons. For utility is their bond, and not respects. The united provinces of the Low Countries, in their government, excel: for where there is an equality, the consultations are more indifferent, and the payments and tributes more cheerful. A great and potent nobility addeth majesty to a monarch, but diminisheth power, and putteth life and spirit into the people, but presseth their fortune. It is well, when nobles are not too great for sovereignty, nor for justice; and yet maintained in that height, as the insolence of inferiors may be broken upon them, before it come on too fast upon the majesty of kings. A numerous nobility causeth poverty and inconvenience in a state: for it is a surcharge of expense; and besides, it being of necessity, that many of the nobility fall in time to be weak in fortune, it maketh a kind of disproportion, between honour and means.

As for nobility in particular persons; it is a reverend thing, to see an ancient castle or building not in decay; or to see a fair timber tree, sound and perfect: how much more, to behold an ancient noble family, which hath stood against the waves and weathers of time. For new nobility is but the act of power, but ancient nobility is the act of time. Those that are first raised to nobility are commonly more

virtuous, but less innocent, than their descendants: for there is rarely any rising, but by a co-mixture, of good and evil arts. But it is reason the memory of their virtues remain to their posterity; and their faults die with themselves. Nobility of birth commonly abateth industry: and he that is not industrious envieth him that is. Besides, noble persons cannot go much higher, and he that standeth at a stay, when others rise, can hardly avoid motions of envy. On the other side, nobility extinguisheth the passive envy, from others towards them; because they are in possession of honour. Certainly kings, that have able men of their nobility, shall find ease in employing them; and a better slide into their business: for people naturally bend to them, as born in some sort to command.

16 Of Seditious & Troubles

Shepherds of people had need know the calendars of tempests in state; which are commonly greatest, when things grow to equality; as natural tempests are greatest about the equinoxes. And as there are certain hollow blasts of wind, and secret swellings of seas, before a tempest, so are there in states:

*ille etiam caecos instare tumultus
saepe monet, fraudesque et operta tumescere bella.* [\[1\]](#)

Libels, and licentious discourses against the state, when they are frequent and open; and in like sort, false news, often running up and down, to the disadvantage of the state, and hastily embraced; are amongst the signs of troubles. Virgil giving the pedigree of fame, saith, she was sister to the giants.

*Illam terra parens ira irritata deorum,
extremam (ut perhibent) Coeo Enceladoque sororem
progeniit.* [\[2\]](#)

As if fame were the relics of seditious past; but they are no less, indeed, the preludes of seditious to come. Howsoever, he noteth it right, that seditious tumults and seditious fame differ no more, but as brother and sister, masculine and feminine; especially, if it come to that, that the best actions of a state, and the most plausible, and which ought to give greatest contentment, are taken in ill sense, and traduced: for that shows the envy great, as Tacitus saith; *conflata conflata magna invidia, seu bene, seu male, gesta premunt.* [\[3\]](#) Neither doth it follow, that because these fames are a sign of troubles, that the suppressing of them with too much severity, should be a remedy of troubles. For the despising of them, many times, checks them best; and the going about to stop them, doth but make a wonder long-lived.

Also that kind of obedience, which Tacitus speaketh of, is to be held suspected; *erant in officio, sed tamen qui mallent mandata imperantium interpretari, quam exsequi*;^[4] disputing, excusing, calling upon mandates and directions, is a kind of shaking off the yoke, and assay of disobedience: especially, if in those disputings they which are for the direction, speak fearfully, and tenderly; and those that are against it, audaciously.

Also, as Machiavelli noteth well; when princes, that ought to be common parents, make themselves as a party, and lean to a side, it is as a boat that is overthrown by uneven weight on the one side; as was well seen, in the time of Henry the Third of France: for first, himself entered league for the Protestants; and presently after, the same league was turned upon himself. For when the authority of princes is made but an accessory to a cause; and that there be other bands, that tie faster than the band of sovereignty, kings begin to be put almost out of possession.

Also, when discords and quarrels and factions are carried openly, and audaciously; it is a sign, the reverence of government is lost. For the motions of the greatest persons in a government, ought to be, as the motions of the planets, under *primum mobile*;^[5] according to the old opinion: which is, that every of them is carried swiftly, by the highest motion, and softly in their own motion. And therefore, when great ones, in their own particular motion, move violently, and, as Tacitus expresseth it well, *liberius quam ut imperantium meminissent*;^[6] it is a sign, the orbs are out of frame For reverence is that, wherewith princes are girth from God; who threatneth the dissolving thereof; *solvam cingula regum*.^[7]

So when any of the four pillars of government are mainly shaken, or weakened (which are religion, justice, counsel, and treasure), men had need to pray for fair weather. But let us pass from this part of predictions (concerning which, nevertheless, more light may be taken,

from that which followeth); and let us speak first of the materials of seditions; then of the motives of them; and thirdly of the remedies.

Concerning the materials of seditions. It is a thing well to be considered: for the surest way to prevent seditions (if the times do bear it), is to take away the matter of them. For if there be fuel prepared, it is hard to tell, whence the spark shall come, that shall set it on fire. The matter of seditions is of two kinds; much poverty, and much discontentment. It is certain, so many overthrown estates, so many votes for troubles. Lucan noteth well the state of Rome, before the civil war.

*Hinc usura vorax, rapidumque in tempore foenus,
hinc concussa fides, et multis utile bellum.*^[8]

This same *mutis utile bellum* is an assured and infallible sign of a state disposed to seditions and troubles. And if this poverty and broken estate, in the better sort, be joined with a want and necessity, in the mean people, the danger is imminent, and great. For the rebellions of the belly are the worst. As for discontentments, they are in the politic body, like to humours in the natural, which are apt to gather a prenatural heat, and to inflame. And let no prince measure the danger of them, by this; whether they be just, or unjust. For that were to imagine people to be too reasonable; who do often spurn at their own good: nor yet by this; whether me griefs, whereupon they rise, be in fact, great or small: for they are the most dangerous discontentments, where the fear is greater than the feeling. *Dolendi modus, timendi non item.*^[9] Besides, in great oppressions, the same things that provoke the patience, do withal mate the courage: but in fears it is not so. Neither let any prince, or state, be secure concerning discontentments, because they have been often, or have been long and yet no peril hath ensued; for as it is true, that every vapour, or fume, doth not turn into a storm; so it is, nevertheless, true, that storms, though they blow over divers times, yet may fall at last; and as

me Spanish proverb noteth well; The cord hreaketh at the last by me weakest pull.

The causes and motives of seditions are; innovation in religion; taxes; alteration of laws and customs; breaking of privileges; general oppression; advancement of unworthy persons; strangers; dearths; disbanded soldiers; factions grown desperate; and whatsoever in offending people, joined and knitteth them, in a common cause.

For the remedies; there may be some general preservatives, whereof we will speak; as for the just cure, it must answer to the particular disease: and so be left to counsel, rather than rule.

The first remedy or prevention, is to remove by all means possible, that material cause of sedition, whereof we spoke; which is want and poverty in the estate. To which purpose, serveth the opening and well balancing of trade; the cherishing of manufactures; the banishing of idleness; the repressing of waste and excess by sumptuous laws; the improvement and husbanding of the soil; the regulating of prices of things vendible; the moderating of taxes and tributes; and the like. Generally, it is to be foreseen, that the population of a kingdom, (especially if it be not mown down by wars) do not exceed the stock of the kingdom, which should maintain them. Neither is the population to be reckoned only by number: for a smaller number, that spend more, and earn less, do wear out an estate sooner than a greater number, that live lower, and gather more. Therefore the multiplying of nobility, and other degrees of quality, in an over proportion to the common people, doth speedily bring a state to necessity: and so doth likewise an overgrown clergy; for they bring nothing to the stock; and in like manner, when more are bred scholars than preferments can take off.

It is likewise to be remembered, that for as much as the increase of any estate must be upon the foreigner (for whatsoever is

somewhere gotten, is somewhere lost), there be but three things, which one nation selleth unto another, the commodity nature yieldeth it; the manufacture; and the vecture or carriage. So that if these three wheels go, wealth will flow as in a spring tide. And it cometh many times to pass, that *materiam superabit opus*;^[10] that the work, and carriage, is more worth than the material, and enricheth a state more; as is notably seen in the Low Countrymen, who have the best mines, above ground, in the world.

Above all things, good policy is to be used, that the treasure and moneys in a state be not gathered into few hands. For otherwise, a state may have a great stock, and yet starve. And money is like muck, not good except it be spread. This is done, chiefly, by suppressing, or at the least, keeping a strait hand, upon the devouring trades of usury, engrossing, great pasturages, and the like.

For removing discontentments, or at least, the danger of them; there is in every state (as we know) two portions of subjects; the noblesse, and the commonality. When one of these is discontent, the danger is not great; for common people are of slow motion, if they be not excited by the greater sort; and the greater sort are of small strength, except the multitude be apt and ready to move of themselves. Then is the danger, when the greater sort do but wait for the troubling of the waters, amongst the meaner, that then they may declare themselves. The poets feign, that the rest of the gods would have bound Jupiter, which he hearing of, by the counsel of Pallas, sent for Briareus, with his hundred hands, to come in to his aid. An emblem, no doubt, to show how safe it is for monarchs to make sure of the good will of common people.

To give moderate liberty for griefs and discontentments to evaporate (so it be without too great insolency or bravery) is a safe way. For he that turneth the humours back, and maketh the wound bleed inwards, endangereth malign ulcers, and pernicious

impostumations.

The part of Epimetheus mought well become Prometheus, in the case of discontentments; for there is not a better provision against them. Epimetheus, when griefs and evils flew abroad, at last shut the lid, and kept hope in the bottom of the vessel. Certainly, the politic and artificial nourishing and entertaining of hopes, and carrying men from hopes to hopes, is one of the best antidotes against the poison of discontentments. And it is a certain sign of a wise government, and proceeding, when it can hold men's hearts by hopes, when it cannot by satisfaction: and when it can handle things in such manner as no evil shall appear so peremptory, but that it hath some outlet of hope: which is the less hard to do, because both particular persons, and factions, are apt enough to flatter themselves, or at least to brave that, which they believe not.

Also, the foresight, and prevention, that there be no likely or fit head, whereunto discontented persons may resort, and under whom they may join, is a known, but an excellent point of caution. I understand a fit head, to be one that hath greatness, and reputation; that hath confidence with the discontented party; and upon whom they turn their eyes; and that is thought discontented in his own particular, which kind of persons are either to be won, and reconciled to the state, and that in a fast and true manner, or to be fronted, with some other of the same party, that may oppose them, and so divide the reputation. Generally, the dividing and breaking of all factions and combinations that are adverse to the state, and setting them at distance, or at least distrust amongst themselves, is not one of the worst remedies. For it is a desperate case, if those that hold with the proceeding of the state, be full of discord and faction; and those that are against it, be entire and united.

I have noted, that some witty and sharp speeches, which have fallen from princes, have given fire to seditions. Caesar did himself

infinite hurt, in that speech; *Sulla nescivit literas, non potuit dictare*.^[11] for it did, utterly cut off that hope, which men had entertained, that he would, at one time or other, give over his dictatorship. Galba undid himself by that speech; *legi a se militem, non emi*:^[12] for it put the soldiers out of hope of the donative. Probus likewise, by that speech; *si vixero, non opus erit amplius Romano imperio militibus*.^[13] A speech of great despair, for the soldiers: and many the like. Surely, princes had need, in tender matters, and ticklish times, to beware what they say; especially in these short speeches, which flee abroad like darts, and are thought to be shot out of their secret intentions. For as for large discourses, they are flat things, and not so much noted.

Lastly, let princes, against all events, not be without some great person, one, or rather more, of military valour near unto them, for the repressing of seditions in their beginnings. For without that, there useth to be more trepidation in court, upon the first breaking out of troubles, than were fit. And the state runneth the danger of that, which Tacitus saith; *atque is habitus animorum fuit, ut pessimum facinus auderent pauci, plures vellent, crimes paterentur*.^[14] But let such military persons be assured, and well reputed of, rather than factious, and popular, holding also good correspondence with the other great men in the state; or else the remedy is worse than the disease.

[1] He also [the sun] often gives warning of dark rebellions imminent, of treachery and hidden warfare brewing.

[2] Her did mother Earth inflamed with wrath against the Gods, bring forth (so runs the story) youngest sister to Coeus and Enceladus.

[3] When great ill-will has been conceived [towards a ruler], all his acts, good or bad, alike condemn him.

[4] They were full of zeal, and yet rather inclined to discuss than to execute the orders of their officers.

[5] 'the first moveable' or 'first moved' (Paradise Lost 3, line 483), the tenth sphere or heaven of the old astronomy, which carried round with it in its revolution the lower spheres of the planets and fixed stars.

[6] More freely than was compatible with respect for their rulers.

[7] I will loose the girdles of kings (Isaiah xlv: 1 cf .Jobxii:18).

[8] Hence usury rapacious, and interest greedily advancing to the reckoning day, hence credit shaken, and war that was a gain to many.

[9] There is a limit to grieving but none to fearing.

[10] The workmanship will excel the material.

[11] Sulla was ignorant of letters, he could not 'dictate'.

[12] That his soldiers were levied, not bought.

[13] If I live, the Roman Empire will have no further need of soldiers.

[14] The temper of men's minds was such that while only a few dared to do so vile a deed, many desired it and all acquiesced in it.

17 Of Atheism

I had rather believe all the fables in the Legend, and the Talmud, and the Alcoran, than that this universal frame is without a mind. And therefore, God never wrought miracle to convince atheism, because his ordinary works convince it. It is true, that a little philosophy inclineth man's mind to atheism; but depth in philosophy bringeth men's minds about to religion: for while the mind of man looketh upon second causes scattered, it may sometimes rest in them, and go no further: but when it beholdeth the chain of them, confederate and linked together, it must needs fly to providence, and deity. Nay, even mat school which is most accused of atheism, doth most demonstrate religion; that is, the school of Leucippus, and Democritus, and Epicurus. For it is a thousand times more credible, that four mutable elements, and one immutable fifth essence, duly and eternally placed, needs no God, than that an army of infinite small proportions, or seeds unplaced, should have produced this order, and beauty, without a divine marshal. The scripture saith; The fool hath said in his heart, there is no God: it is not said; The fool hath thought in his heart: so as, he rather saith it by rote to himself, as that he would have, than that he can thoroughly believe it, or be persuaded of it. For none deny there is a God, but those, for whom it maketh that there were no God. It appeareth in nothing more, that atheism is rather in the lip, than in thie heart of man, than by this; that atheists will ever be talking of that their opinion, as if they fainted in it, within themselves, and would be glad to be strengthened, by the consent of others: nay more, you shall have atheists strive to get disciples, as it fareth with other sects: and, which is most of all, you shall have of them, that will suffer for atheism, and not recant; whereas, if they did truly think, that there were no such thing as God, why should they trouble themselves? Epicurus is charged, that he did but dissemble, for his credit's sake, when he affirmed, there were blessed natures, but such as enjoyed

themselves, without having respect to the government of the world. Wherein, they say, he did temporise; though in secret, he thought, there was no God. But certainly, he is traduced; for his words are noble and divine: *non deos vulgi negare profanum, sed vulgi opinis diis applicare profanum*.^[1] Plato could have said no more. And although he had the confidence to deny the administration, he had not the power to deny the nature. The Indians of the West have names for their particular gods, though they have no name for God: as if the heathens should have had the names Jupiter, Apollo, Mars, etc., but not the word *deus*: which shows, that even those barbarous people have the notion, though they have not the latitude, and extent of it. So that against atheists, the very savages take part, with the very subtlest philosophers. The contemplative atheist is rare; a Diagoras, a Bion, a Lucian perhaps, and some others; and yet they seem to be more than they are; for that, all that impugn a received religion, or superstition, are by the adverse part branded with the name of atheists. But the great atheists, indeed, are hypocrites; which are ever handling holy things, but without feeling. So as they must needs be cauterised in the end. The causes of atheism are; divisions in religion, if they be many; for any one main division addeth zeal to both sides; but many divisions introduce atheism. Another is, scandal of priests; when it is come to that, which St Bernard saith; *non est iam dicere, ut populus, sic sacerdos: quia nes populus, ut sacerdos*.^[2] A third is, custom of profane scoffing in holy matters; which doth, by little and little, deface the reverence of religion. And lastly, learned times, specially with peace, and prosperity: for troubles and adversities do more bow men's minds to religion. They that deny a God, destroy man's nobility; for certainly, man is of kin to the beasts, by his body; and if he be not of kin to God, by his spirit, he is a base and ignoble creature. It destroys likewise magnanimity, and the raising of human nature: for take an example of a dog; and mark what a generosity and courage he will put on, when he finds himself maintained by a man; who to him is in stead of a God, or *melior natura*:^[3] which courage is manifestly such as that

creature, without that confidence of a better nature than his own, could never attain. So man, when he resteth and assureth himself upon divine protection, and favour, gathereth a force and faith; which human nature, in itself, could not obtain. Therefore, as atheism is in all respects hateful, so in this, that it depriveth human nature of the means to exalt itself, above human frailty. As it is in particular persons, so it is in nations: never was there such a state, for magnanimity, as Rome: of this state hear what Cicero saith; *Quam volumus licet. patres conscripti, nos amemus, tamen nec numero Hispanis, nec robore Gallos, nec calliditate Poenos, nec artibus Graecos. nec denique hoc ipso huius gentis et terrae domestico nativoque sensu Italos ipsos et Latinos; sed pietate, ac religione, atque hac una sapientia, quod deorum immortalium numine omnia regi gubernarique perspeximus, omnes gentes nationesque superavimus.*^[4]

^[1] It is not profane to deny the gods of the vulgar: but it is profane to apply to the gods the beliefs of the vulgar.

^[2] We cannot now say: As the people, so is the priest. For in fact the people are not so [bad] as the priest.

^[3] a better nature

^[4] Esteem ourselves as we may, senators, yet we are not superior to the Spaniards in numbers, nor to the Gauls in bodily force, nor to the Carthaginians in cunning, nor to the Greeks in arts, nor, indeed, to the Italians and Latins themselves in the inborn domestic sentiment which belongs to this land and nation; but in piety, and religion, and the one great wisdom—the recognition that all is ruled and ordered by the will of the immortal gods—it is here that we have surpassed all tribes and peoples.

18 Of Superstition

It were better to have no opinion of God at all, than such an opinion, as is unworthy of him: for the one is unbelief, the other is contumely: and certainly superstition is the reproach of the deity. Plutarch saith well to that purpose: Surely (saith he) I had rather, a great deal, men should say, there was no such man at all as Plutarch; than that they should say, that there was one Plutarch, that would eat his children, as soon as they were born, as the poets speak of Saturn. And, as the contumely is greater towards God, so the danger is greater towards men. Atheism leaves a man to sense; to philosophy; to natural piety; to laws; to reputation; all which may be guides to an outward moral virtue, though religion were not; but superstition dismounts all these, and erecteth an absolute monarchy in the minds of men. Therefore atheism did never perturb states; for it makes men wary of themselves, as looking no further: and we see the times inclined to atheism (as the time of Augustus Caesar) were civil times. But superstition hath been the conclusion of many states; and bringeth in a new *primum mobile*,^[1] that ravisheth all the spheres of government. The master of superstition is the people; and in all superstition, wise men follow fools; and arguments are fitted to practice, in a reversed order. It was gravely said, by some of the prelates, in the Council of Trent, where the doctrine of the schoolmen bare great sway; that the schoolmen were like astronomers, which did feign eccentrics and epicycles, and such engines of orbs, to save me phenomena; though they knew, there were no such things: and, in like manner, that the schoolmen had framed a number of subtle and intricate axioms, and theorems, to save the practice of the Church. The causes of superstition are: pleasing and sensual rites and ceremonies; excess of outward and pharisaical holiness; over-great reverence of traditions, which cannot but load the Church; the stratagems of prelates for their own ambition and lucre; the favouring too much of good intentions,

which openeth the gate to conceits and novelties; the taking an aim at divine matters by human, which cannot but breed mixture of imaginations; and lastly, barbarous times, especially joined with calamities and disasters. Superstition, without a veil, is a deformed thing; for, as it addeth deformity to an ape, to be so like a man; so the similitude of superstition to religion, makes it the more deformed. And as wholesome meat corrupteth to little worms, so good forms and orders corrupt into a number of petty observances. There is a superstition, in avoiding superstition; when men think to do best, if they go furthest from the superstition formerly received: therefore, care would be had, that (as it fareth in ill purgings) the good be not taken away with the bad; which commonly is done, when the people is the reformer.

[1] 'the first moveable' or 'first moved' (Paradise Lost 3, line 483), the tenth sphere or heaven of the old astronomy, which carried round with it in its revolution the lower spheres of the planets and fixed stars.

19 Of Travel

Travel, in the younger sort, is a part of education; in the elder, a part of experience. He that travelleth into a country, before he hath some entrance into the language, goeth to school, and not to travel. That young men travel under some tutor, or grave servant, I allow well; so that he be such a one, that hath the language, and hath been in the country before; whereby he may be able to tell them, what things are worthy to be seen in the country where they go; what acquaintances they are to seek; what exercises or discipline the place yieldeth. For else young men shall go hooded, and look abroad little. It is a strange thing, that in sea voyages, where there is nothing to be seen but sky and sea, men should make diaries; but in land-travel, wherein so much is to be obscured, for the most part, they omit it; as if chance were fitter to be registered than observation. Let diaries, therefore, be brought in use. The things to be seen and observed are: the courts of princes, specially when they give audience to ambassadors: the courts of justice, while they sit and hear causes; and so of consistories ecclesiastics: the churches, and monasteries, with the monuments which are therein extant: the walls and fortifications of cities and towns; and so the havens and harbours: antiquities, and ruins: libraries; colleges, disputations, and lectures, where any are: shipping and navies: houses, and gardens of state and pleasure, near great cities: armories: arsenals: magazines: exchanges: bourses; warehouses: exercises of horsemanship; fencing; training of soldiers; and the like: comedies; such whereunto the better sort of persons do resort; treasures of jewels, and robes; cabinets, and rarities: and to conclude, whatsoever is memorable in the places where they go. After all which, the tutors or servants ought to make diligent enquiry. As for triumphs; masques; feasts; weddings; funerals; capital executions; and such shows; men need not to be put in mind of them; yet are they not to be neglected. If you will have a young man, to put his travel into a

little room, and in short time, to gather much, this you must do. First, as was said, he must have some entrance into the language, before he goeth. Then he must have such a servant, or tutor, as knoweth the country, as was likewise said. Let him carry with him also some card or book describing the country, where he travelleth; which will be a good key to his enquiry. Let him keep also a diary. Let him not stay long in one city, or town; more or less as the place deserveth, but not long: nay, when he stayeth in one city or town, let him change his lodging, from one end and part of the town to another, which is a great adamant of acquaintance. Let him sequester himself from the company of his countrymen, and diet in such places, where there is good company of the nation where he travelleth. Let him upon his removes, from one place to another, procure recommendation to some person of quality, residing in the place whither he removeth; that he may use his favour in those things he desireth to see or know. Thus he may abridge his travel, with much profit. As for the acquaintance, which is to be sought in travel; that which is most of all profitable, is acquaintance with the secretaries and employed men of ambassadors; for so in travelling in one country he shall suck the experience of many. Let him also see and visit imminent persons, in all kinds, which are of great fame abroad; that he may be able to tell, how the life agreeth with the same. For quarrels, they are with care and discretion to be avoided: they are, commonly, for mistresses; healths; place; and words. And let a man beware, how he keepeth company with cholerick and quarrelsome persons; for they will engage him into their own quarrels. When a traveller returneth home, let him not leave the countries where he hath travelled altogether behind him; but maintain a correspondence, by letters, with those of his acquaintance, which are of most worth. And let his travel appear rather in his discourse, than in his apparel, or gesture: and in his discourse, let him be rather advised in his answers, then forwards to tell stories: and let it appear, that he doth not change his country manners for those of foreign parts; but only prick in some flowers, of that he hath learned abroad,

into the customs of his own country.

20 Of Empire

It is a miserable state of mind, to have few things to desire, and many things to fear: and yet that commonly is the case of kings; who being at the highest, want matter of desire, which makes their minds more languishing; and have many representations of perils and shadows, which makes their minds the less clear. And this is one reason also of that effect, which the scripture speaketh of; that the king's heart is inscrutable. For multitude of jealousies, and lack of some predominant desire, that should marshal and put in order all the rest, maketh any man's heart hard to find, or sound. Hence it comes likewise, that princes, many times, make themselves desires, and set their hearts upon toys: sometimes upon a building; sometimes upon erecting of an order, sometimes upon the advancing of a person; sometimes upon obtaining excellency in some art, or feat of the hand; as Nero for playing on the harp, Domitian for certainty of the hand with the arrow, Commodus for playing at fence, Caracalla for driving chariots, and the like. This seemeth incredible unto those that know not the principle; that the mind of man is more cheered, and refreshed, by profiting in small things, than by standing at a stay in great. We see also that kings, that have been fortunate conquerors in their first years; it being not possible for them to go forward infinitely, but that they must have some check or arrest in their fortunes; turn in their latter years to be superstitious and melancholy: as did Alexander the Great; Dioclesian; and in our memory, Charles the Fifth; and others: for he that is used to go forward, and findeth a stop, falleth out of his own favour, and is not the thing he was.

To speak now of the true temper of empire: it is a thing rare, and hard to keep: for both temper and distemper consist of contraries. But it is one thing to mingle contraries, another to interchange them. The answer of Apollonius to Vespasian is full of excellent instruction;

Vespasian asked him; What was Nero's overthrow? He answered; Nero could touch and tune the harp well; but in government, sometimes he used to wind the pins too high, sometimes to let them down too low. And certain it is, that nothing destroyeth authority so much, as the unequal and untimely interchange of power pressed too far, and relaxed too much.

This is true; that the wisdom of all these latter times in princes' affairs, is rather fine deliveries, and shiftings of dangers and mischiefs, when they are near, than solid and grounded courses to keep them aloof. But this is but to try masteries with fortune: and let men beware, how they neglect, and suffer matter of trouble to be prepared: for no man can forbid the spark, nor tell whence it may come. The difficulties in princes' business are many and great; but the greatest difficulty, is often in their own mind. For it is common with princes (saith Tacitus) to will contradictories. *Sunt plerumque region voluntates vehementes et inter se contrariae.*^[1] For it is the solecism of power, to think to command the end, and yet not to endure the mean.

Kings have to deal with their neighbours; their wives; their children; their prelates or clergy; their nobles; their second-nobles or gentlemen; their merchants; their commons; and their men of war, and from all these arise dangers, if care and circumspection be not used.

First for their neighbours; there can no general rule be given (the occasions are so variable), save one; which ever holdeth; which is, that princes do keep due sentinel, that none of their neighbours do overgrow so (by increase of territory, by embracing of trade, by approaches, or the like), as they become more able to annoy them, than they were. And this is, generally, the work of standing councils to foresee, and to hinder it. During that triumvirate of kings, King Henry Vffl of England, Francis I, King of France, and Charles V, Emperor, there was such a watch kept, that none of the three could win a palm

of ground, but the other two would straightways balance it, either by confederation, or, if need were, by a war: and would not, in any wise, take up peace at interest. And the like was done by that league (which, Guicciardine saith, was the security of Italy) made between Ferdinando King of Naples; Lorenzious Medices, and Ludovicus Sforza, potentates, the one of Florence, the other of Milan. Neither is the opinion of some of the schoolmen to be received; that a war cannot justly be made, but upon a precedent injury, or provocation. For there is no question, but a just fear of an imminent danger, though there be no blow given, is a lawful cause of a war.

For their wives, there are cruel examples of them. Livia is enfamed for the poisoning of her husband: Roxolana, Solyman's wife, was the destruction of that renowned prince. Sultan Mustapha; and otherwise troubled his house, and succession: Edward the Second of England his queen had the principal hand, in the deposing and murder of her husband. This kind of danger is then to be feared, chiefly, when the wives have plots for the raising of their own children; or else that they be adulteresses.

For their children: the tragedies, likewise, of dangers from them, have been many. And generally, the entering of fathers into suspicion of their children, hath been ever unfortunate. The destruction of Mustapha (that we named before) was so fatal to Solyman's line, as the succession of the Turks, from Solyman, until this day, is suspected to be untrue, and of strange blood; for that Selymus the Second was thought to be supposititious. The destruction of Crispus, a young prince of rare towardness, by Constantinus the Great, his father, was in like manner fatal to his house; for both Constantinus, and Constance, his sons, died violent deaths; and Constantius, his other son, did little better; who died, indeed, of sickness, but after that Julianus had taken arms against him. The destruction of Demetrius, son to Philip the Second, of Macedonia, turned upon the father, who

died of repentance. And many like examples there are: but few, or none, where the fathers had good by such distrust; except it were, where me sons were up in open arms against them; as was Selymus the First against Baiazet: and the three sons of Henry the Second, King of England.

For their prelates, when they are proud and great, there is also danger from them: as it was, in the times of Anselmus, and Thomas Becket, Archbishops of Canterbury; who with their croziers, did almost try it, with the king's sword; and yet they had to deal with stout and haughty kings; William Rufus, Henry the First, and Henry the Second. The danger is not from that state, but where it hath a dependence of foreign authority; or where the churchmen come in, and are elected, not by the collation of the king, or particular patrons, but by the people.

For their nobles, to keep them at a distance, it is not amiss; but to depress them, may make a king more absolute, but less safe; and less able to perform anything that he desires. I have noted it, in my history of King Henry the Seventh of England, who depressed his nobility; whereupon, it came to pass that his times were full of difficulties, and troubles; for the nobility, though they continued loyal unto him, yet did they not cooperate with him in his business. So that in effect, he was fain to do all things, himself.

For their second nobles, there is not much danger from them, being a body dispersed. They may sometimes discourse high, but that doth little hurt: besides, they are a counterpoise to the higher nobility, that they grow not too potent: and lastly, being the most immediate in authority, with the common people, they do best temper popular commotions.

For their merchants, they are *venaporta*;^[2] and if they flourish not, a kingdom may have good limbs, but will have empty veins, and

nourish lime. Taxes, and imposts upon them, do seldom good to the king's revenue; for that that he wins in the hundred, he loseth in the shire; the particular rates being increased, but the total bulk of trading rather decreased.

For their commons; there is little danger from them, except it be, where they have great and potent heads; or where you meddle with the point of religion; or their customs, or means of life.

For their men of war, it is a dangerous state, where they live and remain in a body, and are used to donatives; whereof we see examples in the Janissaries, and Pretorian bands of Rome: but trainings of men, and arming them in several places, and under several commanders, and without donatives, are things of defence, and no danger.

Princes are like to heavenly bodies, which cause good or evil times; and which have much veneration, but no rest. All precepts concerning kings, are in effect comprehended in those two remembrances: *memento quod es homo*', and *memento quod es deus*, or *vice dei*,^[3] the one bridleth their power, and the other their will.

[1] The desires of princes are commonly vehement and contradictory one to another.

[2] the 'gate-vein' which distributes blood to the liver

[3] Remember that thou art man—remember that thou art a God, or God's vicegerent.

21 Of Counsel

The greatest trust between man and man is the trust of giving counsel. For in other confidences, men commit the parts of life; their lands, their goods, their children, their credit, some particular affair, but to such as they make their counsellors they commit the whole: by how much the more, they are obliged to all faith and integrity. The wisest princes need not think it any diminution to their greatness, or derogation to their sufficiency, to rely upon counsel. God himself is not without: but hath made it one of the great names of his blessed son; the counsellor. Solomon hath pronounced, that in counsel is stability. Things will have their first or second agitation; if they be not tossed upon the arguments of counsel they will be tossed upon the waves of fortune; and be full of inconstancy, doing, and undoing, like the reeling of a drunken man. Solomon's son found the force of counsel as his father saw the necessity of it. For the beloved kingdom of God was first rent and broken by ill counsel; upon which counsel there are set, for our instruction, the two marks, whereby bad counsel is for ever best discerned: that it was young counsel for the persons; and violent counsel for the matter.

The ancient times do set forth in figure both the incorporation and inseparable conjunction of counsel with kings; and the wise and politic use of counsel by kings: the one, in that they say, Jupiter did many Metis, which signifieth counsel: whereby they intend, that sovereignty is married to counsel: the other, in that which followeth, which was thus: they say after Jupiter was married to Metis, she conceived by him, and was with child; but Jupiter suffered her not to stay till she brought forth, but ate her up; whereby he became himself with child, and was delivered of Pallas armed, out of his head. Which monstrous fable contained a secret of empire; how kings are to make use of their counsel of state. That first, they ought to refer matters

unto them, which is the first begetting or impregnation; but when they are elaborate, moulded, and shaped, in the womb of their counsel, and grow ripe, and ready to be brought forth; that then, they suffer not their counsel to go through with the resolution, and direction, as if it depended on them; but take the matter back into their own hands, and make it appear to the world, that the decrees, and final directions (which, because they come forth with prudence, and power, are resembled to Pallas armed) proceeded from themselves: and not only from their authority, but (the more to add reputation to themselves) from their head, and device.

Let us now speak of the inconveniences of counsel, and of the remedies. The inconveniences, that have been noted in calling and using counsel, are three. First, the revealing of affairs, whereby they become less secret. Secondly, the weakening of the authority of princes, as if they were less of themselves. Thirdly, the danger of being unfaithfully counselled, and more for me good of them that counsel, than of him that is counselled. For which inconveniences, the doctrine of Italy, and practice of France, in some kings' times, hath introduced cabinet counsels; a remedy worse than the disease.

As to secrecy; princes are not bound to communicate all matters with all counsellors; but may extract and select. Neither is it necessary, that he that consulteth what he should do, should declare what he will do. But let princes beware, that the unsecreting of their affairs comes not from themselves. And as for cabinet counsels, it may be their motto; *plenus rimarum sum*:^[1] one futile person, that maketh it his glory to tell, will do more hurt than many, that know it their duty to conceal. It is true, there be some affairs, which require extreme secrecy, which will hardly go beyond one or two persons, besides the king: neither are those counsels unprosperous: for besides the secrecy, they commonly go on constantly in one spirit of direction, without distraction. But then it must be a prudent king, such as is able to grind

with a hand-mill; and those inward counsellors had need also be wise men, and especially true and trusty to the king's ends; as it was with King Henry the Seventh of England, who in his greatest business imparted himself to none, except it were to Morton, and Fox.

For weakening of authority; the fable showeth the remedy. Nay, the majesty of kings is rather exalted, than diminished, when they are in the chair of counsel: neither was there ever prince bereaved of his dependencies by his counsel; except where there hath been, either an overgreatness in one counsellor, or an overstrict combination in divers; which are things soon found, and holpen.

For the last inconvenience, that men will counsel with an eye to themselves; certainly, *non inveniet fidem super terram*,^[2] is meant of the nature of times, and not of all particular persons; there be, that are in nature faithful, and sincere, and plain, and direct; not crafty, and involved: let princes, above all, draw to themselves such natures. Besides, counsellors are not commonly so united, but that one counsellor keepeth sentinel over another, so that if any do counsel out of faction, or private ends, it commonly comes to the king's ear. But the best remedy is, if princes know their counsellors, as well as their counsellors know them:

principis est virtus maxima nosse suos.^[3]

And on the other side, counsellors should not be too speculative into their sovereign's person. The true composition of a counsellor, is rather to be skilful in their master's business, than in his nature; for then he is like to advise him, and not to feed his humour. It is of singular use to princes, if they take the opinions of their counsel both separately and together. For private opinion is more free; but opinion before others is more reverend. In private, men are more bold in their own humours; and in consort, men are more obnoxious to others' humours; therefore it is good to take both: and of the inferior sort,

rather in private, to preserve freedom; of the greater, rather in consort, to preserve respect. It is in vain for princes to take counsel concerning matters, if they take no counsel likewise concerning persons: for all matters, are as dead images; and the life of the execution of affairs resteth in the good choice of persons. Neither is it enough to consult concerning persons, *secundum genera*,^[4] as in an idea, or mathematical description, what the kind and character of the person should be; for the greatest errors are committed, and the most judgement is shown, in the choice of individuals. It was truly said; *optimi consiliarii mortui*;^[5] books will speak plain, when counsellors blanch: Therefore it is good to be conversant in them; specially the books of such as themselves have been actors upon the stage.

The counsels, at this day, in most places are but familiar meetings; where matters are rather talked on, than debated. And they run too swift to the order or act of counsel. It were better, that in causes of weight, the matter were propounded one day, and not spoken to, till the next day; *in nocte consilium*.^[6] So was it done, in the commission of union between England and Scotland; which was a grave and orderly assembly. I commend set days for petitions: for both it gives the suitors more certainty for their attendance; and it frees the meetings for matters of estate, that they may *hocagere*.^[7] In choice of committees, for ripening business for the counsel, it is better to choose indifferent persons, than to make an indifference, by putting in those that are strong on both sides. I commend also standing commissions; as for trade; for treasure; for war; for suits; for some provinces: for where there be divers particular counsels, and but one counsel of estate (as it is in Spain), they are in effect no more than standing commissions; save that they have greater authority. Let such as are to inform counsels, out of their particular professions (as lawyers, seamen, mintmen, and the like), be first heard before committees; and then, as occasion serves, before the counsel. And let them not come in multitudes, or in a tribunitious manner; for that is to clamour

counsels, not to inform them. A long table, and a square table, or seats about the walls, seem things of form, but are things of substance; for at a long table, a few at the upper end, in effect, sway all the business; but in the other form, there is more use of the counsellors' opinions, that sit lower. A king, when he presides in counsel, let him beware how he opens his own inclination too much, in that which he propounded: for else counsellors will but take the wind of him; and instead of giving free counsel, sing him a song of *placebo*.^[8]

[1] I am full of chinks.

[2] He shall not find faith on the earth. (Luke xviii: 8) cf. Essay I,p.6.

[3] A prince's greatest virtue is to know his men.

[4] by classes

[5] The best counsellors are the dead.

[6] Night brings counsel.

[7] Keep to the business in hand.

[8] 'I will please' (Psalms xvi: 9): 'to sing a song of placebo' meaning to flatter, to be complaisant.

22 Of Delays

Fortune is like the market; where many times, if you can stay a little, the price will fall. And again, it is sometimes like Sybilla's offer, which at first offereth the commodity at full, then consumeth part and part, and still holdeth up the price. For occasion (as it is in the common verse) turneth a bald noddle, after he hath presented her locks in front, and no hold taken: or at least turneth the handle of the bottle, first to be received, and after the belly, which is hard to clasp. There is surely no greater wisdom, then well to time the beginnings and onsets of things. Dangers are no more light, if they once seem light: and more dangers have deceived men, than forced them. Nay, it were better, to meet some dangers half way, though they come nothing near, than to keep too long a watch upon their approaches; for if a man watch too long, it is odds he will fall asleep. On the other side, to be deceived, with too long shadows (as some have been, when the moon was low, and shone on their enemies back), and so to shoot off before the time; or to teach dangers to come on, by over early buckling towards them, is another extreme. The ripeness, or unripeness of the occasion (as we said) must ever be well weighed; and generally, it is good, to commit the beginnings of all great actions to Argos with his hundred eyes; and the ends to Briareus with his hundred hands: first to watch, and then to speed. For the helmet of Pluto, which maketh the politic man go invisible, is secrecy in the counsel, and celerity in the execution. For when things are once come to the execution, there is no secrecy comparable to celerity; like the motion of a bullet in the air, which flieth so swift, as it outruns the eye.

23 Of Cunning

We take cunning for a sinister or crooked wisdom. And certainly, there is great difference, between a cunning man, and a wise man; not only in point of honesty, but in point of ability. There be that can pack the cards, and yet cannot play well; so there are some, that are good in canvasses, and factions, that are otherwise weak men. Again, it is one thing to understand persons, and another thing to understand matters; for many are perfect in men's humours, that are not greatly capable of the real part of business; which is the constitution of one that hath studied men, more than books. Such men are fitter for practice, than for counsel; and they are good but in their own alley: turn them to new men, and they have lost their aim; so as the old rule, to know a fool from a wise man; *mitte ambos nudos ad ignotos. et videbis*; [1] doth scarce hold for them. And because these cunning men are like haberdashers of small wares, it is not amiss to set forth their shop.

It is a point of cunning to wait upon him, with whom you speak, with your eye; as the Jesuits give it in precept: for there be many wise men, that have secret hearts, and transparent countenances. Yet this would be done with a demure abasing of your eye sometimes, as the Jesuits also do use.

Another is, that when you have anything to obtain of present dispatch, you entertain and amuse the party, with whom you deal, with some other discourse; that he be not too much awake, to make objections. I knew a counsellor and secretary, that never came to Queen Elizabeth of England, with bills to sign, but he would always first put her into some discourse of estate, that she mought the less mind the bills.

The like surprise may be made, by moving things, when the party is in haste, and cannot stay to consider advisedly of that is moved.

If a man would cross a business, that he doubts some other would handsomely and effectually move, let him pretend to wish it well, and move it himself, in such sort, as may foil it

The breaking off, in the midst of that one was about to say, as if he took himself up, breeds a greater appetite in him, with whom you confer, to know more.

And because it works better, when anything seemeth to be gotten from you by question, than if you offer it of yourself, you may lay a bait for a question, by showing another visage and countenance than you are wont; to the end, to give occasion, for the party to ask, what the matter is of the change? As Nehemias did; And I had not before that time been sad before the king.

In things, that are tender and unpleasing, it is good to break the ice by some whose words are of less weight, and to reserve the more weighty voice to come in, as by chance, so that he may be asked the question upon the other's speech. As Narcissus did, in relating to Claudius the marriage of Messalina and Silius.

In things, that a man would not be seen in himself; it is a point of cunning, to borrow the name of the world; as to say; The world says, or. There is a speech abroad.

I knew one, that when he wrote a letter, he would put that which was most material, in the post-script, as if it had been a by-matter.

I knew another, that when he came to have speech, he would pass over that that he intended most, and go forth, and come back again, and speak of it, as of a thing that he had almost forgot.

Some procure themselves to be surprised, at such times as it is like, the party that they work upon, will suddenly come upon them; and to be found with a letter in their hand, or doing somewhat which

they are not accustomed; to the end, they may be apposed of those things, which of themselves they are desirous to utter.

It is a point of cunning, to let fall those words, in a man's own name, which he would have another man learn, and use, and thereupon take advantage. I knew two, that were competitors, for the secretary's place, in Queen Elizabeth's time, and yet kept good quarter between themselves: and would confer, one with another, upon the business; and the one of them said, that to be a secretary, in the declination of a monarchy, was a ticklish thing, and that he did not affect it: the other, straight caught up those words, and discoursed with divers of his friends, that he had no reason to desire to be secretary, in the declination of a monarchy. The first man took hold of it, and found means, it was told the queen; who hearing of a declination of a monarchy, took it so ill, as she would never after hear of the other's suit.

There is a cunning, which we in England call the turning of the cat in the pan; which is, when that which a man says to another, he lays it, as if another had said it to him. And to say truth, it is not easy, when such a matter passed between two, to make it appear, from which of them it first moved and began.

It is a way that some men have, to glance and dart at others, by justifying themselves, by negatives; as to say, this do not: as Tigellinus did towards Burrus; *se non diversas spes, sed incolumitatem imperatoris simplidter spectare*.^[2]

Some have in readiness so many tales and stories, as there is nothing they would insinuate but they can wrap it into a tale; which serveth both to keep themselves more in guard, and to make others carry it, with more pleasure.

It is a good point of cunning, for a man to shape the answer he would have, in his own words, and propositions; for it makes the other

party stick the less.

It is strange, how long some men will lie in wait, to speak somewhat they desire to say; and how far about they will fetch; and how many other matters they will beat over, to come near it. It is a thing of great patience, but yet of much use.

A sudden, bold, and unexpected question, doth many times surprise a man, and lay him open. Like to him, that having changed his name, and walking in Paul's, another suddenly came behind him, and called him by his true name, whereat straightways he looked back.

But these small wares, and petty points of cunning, are infinite: and it were a good deed to make a list of them: for that nothing doth more hurt in a state, than that cunning men pass for wise.

But certainly, some there are, that know the resorts and falls of business, that cannot sink into the main of it: like a house, that hath convenient stairs, and entries, but never a fair room. Therefore, you shall see them find out pretty looses in the conclusion, but are no ways able to examine, or debate matters. And yet commonly they take advantage of their inability, and would be thought wits of direction. Some build rather upon the abusing of others, and (as we now say) putting tricks upon them, than upon soundness of their own proceedings. But Solomon saith; *prudens advertit ad gressus suos: stultus divertit ad dolos*.^[3]

[1] Send them both naked before strangers and you shall see.

[2] He said he did not [like Burrus] cherish hopes from opposite quarters, but looked simply to the Emperor's safety.

[3] The wise man takes heed to his own steps: the fool turns aside to deceits (cf.

Proverbs xiv:15).

24 Of Wisdom for a Man's Self
